TO

SIR JOHN MAURICE CLARK, BARONET

PUBLISHER

AND

FRIEND
In issuing this, the twelfth, volume of The Encyclopedia of Religion and Ethics, I wish to thank those who have assisted me in the work.

And first let me name the Publishers, Messrs. T. & T. Clark, and their Staff, above all Sir John M. Clark, Bart., to whom I have taken the liberty of dedicating it. The Printers also, Messrs. Morrison & Gibb Ltd., deserve the thanks of all concerned, and mine most of all; and especially must their able and accurate Readers be remembered.

What shall I say of my accomplished and loyal Staff? Besides Dr. Selbie and Dr. Gray, whose names are on the title-page, I must mention Mr. J. F. Grant and Mr. T. Riach. Not less deserving than these are the two sisters Miss M. C. Macdonald (now Mrs. Laburn) and Miss D. R. Macdonald (now Mrs. Dow), to whom most of all is due the minute accuracy of the Encyclopedia. With them let me name my Secretary, Miss H. Robertson, who was with me at the planning of the Work and has guided its course to the end. I must also mention our indispensable Librarian, Miss E. M. Mitchell, and Miss B. Wisely, the Typist, whose work has often won the admiration of the authors of articles.

Many scholars have aided with their contributions and with their counsel. I cannot name them. But I must say one thing. The Encyclopedia would not have been what it is if I had not had in every department of study covered by it at least one man upon whom I could rely for advice.

The names of the translators have never appeared. The translations from the French have for the most part been made by my assistants. The German translations are almost all due to the Rev. Alexander Grieve, M.A., D.Phil. Mr. Albert Bonus, M.A., has translated nearly all the Italian work. Either Professor W. R. Morfill or Dr. E. H. Minns has been responsible for the Russian translations. A few articles written in Danish were translated by the Rev. John Beveridge, B.D.

The editing of a work like The Encyclopedia of Religion and Ethics is undoubtedly difficult, but it has brought me into touch with so many men of ability and generosity, and has enabled me to make so many friendships, that the pleasure of it has far outweighed its pain.

An Index Volume is in course of preparation.

THE EDITOR.
AUTHORS OF ARTICLES IN THIS VOLUME

ABELSON (JOSHUA), M.A., D.Lit. (London).
Rabbi, Cardiff; author of Immanence of God in Rabbinical Literature, Jewish Mysticism, Maimonides on the Jewish Creed.

SUFFERING.—I. INTRODUCTION: THE FACT AND THE PROBLEM.—Suffering, as a feature of life in this earth, is too obvious and too familiar to need description. Sentimentality and denunciation are alike superfluous. Suffering is all but universal. From the point where, in the evolutionary process, a brain is developed, upward through all ranks of being, suffering is an unvarying element in experience. It appears in endless variety. Some of it belongs to animals in their natural conditions as an accompaniment of their life-story or as a consequence of their predisposed habits. It is, however, in human life that suffering most abounds. A great deal of human suffering is what we term roughly ‘physical pain,’ though, in point of fact, the suffering of a self-conscious being must be radically distinct from that of a living creature in whose sentient life the thought of personality has not yet dawned. Physical pain is found in many degrees of intensity, from that which is easily bearable, at least by persons in normal health, to that which is appalling to look upon, and must constitute an unimaginable anguish. If we pass from physical suffering to that which is mental and moral, we are overwhelmed by the mass and the magnitude of the agonies that are the lot of mankind. From the sorrows of childhood, deeper than the observer can calculate, to the stony griefs of age, untold and ungauged, there is a range of suffering beyond all enumeration and conception, baffling the imagination, affronting the intelligence.

The worst feature of human suffering is the chaotic nature of its distribution. If strong men alone were sufferers, we would comfort ourselves by noting the gladness of little children; but children suffer, often with an intensity which seems too awful for the tender frame to endure and yet survive. If the guilty alone suffered, we might have some kind of theodicy to fit the facts; but the innocent suffer; they are the greatest sufferers. If we had to consider only our own pains, we might find a reason for them, or at least we could retreat to the fastness of our unconquerable soul. When, however, it is the pain of others that confronts us, we feel that our explanations are an impertinence. The clue to their sufferings is not to be found in any supposed rationale of our own.

The deepest element in the problem of pain is that so much suffering is meaningless, as far as our most careful thought can discern. After we have noted causes the removal of which would certainly reduce the quantity of pain in the world, after we have seen the ends which it may be supposed to serve, there remains a surplusage of pain unaccounted for by our largest theory. It is this surplusage that forms the heart of the mystery of suffering. If there is any meaningless pain in the world, it cannot, surely, be the best of all possible worlds. How can a world crossed by such a bar sinister be the expression of wisdom, power, or goodness?

‘The dilemma of Epicurus is still with us: if God wishes to prevent evil but cannot, then he is impotent; if he could but will not, he is malevolent; if he has both the power and the will, whence then is evil?’

The challenge to theism is direct. There is probably little theoretic atheism among ordinary men and women. But it is certain that in multitudes of cases faith has suffered shipwreck on the rock of meaningless pain. To this form of unbelief women are peculiarly prone. Suffering appeals to their sympathy. Their acquaintance with it is wide and intimate. They feel, more deeply than men, the waste and cruelty of it; and they are accordingly brought to doubt the existence of a God who is at once almighty and all-merciful. In their case, too, scepticism means more than it does to the majority of men. It is not merely the abandonment of a theory. It is the ruin of a life, through the loss of the hope which alone makes life endurable. In all ages the pressure of this problem of pain has been felt. It may even be said to be the driving force in all philosophy and in every great religion.

How shall man be reconciled to life? What view of the world must be taken if man is to live worthily in it? What estimate of life must be held if it is to be at least endurable? How are the facts of suffering to be adjusted to the sense of value and the inspiration of hope, which are the springs of fruitful labour?

II. THE LEADING ATTEMPTS AT SOLUTION.—

1. Pessimism.—Frankly and definitely, suffering is so wide-spread and so intense that the verdict of W. R. Sorley and others, The Elements of Pain and Conflict in Human Life, p. 48.
of open-eyed and unprejudiced observers must be that the world is an intolerable place to live in, and that the solution is unendurable.

The classical example of this solution of the problem of pain is the doctrine of Buddhism, which, in the heart of the 19th cent., was rendered popular Schopenhauer. Pessimism is always the same. It is interesting for its verdict, not for its discussions. Buddha's Four Noble Truths—pain, the origin of pain, the destruction of pain, and the eightfold holy way—are the conclusion of the whole matter. The first contains the result of direct observation. Suffering perception is pain. It is the worst-of-the-worse and miserable. The second traces this universalretchedness to its source in 'thirst,' the desire which attaches the soul to worldly objects and leads to 'becoming': an infinite series of new existences, with a monotonous repetition of birth, pain, and death. The third points out the means of deliverance from life and from suffering, viz., cessation of desire. Let desire cease; then the thread of life will be snapped; then the fountain of suffering will cease to flow. The fourth is Buddha's plan of salvation, containing a careful account of the steps by which the extinction of desire is to be accomplished. Among these morality has its place; and Buddhist ethic has a mild lustre of its own. The crown of the procedure, however, is contemplation. Schopenhauer's 'path' includes art, but, otherwise, is scarcely an improvement upon Buddha's. The issue for both is the same—the cessation of desire, the abandonment of the will to live.

To discuss the philosophy of pessimism (q.v.) would be wasted labour. The Buddhist psychology, with its rigidly atomic sensationalism, has gone to the scarp-hamp. Schopenhauer's dependence on Kant does not give his system considerable weight in the very presence of the development of pessimism, or the final demonstration of its weakness, must be sought elsewhere. Pessimism pursues the empirical method. The first question to be asked is as to the validity of this method and as to the certainty of 'truth' reached by means of it. Can the worthlessness of life be established by any enumeration of details? The question is not as to the possibility of balancing the pessimist's miseries and affords no other of a more cheering nature. Optimism cannot be established by such means. The real question is as to the method itself. The pessimist inference from the facts of pain is not really drawn by mere generalization. It rests on a preconceived theory of values, by which all the facts of life are tested. Pessimism is simply discounted hedonism. If the highest good is pleasure, life is certainly not worth living; for pleasure in any case is not to be had, on any terms whatever, in human experience, to such a degree as to counterbalance the damming facts of pain. If the Creator was bound to secure for His creatures a life of pleasure, He certainly has failed to do so. His power has not been equal to His good intentions. If He exists, we must conceive of Him as stern of His omnipotence, or even as an enemy of the ethical laws of the most precarious. If appeal be made to experts in living, the answer will be that happiness is not the chief good for man and cannot be conceived as the chief end of creation. That place of eminence belongs to moral goodness.

Our question as to the world, accordingly, must be: Is it so framed and ordered that moral goodness is being wrought out therein, not merely in spite of, but actually by means of, the suffering that is to be found in all human life? It is to be observed, however, that the answer might be obtained by an appeal to religion, or, at least, to theology. We might be quite convinced that virtue is the highest good for man, and we might indicate the posture that virtue grows to its maturity through the discipline of pain; still, if there is no principle of happiness, and there is no relation at all to character and cannot be related to the chief end of creation, the theistic conclusion remains open to doubt. It may even become more difficult to maintain the logical position of the moralist, if it be shown that morality is not to be established by argument at all, and that theism is warranted by some other process than that of logical demonstration. In that case the challenge of suffering would be met, but not on ethical grounds.

2. Stoicism.—Another answer to the challenge of suffering is to the effect that, while pain is real and may be very acute, it is one of those indifferent things which a wise and strong man may not allow it to disturb him in any way. The Stoic philosophy is the elaboration of this answer, by means of a full apparatus of metaphysics, psychology, and ethic. Stoicism, however, is more than a philosophical theory. It is an attitude to life. It reappears in noted personalities, when the insistent evils and disorders of the world drive men to the inner region of their own souls, to find there a refuge nowhere else discoverable. The circumstances under which classical Stoicism arose are familiar. It was an age of individualism. No relief or satisfaction could be found in any form of life open to man in the world of that day. Men could not go into the world and find the counterpart of their own moral nature. They could not lose themselves in the activities of city or nation and in the relations of society. They had to find their own highest welfare. And this for two reasons: no city or nation was left standing in its independence; and the soul of man had grown so great in its needs and capacities that it could no longer be satisfied within the limits of civic or national activities, however intense and vivid these might be. Man had discovered himself. He knew now that nothing less than the universe would meet his requirements of a satisfying life. Here, then, is the Stoic gospel, which is at once a philosophy and a message of salvation. The ultimate reality is reason. We may speak of Nature or of God. In any case there is one principle at work in the world and in man. Stoicism is, in this aspect, optimism. It believes in a principle which underlies all phenomena and is moving through all events to complete victory. This principle is the life of all that is, both within man and beyond him. It is a principle of reason and of harmony. It is inherently good; and its supremacy is the highest welfare of the world and of man. The ethical theories, accordingly, are supposed to be derived from the natural or with reason; or, speaking religiously, it is harmony with the will of God. The ancient Stoic doctrine of providence has the fervour of intense religious conviction. It is strange at first sight that such an abstruse philosophy should have any room for a theo-eristic acknowledgment of the facts of pain and evil. It is to be noted, however, that the ultimate reason has been reached in Stoicism too easily. It is, after all, a negation of the vast and confusing facts of a miserable and perplexing experience. It is the bare affirmation of an abstract principle which ought to be the truth of all things and, in point of fact, is reproduced in scarcely any of them. Reason is everything; and yet reason is nowhere. Stoic optimism is a faith; but the Stoic estimate of facts is dark and pessimistic. What, then, is man to do, praised as he is between reason, which is his true nature, and a world in which man and things are so irrational? What attitude is he to take towards such brute facts as hunger and cold, oppression and cruelty, bereavement and ruin? He is not serene and hard. The wise man will choose reason. He will be absolutely sure that this choice brings him a good of which no power in man or in things can really be the possible possession of the absolute best. His harmony with reason sets him in a charmed circle, into
which nothing irrational and evil can ever enter. Pain racks his body; but his body is not his reason. Death robs him of wife or child; but they are not himself, and all his friends that cannot invade the citadel of his own peace. We read the aphorisms and cannons of an Epictetus with a shudder. So calm, so logical, so inhuman! It ought to be noted, however, that the attitude of complete detachment towards pain and evil is an advance upon a view such as that of Aristotle, which regards them as obstacles in the way of a perfect life. So far as they are obstacles.

The perfect life has simply nothing to do with them. The wise man will not court them; but he will not allow them to disturb his serenity. He will make their occurrence in his experience the occasion of manifesting his consistency with reason. He will even benefit by their presence, inasmuch as his conquest of them will invigorate his strength and enable him to gain a yet greater superiority over them. But, in themselves, they have no relation to his inner life, which is complete without them and does nothing to them. At this point our admiration for the Stoic attitude reaches its highest pitch.

Here also our criticism begins. The reason, which is the Stoic's God, and highest good, is not positively related to the manifold experiences of life. It is not in and through them that reason is revealed to man. The man who attains the fullness of his being. Very specially, pain and evil serve no end of reason, and the supreme principle of the universe has no relation to them. Man, in union with that principle, has no duty with regard to them, save to repel them and to refuse them the tribute of an emotion. It is not on these lines that the worth of life can be vindicated or an idealized construction of the universe be established. The Stoic conclusion is mere negation, abstraction, and emptiness. It is good only for defiance; but defiance is not victory over pain; and far less is it transmutation of evil into the means of a greater good.

Yet is it good, even for defiance? Stoicism has too easily assumed that man can choose the reason of the universe and identify himself with it. A painful doubt develops. What if a man's self be the main obstacle to his being identified with God? In abandoning all things finite and particular, will he not need also to surrender himself? Thus the very essence of the Stoic practice and the Stoic gospel turns out to be a counsel of despair. In the night of my self I am to defy the world. But who am I? The very essence of finitude, the very aye of contrast with the reason which is the harmony of the universe. My utmost willing, then, is weakness. Upon my resistance falls the doom of impotence and impotence. Victory is turned to defeat. Self-confidence is no longer possible; for self is the secret of failure. When Stoicism has reached this point, it is ready for a philosophy, or a religion, which shall start where it ended and make the condition of man's achievement of the highest good, not his self-assertion, but his self-surrender. The challenge of suffering might now be met in a different way—not by resistance, but by acceptance. Pain might become, not an obstacle in the path of the perfect life, not even a thing indifferent to man's inner good, but the opportunity and the instrument of his death to self, and therefore, also, of his complete self-realization. Stoicism began with optimism and ended in pessimism. It must, however, be the period and lead to our optimism upon a deeper view of evil than an empirical pessimism had ever reached. Such a stage beyond Stoicism is found in one direction in Neoplatonism, and by another path in Christianity. 3. Meliorism. A further answer to the challenge of suffering than that offered by Stoicism was very prevalent during the recent war. The world, it is admitted, is full of virulent evils and untold sufferings. The answer is, that such evils are to be fought. They are not to be accepted as an irresistible fate or as the appointment of an almighty and sovereign Disposer of events. They are evil, and evils, continually. Judged by the human conscience, they exist only to be resisted, defeated, banished from the experience of the race. They are a challenge to love, sympathy, honour, to be met by sacrifice, and above all by unending war. All intelligences are summoned to take part in this war for peace, this struggle for the abolition of suffering. Among the hosts engaged in this life-and-death conflict some individuals, both human and superhuman, occupy the position of leadership, as well in strategy as in the actual fighting. Commander-in-chief of this army is God. He is not what absolutism, or orthodox theism, has conceived Him to be. He is not the inscrutable ground of all being, the omnipotent will, the omnipotent mind by whose unalterable decree all things in creation are predetermined. He is a finite being, and of course His reason is also finite and human. He in this fight, which is no shadowy and spectral combat, but is for Him as for man tragically real, a genuine life or death struggle. We can indeed scarcely imagine His being defeated ultimately; but He has not won yet. Nay, He cannot win unless He secures the co-operation of man. In this tremendous conflict human beings cannot be neutral. If they are not for Him, they are against Him, slackers, traitors, or open enemies. He sends out a great call for volunteers; and all who have a spark of generosity or heroism will rally to His side. They will fight with the sword of the spirit, which comes from sympathy with the oppressed and tortured everywhere, and with the desperate energy of those who see the issue plainly. They are fighting for their all, for the very life of humanity, and humanity's radiant and high-souled Leader. Every woe pulled down, every disease routed, every social wrong redressed, is a battle won in the long campaign, a stage to the final, all-comprehensive victory. Suffering is being eliminated. Progress is being made. The end, if not in sight, is reasonably secure.

But the practical value of meliorism must rest ultimately in the value of the universe, which the Stoics held to be the same as that of the individual. If these are invalid, their results cannot be permanent. Now the presuppositions of meliorism are mainly three: (1) the universe is conceived as growing in time, its future, strictly speaking, unpredictable; (2) God Himself is avowedly a finite being, in time, sometimes described even as young, with a future before Him in which He has still to make good; (3) the issue of the conflict is, in the nature of the case, uncertain, though every successive victory and the inexhaustible resources of intelligence, human and superhuman, give ground for hope. It is not too much to say that each one of these presuppositions is disputable. Not one of them has won universal consent. Together they constitute a huge hypothesis. If regarded as more than this, they become sheer dogmatism; and dogmas are but iron rations at best, and are soon exhausted.

The error both of Stoicism and of meliorism lies in trying to turn what is partial into an absolute. Because a man is summoned to oppose the evil that threatens him, he should not be prepared to learn that he can carry on till the victory is his. Suppose, however, that this rough dualism between the good man and the wicked world does not represent the whole picture. Suppose that the real source of evil is not without, but within, and that
the conflict that is being waged in the world is the image and the outcome of a more devouring strife that rages in man’s own soul. Then the result will be, as happened in the history of Stoicism, that self must give up its self-sufficiency and must seek the truth of the good, pain, and God must break his self-surrender, and see in its attainment of virtue and knowledge the disclosure and the communication of One who includes the universe in His consciousness and that of the individual. Then the fighter may carry on without anxiety and without self-confidence, because the victory has been won already, not by himself, but by the Power which is working in him, whose servant and vehicle he is. The end of any war is not uncertain, though it can be reached only through a sacrificial ministry.

I ought to be added that meiosis makes no pretension of having solved the problem of pain. It knows no more than any other theory why pain should ever be; and it cannot be blamed for refusing to face the question. A goner detector, however, is its inability to provide hope or comfort for those sufferers who are not taking part in the successful victories, or are not directly beneficiaries of the universal good, not by self-assertion, but by self-surrender, and see in its attainment of virtue and knowledge the disclosure and the communication of One who includes the universe in His consciousness and that of the individual. Then the fighter may carry on without anxiety and without self-confidence, because the victory has been won already, not by himself, but by the Power which is working in him, whose servant and vehicle he is. The end of any war is not uncertain, though it can be reached only through a sacrificial ministry.

SUFFERING

due to the disability of a finite consciousness. From this point of view the problem of evil may be solved; but the solution is really pantheistic.

The criticism of Hume, and the yet more destructive work of Kant, have made the dominance of an abstract Absolute truth impossible for modern thought. The finite has come to its rights. The principle of freedom is too strongly entrenched in the convictions of men ever to be relegated to the sphere of the negative, even if it means that modern optimism can no longer take the position of pantheism, and so affirm the sole reality of good as to destroy the possibility of evil. Its proof must now consist in arguing that evil is inseparable from the highest good, that the highest good is attainable only through the conquest of evil. This argument consists fundamentally in a special reading of the facts of human life. It may be presented as a deduction from an idealist philosophy, or it may appear as an induction from data empirically reached. Fundamentally it is a judgment of value, as intuition of the significance of life, and is reached by either the a priori or the a posteriori method.

There is no evil except for a rational being, who is capable of willing a good which he identifies with the absolute good, but which is in reality dependent upon him. The possibility of willing this lower good is inseparable from the existence of free agents, who, by the nature of the higher through experience of the lower, it is just the high destiny of man and the infinite perfection of God which makes it inconceivable how there should be a universe, containing beings who realize what is the meaning of their own life and of the whole, unless those beings pass through the long and painful process by which the absolutely good is revealed as that which can overcome the deepest depths of evil.1

Watson, from whom these words are quoted, develops them into a view of human nature and history which shows that, the higher the conception of the good, the deeper will be the insight into evil. The man who knows himself a sinner knows no sin is alien to him. He is the supreme sinner of the universe, the chief of sinners; and in the act in which he confesses and dies to his sin the violated order is rectified; and the guilt which he so profoundly acknowledges is lifted to the shoulders of Another, and he is free for ever. Watson does not in this passage explicitly apply this profound conception of an optimism, vindicated through a deeper pessimism than Buddha or Christianity, which is the least known of all the characteristics and the only possible evil. Plainly, however, the one problem lies within the other. The deepest evil man can suffer is the division within his own spirit. Let him come with the Absolute he healed, and his breach with nature cannot fail to be healed likewise. The truth of nature is spirit. If the unity of spirit rise triumphant above the dualism that a false assertion of freedom has wrought, there can be left nowhere in the universe any element of difference, and therefore of evil, which is not in process of being transcended in the realization of the ultimate good.

Many writers who do not adhere to Watson's type of idealism base their ethical view of the universe on the facts which he emphasizes. The world was certainly not framed to produce the pleasure of all sentient creatures or the happiness of human beings. The highest good is moral, and moral good can be attained by man only through a process of discipline. A world which made goodness easy would make true goodness impossible. By work, by suffering, and by his own character is perfected. The ethical and optimistic inference is more securely drawn from a world with imperfections, in conflict with which character is refined, then as a result of which either neither physical nor moral evil was present. It is possible to believe that the Creator of such a

1 See art. LEIBNIZ and PESSIMISM AND OPTIMISM.
world is good and wise and allembracing, whereas such a faith would be valueless if the world were a machine for turning out mechanical perfection. This does not mean, of course, that for every pain we suffer there shall be a corresponding good. Physical suffering comes to us through our place in a cosmic order whose laws operate with absolute impartiality. We would prefer that it were otherwise? Yet in such a world, and in such a world alone, can the hypothesis of a personal God be sustained. An individual of regulated, observed, fact, the good is making progress towards a victory, which may be delayed, but which stands in no reasonable doubt. One difficulty lies in the path of such modest optimism, viz. the fate of the individual. Most upholders of this view take refuge in the idea of personal immortality. It is granted that the general optimistic estimate requires that there shall be a balance of good for the individual as well as for the race, seeing that the individual is an end in himself, and not a mere link in a chain. But in the vast majority of individuals this balance is not struck within time and space. It is necessary, therefore, to postulate another life, in which the wrongs and sufferings of this world shall be rectified and their memory lost in the realization of perfect good.

The highest remedy is Loro, which turns upon the supremacy of moral worth, and the function of pain in realizing it in the history of individuals and of the race, is intellectually unanswerable. The conclusion is: it is not fatal, it is not good, it is not the case. Under these conditions, it is not needed. It may be that in this case pain is; and pain is inexpressible by a process of reasoning. Over against every phase of the argument stands the intractable pain, or, rather, there stands the pitiful army of the sufferers. Optimism appears satisfactory only when we stand back from the facts. Stated in the midst of them, and our philosophy is smitten into silence. A world, with pain in it—and such pain!—cannot be the best of all possible worlds.

Of course, Omar Khayyam's aspiration is ridiculous. We cannot grasp this sorry scheme of things entire, cannot sway the harshest truths with an understanding heart's desire. None the less, we turn from the best that the optimist can say to the contemplation of a universe which contains such 'things' in it and are conscious of a hauntingly cruel consciousness: they do not fit the lock. Suffering remains a mystery and a challenge to thought.

5. The Christian doctrine of providence.—It cannot be doubted that Jesus had the whole fact of pain present to His mind. He lived in the midst of suffering. Yet it did not present itself to Him as a problem. Certainly He made no explicit reference to the questions with which Job wrestled. His compassions flowed forth unheeded by any theory of the causes of pain. He never viewed suffering as other than a great evil. He devoted a large part of His ministry to its alleviation. But He never stood before it confounded or paralyzed. If He was conscious of its challenge to the God of His adversary, He never argued with an unanswerable heart's desire. None the less, we turn from the best that the optimist can say to the contemplation of a universe which contains such 'things' in it and are conscious of a hauntingly cruel consciousness: they do not fit the lock. Suffering remains a mystery and a challenge to thought.

This experience is not a mystic rapture, to be attained in rare moments by those who have leisure to cultivate the conditions leading to such remote and perilous heights. It may be reached by children, or by those who consent to become as little children. It is peculiarly accessible to sufferers. It is reached in the act by which man surrenders his separateness of will and commits himself trustfully to the divine love as it moves in the midst of all the circumstances. Such an experience cannot be translated directly into a theory of pain. It contains more than any theory can express. All noble idealism seeks to interpret its fulness; and, apart from it, no philosophical solution can be more than an attractive speculation.

The Christian doctrine of providence (q.v.) articulates the leading ideas which are implicit in this experience, and by means of them seeks to exhibit the relation of God to the history of the world. It does so, however, under the distinct understanding that the experience of communion with God, while it is central and all-comprehensive, can be drawn upon to provide ready-made answers to the questions which intellect may raise regarding the course of nature and of human life. The divine love is the answer to the problem. The highest remedy is the unconditional love of God in the life of the Son of God. But this does not mean that a book could be written, solving, on the whole and in every detail, the mystery of pain. No reasoning power can reach a sanctuary where at once comforts and remedies the soul that pain has shattered. The Christian is an optimist, but not a theorist. He knows God. He has seen Him in Christ. God is love. That is the secret. There is no truth outside of love, no power that can withstand love. It dominates the universe. It is almighty. When it is reproduced in man, it is the greatest thing in the world. The doctrine of providence simply says, in different connexions, that the divine love is sure of itself, knows its own design, is baffled by no obstacles, overcomes all enemies, is moving to an end, guaranteed in Christ, which is none other than God's perfect communication of Himself in and to a universe which responds with the 'Amen' of absolute faith and unshaken devotion. Christian optimism blends the confident assertion of love's supremacy with a deep appreciation of the mystery of suffering. Yet the Christian does not employ this key to meet the question of why and wherefore, either as to the presence of pain in the world at large, or as to any individual experience. He bears witness to the fact of love. The acceptance of that fact introduces the sufferer to an experience in which all questionings are transcended in a great possession. Christianity accordingly stands apart from theorectic optimism. It does not, of course, impugn the function of pain, by which philosophers and poets have sought to establish their hopeful conclusions. It can use such instances of beneficial pain as illustrations of its own central truth. It doubts, however, their adequacy to establish, by intellectual demonstration, results so magnificent. It is in full sympathy with their spirit. But it rests its optimism on a different basis; and it presents its results not so much to those who contemplate suffering from without, in order to satisfy their questions, as to those who know it from within, that they may know it better and enter through it into fellowship with God.

(a) The ground of Christian optimism.—The Christian doctrine of providence stands at one point in profound and significant agreement with such an idealism as is revealed in the writings of Caud and Watson. It believes that the problem of pain is part of the wider and deeper problem of moral evil. It does not stay to discuss the fact of
SUFFERING

physical evil before it has dealt with the graver problem of sin. It presents itself as the token of a breach with God, confident that, if that has been met and healed, no other discord can remain finally unresolved. Nature finds its truth in man.

Physical suffering has its analogue in the division which exists between the human soul and God. Reconciliation with God will be the final solution of a mystery of pain which reverberates throughout the universe. In spite of this parallelism, however, the Christian viewpoint is not an idealism, but idealism is not Christianity. The vital question for both is the reconciliation of man and God. How is it achieved? Idealism answers, In an idea. Christianity ventures its all on an historic fact. Idealism pursues the soul to its deepest consciousness of guilt and declares that there already is the reconciliation. The consciousness of guilt is possible only to a soul fundamentally at one with God. In awaking to a sense of his guilt, man knows himself reconciled at once to God and the universe. The spiritual unity is gained; the unification of all experience is thereby guaranteed. Christianity deepens the diagnosis and exhibits a different remedy. In sin man has the universe against him. It reacts to his sin in perpetual judgment, registering in his character and his career, in loss and death, the condemnation which man's attack upon the universal order has brought upon him. This automatic reaction does not stand apart from the will of God. It reflects one aspect of the divine mind regarding sin and carries out one part of the divine dealing with it. But sin is not the ultimate reality of the moral world; and judgment is not the whole mind and will of God. This is the measure of the reconciliation.

The reconciliation is accomplished not in an idea, but in the action of God. The love of God goes into action coincidently with the sin of man. It is true that God's experience of time must differ from ours in a manner necessarily inconceivable by us; so that it is not improper to speak of an eternal act of love and an eternal atonement. But the standpoint of Christianity is, definitely historical. Sin is in time. Sin-bearing is in time also. Love can reconcile the world to God only if it pass to the world's side and in the world realize experimentally the whole meaning of sin. It must enter into this life's experience more tragically than any penitent sinner ever has passed through. 'Christ died for our sins' (1 Co15). It is the first, the only, Christian gospel. In the action and passion of a life crowned by the Cross Christ is not another than God. He is God, in a temporal experience, manifesting an eternal fact. Love has gone to the utmost limit of sin and suffering and has returned bearing the fruits of that unimaginable agony in a world reconciled, mankind redeemed, sin and evil judged, exposed, broken. The fact of sin—that is pessimism. The fact of Christ—that is optimism. Christianity confronts the world of sin and suffering with the deeper suffering of divine sin-bearing love. All else things have to it to say is an inference from that basal fact. Its doctrine of providence consists in developing the significance of that fact for the varied discipline of life.

'\"The Christian faith in providence is an immediate inference from the Christian experience of redemption, and it is an intuition as vast and unqualified as the redeeming love on which it rests.\"'

To be reconciled to God is to be reconciled to life. To be at one with God is to be at home in the universe. The reactions of the order with which we now live in harmony set like a tide towards our perfection. 'All things work together for good to them that love God.' Love has taken the place of the cross and is being possessed by it, we possess all things.

'The NT is lyric; but it is not a freak of poetic fancy. It is the song of a victory won, the record of an experience, not the less reliable that it is amazing, an inference which is strictly logical, from the greater to the less, though it surpass all calculation. The God of redemption, who had delivered him up for us all, how shall he not with him also freely give us all things?' (Ro 8:8).

(b) The Christian attitude towards suffering.—

(1) Pain means obstruction of life. It is essentially evil. It is not the intention of God that any of His sentient creatures should suffer. It is not possible to say to every sufferer, 'God sent you this; He has laid this affliction upon you.' This judgment upon suffering as evil will be assailed from many points of view, scientific, ethical, and religious. Suffering, it will be said, is inevitable, as an element in the evolution of the world. It has been experienced by innumerable sentient creatures, millennia before man appeared on the earth, before the first sin was committed. Suffering, it will be urged, is a splendid moral discipline. It is, therefore, a good, of which no man can complain that he has had too much. It is alleged to reply that the Author and Object of Christian faith, the Revealer and the Organ of the infinite love, did not think so. He steadfastly set Himself to reduce the sum of pain. So far as we know, He never met a case of pain which He did not relieve, if the conditions were present for His doing so. In such action He Himself suffered exceedingly. For such a man to make suffering necessary to the fulfillment of His redeeming vocation (Mt 8:7). But His doing so cannot be construed as an approval of pain. Rather was it a judgment upon sin as an evil to be removed at any cost of pain. This judgment, moreover, was not an implicit hedonism. It would be ridiculous to make such a suggestion regarding the teaching of Jesus. He never taught that it was a primary concern of God's love to keep His creatures immune from suffering. He absolutely denied that the crown of life was pleasure. But this cannot be construed to mean that He regarded suffering as a good, or as necessary for the attainment of life, or to purge the soul of religion. It does imply, however, that He regarded the condition of the world as abnormal. He occupies the point of view of the religious mind of Israel in looking upon the world as standing in intimate and vital relation with human life. There is a strict relevance between these two. If there be evil in man, there will be pain in nature. Nature stands so far near to spirit that it thrills responsive to the breach that sin has wrought between the human spirit and the divine. Paul is enlarging the same idea inherited from the OT, and reinterpreted through the death and resurrection of the Redeemer, when He speaks of the 'sighing of creation,' of its subjection to μακραίσθη and its share in the hope of redemption (Ro 8:22). There is suffering in nature; and there is suffering in man as part of nature. And all suffering, in nature or in little children, is the exposition and illustration of that which, in self-conscious and self-determining man, is sin. Dognosticism regarding the origin of sin and suffering is foreign to the approach for a theory is to bring the Eternal within the limits of time. We have nothing to do with origins. We have to do only with meanings and values. And this is the meaning which Christianity puts upon suffering. It means life is evil; and it means evil. The first thing to be done with it is
not to discuss it or apologize for it, but to relieve it, if possible, and at least administer the healing of sympathy. This, then, is the first position of Christianity with respect to pain: it is not God's will for His creatures that they should suffer; His mouth shall be closed from His universe for evermore.

(2) Pain is not an unanswerable challenge to theism. It is not inconsistent with the supremacy of love. Love has attained a final victory in an event which occurred in time. Love has snatched victory from defeat. It has transmuted the foulest crime of man into the instrument of the divine redemption. It has done this greatest thing. How shall it not accomplish all lesser things in the same order? He who redeems from sin will not be baffled by suffering. It is to be noted carefully that Christian thought, in claiming that God is not hindered by the obstacle of pain, is not passing from ethical to non-ethical considerations, giving up love to take up power. What Christian experience finds in the Cross of Christ is not an incident, an act over and done with, like the punishment of a criminal. It is the historic revelation of that which is in essence timeless, and endures through all time, and triumphs in all history. In the Cross of Christ is the supreme revelation of the divine immutability. God is present in all pain. He suffers in all suffering. He is the chief sufferer in the world.

This is the doctrine of the Cross, the surest affirmation of faith: 'In all their affliction he was afflicted.' The incarnation of God in Christ is the deepest truth of the divine relation to the world. Nicene orthodoxy is not orthodox enough. Mired by the Greek conception of the Absolute, it ascribes divinity to One who, nevertheless, has an experience of which God is incapable. But the God whom faith finds in Christ is the only God there is. He suffers in all that sin has wrought, and His suffering is the redemption of the world. Christianity meets the challenge of pain, not by anxious computations of the amount of good which may be extracted from the agonies that fill the records of time, but by the unveiling of the sufferings of God. The Cross is the only Christian apologia. Only through the suffering of God is it tolerable to suppose that a world with pain in it is finally triumphing and carrying on within its tragic history the energy of the omnipotent redeeming love. We time-determined consciousnesses cannot pretend to understand God; but we know that He has made an estimate that is sure and pierces the inevitable mists of time. God is love. This know. For the rest we can afford to wait.

(3) Christianity sets out in the name and by the power of a victory already won, on its age-long vacation—the conquest of sin and suffering. To accept at God's hands the deliverance He has wrought by pain is to be committed to a perpetual war with pain. The campaign is world-wide. The battles are innumerable. The fundamental strategy is to utilize for every instance of pain the energy of love, which is the very nature of God and is available and adequate for the redemption of man. In this plan, if by any chance: theology and Church policy have fallen behind the actual experience of Christians and have failed to push home the victory.

Three lines of action are prescribed by the consciousness of redemption.

(1) The employment of pain, as is here that optimism is most at home. Browning has rung out the answering bell of sympathy. It is absurd to assume that in a sinful world the perfecting of souls is won through suffering. We are to react on the pains we endure, and so make them subservient to the inmost will of moral stability. We have to be swift and earnest in this subjection of pain to our uses; for the opportunity of exploiting it passes with passage of time. We are to lay to heart the thought which finds eloquent expression in Ugo Foschi's 'Sermon in the Hospital':

'While we suffer, let us set our souls
To suffer perfectly: since this alone,
The sick soul, which is this world's special grace,
May here be perfected and left behind.'

All this is to be accepted, rejoiced in, and practised. The only reservation to be made is that such considerations be not used as a Christian justification of pessimistic optimism as a theory. The data are not broad enough. The victory of the Cross was the first instance of the victory of truth being in danger of being attacked in detail and made to yield hoity to the conqueror. This is the paradox of the higher life of man. Apart from the faith in triumphs that have been won the irrelevant pain in nature and history would rout the most consistent optimist.

(ii). The mastery of conditions. This is the sphere of organized ministry. All such service, whether operated by idealists or materialists, Christians or non-Christians, is a demonstration that the conditions of human life are abysmal, and that, before full victory can be enjoyed these conditions must be improved. Another preoccupation, however, has to be made if such ministerial aid to sufferers is to be completely successful, and is to be the world-wide. By this means the idea of the cure of the sick soul is the cure of the cause, and the hope of the last is the hope of the every day. He who suffers, who, of course, is the primary minister, will find that the cure of his soul is dependent on the cure of the world.

(iii). The direct exhibition of the ultimate cure of pain, viz. the love of God in Christ. This is not an extravagance of unreasoning enthusiasm. It is sober fact, verified by innumerable instances; God's love does heal pain. If the love of God were remittent in proportion as the evil of the world, what would remain? This is not an abstract speculation; it is a question whose answer cannot be arithmetically complete, and yet is absolutely plain in the limits of bounds of human endurance and satisfaction. We must make thorough work of the category of solidarity. Soul, body, and man, race as it will, are helpless but for the revelation of the sons of God. Man's part in this comprehensive conquest of pain corresponds to the leadership of the world. In him the meaning and value of the world are consciously apprehended and uttered. By him only have they been generously ministered, and the forces which should have filled the world with the peace and joy of functions normally operating and perfectible applied have been hindered, and man and nature have been put to illimitable torture. It is not morbid when a man sees in the pain of innocent children, of wronged workers, of the poor even of the criminals, in the highest rank, the sign and seal of his own sin, the issues of a mighty evil in which he is indispensable. It is the simple fact.

Therefore men has special work to do in the healing of pain. He has to receive the healing which love can bestow in his own experience, allowing it unhindered exercise as he is reconciled to God and to life. He has to become the conscious organ of that healing to all who suffer. He is never to inflict pain except in so far as pain, in the conditions under which we live (themselves abysmal), is the instrument of moral or physical benefit. He is to be ceaselessly the channel of the love of God to man. Simply by being in the communion of God, one living in the divine love becomes source and centre of healing to the souls and bodies of all around. The evidence is matter of daily experience. Yet the power of healing is not a bare physical force. It requires conscious appropriation and direction. Love that heals is not magic but, as so effectively as a vocation, accepted and fulfilled. The specific task of love belongs to the manifold opportunities of life, and these are innumerable. They include all ministries of help. In particular, the hospital obligation is clear. The one to whom love is doing its reconciling and healing work, One is witness, the other is prayer. The Church, called into being by love's deed, has been

SUFFERING

slow in its recognition of these evident duties—
slower, and less confident, in respect of the second thing, that is, the direct function and high privilege of humanity do chiefly consist. By prayer man enters the sanctuary of the divine immunence. In prayer the indwelling love of God, by the operation of a new centre of energy from which to work. Prayer is the liberation of the spiritual energies that are saving the world. Prayer provides God with the conditions without which an Omnipotence that is, moral, and not physical, would not act. The question will be asked, Does this mean that any given pain can be relieved by prayer? The answer must be that dogmatism and prediction are forbidden by the organic structure of the universe. No man sins by himself or suffers by himself, and no man is redeemed for himself alone. It is impossible to cut a man out of the texture of his existence and operate on him as though he were an unrelated atom moving in empty space. We have no calculi by which to work out the measurements of the individual's sin and sufferings or to forecast the immediacy and completeness of his deliverance. At the best answer must not "limit God." He certainly does not fling about His powers, healing at haphazard. But with equal confidence we may affirm that His healing power is exerted in the medium we name "prayer" and have permitted it to operate. The ordo salutis here is fixed and cannot be altered: first the reconciliation, then the healing; first the faith that confounds itself absolutely to God in Christ, then the faith that refuses no gift of God.

The experience recorded in the NT is normative. First, believers owned Jesus Lord, then they received the Spirit. The love to which they committed themselves lived on in them, and brought mightily. No complete catalogue of such operations could be given. But among the lists that are given we read of healings (1 Co 12:28). The gifts of the Spirit are not magical, and there is nothing stereotyped in the activities produced by them. It would be ridiculous to infer from the presence of a certain gift in the NT communities that it must be actual in the Church at all ages. The gifts were created for use. If the use ceased, the gift was withdrawn. But it is fair to regard healing as a sporadic and passing manifestation of the Spirit's presence! Healing of the world's pain is certainly a present reality and an assured reality. Is it proper to make a distinction here and say that we will believe in the forgiveness of sins, but draw the line at the relief of pain? It may be that sects which we justly condemn for their absurd metaphysic and their ridiculous jargon, and for faults graver still, have such influence as belongs to them because they have been bold enough to rely on a healing power which belongs to the love that was, in Christ, the reconciliation of the world. It may be that the Church has to learn in this matter from those whom, quite justifiably, it has excluded from its fellowship. In any case, the conquest of pain is the work of omnipotent atoning love; and in prayer man co-operates with God in healing the hurt of humanity and of the world.

(4) Christian faith is more than conqueror of pain and can do much more for the sufferer than relieve him of his distress. Christianity teaches the transmutation of pain. Those who love God find that all things, pain included, work together for good. As they go on to experience of suffering, they make a still more wonderful spiritual discovery. In their pain they are not alone. They meet in that sequestered place Another, and He too is a sufferer. These two pains, theirs and His, draw together into the unity of suffering—He in them, and they in Him; their pain His, His pain theirs. This is not to escape from pain. It is to take out of pain the element which makes it an evil. When the self is surrendered to the love of God in Christ, the sting of pain, which is sin, is taken out of it. It becomes straightway part of a life-fellowship with redeeming love. It must not transmit a counter current of pain. It has been taken up into the pain that is the price of the world's redemption. There is no question of diminishing the value of love's redeeming deed on the Cross. But the method of triumphant love rem meme The agony undergone the method of Calvary. The sufferings of Christ rise like a tide in the souls of His people (Phil 3:3, Col 1:24). Their sufferings take on the quality of His. They are ministerial, vicarious, sacrificial. They are not on that account less hard to bear. Were shame and spitting, thorns and nails, less painful because Jesus bore them as part of His obedience? Suffering born with Him is suffering still. It is, however, bearable, and far more than bearable. It is utterly changed. It is not a fate, but a vocation, the highest service that a soul can render to God or man. Its evil is blotted out. It is a moment in the being of the highest good. This does not mean that in every suffering a believing man will be conscious that it is good. The pain may inhibit the sense of joy, even as it did with that man in the leper's house, and be taken and retained by the servant of God as the crown of his ministry, even as Jesus refused to come down from His Cross.

Perhaps James Hinton overstates the thought when he suggests that our feeling of pain in sacrifice is due to the lack of a perfect love in us. Sacrifice is pain; but in deepest anguish we know it preferable to the best that the world can give.

Remembering these things, what should we consider the presence of pain in the world to mean? . . . Does it not mean that a world in which so much of pain is present, is adapted—was altogether made—to be the scene of an overpowering, an absorbing love? . . . The reason we are made, or seem as if we were made for pain, is that we are made for love, . . . What is the happiness God has meant us for, the happiness to which human nature is fitted, to which it should aspire? Should it be that from which the painful is banished, or that in which pain is latent? Should pain be merely absent, or swallowed up in love and turned to joy? . . . The pain that is latent in man's bliss is latent, too, in God's; in His most as He is highest: and that great life and death to which the eyes of men are ever turned, or wandering ever are scaled, reveals it to us.

All pains may be summed up in sacrifice; and sacrifice is—of course it is—the incarnation of joy.

This is a nobler optimism than that which rests its case on the fruitfulness of benefit out of pain. Drowning, who is the poet of the one, has not missed the other:

1 I think this is the authentic sign and seal
2 Of Godship, that it ever waxeth glad,
3 And more glad, until bloomless blossoms burst,
4 Into a rage to suffer for mankind,
5 And recommence at sorrow: drops like seed
6 After the blossom, ultimate of all the ideal

The mystery of pain, then, is hid with Christ in God and becomes the open secret of the universe. All pain is a symbol of the suffering of God, and fulfils the function of sacrifice. These innumerable untold and incalculable pains of all of humanity are drawn into the compass of the atoning suffering of God. The sign of the Cross is upon a world of sin. The ministerial, vicarious, sacrificial quality of suffering begins to the history of the world. Its presence is ever more closely marked as the scale of being rises. It can be traced in each stage of the 'ascent of man.' It can be followed along the whole course of history, as if blood and tears are the visible signs of that which flows through human history. It is useless to make computations, and ask, Was even redemption worth such a price? It would

1 The Mystery of Pain 2, pp. 57, 58, 59, 60, 62.
2 Redemption's Adventure.
not be, if the price paid were merely human pain. But within the human pain is hid the anguish of crucified love. It is part of 'the reproach of Christ.' Because the infinite love shares this pain, it is transmitted. It becomes part of the price which God must pay for the redemption of man. Nothing could apologize for God, not any benefit wrung from tortured bodies and slaughtered souls, if He merely looked on from a throne of omnipotence. But a God who suffers is immune from criticism and does not need our defence. The suffering of love has redeemed the world and has not lost its redeeming power.

Confessedly, this is a faith, not a theory. It is not the less, but the more, sure on that account. It is not a precarious inference from insecure premises. Its premises are the love and suffering of God, revealed in the ministry and the Cross of Christ, and apprehended in the act which commits the soul to their redeeming power. Faith is not an act finished in a spasm of emotion. It is the assumption of an attitude towards God and towards life, warranted and established by God's redeeming act.

Faith, says a great Christian teacher, 'is the whole being and attitude of the soul as determined by the saviour-love of God in Christ.' Love, and that love which He evokes in us, and on that love and that alone, it rests."

Therefore, Christian optimism is not a document which is written, signed, sealed, and delivered to a suffering world to solve the whole problem of suffering. It is the outcome of an experience. Experience cannot be gathered up, put aside. It lives and grows from a centre. Those who will know the force of its demonstration must occupy the central standpoint. As that is reached in the act of self-commitment to the appeal of divine suffering love, it can be explained only in the continued action of communion with God. Faith in divine providence is not easy. Did any serious thinker ever imagine a state of mind in which faith would rest on an argument? Faith is a post held in the midst of a furious attack which never ceases. It can be held only in prayer. Prayer is at once communion and co-operation with God. In both aspects it carries with it confirmation of faith. Without it faith withers and dies. As we live by receiving the divine love and by acting in the power of it, even to the last limit of devotion, the world where men suffer reveals itself as still within the compass of a sovereign purpose which through pain is passing to its victory. And prayer is the concentrated power of that life, the life of receiving and of giving. Prayer, therefore, conveys the final proof of divine providence for the day. Prayer is the daily prayer of suffering coming into the light of divine victorios love.

(5) Lastly, the Christian view of pain is available for comfort. Comfort for such suffering as the world is full of cannot consist in words.

'The philosopher's generalisations faller, and only the professional politician, babbling about all being for the best, keeps on talking. His observations are highly admirable. But even faith is almost ashamed of them. It is better to say nothing. There is simply nothing to be said."

The only offer of comfort that will not insult the sufferer comes from the love of a God who can and does suffer. This is the knowledge we have of Him. Where suffering is He is, in the fullness of a power won by His own pain. In Him there is no comfort. A world without suffering love at the heart of it would be an atheistic world. The last word regarding it would be unrelieved pessimism.

Comfort is the work of God within the soul. It is direct, immediate, as the divine Spirit enfolds the human in the unity of a mutual indwelling. Its action is beneath the eye of the observer; yet, when there is no eye to see, no heart to pity. It is the privilege of creatures whose consciousness is other than human. It upholds those who are not conscious of its operations. Beneath their pain there is a divine experience which they do not know. It is withheld from pessimism, only because it holds thus profoundly the truth of the divine innanence. Only so is it withheld from blasphemy, as it beholds the agonies of the world. Even so, it is freedom with which Christ has clothed us, and does it lay upon those who have received the Divine consolations the duty of ministering to those who suffer. Their fulfilment of this duty consists in making themselves the vehicles of redeeming love. They have nothing of their own to give. The comfort they can give is simply the comfort they have received, and that is the love of God. Whatever they say and do will be effective as it bears witness to, and is the medium of, this—the only medicine for human hurt. In many cases silence will be the most perfect human vehicle of the divine comfort.

The Christian view of pain does not warrant the conclusion that in the case of the individual all suffering will cease. The organism is disorders, and the elimination of pain cannot take place at haphazard. The doctrine of divine victorios love, however, rests on the eternal victory of love, of which the time-development of the world contains the progressive achievement. It, therefore, becomes a power of victory which will end the pain of time—the complete reconciliation of the world.

Without this, comfort in suffering would be incomplete. God has no comfort to give if He is uncertain of what He had in mind. Love is triumphant over sin and suffering; therefore both sin and suffering will cease to be. The final message of Christianity to a suffering world is one of an immortal hope:

'There shall be no more death, neither sorrow, nor crying, neither shall there be any more pain; for the former things are passed away.'

the authority of Oriental tradition. Noldeke then cites a number of passages showing that, in the first two centuries of Islam, garments of coarse wool were worn by the community, and especially by those who followed an ascetic way of life. The words *labasa* 7- *saf*, 'he clad himself in wool,' occur frequently in the early literature and signify that the person to whom they are applied has renounced the worldly life and become an ascetic; at a later period, when asceticism passed into mysticism, *labasa* 'saf' generally means 'he became a Sufi.' In Persian too the ascetic is often called *jasaknian*, i.e. 'wearing a woolen garment.' The old Muslim ascetics who clothed themselves in wool borrowed this practice from Christian hermits or monks. When Hamnund b. Salama († A.D. 784) came to Basra, he said to Farqad al-Sanji, who appeared before him in a woolen garment, 'Put off this (embolium) of Christianity.' Such garments are described as *zīyi al-
mitak̄an*, 'the dress of the Christian ascetics.' A *hadith* put in the month of the Prophet states that Jesus Himself used to wear them.

We are told by Jami 3 that the name 'Sufi' was first borne by Abū Ḥisham al-Kašfa, a contemporary of Ṣūfyan b. ‘Aṣir, mentioned in al-Thauri’s Risâla, 1878. According to Qushairi, 4 it came into vogue before A.H. 200 (= A.D. 818). Al-Sarrāj mentions the view that it was invented by the people of Baghda. Although the precise origin of the term is obscure, it seems to have gained currency during the period of transition from asceticism to mysticism, about the end of the 2nd cent. of the Hijra, and may have come into some stage in that process. No weight can be attached to the apocryphal traditions which seek to prove that the appellation existed in the Prophet’s time or even that it was current back into the pre-Islamic age. The Sufis of the 3rd and 4th centuries are claimed to be the true spiritual descendants of Muhammad, considered themselves fully justified in fabricating evidence in support of their assertion. So far as the present writer is aware, the first Arabic writer to use the word ‘Sufi’ is Jāḥiz of Basra († A.D. 869), who refers to ‘the Sufis amongst the pietists’ (al-
ṣīfīn wa-’l-
naṣībīn) and enumerates the names of several who were famous for their eloquence. In the present article the terms ‘Sāfi’ and ‘Ṣāfi’ are to be understood in their ordinary sense, viz. as equivalent to ‘Muhammadan mystic’ and ‘Muhammadan mysticism,’ although the former term is used occasionally by al-Thauri’s Risâla, 1878, and later works of the same type, who should hesitate to describe as mystics in the proper meaning of the word. In Persian and Turkish poetry ‘Ṣāfi’ sometimes means the sense of ‘hypocritical pietist’ or ‘dissolute free-thinker’ and may be used as a term of reproach by poets who are themselves Sufis of a different sort.

2. Origin and early development.—The beginnings of mysticism in Islam take us back to the great ascetic movement which arose largely under Christian influence, during the 7th cent. A.D. This is reflected in the biographical works containing notices of eminent Sufis, which include the names of many of these early ascetics.

Nöldeke then cites a number of passages showing that, in the first two centuries of Islam, garments of coarse wool were worn by the community, and especially by those who followed an ascetic way of life. intense religious exaltation, an overwhelming consciousness of human frailty, an all-pervading fear of God, and utter submission to His will. There was no organized monastic life, though some ascetics wandered to and fro accompanied by a few friends, on held prayer-meetings in their own houses or temples, and they studied the Qur'an or meditated on their spiritual experiences.

Baṣra seems to have been the centre of an anti-
ritualistic party who laid stress on the higher
aspects of asceticism, regarding it as essentially
an inward thing, a matter of individual personal
consciousness of the Muslim faith, organized more
closely the divine unit and contented to account for its development
and indeed for its origin. If there were more gods
than one, says the Koran, the heavens and the earth must have come to and fro, and any attempt to make a god "good" metaphorically, speculation quickly leads to something
like the monothelians, or the necessarily inconsistent
Him and man is that the former is eternal, the latter transient. The relation between God and man is essentially; the question of the relationship of God, or not. The former supposition leads to polytheism, the latter, to neoplatonism. If, then,
God is not outside matter, He must in a way be identical with
and the most thoughtful of the Sufis, accepting this conclusion, said that the Sufis were more

Theoretically, there is no reason why the Sufis should not have received their pantheistic goal in some such fashion as this, and probably they did, although in most cases it was a truth grasped
intuitively from mystical experience rather than the result of philosophical reflection. But, in
seeking to explain how they advanced from quietism to pantheism, we cannot proceed on the
assumption that they were wholly impervious to non-Islamic ideas. The influence of Christianity,
Neo-Platonism, and Buddhism is an undeniable
fact. It was in the air and inevitably made itself
felt. Of its extent and importance we have ample
evidence, although the materials at our disposal seldom allow us to trace its exact course.

During the 3rd cent. Sufism enters decisively
on a new course. The ascetic and quietist spirit,
though still strong, is overshadowed by speculative monotheistic tendencies which had
hitherto remained in the background but now
assert themselves with increasing boldness.
Notwithstanding the dominant and vital part which
they have played in the further development of
Sufism, it is a mistake to identify its triumph
with the origin of Sufism. Nor is it less a mistake
to describe them as an entirely foreign element which flowed into Sufism from outside and rapidly
transformed it, so that all at once it became
different in kind. The germs of Sufi pantheism
are to be found in the Qur'an:

E.g., xcviii, 88: 'Everything is perishable (ḥālīlā) except the face (injūl) of Allah'; lv, 201: 'Every one on the earth is passing away (malt), but the glorious and honoured face of thy Lord abideth forever'; and ii, 106: 'Wheresoever ye turn, there is the face of Allah.'

Certainly the Muslim mystics might have arrived independantly at the conclusion that Allah is the only
God of the universe.

* It is conceivable that this notion may have come into Islam from outside; on the other hand, speculation on the doctrine of the divine unity appears sufficient to account for its development
and indeed for its origin. If there were more gods
than one, says the Koran, the heavens and the earth must have come to and fro, and any attempt to make a god "good" metaphorically, speculation quickly leads to something
like the monothelians, or the necessarily inconsistent
Him and man is that the former is eternal, the latter transient. The relation between God and man is essentially; the question of the relationship of God, or not. The former supposition leads to polytheism, the latter, to neoplatonism. If, then,
God is not outside matter, He must in a way be identical with
and the most thoughtful of the Sufis, accepting this conclusion, said that the Sufis were more

The main features in the evolution of Sufism in the 3rd cent. may be set forth as follows.

The older Sufis had sought to bring every
together, and thought of their lives in harmony with
the divine will—an ideal which expressed their
conception of Allah as a transcendent personality,
'the Lord of created beings,' and which they
attained by means of asceticism. This theory and
practice naturally produced (1) the doctrine of
divine love, which is the highest positive form of
quietism, and (2) ecstasy, which is frequently a
result, either involuntary or intentional, of ascetic
exercises. Although the early Sufis were more or
less orthodox, their relation to Islam being not
unlike that of the medieval Spanish mystics to the
Roman Catholic Church, a religion of love and
passion, late results which seem to have come into effect
sooner or later. ribbi declared that she had no
SUFIS

How to use the Sufis.

The history of the Sufis, as well as their teachings, reveals a deep connection with the mystical traditions of other cultures. It is possible to find parallels in the Sufi teachings with those of other religions, such as Hinduism, Buddhism, and Christianity.

One example will suffice. The mystical knowledge of God peculiar to the Sufis is denoted by the term sunnat al-qiyas, i.e., universal knowledge or revelation. It is defined in this sense by several Sufis of the 3rd cent., but we owe the first important speculations on its nature to Ibn 'Arabi (Kitdb al-Mahjuh, 11, 1906), of whose Persians, it is said, he was the head of the sect (the Sufis), to all descends from it. The Sufis regard it as an exegyptian; it yet shows the significance of the man. Now, Ibn 'Arabi was a Copr or Prophet; he is described as a philosopher and a scientist of Greek wisdom; during his life he was regarded by many as a divinity (free-thinker). Here we have plain indications that, as soon as mysticism begins to develop, it draws inspiration from the doctrine concerning "a god or higher knowledge which can be taught with safety"—as Ibn 'Arabi also says—"only to the "perfect" or "fully initiated."' And while Ibn 'Arabi cented the Sufi's supreme experience as a super-intellectual God-given knowledge, peculiar to those who are "sons of God with their hearts" and ultimately involving complete unconsciousness ("the more a man knows God, the more he is lost in Him"), he never makes use of the term fa'at, which is associated with the mystic, the god-intoxicated, the Pick-this, or the Pick-exalted; Fa'at must be regarded by "passing-away"; it may be applied to the appearance of evil qualities or, in its political, to the individuality of the whole individual self of the human. Possibly the term was derived by Muslim mystics from a Vedantic term, but no certain evidence of this was quoted above, but in Krishna's words, where it first came into prominence, it must have been deeply colored by Perso-Indian ideas. The definition of fa'at as a moral state, and of the means by which the extinction of all passions and desires is brought about, agrees so exactly with the definition of nirvana that Buddhist influence cannot be denied. As regards the pantheistic aspect of fa'at, the Vedanta and similar forms of Indian thought readily suggest themselves. Here again the lives and writings of representative Sufis, in conjunction with other historical evidence, provide the only trustworthy clue. Bhavar was a native of Bharat, his grandfather was a Zoroastrian and his master in Sufism a Kurd. He learned the mystical doctrine of passing-away (fa'at) in the divine unity from Abu 'Ali al-Suhrawardi, a celebrated mystic of Sufism. He was a lover of beauty and a practiser of "watching the breath" (passan ansat) and described it as the highest form of asceticism. The chanting of the fa'at is probably reflected in the utterances which his legend records, even if their authenticity may be questioned—"for example, 1

2 Many illustrations of the close parallelism between the leading ideas of Hellenistic religious philosophy and those of early Sufism may be found in the introduction to Heiberg's The Book of the Dead, tr. A. J. Wensineck, Leyden, 1919, p. 17.

3 Jami, Nafahat al-insan, p. 46.

5 Ibn 'Arabi, al-Hamdu l'l-walid, 1904, p. 91.

7 Tadkhirat al-nilumi, I, 192, 10; tr. T. W. Rhys Davies, The Tadhkira of Al-Baladhuri (PTS), London, 1903, p. x.

1. I went from God to God, until they cried from me in my, "O Thon!"

2. Verily, I am God, there is no God except me, so worship me. Glory to me! How great is my majesty!"

3. "Nothing is better for man than to be without sight, having no knowledge, nor anything, that he acts, and besides, there is no凡是, all, he is with all."

4. "Creatures are subject to states, but the gnostic has no state, because his vestiges are obliterated and his individuality (taswi'i) passes away in the individuality of Another and his traces are effaced at the beginning of the world."

At this time earnest Sufis did not habitually and openly indulge in the language of 'delicitation.' The doctrine underlying it was esoteric, reserved for adepts in theosophy, who usually were more discreet than Bāyazīd and Hāllāj. They saw the necessity of keeping their mystical theories in close touch with the religious life which they professed. Consequently the Qur'an and the Sunna were proclaimed to be the standard to which not only speculation but also spiritual feelings and states must conform.

Let us now consider the methods whereby a reconciliation was effected and take a general survey of the religions existing between Sufism and Islam.

3. The Law, the Path, and the Truth.—The Qur'an contains a few passages from which it can fairly be argued that Muhammad had in him something of the mystic, but that book as a whole is no better fitted than the Pentateuch to form the basis of a system of mysticism. Nevertheless, among the Sufis, adopting the Shi'ite principle of allegorical interpretation (ta'wīl), were able to prove to their own satisfaction that every verse and word of the sacred text hides treasures of meaning which God reveals to the elect—meanings which flash upon the inward eye in moments of rapt meditation. So much being granted, one can imagine that it was easy to show, in a Nilistic fashion, that any mystical doctrine whatsoever and to maintain that Sufism was really the exoteric teaching of the Prophet communicated by him to his son-in-law, Ali b. Abi Ta'b. From the same principle it follows that the Sufi interpretation of Islam admits an endless variety of divergent and even contradictory beliefs and practices, all of which are equal valid in kind, though not in degree, since the meanings of the Qur'an are infinite and reveal themselves to each mystic in proportion to the spiritual capacity with which he is endowed. Hence the Sufis are not a sect, and there is no uniform doctrine or interpretation which is called 'Sufism.' This many-sidedness is signified in the term is exemplified by the innumerable attempts made to define it. Similarly, the attitude of the Sufis towards Muhammadan religions law depends on a subjective criterion. Some punctiliously fulfilled their ritual obligations, while at the same time they recognized that forms of worship have only a relative value in comparison with the 'works of the heart,' or are altogether worthless except as symbols of spiritual realities. To make the pilgrimage, e.g., is to journey away from sin; to put on the pilgrim's garb (ḥajj) is to cast off with one's every-day clothes all sensuous thoughts and feelings. This is a well-known doctrine of the Isma'īlis, from whom the Sufis seem to have borrowed it. Others are antinomian, whether they be free-thinking and free-living dervishes, genuine mystics like the Mahánānis described by Hujwīrī, whose fear of men's praise caused them deliberately to act in such a way as to incur reproach, or gnostics supremely indifferent to the semblances of religion and
morality in a phantom world. Many Sufis, however, insist that, normally at any rate, perfect realization of the Truth (haqiqat)—i.e., the consummation of the mystical knowledge (‘ilm)—is not simply acquisition of the Law (shar‘at) but includes it as a facet or aspect of the whole. This view will be better explained if we give a brief account of its ethical and psychological basis.

The Sufis regarded themselves as a peculiarly favoured class, possessing an esoteric knowledge of the Qur‘an and the apostolic traditions, and using mystical-expressive language which an ordinary Muslim could understand. This fostered a feeling of brotherhood, and it was not long before traces of organization began to appear. Eminent mystics gathered round them groups of disciples (adā'ī) for private instruction and in course of time became recognized teachers, heads of mystical schools, and abbots presiding over convents where Sufis were trained. It was generally held that for those entering on the religious life a teacher was indispensable. A self-trained mystic, who had not passed through the discipline prescribed by a spiritual director (shaykh, pir, murshid), was looked upon with great suspicion. He lay with them to decide whether the novice, after his probationary period, should be granted leave to take the vow of obedience to his master which was exacted from all candidates for initiation. Hujwīrī mentions three years’ probation.

The first year is devoted to service of the people (i.e., the Sufis); the second year to service of God, and the third year to watching over his own heart. He can serve the people, only when he places himself in the rank of servants and all others in the rank of masters, i.e., he must regard all, without exception, as being better than himself and must deem it his duty to serve all, of God, only when he cuts off all his selfish interests relating either to the present or to the future life, and worships God for God’s sake alone. And he can watch over his heart, only when his thoughts are collected and every care is discussed, so that in communion with God he guards his heart from the assaults of badness (a small at first) for private instruction and in course of time became recognized teachers, heads of mystical schools, and abbots presiding over convents where Sufis were trained. It was generally held that for those entering on the religious life a teacher was indispensable. A self-trained mystic, who had not passed through the discipline prescribed by a spiritual director (shaykh, pir, murshid), was looked upon with great suspicion. He lay with them to decide whether the novice, after his probationary period, should be granted leave to take the vow of obedience to his master which was exacted from all candidates for initiation. Hujwīrī mentions three years’ probation.

On taking the vow of initiation, the novice was invested by his shaykh with the khirqa or turba‘a‘a‘, a garment made of pieces of cloth stitched together, which in later times superseded the woolen dress worn by the original Sufis. This ceremony marked his admission (al-bā‘it) or brotherhood (adā‘ī) into the order. Occasionally a Sufi might be invested with two khirqas by different shaykhs, as happened to Abū Sa‘īd ibn Abī ‘l-Khair. The veneration which the Sufi places on the various titles is characteristic of the devotion which the Sufi feels towards his master. Dhu ‘l-Nūn went so far as to say that the true disciple should be more obedient to his master than to God Himself. The rule, method, and religious practices involved in the veneration of the shaykh and followed by the disciple constitute the Path (tariqā). Accordingly, the Path has no fixed and uniform character; its details are determined by the individuality of the teacher. The tariqas of the dervish orders exemplify this divergence. Broadly speaking, the Path corresponds to the via purgativa of medieval Christian mysticism. Hunger, solitude, and silence are the chief weapons employed in war against the Flesh (nafs). The ascetic and ethical discipline is divided into a progressive series of stations (maqamat), which the learner must traverse, making himself perfect in every one of them before advancing to the next. They vary in number and order, but the first place is usually occupied by ‘repentance’ or ‘conversion’ (taubah), i.e., turning away from sin towards God. The moral ideal of the Sufis is unfussiness, whether the form of the remaining worldly possessions and desires, sincerity in word and deed without regard for the good opinions of others,

patience, humility, charity, or trust in God and single-hearted devotion to His will. These are the fruits of the Path, but its true end is attained by means of exercises in spiritual meditation and recollection. The practice of recollection (dhikr) is the disciple for ecstatic experiences. It may be that he will never reach that end; ecstasy is an inaequable gift of divine grace and cannot be extorted. But the Sufi recommended a method of producing the state of mind in which ‘revelation’ of the unseen was most likely to occur. They called it dhikr (‘recollection’), set the highest value upon it, and prescribed it as the supreme act of Sufi religious devotion. The simplest form of dhikr is the continual repetition of the name Allah or of some short litany, accompanied with intense concentration on the sound of the holy names. This exercise might be assisted by other means, such as flagellation and holding the breath, until the sense of personality gradually disappeared in a state of trance.

The first stage of dhikr is to forget self, and the last stage is the effacement of the thinker in the act of thought, without consciousness of thought, and such absorption in the object of thought that it is as if one were to return to the subject matter. The concerted performances of dhikr, with music and dancing, were introduced by the great Sufi saint Nāsir-Allah al-Ba‘lī. These ceremonies are noted by Hujwīrī. Such prayer-services, as is well known, play an important part in the ritual of the dervish orders.

A general view of Sufi psychology, so far as it bears on the ecstatic life, may be obtained from Qushairī or from the more systematic treatment of the subject by Ghāzalī in the second half of his Ḥaḍīth. There are four terms which, taken together, comprise the sensual, spiritual, and intellectual natures of man: (1) nafs, the appetitive nature; (2) ‘ayn, the intelligence. The nafs, being the seat of the passions, is wholly concerned with the satisfaction of all the selfish interests relating either to the present or to the future life, and worships God for God’s sake alone. And he can watch over his heart, only when his thoughts are collected and every care is discussed, so that in communion with God he guards his heart from the assaults of badness (a small at first) for private instruction and in course of time became recognized teachers, heads of mystical schools, and abbots presiding over convents where Sufis were trained. It was generally held that for those entering on the religious life a teacher was indispensable. A self-trained mystic, who had not passed through the discipline prescribed by a spiritual director (shaykh, pir, murshid), was looked upon with great suspicion. He lay with them to decide whether the novice, after his probationary period, should be granted leave to take the vow of obedience to his master which was exacted from all candidates for initiation. Hujwīrī mentions three years’ probation.

On taking the vow of initiation, the novice was invested by his shaykh with the khirqa or turba‘a‘, a garment made of pieces of cloth stitched together, which in later times superseded the woolen dress worn by the original Sufis. This ceremony marked his admission (al-bā‘it) or brotherhood (adā‘ī) into the order. Occasionally a Sufi might be invested with two khirqas by different shaykhs, as happened to Abī Sa‘īd ibn Abī ‘l-Khair. The veneration which the Sufi places on the various titles is characteristic of the devotion which the Sufi feels towards his master. Dhu ‘l-Nūn went so far as to say that the true disciple should be more obedient to his master than to God Himself. The rule, method, and religious practices involved in the veneration of the shaykh and followed by the disciple constitute the Path (tariqā). Accordingly, the Path has no fixed and uniform character; its details are determined by the individuality of the teacher. The tariqas of the dervish orders exemplify this divergence. Broadly speaking, the Path corresponds to the via purgativa of medieval Christian mysticism. Hunger, solitude, and silence are the chief weapons employed in war against the Flesh (nafs). The ascetic and ethical discipline is divided into a progressive series of ‘stations’ (maqamat), which the learner must traverse, making himself perfect in every one of them before advancing to the next. They vary in number and order, but the first place is usually occupied by ‘repentance’ or ‘conversion’ (taubah), i.e., turning away from sin towards God. The moral ideal of the Sufis is unfussiness, whether the form of the remaining worldly possessions and desires, sincerity in word and deed without regard for the good opinions of others,
SUFIS

(meqāth) is a saint (wall); no further testimony is required, since the doctrine that a saint who violates the Law is thereby shown to be an impostor, is implied by the very essence of the ecstatic fit. Ibn Khaldun illustrates this. Ecstasy not being confined to one sex, the Sufi legend includes a long roll of women, to whom a separate section is sometimes allotted in some of the larger collections. In accordance with the theo-pathetic character of Muslim saints, their miracles (ka-bin-ma‘d = qayṣara) are described, not as wrought by them, but as granted or manifested to them; and, while the higher Sufis declares that reliance on miracles hinders the elect from penetrating to the innermost shrine of the Truth, and that the greatest miracle is the substitution of a good quality for a bad one, the popular walli could even if he wishes, avoid the reputation of being gifted with powers which Muslims call 'extraordinary' and Europeans 'supernatural.'

The saints form an invisible hierarchy by which the greater saint controls the lesser. Thus the head stands the qadī (‘axis’), under him inferior grades of sanctity—qudud, antūd, obrād, abdād or abulād, etc.—the members of each class increasing in magnitude with its distance from the qadī. Probably this idea is derived over by the Sufis from the Shi'ites and Ismā'īlīs.7

The Sufi theory of ecstasy recognizes two aspects of the experience of oneness with God. These aspects are symbolically linked with the two forms of fanā (‘passing-away’ from individuality), faqīl (‘self-loss’), sukr (‘intoxications’), with their positive counterparts beqīd (‘abiding in God’), wujūd (‘finding God’), and sulq (‘sobriety’). In the controversy which arose as to the relative values of the ecstatic state and the subsequent return to consciousness,1 it is easy to discern the same motives as ranged Sufis on opposite sides in regard to the question. Were they antinomian or not? From the standpoint of pure Sufism there is nothing beyond the supreme negation of self, when the mortal disappears’ and religion no longer exists; but the Sufis who are more than nominal Muslims to set the life in God against and above the death to self, and to find the highest mystical experience in the state of dhu-wujūd, none of which is the moment of ecstasy.

The full circle of deification must comprehend both the inward and outward aspects of Deity—the One and the Many, the Truth and the Law. It is not enough to escape from all that is creatorily without entering into the eternal life of God the Creator as manifested in His works. The Sufis in God (beqīd), after having passed away from selfhood (fanā), is the mark of the Perfect Man, who not only journeys to God, i.e., passes from plurality to unity, but in and with God, i.e., continuing in the unitive state, he returns with God to the phenomenal world from which he reconstitutes and manifests unity in plurality. In this descent... he brings down and displays the Truth to mankind while fulfilling the duties of the religious life.

Such a compromise could not restore the balance European. The Sufis might do homage to the Law, but they ranked it below the Truth and even below the Path. And, if the Truth is above the Law, yet not in contradiction with it, then this view was plausible that, when a man has attained to the Truth, all his acts and words are holy and in harmony with the spirit of the Law, however they may seem to clash with its letter. Still, a

via media had to be secured, even at the price of illogical concessions on both sides.

A Persian Sufi, writing in the 8th century, hint that his contemporaries have given the name of “law” to their insts, call their own senseless fantasies “divine knowledge,” the heart and affections of the animal soul “divine love,” heresy “poverty,” excess passion “pity,” deceit and falsehood “a passing away from self,” neglect of the Law of the Prophet “the mystic path.”

1 In A.D. 1945 Qushairi published his famous ‘Epistle on Sufism’ (Kisla fi ‘ilm al-ta‘ṣawwuf), recalling to his fellow-mystics how in past times great Sufis spoke and behaved as good Muslims and set an example of piety which their unruly successors had almost forgotten. That these tests were not made in vain was due above all to Ghazālī. He fused the traditional and mystical elements into one mass. His work was lasting because it took shape not so much from the force of his mind as under the pressure of a searching spiritual experience: he had worked out and solved the problem in himself before he gave the result in his books. Fifty years after the appearance of Qushairi’s Risāla Ghazālī resigned the professorship of theology and canon law which he held in the Nizamīya college at Baghdad and went into retirement as a Sufi. Only has told us, as fascinating as Newman’s Apologia how his studies and meditations at last made his conversion inevitable, through what struggles he shed off philosophy, scholasticism, and legalism, and gained the certainty that the central truth of religion lies in the inner life of the soul. 21

By frankly accepting the main Sūfi position Ghazālī gave a new meaning to Islām and an assured place within its fold to many earnestly religious men and women whom the formalists would have driven out if they could. Henceforth Islām is in large measure a mystical faith. But Ghazālī always remained a Muslim in two essential points: (1) his reverence for the religious law, (2) his view of the nature of God. He shut the door against pantheism by insisting on the dogma that the Divine Being is personal, unique, distinct from all other beings. In so far as the human soul has these attributes, it is capable of knowing God; but it can never be identified with God. Our knowledge of God depends on His will to make Himself known through revelation to prophets and saints whom He created. This left ‘Allāh spiritualized and brought near to men’s hearts, but still ‘Allāh, not the All in One. It may be said that Ghazālī belongs to Islām rather than to Christian mysticism, and that, inasmuch as he is not a pantheist, he is not a typical Sūfi. This seems true. On the other hand, while Sūfis who are pantheists often use language implying belief in a personal God, such belief is by no means inconsistent with the full theory of fanā, or at least may be sincerely combined with it.

4. God, man, and the universe.—Upon the foundation of mystical mysticism the Sufis built a theology and a philosophy of which the forms are as various in content and expression as the materials are diverse in kind. It is a notable fact that the oldest development to prophetic and saints whom he

1 Qurʾān, xviii. 64–65.

8 See art. Entités and Morality (Muslim).
10 See Literature.
and duality, as an external object. He brought forth from non-existence an image of Himself, endowed with all His attributes and names. This divine image is Adam, in and under which is the essence of the One in whom God is. Nevertheless, however, maintaining certain distinction between the divine and human natures. Even in their mystical union, the absolute being and the manifest world is infused in— not confused with—humanity (nabīt), as wine in water; hence the ‘drifted’ man cries, ‘I am not Adam, I am a man! ’The essence of God has a marking of the divinity of the Halijian doctrine, together with its author’s use of the heretical term hādhā (‘infusion’ or ‘transformed’) which is translated by the Sufis, and later Sufis, take care to give it a monistic interpretation; Ibn al-'Arabi, e.g., reduces the hādhā and māshīṣ (mutative and transformative) to ‘two aspects of one reality. Yet, the same quality of the divine, to which Sufism owes to Halij, can hardly be overestimated. His doctrine, though formally rejected, introduced and established in Islam the revolutionary idea that there is a principle of difference in the Absolute itself.

An important school of Sufis, whose watchword is ‘the unity of being’ (wadat al-wujud or tābihāt), hold that reality is one, that all apparent multiplicity is a mode of unity, and that the phenomenal is the outward manifestation of the real. Their views may be illustrated by giving some account of a work entitled The Man perfect in Knowledge of the Last and First Things by 'Abd al-Karim al-'Jili, a mystic of the 15th century A.D.

The essence of God is unknowable per se; we must seek knowledge of it through its names and attributes. It is a substance with two accidents, eternity and everlastingness; with two qualities, creative and creatureliness; with two descriptions, uncreated and origination in time; with two names, Lord and slave (i.e. God and man); with two aspects, the outward or visible, which is the present world, and the inward or invisible, which is the next world. True being, as such, has neither name nor attribute; only when it gradually descends from its absoluteness and enters the realm of manifestation do names and attributes appear imprinted on it. The sum of these names is the phenomenal universe, which is phenomenal in the sense that it shows reality under the form of externality. Although the distinction of essence and attributes must be admitted if we are to think of the universe at all, the two are ultimately one, like water and ice. The so-called phenomenal world—the world of attributes—is no illusion; it really exists as the self-revelation or other self of the Absolute. It expresses God’s idea of Himself; for, as Ibn al-'Arabi says,

‘We ourselves are the attributes by which we describe God; our existence is merely an objectification of His existence. God is a name, a thought, a thing that exists, while we are necessary to Him, in order that He may be manifested to Himself.’

The simple essence, apart from all qualities and relations, Jili calls ‘the darkness’ (al-‘awd). It develops consciousness by passing through three stages which modify its purity and simplicity. The first stage is oneness (ahdāyāt), the second is ‘He-ness’ (hwajyāt), the third is ‘I-ness’ (anijyāt).

By this process of descent absolute being becomes the subject and object of all thought and reveals itself as divinity with distinguishable attributes embracing the whole series of existence. While every appearance displays some attribute of reality, man is the microcosm in which all these attributes are united, and in him alone does the Absolute become conscious. In all its diverse aspects, this can only mean that the Absolute, having completely realized itself in human nature, returns into itself through the medium of human nature, or, in mystics, through God and man become one in the perfect man—the divinely rapt prophet or saint—whose religious function as a mediator between man and God corresponds with his metaphysical

2 'Abd al-‘Azīz, ed. Madīnah, p. 83.

SUFIS
The more completely and universally the idea of God is presented, in all its dimensions, the more perfect its contact with the mind must be. Religious revelation through a prophet contains the fullest measure of the God idea. Of these the most considerable three, from the standpoint of Islam, are: Allah, the Creator of the universe through emanation, the One who reveals Himself in the Abbreviated Book of His treasures; Jesus, the Son of God, who, from that one point of view He is above all other beings, while from this one point of view His prevailingly Ilesus-in-His-Book of His treasures. Their mistake lies in the limitation to which they have subjected the principle that God becomes man in a form of which the human mind can find no face to face such of which contains what is in all; and so they will beheld it in its and declare Him to be absolutely One.

5. Sufi poetry.—Among the practices devised by the Sufis for the purpose of stimulating religious emotion there is none more potent than that which they name "audition" (sama'), i.e. listening to music and song. Sufis who were thrown into ecstasy on hearing a few lines of verse chanted inadverfently by a singing-girl or with intention by one of themselves. Such verses were usually erotic, but not mystic; the allusions were such as to make any direct and explicit supply to the hearer. In Sufi poetry, of course, it is otherwise; here the poet's meaning is mystical, however sensuous may be the form in which it is veiled. And the verses are so arranged as to be like such unutterably that, unless we have some clue to the intention of the writer, we cannot easily decide whether we are reading an ode of human love or a hymn addressed to the Deity. If it be asked why the Sufis make such large use of erotic and bacchanalian symbolism, the answer is that they could find no analogy more suggestive and better adapted to shadow forth the sacred power of enthusiasm and ecstasy which their poets describe.

1 Wine, beer, and beauty are epiphanies of Verity, Nor is it which is revealed under all forms seen. 
Wine and beer are the transport and light of the knower; 
Behold! The beauty, for it is hidden from none.  
Wine, beer, and beauty, all are pleasant, 
Neglect not to embrace that beauty.
2 Restore the soul to its dying self, and for a season.
Sustainability you will be freed from the dominion of self, 
Upon the elevation of the soul is the face of the wine.
3 The barge is his eye drunken and down with wine.

This poetry is the chief glory of Persian literature. It may be studied in the quatrains attributed to Abú Sa'd b. Abi-Khair, in the poems of Paride (died A.D. 1159). Jalal-ud-din Rumi (O.), and Jamā', or in the Gulshāni Bāz of Maham Shabestari. Whinfield's edition of the last-named work is provided with explanatory notes and may be recommended as the best introduction to the subject. In Arabic this genre of poetry takes a more conventional form, which is not so attractive to Western readers, but the odes of him al-Fārisī are exceedingly fine, while those of Ibn al-Arabi, in spite of their resonant style, contain some passages of great beauty. Of the Turkish Sufis the poet most interesting is Nəşirî, a fervent admirer of Hallaj and a member of the sect known as Husāris, who derive their title from the mystic sign X, and have recourse to the letters of the alphabet and to combinations of these. The Sufi poet is not directly concerned with metaphysics.

1 He let his heart be wholly filled by the sublime conceptions of all-embracing Unity and all-conquering Love which form the real basis whereon all the rest is built... He sees how the Truth is in the one aspect oneness, which afterward he comprehends the universe through emanation after emanation; how the Primal Intelligence, first rayed out from the One, rays out in turn the Primal Soul; how the Divine Names cast their light upon the darkness of not-being, each atom of which mirror-like reflects one.
He sees how the Artful Attributes of the Truth are reflected in the existence of hell and the devils, and how the Beautiful Attributes are reflected in this of Paradise and the angels.
He further sees how Man reflects all the Attributes, Artful and Beautiful alike, and is thus the Microcosm, running up the universe in himself. He thus sees how it is the Truth alone that is acting through all things, and moreover how this action is a never-ending, never-cessing process, every existence atom being each instantly clothed with a fresh phenomenal efflux radiated from the Source of Existence, and being again stripped off of it, so that the whole coming and going is momentarily being annihilated and re-created, though the successive acts of destruction and construction are never one another in such swift succession that they are wholly imperceptible, and all appears as one uninterrupted line, even as an unbroken circle of fire is seen in a single space, and yet is believed quickened and extinguished. But the poet may not rest content with the mere perception of these inexpressible mysteries; indeed, they have so revealed them to him as to impel him to seek reunion with the Truth.

2 God, as the poet conceives Him, is the eternal Beauty which by the necessity of its nature desires to be loved, made manifest, and the object of all love. Even earthly love is a type of spiritual, a bridge leading to reality. The soul, being divine in its essence, longs for union with that from which it is separated by the illusion and illusion of the body, and this longing aspiration, which urges it to pass away from selfhood and to rise on the wings of ecstasy, is the only means whereby it can return to its original home. Love transmutes into pure gold that base phenomenal alloy of which every creature partakes. While reason is dualistic, love unifies by transcending thought.

3 He comes, a moon whose like the sky ever saw, awake or dreaming, Crowned with eternal flame no cloud can lay.
Look, from the farmhouse of the Lord, my soul is swimming, and ruined all my body's house of clay.
When dust the Giver of the grape my lovely heart befriended, Wine fixed my bosom and my veins filled up, But when his image in my body possessed, voice descended:— "Walt, down! O wretched Wine and peerless Cup!"

Love's mighty arm from roof to base each dark abyss is heaving Where nothing remains catch a golden ray.
My heart, when Love's wonderful golden heart into its viewing, Leapt headlong in, with "Find me now who may!"

The following passages further illustrate the manner in which this principle is applied by Sufi poets.

Love is the final cause of creation:

"In solitude, where Being sighs in solitude, And all the universe still lingers stay, Concealed in the dim light, One Being was.
From rent "I"-or "Thou"-man, and spirit Of all from dross, Beauty, Supreme, Unmasked except unto Himself By its own light, yet fraught with power to charm. The souls of all..."

But Beauty cannot break, Concealment and the veil, one Soul and beauty Unseen and unmasked, 'twixt love all bonds And from its presence-came to the world. Heaven itself..."
Wherever Beauty dwells,
Such is its nature and its heritage
From Everlasting Beauty, which emerged
In a form of tragic purity to shine upon
The worlds, and all the souls which dwell therein.

1. Each speck of matter did His constitute
And God is the beauty of His visage.
From the rose
Flashed forth His beauty, and the nightingale,
Singing, ‘He is loved madly.’ From the candle
The die cast the inscrip which beguiles
The moth to the flame.

Beware! say not, ‘He is All-Beautiful,
And we live lovers.’ Thou art but the glass,
And He the face confronting it, which casts
Its image on the mirror. He alone
Is manifest, and Thou in truth art hid.

Pure love, like beauty, coming but from Him
Revels itself in thee. If steadfastly
They cast not requital, then will at length perceive
He is the mirror also; He alike
The Treasure and the Caution,
And ‘Thou’
Have here no place, and are but phantasmes
Vain and unreal.

Love is the essence of all religions:
‘Soul of mine, thou knowest Light: be not far, O be not far!’
Love of mine, thou Vision bright: be not far, O be not far!’

See well how the Turban glistens, yet the Paraclete girdles me.

Cord and Waffle I bear light: be not far, O be not far!
True Parece and true Brahaman, a Christian, yet a Mussulman,
Thou I trust supreme by Right: be not far, O be not far!
In God’s Love of persons, all persons are one alone;
Thy Face is there my sole delight: be not far, O be not far!’

The same principle enables the Sufi poet to solve the problems of evil and predestination.
The more a love dwells, the deeper it generates the divine purposes.
Love is ‘the legitimate of heavenly mysteries,’ the eyes-saw which clears the spiritual eye and makes it clasped and open.

Through love we can discern that evil, so far as it has any real existence—and in relation to God it has none—is a good in disguise or, at the worst, a necessary condition for the manifestation of good.
As regards predestination, perfect love imparts identity of will and thus abolishes the conflict between freedom and necessity.

‘The word “compulsion” makes me impatient for love sake:’
‘Be he who loves not that is lettered by compulsion.
This is close communion with God, not compulsion.
The shining of the sun, and not a dark cloud.

The lyric poetry of Sufism reaches its highest mark in the pantheistic hymns describing the state of fana (negation of individuality) and bagh (affirmation of universal consciousness).
‘Lo, for to myself an unknown, now in God’s name what was
I adore not the Cross or the Crescent, I am not a Glauber nor
East nor West, land nor sea is my home, I have kin nor with angel nor gnome,
I am rather at heart of fire nor of foam, I am shaped not of dust nor of dew.
I was born not in China after, not in Sogdian and not in Buhzb; Not in India, where the rivers are, not Iraq nor Khurasan I grew.
In this world nor that world I dwell, not in Paradise, neither in hell.
Yet not from Eden and Bawrak I fell, not from Adam my lineage I drew.
In a place beyond uttermost Place, in a tract without shadow of trace.

Soul and body transcending I live in the soul of my Love One knew.

Though many of these poems are exquisite in formal beauty, it is difficult to regard them as products of conscious literary art, and the present writer is inclined to accept the statement that the odes of Al-Jalāl al-Din Rūmī, Ibn al-Fārābī.

Ibn al-‘Arabi, and other Sufi poets were often composed in the influence of ecstasy, in the context of their peculiar and fact analogous to what is known as ‘automatic writing.’ Their rhythm and melody, combined with the symbolic form in which they are clothed, give them an uncanny power of communication to the reader the same feeling of rapture by which their composer was inspired: and the effect is greatly enhanced when they are chanted with an accompanying accompaniment, as is customary among Sufis engaged in dhuhr. While students of this poetry cannot ignore the conventional rules of interpretation which assign a fixed allegorical meaning to a large number of words that are commonly used in such a context, a method may easily be pushed too far. Ibn al-‘Arabi’s commentary on the Tarjumān al-‘Ashariyy, shows that even the author of a mystical ode is sometimes unable to state his meaning in words. Each element appears only at intervals and seldom with its first intensity in narrative romances, which depict the soul’s love of God and its ultimate union with Him as the theme of two human lovers—e.g., Yusef and Zulaikha, Khulil and Maynun, and Abūl-Asbaḥ—and didactic poems, of which the Mawsū‘ is the most celebrated.

LITERATURE.—This art is supplementary to, and should be read in conjunction with, the preceeding. The fact that many of the present writer’s opinion, it would be premature to aim at giving a historical classification of the subject, since the modern materials are not yet available. Further information concerning the doctrines of individual Sufis will be found in the arts, Al-Khalil al-Mukhtar, Hallaj, Hallajan, al-Mamluk, MANSUR, and Shams al-Din ibn al-‘Arabi, AS-SHAMI, and SHA’RAWI. See also, Eissfeldt (Mohammedan), Connected with Dervish (Moslem), Dervish, and Christian, Mohammedan.

(3) Doctrines.—Most of the important European books and papers on Sufism have already been mentioned in the present art, or in the various art, enumerated above. These titles are not repeated here. The art follows, M. Schraub, ‘Heben zur Gesch. der theologischen Bewegungen im Islam,’ Emd, iii., (1880) 219 ff.; G. Borchert, ‘Studien über die Gesch. des Mohammedaner,’ J. 99, 1894, pp. 460 ff., and 1895, pp. 460 ff. (concerning the different grades of Sufis, the sufis, and the inferior saints).—M. Schraub, ‘Heben zur Gesch. der theologischen Bewegungen im Islam,’ Emd, iii., (1880) 219 ff.; G. Borchert, ‘Studien über die Gesch. des Mohammedaner,’ J. 99, 1894, pp. 460 ff., and 1895, pp. 460 ff. (concerning the different grades of Sufis, the sufis, and the inferior saints).

SUGGESTION.—Suggestion is the production of a reaction by an ideational process, but without deliberation on the part of the subject thereof. The term applies also to any attempt by the subject or by another person to awaken such a reaction. A suggestion is any idea that determines, or is used for the purpose of determining, the outcome of such a non-deliberative process.

The qualification "by an ideational process" is introduced in differentiation of primary instinct-acts. Such acts, though they may be secondarily initiated by an idea or mental image (as when a letter makes me angry with the writer of it), require as their primary stimulus nothing but an appropriate sense-presentation. Suggestion, on the other hand, is primarily ideational. The most typical suggestions are those that are conveyed by language. Gesture, in the broad sense of significant bodily motions, postures, and inarticulate vocalization, comes next. Natural phenomena act suggestively only when they have antecedently acquired a meaning, as when one avoids poison ivy, or quickens one's pace upon hearing distant thunder.

The term 'reaction,' as here used, refers to both psychical and bodily responses. It includes beliefs, hallucinatory perceptions (affecting an appropriate stage of the emotional aspects), stimulation of involuntary muscles and of certain glands, particular contractions of voluntary muscles and muscle-systems, even extended chains of such contractions, and finally, in all these fields, inhibitions and functional paralyses as well as stimulations.

A reaction is 'deliberate' when it is made after attention has been given to alternatives, and with the alternatives in view. Associated with the idea that defines any alternative is a tendency towards something beyond itself as merely this idea now presents. Because of these associated tendencies ideas may be said to compete with one another and therefore to involve inhibitions as well as positive stimulations. In deliberation there is mutual inhibition of two or more competing ideas, whereas popular thought correctly conceives that pause or postponement is a mark of deliberate conduct and of deliberate believing. Suggestion, on the other hand, implies the absence of deliberate competition, inhibition, and pause. All that is necessary is that attention should be withheld from some of the ideas appropriate to the given situation, and focused or "narrowed down" to one idea or coherent chain of ideas. Thereupon the associated tendency that has just been referred to is automatically instated.

How such associated tendencies should be conceived has been a matter of debate. W. McDougall, emphasizing the subconscious character of the connections here involved, and also the close relation of suggestion in general to "psychic phenomena," is of the opinion that any adequate analysis of suggestion must rest at last upon a theory of the subconscious. William James used the phrase "ideo-motor action" to designate what he regarded as a mental law, namely: 1

1 See art. HYPNOTISM, 2 Principles of Psychology, p. 226.

Every representation of a movement awakens in some degree the actual movement which is its object; and awakenings in a majority of cases, it is not by mental act, but by a sympathetic representation present simultaneously to the mind. 2

On the other hand, E. L. Thorndike opposes to the 'ideo-motor' theory, and adheres to the following far simpler theory: an idea may produce a movement in either of two ways—by imaging an object that awakens an instinctive response, or, under the ordinary law of habit, by re-creating something that has previously been associated in the subject's experience with the suggestive idea. The reason why the idea of bending my first finger produces actual bending, according to Thorndike, as the idea of the finger being bent and the actual bending—have been experienced together heretofore. The very first flexions of the finger, it may be added, occurred reflexly, without any previous present idea thereof. Just as the sight of a glass of water upon my dinner-table induces me to drink water that I do not want, habit is clearly the explanation. 3

This theory enables us to bring all the psychological and physiological manifestations of suggestion under the same two heads, habit and instinct.

Both are found in Antony's handling of the Roman rabble. The opinion of the artists concerning Caesar's death was reversed, not by the weighing of pros and cons, but by bringing attention back again and again to essentially the same point, i.e., by narrowing attention so that the old attitude of admiration for Caesar the conqueror was reinitiated. In addition, Antony arouses various instincts, as when he works upon curiously until the crowd demands to hear the will that he pretends to withhold.

It is evident that suggestion is not an exceptional, rare, or abnormal phenomenon, but an omnipresent fact of all mind whenever its reactions are upon the ideational level. In hypnosis competing ideas may be inhibited to an extraordinary degree, but there is no fixed line of conflict between the ideas gradually brought on and fully normal mental action. Similarly the ordinary effects of cheerful or of gloomy expectation are merely heightened in the extreme and truly remarkable facts of suggestive therapies.

The process of suggestion has, as such, no particular relation to the truth or the falsity of what is suggested. One may arrive by suggestion at true beliefs or at ethical, or correctly or incorrectly or even wrong attitudes and conduct. Suggestion is an ordinary device of oratory and of preaching, as it is also of advertising and of salesmanship. Recent works on 'business psychology' present what may fairly be called a technic that is parallel to that of physicians who employ psycho-therapy. Thus far the ethical aspects of influencing buyers by suggestion have not been examined as carefully as the technic.

If any one should doubt whether the deliberate influencing of men to act without deliberation is ever justifiable, the following considerations would have to be considered: (1) There are numerous cases in which the ends of deliberation are defeated by the process of deliberation itself, as when too meticulous weighing of possible consequences or overconceived insistency upon complete certainty prevents the action that a situation calls for. One way to get such a person over his 'dead centre' is precisely to narrow his attention to one of the alternatives until action ensues. (2) When an instinctive capacity for noble emotions and attitudes has become dull from disuse, one simply lacks considerations that are needed for deliberation. A psychological pre-condition of all deliberation is appreciation of the pertinent alternatives. What is to be done for a man, then, whose habits preclude any feeling of the force of a pertinent alternative? The obviously rational procedure is by processes of suggestion to draw his attention upon some object that may awaken an instinctive response of the desirable sort, and then to lead him to include this fresh experience among the data of his deliberate thinking. (3) Whether we will or not, a large factor in education, particularly in the development of standards and ideals in the young, is suggestion emanating from adults, especial
ally parents and teachers. A purely rationalistic education is a psychological impossibility. Hence it is a custom of educators to take at least some measures for determining the sorts of suggestion to which pupils shall be exposed. M. W. Keating argues for careful, deliberate planning of this part of teaching.1

On the other hand, suggestion is, on the whole, a process of repetition or of maintaining some status quo ante rather than a process of criticism and rationalization. The repetition is likely to be done alone rather than with some conscious or deliberate effort. A process of suggestion, directed to alone or to oneself, is more or less social process, current, or conversational. It would be a mistake, nevertheless, to suppose that truly ethical action requires nothing but deliberation. Ethical situations are made real to us, especially situations that call for reform, by some kindling of elemental processes that include strong satisfactions or their opposites. Thus it comes to pass that great sermons commonly interweave strong suggestions with analysis and even argument.

To exhibit the whole significance of suggestion in religion would require an historical catalogue of practically all experience. Primitive fears connected with taboo and with spiritism were propagated from individual to individual and from generation to generation by suggestion. The same is true of the rejoicing that accompanied some of the ceremonies. Priesthoods acquired and retained their power by narrowing the attention of worshippers by means of sense stimuli of various sorts focused upon some point that required concentration. The mystery of all ages have practised auto-suggestion under the name of contemplation or interior prayer. Modern revivals have produced a sense of sin, conversion (reversal of attitudes), and of likes and dislikes, and assurance or the witness of the Spirit chiefly by suggestion. Indeed, managers of revival campaigns at the present day are accustomed to organize preaching, singing, personal work, and advertising of various kinds upon a strictly suggestive basis. Not the least item is the careful preparation of the public mind, sometimes for weeks in advance of the first public meeting. Priests and preachers, as 'the jerks,' 'the power,' 'speaking in tongues,' and 'interpretation of tongues' present as a whole cases of suggestion. They are usually initiated by a spontaneous automatism which is then imitated (by oneself and by others) without deliberation, but often with support from passages of Scripture. The idea of a baptism 'with fire' has similarly fulfilled itself here and there.2

The phenomena of suggestion reach their climax in human masses, whether crowds (which involve spatial propinquity) or a public whose opinions and attitudes are formed by common reading material or even by statements passing from month to mouth. It is a fact of common observation that in a crowd one may act 'like a different person,' accepting as truth what one could not ordinarily believe, and conducting oneself contrary to one's ordinary standards. The mechanism whereby crowd suggestion acquires this remarkable power is as follows. (1) Certain instinctive capacities are strongly stirred by the massing of appropriate stimuli, in a group situation is peculiarly interested in the movements of his fellows, and is sensitive to their approvals and disapprovals. Here is the basis for a quickening or excitement of

1 Suggestion in Education.

SUGGESTION

the mind through the mere presence of others, as also for watching and following others, and for subordinating one's own actions to those of others in the presence of a sentiment generally held by the mass. (2) A crowd usually assembles under the influence of some common thought. Even when this is not the case, conversation tends to reproduce a common thought. Moreover, under the stimulus of the excitement already referred to, some individual—either one with relatively few inhibitions or one with strong convictions—suggestions on the duenna—suggestions are likely to speak aloud. This often precipitates the thinking of the entire mass. It is now as if each one were suggesting to every other one the idea that has come to expression. Thus sentiment rolls up like a snowball. (3) This narrowing of attention, as already indicated, involves an equally strong inhibition upon ideas that would ordinarily appear as competitors. Therefore strong, impulsive action occurs spontaneously and appears to the subject to be natural and justifiable. A crowd is incapable of fine discriminations and of skill; its acts tend towards the simplicity and crudity of instinct; and therefore, in this case, a human association easily acts less socially (as far as ends and consequences are concerned) than its members would do if they faced the same moral issue individually.

All that has just been said applies also to masses that are unified by means of the public press. Our present means of communication are so swift and so all-pervasive that men feel the presence of one another almost the world over at almost the same instant. Communities that are a thousand miles apart get the same news, often word for word, at about the same hour; the effect that results is that in one community now becomes an item of news in the other; action as well as idea thus spreads. This is the process whereby a whole nation rises to succour sufferers from earthquake or from fire, or to repel an invader. Thus, too, political opinions as well as fashions of dress and of speech spread with great rapidity.

A study of suggestion as a means of governing men in the State as well as in the Church will show that one of the basal differences between types of organization lies in the degree to which suggestion, as compared with deliberation, is officially used. At the tribal level of organization, communal action is commonly achieved by suggestion of the crowd type, as in dances and other ceremonies, and in the personal leadership of the chief. In the monarchical State, as in sacramental religion, men are ruled partly by direct command (which is, under some conditions, a potent mode of suggestion), and partly by pageantry and other sensuous or sentimental appeal that ever reawakens a traditional attitude of loyalty. The underlying psychological principle of democracy, on the other hand, is deliberate group action. A deliberative group is one in which unity is sought, not by withdrawing attention from alternatives, but by mutual incitement to pause and weigh alternatives before acting. This type is most fully developed in bodies that have formal rules of order. Here, as a preliminary to each commence, the entire group prays, the chairman saying, 'Are there any remarks?' Then, as if challenging each individual to full, deliberate self-expression, he asks, 'Are you ready for the question?' This procedure has been devised so as to prevent any undue influence being exercised by the crowd becomes a unit by the suppression of individual inhibitions, the deliberative group achieves its unity precisely by inviting the expression of competing views and by spreading it far and wide for inspection and unforced selection. The ballot, in popular government, is an organ for essentially
SUHRAWARDI

the same type of delibration on the scale of the local community or of the nation.

GEORGE A. COE.

SUHRAWARDI.—Suhraward, a small town in the Jilil provine of Persia, has given its name to two celebrated mystics whose lives, characters, and opinions present a remarkable contrast, though both were born in the same decade. Of Shihâb al-din 'Umar b. 'Abdallah al-Suhrawardi (A.D. 1144-1234) it is enough to say that he was a Sufi of the conventional type, that he adhered to the strict precept of Franciscan and Capronian, and that his writings include a well-known treatise on Sifism—the 'Awârif al-ma'ârîj—and a polemical work directed against the study of Greek philosophy, which he considers heretical. His name was al-Zahir, in his own time he was denominated the khalil al-Nasir. His contemporary, Shihâb al-din Yahâyâ b. Amirâk al-Suhrawardi (A.D. 1138-91), after studying jurisprudence and philosophy at Maragha, devoted himself to the mystical philosophy, led the wandering life of a dervish, and finally settled in Aleppo. While some of his earlier books were written under the influence of Aristotle, he was at heart a Platonist, as is shown by the title and contents of his chief work, the Ihkâmât 1-al-ishrâq ('Philosophy of Illumination')—whence the school of mystics who follow him are called Ishraqis (al-ishrâqûn). Being an enthusiast as well as a bold and original thinker, he made no attempt to disguise the anti-Platonic tendency of his doctrines. It cannot be denied that from the orthodox standpoint they were detestable and heretical, though at first he was an adherent of al-Malik al-Zahrâ, the son of Saladin, he was condemned and executed by order of that prince in 1191. The name of 'martyr' (shahid) was refused to him; he is generally known as Shihâb al-din al-Mu'âiqli (al-Suhrawardi the slain) or al-Shihâb al-Mu'âiqli.

In his theory of illumination he combines Neo-Platonic and Persian ideas. The source of all things is the Absolute Light (al-nil al-qahir), that which is visible requires no definition, and nothing is more visible than light, whose very nature consists in manifestation.

1 'The Primal Light, therefore, has no reason of its existence beyond itself. All that is other than this original principle is dependent, contingent, possible. The 'not-light' (darkness) is not something distinct proceeding from an independent source. It is an error of the representatives of the Magian religion to assert that Light and Darkness are distinct realities created by two distinct creative agencies. The relation between them is not that of contrast, but of existence and non-existence. The affirmation of Light necessarily postulates its own negation—darkness, which it must illuminate simply in order to be itself. This Point is the source of all motion. But its motion is not change of place; it is due to the law of illumination which constitutes its very essence. The number of illuminations it produces from it is infinite. Illuminations of intense brightness become in their turn the source of darkness, so that the scale of brightness gradually descends to illuminations too faint to beget other illuminations. All these illuminations are medullae, or in the language of theology angels through whom the infinite varieties of being receive life and sustenance from the Primal Light.'

2 We may distinguish two illuminations, i.e. the modes of being possessed by the Primal Light (1) pure, abstract, formless; (2) accidental, derivative, possessing form. The pure light is self-conscious substance (spirit and soul), knowing itself through itself, for 'what has existence in itself is light.' The accidental light is related to the pure light as effect to cause and only exists as an attribute in association with the illuminated object (body), which is not matter in Aristotle's use of the term, but the negation necessarily implied in the nature of light.

The experimental fact of the transformation of the primary elements into one another points to this fundamental Absolute matter which, with its various degrees of grossness, constitutes the various spheres of material being. It is of two kinds: (a) dark substance, (b) dark forms, i.e. qualities; and the combination of these two makes up a material body. Since darkness is nothing but the absence of light, and light is identical with reality, the substance and forms of the universe consist of illuminations derived from the Primal Light in infinite gradations of intensity. It follows that everything partakes of reality in proportion to the radiance which it receives and towards which it ever moves with a lover's passion. In order to drink more and more of the original fountain of Light. This perpetual flow and ebb of desire produces the revolutions of the heavenly spheres, the processes of nature, and all human activities. The abstract light (First Intelligence) is less perfect than the Primal Light (God), in contemplating which it becomes conscious of its imperfection, whereas there arises in it a darkness that is the ground of plurality in the sensible world. While the entire universe is eternal as emanating from the eternal Light, but contingent if regarded as the object of irradiation, some illuminations are simple, others compound and therefore inferior. The intelligences, the celestial spheres, the souls of the heavens, time, motion, and the archetypes of the elements belong to a higher world, which may be called eternal in contrast with all below it, though in the relation existing between them posteriority but parallelism is implied. Suhrawardi, like Plato, conceives a world of Ideas—he declares that it was revealed to him mystically—in which every kind of subsundary thing exists as a substance in itself. The wise men of Persia (Zoroastrians), he says, gave names to many of these pure lights (Ideas); e.g., they named the Idea of water Khurâd (May), that of trees Murâd (July), and that of fire Ardibilîsât (April).

As each species is endowed with its distinctive qualities and preserved by its guardian Idea—the lord of the species' ('hadâw 'unwar')—so the Idea of the human body is 'the holy spirit' or universal Reason, while bodies individually are types of rational souls. The body being pure light, it imparts illumination to the body through the medium of the animal soul. It operates with the five external and the five internal senses, which correspond to powers residing in the ideal archetype. Thus vision, knowledge, memory, imagination, etc., are essentially not perceptive functions but illuminative acts of the soul. Obeying the principle that what is lower in the scale of being loves what is higher, the soul longs to be initiated towards the Formless.
SUICIDE (Introductory)

world of light, and it advances towards this end according as it seeks to become perfect in philosophy and the practice of virtue. By so doing it develops a mystical perception (shumq) which clears all doubts away. Shumq, as Suhrwardi tells us, was the name of the speculations set forth in the Hikamut l-tishrih. In one passage he seems to hint that he himself is the gubb, the mysterious head of the Sfi hierarchy, for he asserts that the philosophy of illumination was taught by Empedocles, Pythagorans, Plato, and the Zoroastrian sages, and that the world is never without one some who possesses the doctrine and can expound of it unerringly. If the stranger, he adds, is God’s viceroyent (khulafa Allah) on the earth, then Attainment of firmi2 unites the soul with God, but does not mean that one substance is absorbed in another. No two souls can be completely alike.

1 The individual souls, after death, are not united into one soul, but continue different from each other in proportion to the illumination they received during their companionship with physical organisms. ... Some souls probably come back to the world in order to make up deficiencies. The doctrine of transmigration cannot be proved or disproved from a purely logical standpoint, though it is a probable hypothesis agrees so as to be desired for the future welfare of the soul. All souls are thus constantly journeying towards their common source, which calls back the whole universe when this journey is over, and starts another cycle of being to reproduce in almost all respects the history of the preceding cycles.

2 Suhrwardi agrees with Gzah to hold that the world could not be better than it is. Evil is a negation depending on the motion and darkness which, as we have seen, are involved in the nature of light; it is associated with the effects and does not proceed per se from the First Cause; if it existed per se, it would not be evil. In his clear and symbolic exposition of the Sufi philosophy Shahih Muhammad Iqbal calls attention to Suhrwardi’s intellectual independence and to the skill with which he moulded his Neo-Platonic materials into a whole. A premonition of thought, uniting speculation and emotion in perfect harmony. Mystic and (in a sense) pantheist as he was, he regards the external world as real and never loses touch with it.

Reynold A. Nicholson.

SUICIDE.

Hindu (A. BIRRIEDALE KEITH), p. 33.

SUICIDE (Introductory).—Before attempting any discussion of this diseases in the subject of ethics or religion, we should note that in many cases — probably the majority, among civilized peoples—either no moral judgment can be passed upon the act or at least great allowance must be made for the mental condition of the agent. Lunacy not infrequently involves such complete loss of the instinct of self-preservation that the patient, even where agnosia is not present, will unwittingly commit acts injurious both to himself and others without any knowledge of what he is doing. So in dementia praecox 'self-respect, modesty and the instinct of self-preservation are quite absent'; and the result is various absurd, criminal, or indelent acts, including suicide for a trivial reason or none at all. Again, dementia paranoid, or chronic paranoephalia, although like many forms of mental diseases it generally produces intense and unreasoning attachment to life, often involves accessions of wild, self-directed fury, such as that in which Gye de Manpassant tried to kill himself,4 but the most typical examples are those of melancholia. We quote part of Tanzi’s admirably lucid account:

4 In some cases of melancholia scenes of the most horrible and sanguinary nature, which are represented to the patient’s mind as sincere and as connected with the most disgusting images on account of their hideousness, becomes transformed into a milder obsession. The obsession, meeting with but slight resistance in an exhausted and abject brain (i.e. one almost if not quite deprived of will-power), becomes so imperative as to drive the patient not merely to the commission of acts corresponding to it, such as suicide in its most horrible forms.

5 The state in which these acts occur—the raptus melancholici—is quasi-insomniacal. But suicide often takes place in less time than this, when the patient is not wholly irresponsible, but

is actuated by motives the importance of which his disease—like that of the sick in the story of the seventh of St. Mark—fixes on the heart with the greatest degree of intensity. But even so, they are always to be considered even if there be no other means of relief. The passions of the patient, as far as they are in his power to control, are to be regarded as those of a diseased nature, and the motive of the act must be determined by the state of the patient’s mind, and not by the consequences of the act.

7 Ec. 519.
Sexual emotions, especially in women. Hence such suicides are particularly common among adolescents. As there is admittedly a close connection between sexual and religious emotions, especially in their more exaggerated and wild form, we may place some at least of the religions of suicide (see below) in this category.1

In most cases of this kind the patient's insanity is easily recognizable; and even in those instances where a melancholia propria, i.e., the more refined and characteristic form of insanity, is long and hard to recognize, and perhaps regarded as such impulses as part of the normal mental life of an individual. 2

In many cases of this kind suicide is frequently regarded as the outcome of a malignant, and may even be the result of a normal, inclination. 3

When a person of this kind attempts to commit suicide, he is usually successful, and does not wish in general to be cured. 

To the several classes of more or less non-moral acts of self-destruction should be added the very large number of instances in which the person who is about to commit suicide is temporarily insane, and is really not responsible for what he is about to do. 

To the several classes of more or less non-moral acts of self-destruction should be added the very large number of instances in which the person who is about to commit suicide is temporarily insane, and is really not responsible for what he is about to do. 

... (but) death by famine was attended by some obvious disadvantages. It was slow; it opened the door to repentance; it occasioned a constant repetition of robberies. But the number of actual cases of the same kind. Clearly, then, when a person imagines himself to be insane, he is, as it would be regarded as an ordinary lunatic who does not know what he is doing or imagines that he has good reasons for his act, or he will do any other thing that he desires, on more or less rational grounds, that he wishes to end his life. It is still harder to pass satisfactory moral judgment on a man who, either for himself or others, apparently sane but perhaps really neurotic, whose suicidal, but is an inadequate one—a small injury, real or supposed, to honour, or even so trivial a cause as a wager. 

Suicides of this kind sometimes amount to a sort of epidemic. When one member of a family has ended his life, the recurrence of the anniversary of his death, the sight of the weapon that the person died by, or some such casual association has been known to drive a relative to follow his example, until as many as seven of one household have died by their own hand. 5

Epidemics, extending through an entire city, or even wider; 6 have not been unknown, in ancient or modern times, and are frequently associated with religious mania. These are probably hysterical, as hysteria is easily communicable, and tends to produce, especially among women, an epidemic mania. 

To all these classes of more or less non-moral acts of self-destruction should be added the very large number of instances in which the person who is about to commit suicide is temporarily insane, and is really not responsible for what he is about to do. 

Suicide by violent nervous shock, disease, grief, excesses of one sort or another, etc., become temporarily unbalanced to a slight degree. These causes are so many that it is questionable whether any one whose life is of normal length is absolutely sane during every waking moment of it. 7 We need not doubt that the charitable verdict of the average coroner's jury, 'suicide while of unsound mind,' is in a large percentage of cases quite in accordance with medical facts. 

But our primary interest is in the act of one who, being perfectly sane, takes his own life. The question whether such an act is justifiable, and, if so, when and under what circumstances, has been answered in the most various ways by peoples of different degrees of culture, from the lowest savages to members of the highest civilizations, ancient and modern. Some account of these answers has been given elsewhere. 8 We propose now to consider the attitude taken by religions savage and civilized, and by the leading schools of moral philosophy.

1. Religion. Various faiths have taken every conceivable view of suicide, from recommending it to resolutely and uncompromisingly opposing it. As the grounds for the former view are less obvious to us, it is well to begin by briefly discussing them. First in the list stand those fanatic beliefs, including degraded forms of Christianity, whose votaries have been impelled to kill themselves, often in most painful ways, to attain a blissful immortality or to avoid something which they regarded as polluting.

Many of these people, and other such religions suicides, were undoubtedly in a condition of hysteria, if not actual madness. We have a parallel to such self-destruction in the most horrible of the rites of Kybele—which took place on the dies syncinis, at least in its earlier form. 9 On this occasion the devoees of the goddess, wrought up to a pitch of frenzy by an exciting and elaborate ritual, not only wounded themselves, but performed the act of self-emasculation, thereafter joining the ranks of the Guli. Turning now to medical evidence, we find such mutilation named along with suicide and manslaughter as typical of some forms of lunacy. We have thus two closely related acts, both involving loss of the instinct of self-preservation, arising, not from ordinary, but from a temporary insanity, or from a deliberate and aroused to a perverted or degraded religious instinct.

But religious suicides are not always maniacal. We need only allude in passing to the innumerable instances of Frazier, familiar to us from the result of violent nervous shock, disease, grief, excesses of one sort or another; of suicide, or of suicide from some other cause; 10 and of the very widespread belief among many tribes that the soul of one who kills himself will be punished by the gods, or will receive some other penalty.

8 Mercier, p. 137.

1 See art. ETHICAL.
4 Tanzi, p. 533.
lower strata of human history we have numerous examples of savages who regard suicide as perfectly justifiable (a) because the deceased will in the next world have a body in the same state as his present one. (b) This naturally leads to the conclusion that voluntary suicide is praiseworthy for meditation of a grave or long and wasting illness, since it will avoid a maimed or helpless life after death. Such suicides are practically examples of euthanasia (q. v.). Or (b), because some people regard it as honourable and therefore as procuring a more than usually pleasant lot in the next world, not merely avoiding an unpleasant one. Obviously such ideas are not widespread or unqualified, or they would result in the extinction of the peoples holding them. They mostly take this form; a dependent — wife, vassal, or slave — is so closely bound to his or her superior that death cannot sever the tie; therefore, just as in any earthly journey the vassal will faithfully attend his lord, so, when his lord dies, the most honourable course is to follow and continue to serve him. Such fidelity will, it may be expected, result in due honour among the dead.

So at the death of a king of Benin his favourites and servants used to compete with each other for the privilege of being burned alive with the king's body in order that they might attend and minister to the other world, and 'the first to die was deemed the most fortunate of those ever allowed' to give evidence of this.2 Similarly among the early Germans 'notice in common utanam as prorsum superstitio princi palis sancta diucessisse,' and higher civilization Persians were capable of similar devotion to their king. But this is hardly a religious idea; more definitely connected with religious belief is the Hindu sati (q. v.).

Religious opposition to suicide is to be found in all, or nearly all, strata of civilization. Probably the chief, if not the intrinsic reason for this among primitive races is simply the dread of the ghost. The self-destructor must have been greatly wronged or troubled in some way, or he would not have acted as he did; therefore his ghost will be an unusually troublesome and revengeful spirit, like that of all aventahvatos — to borrow the convenient Greek term. Hence, either he must be appeased by the death of his enemy, if known, or by offerings of some kind, or else he must be rendered harmless. A natural way to accomplish this is to mutilate or destroy the corpse — in fact, to treat it much as medieval Europe did a madman, in the hope that the ceremony of cremation, or burning, would, in accordance with the common idea, would easily generate enough the belief that the act of burning, under these circumstances, would make the crime wicked, i.e. strongly displeasing to whatever deity the community worshipped. It should be noted, however, that among some people this is not a very advanced stage of culture suicide is objected to on religious grounds, but so scrupulous methods of treating the corpse are in vogue. The Exclusive of North Borneo held that those who die by their own hands live miserably in the next world; but the bodies are not burned or mutilated, nor is there any fear of them shown3 unless their unconceivable burial or the spot where they are found may be taken to be a precautionary measure indicating fear.4

This vague idea of suicide as a crime has been taken over by several higher religions and explained by them in the light of their ethical and eschatological beliefs. Thus for an uncorrupted and logical form of Buddhism it is clearly for forbidden, since it violates the first of the five funda-

mental precepts, 'Kill not any living thing.' 1 A religion — it can scarcely be called a philosophy — which presents certain striking parallels to that of Gautama gave an elaborate justification of its prohibition of suicide. To the Orphic — Pythagorean doctrine was the present of duty to mortification and lengthening of life, i.e. the form of imprisonment; therefore to kill one's self was to attempt, quite vainly, to shirk a deserved penalty. 2 This view, with various modifications, was taken up by Plato, and is regarded as an important theocological of later philosophy. 3

The natural Roman religion perhaps condemned suicide originally and in theory. So Sertorius tells us that the ibert pontifices beds the body of one who had himself to be cast forth unburied; and the later Servius Daniellis adds on the authority of Consus Hemsia that the idea of the disgracefulness of suicide dates from the time of Tarquinius Superbus. More cowerth is notion from Varro 4 and in the conclusion that inhuman were denounced the regular funeral rites. We have no hint, however, that the various suicides of legend and history were otherwise than honourably treated. Possibly the objection was not to suicide in general, but to hanging, regarded as foragoria, any rate, the rhetorical discussions of the subject 6 quote no native religious scruple.

The opposition of Christianity has from an early date been of the most considered kind. It is true that nothing in the NT directly prejudices such an attitude, but certain Patristic writings make it obvious that by their time the discussion had taken the form of an inquiry whether self-destruction was an office of one of the superior classes, and whether any class of the superior classes, and whether any sanction to such a crime (acculus), as he repeatedly calls it, may be conduced in the case of a woman whose honour is in danger, or in any case, if he arrives at any conclusion. His reasons are chiefly: (a) that suicide is an act which precludes the possibility of repentance, 3 and that it is a form of homicide, and therefore a violation of v. the sixth commandment, 4 not justified by any of the exceptions, general or specific to that commandment, which have been divinely established, 5 and aggravated by the fact that the person thus killed has done nothing worthy of death. 6 To commit suicide one must avoid violating the best of a greater sin to escape a lesser. 7 But even St. Augustine himself was obliged to admit the possibility of exceptions, since in his day several persons who had taken their own lives were recognized officially as martyrs — an indication, even if other proofs were lacking, that the opposition of suicide to was of gradual growth. It is suggested that what is now regarded as a special divine ordnance superseded the general law, which nevertheless remains in full force for all ordinary persons. This remains in substance the position of orthodox Catholicism. It is not insignificant that in the most developed of all mediaeval works on eschatalogical subjects, although the possibility of repentance at the very moment of a violent death is admitted, the examples are chosen from persons killed in battle or by assassins. 8 Nor has orthodox Protestantism been any less emphatic; indeed, its rejection of the doctrine of purgatory makes it still more uncompromising in condemnation of suicide and less hope-
ful with regard to the future destiny of suicides. Judaism in its later forms strongly denounces self-destruction, but the OT says nothing which could reasonably be held to justify this, unless we adopt the Augustinian view of the meaning of the sixth commandment. Probably the Hebrews, until late post-Exilic times, must be counted among those races to whom suicide is simply one of the various possible forms of death and calls for no special comment. 2

2. Ethics.---All the different views of suicide taught by various religions re-appear, with additions, in the various ethical systems. The religious side of Plato's views has already been mentioned. Both he and Aristotle objected to self-destruction as cowardly and an offence against the State, which thus loses a citizen. Plato also declares it unnatural, since a man is his own closest friend. But both are willing to allow it in some cases—incurable pain, or disgrace so great as to make life no longer worth living. The flood of individualism which resulted from the overthrow of the old political life by the Macedonian conquest swept away the second of the above arguments; and consequently we find much discussion of suicide in the letters in which he writes, and a decided tendency to condone or even countenance it. Its most whole-hearted upholders are those who deny immortality, or at least personal immortality; for they readily embrace the ancient Greek view that death is the cure for all ills. A thoroughgoing exponent of this view and insister upon the misery of life was Heseglin the Cyrenean, who, according to Cicero, was forbidden by King Ptolemy to lecture on that topic, owing to the number of suicides which took place among his hearers. Less extreme doctrines were prevalent among the Stoics, who before the time of Posidonius generally denied personal immortality and without exception refused to admit that death was an evil or life a good. Both being 'indifferent,' since neither is a virtue or a vice, it follows that sometimes one and sometimes the other is 'preferable'; hence it is 'reasonable' for even the perfectly wise man to kill himself if it will benefit his friends or his country, or will free him from great pain or incurable disease for tilting reasons, however, was condemned.

Epiktetos, perhaps the most infallible member of this school, held the matter thus: 'In an imaginary dialogue: Epiktetos declares, 'You can no longer endure to be bound to this wretched body! ... Let us go whence we came; let us at length throw off the fetters with which we have been weighed down. ... Wait for God, sirs; when He gives the signal and sets free those who shall depart to live in the present, endure to live in the place where He has stationed you. ... Wait, do not depart unreasonably.'

Again, what may be written, 'You may depart unreasonably.' The room is smoky. If only moderately, I will stay; if there is too much smoke, I will go. Remember this, keep fast hold on it—the door is open. ... You must live in Gyara.' Very well. But Gyara seems to me a very smoky room. So I will go to a habitation in which no one can prevent me dwelling; a habitation which is open to everyone.'

The Epicureans did not indeed recommend suicide in general; but that death, although an evil, is not one which can touch or harm us is one of their fundamental principles. 'When we are, death is not present; when death is present, then we are not,' says the founder of the sect.

The suicide of the ordinary unphilosophical man, Laertius stigmatizes as self-destructive, since it is caused by fear of the very death which is committed. The Cyrenes were to be absolutely indifferent to life and death as to everything else and are accused of having 'diligently endeavored to achieve death for little or no reason,' while some Skeptics were equally insensible. In Rome, where originally suicide appears to have been rare, the famous case of Caius Gracchus, who killed himself for the most part inspired by Greek teaching, generally soiled. Medival ethics added nothing new.

Perhaps the greatest contribution of modern times to the rational treatment of the matter is the consideration noticed in the opening paragraphs of this article, that many suicides are non-moral and entirely the result of the specific mental diseases. Apart from this, and considering only cases where the agent is fully rational, the characteristic feature of the ethical discussions of the subject is their elimination of the theological elements in the arguments. Hume's famous essay 'Of Suicide' being the last important work to pay them much attention. Perhaps the school most nearly favourable to suicide is Utilitarianism; for, starting from the definition of a good act as one which increases the sum total of human happiness (identified with pleasure), one can easily imagine cases where the death of a man by his own hand would cause little or no pleasure to anyone, and would be more or less completely a source of pleasure to many. The more metaphysical schools disapprove it, either as an insult to humanity in general as embodied and existent, the 'perfect man' (Kant) or as a final assertion of the will to live (Schopenhauer). There is also a tendency, arising from a contemplation of such medical facts as those already mentioned, to remove it altogether from the field of ethics—a view of suicide to be an exaggeration of a truth. The general trend of non-theological thought on the part of the ordinary educated man is towards a compromise between the extreme latitude towards suicide represented by Stoicism and the extreme rigidity of the Kantians. That self-destruction is now and then justified by circumstances is admitted by most; and it is quite as widely admitted that those circumstances must be of an extreme and unusual kind to make the act anything else than cowardly and otherwise immoral.

LITERATURE.—Besides the works given under Euthanasia, the following may be cited: E. Tanti, A Text-book of Mental Disease, Eng. tr., London, 1910; C. Mercier, Sanity and Insanity, 200, 1910, and similar accounts; J. G. Frazer, 649, p. 1911-14; J. S. Mill, Utilitarianism, 30, 1869 (many subsequent ed.).

SUICIDE (Buddhist).---1. Introduction.---We are concerned only with 'religious suicide' and the Buddhist views thereon, not with the various kinds of suicide mentioned in Buddhist literature, interesting as they may be. The position of the old Indian ascetics in regard to suicide may be summarized as follows. While the majority of sects were addicted to rapid methods of death—throwing oneself down from a mountain, etc.—the Jains (and probably also the disciples of Gsoka) considered those methods vulgar and evil.

1 De Rer. Nat. Hist. iii. 79 ff.

SUICIDE (Buddhist)

who thus kill themselves are reborn as demons. While practising starvation, the Jain must avoid any desire for death (maragdayan). 2. Renouncing all food and drink, I patiently wait for my end.

2. Buddhism condemns asceticism. — Any austerity which is likely to weaken body or mind is forbidden. The Jains and many others saw in asceticism and physical pain (dikha, tapas) a formula that would bring them from sin. Suicide by starvation is the ascetic act par excellence. While vocal sins are destroyed through silence (mumtu) and mental sins through 'respiratory restraint,' bodily sins are destroyed through starvation (hrdaya), and lust is crushed through mortification. Buddhism had better methods of crushing lust and destroying sin—the realization of the impermanence of pleasure and of the non-substantiality of the ego, the experience in trance (bhyanata) of a happiness which has nothing to do with pleasure and destroys in a man any infatuation for pleasure. It was thus enabled to dispense with ascetic methods.

3. Buddhism condemns suicide. — There is a celebrated text:

"A monk who preaches suicide, who tells man: 'Do away with this wretched life, full of suffering and death, and the facts prove murder; he is not a monk.'"

A man must live his allotted span of life. He cannot avoid, by suicide, the suffering which are the result of his former evil deeds; nor can he win sooner, by a voluntary death, the reward of his good deeds. Everything comes to him who waits. To that effect Buddha employs the P'yanisi the shrillest of the women who cuts open her body in order to see whether her child is a boy or a girl.

It seems also that suicide from religious motives is not effective. Buddhists object to 'thirst for non-existence' (vibhavatayat), as they object to 'thirst for existence' (bhavatayat). A saint must abide in indifference, without caring for life, without caring for death. He will not commit suicide in order to reach nirvana sooner. Is not suicide a desperate act of disgust and desire, disgust of existence, desire of rest?

4. Buddhism admits suicide. — We have therefore good reasons to believe (1) that suicide is not an ascetic act leading to spiritual progress and to nirvana, and (2) that no saint or arhat—a spiritually perfect—will kill himself. But we are confronted with a number of instances which prove beyond dispute that we are mistaken in these two important conclusions. On the one hand, suicide may be in certain cases the actual cause or the occasion of the attainment of arhatship, although in other cases it may be premature and sinful. On the other hand, arhats commit suicide. In illustration of the first point, we may quote the story of the attempted suicide of (1) Sisa, (2) Sappadzos, and (3) Vakkali; for the second the suicide of (4) Vakkali and (5) Godhika.

1 The girigadana or bhipptaya is pitripayanakhetthya (H. Jacobi, Ausgewichte Erzahlungen in Mahahartri, Leipziz, 1880, p. 21; A. Weber, Fragment der Dharmasut, Berlin, 1866-68, p. 206).

3 Vakkali suicide. It is voluntary or not, destroys sin (see J. J. Meyer, Hindu Tales).

4 On v. 99, Magadha, L. 97; SBE i, 1910, i.e. 'Suicide,' the references to vols. xxii. and xliv.

5 Sappaddos, i.; see SBE xil. (1914) 4.

6 Dhipada-Nigha, ii. 227; Dintawaka of the Buddha, ii. 250 (SBE iii, London, 1919).

(1) Sisa was distressed at not obtaining spiritual progress after seven years of endeavour. She said: 'What have I to do with this wretched life (sappadaya)? I will die through hanging.' But, just before death, she was tied round her neck, she was turning her thought towards enlightenment (sujata), as was her former wife, and gained arhatship. Had it not been for the moment the rope loosened from her throat and fell.

(2) The story of Vakkali is to the same kind. This monk was overpowered by passion (suset) and never obtained concentration. This distressed him so much that he was about to commit suicide when he washed with a ramnitied cloth. The Buddha commanded him to go. Desperate at being no longer able to see the Master, Vakkali decided to commit suicide by throwing himself down from a mountain, saying: 'What have I to do with this life, if I can no longer see Him? At this moment a sage appeared and prevented him from thus destroying the conditions of his reaching the Path (anagamaj).'

(3) Vakkali was suffering from a painful illness. Bhagavat came to comfort him and said: 'Your death will be a holy one, and an auspicious one (parvpati). When the Master had gone, Vakkali uttered for the last time the Buddhist profession of faith (universal transitoriness) and took the sword.

(4) Godhika was unable because of disease to remain in a certain state of meditation. He thought: 'If I were to take a sword, Mara would destroy the Buddha and told him: 'If you desire to destroy the Buddha, you must use your sword skillfully.' But, as the rope was tied round his neck, he did it, and the Buddha said: 'There is no limit to the regard for life; they achieve insight (sappadaya) and reach the self-surrender.' This was the beginning of ones (dharmikapratipada) the way of salvation by destroying one's self'; having removed thirst and the root of thirst (that is, ignorance), Godhika is an arhat.

5 The nirvana of the great saints. — Vakkali was an arhat, but, as he did not possess the power of 'loosening the sappadaya' of life, he had, in order to die, to take the sword. On the other hand, Sakyamuni and Buddha amongst the saints of Mahayajjapati Gotami in the Apyadana—possess such a power. The Sanskrit Abhidharma teaches that it belongs to the saints who have reached the nirvapdayaparinirvan {nirvana without result).

In the case of Sakyamuni we have to deal with a voluntary death; in the case of Mahayajjapati, who has to obtain permission of Sakyamuni before she resolves to die, we have to deal with a voluntary death of a slightly different character. The Pratyekabuddhas, like Sakyamuni, decide for themselves when the 'time' has arrived; their method is to rise a few cubits above the ground and burn themselves.

We can easily understand that a Buddha, when he has set in motion the wheel, when he has elected two chief disciples—brihat, when he has done what he set out to do—is daily and every day to enter into the final rest. The case of an arhat is not different; the arhat also has achieved what he had to achieve—i.e. he has removed the slightest kind of desire. If he is not, like a Buddha, capable of abandoning life in a quiet way, there is no reason why he should not have recourse to more drastic methods.

6. Mahayana praises and deprecates suicide as self-surrender and worship. — The saint of the new Buddhism must, before reaching nirvana, spend millions of lives in charity, worship, and meditation. 'Abandoning one's existence (alatmens layaparicched), alatanga layaparicched is to be looked upon as the best self-sacrifice, for to give one's body is better than to give alms, and also as the best
worship, for to turn one’s body as an offering is certainly more meritorious than to kindle lamps at a shrine. We may refer (1) to the story of the future Sakyamuni giving his body to feed a starving tiger, and (2) that of the monk Sumana, who, dissatisfied with his previous worship although painful and extravagant, filled his body with all sorts of oil and set it on fire. 2

The Buddhists have practised in that way many heroic deeds (dukkhavada), some of which are told in the canon of ancient Buddhism (Charityapada, Jataka); the new scriptures are inexhaustible on this topic.

In accordance with the principles of the new Buddhism and the Légende dorée of the eternal Buddhism, self-surrendering culminating in voluntary death has been held in honour in various Buddhist countries. It happens (or it used to happen) that Chinese monks beg for fuel, build a funeral pyre, sit cross-legged on it, cover their head with linen soaked in oil, and set themselves on fire. With some branches of Buddhism (Mahayana, the T’ien-t’ai), the ‘burning of the skull’ is an essential part of ordination as a ‘future Buddha’—a symbol of the holocaust for which human courage is nowadays iniquitous. 3

The Burmese L’it-sing says that Indian Buddhists abstain from suicide and, in general, from self-torture. 4 Whether this statement be accurate or not—A. Barth did not believe it to be quite accurate anyway—he is ready to strongly deprecate such practices. One of the chief aims of Sántideva in his Sikṣākramanachakraya, 5 ‘A Compendium of the Rules of the Disciple of the Present Era’, is to elucidate this point: In what measure is a disciple—a beginner—to imitate the heroic deeds of the bodhisattvas of old? The disciple is ready, willing, and resolved even to commit sin and to burn in hell for the sake of another, not to mention sacrificing his limbs and body; but he must avoid any mistake in the realization of his resolve. The question is whether in such and such a case sacrifice or self-denial is really useful to our fellow-creatures; there is not some other means of procuring universal welfare. To sum up, the sacrifice of one’s body is not in accordance with a wise estimate of the spiritual needs of a beginner.

I. DE LA VALLÉE POUSSIN.

SUICIDE (Chinese).—Suicide is at least not uncommon in China. Literature and history supply illustrations. In a Chinese novelette the heroine commits suicide on the grave of her betrothed lover to avoid the marriage arranged for her with his rival, and that rival thereupon takes his own life in order to be in the world at once his quest for his bride and vengeance on her lover. Among some eight hundred biographical

2 Sūkadharmaapadippitā, xxii, tr. i. Kern, S.B.U. (1884).
3 See J. J. M. de Groot, Le Caus du Mahayana en Chine, Amsterdam, 1893, pp. 50, 217, 227. It is recorded that in the Japanese temples, professional suicide was not unknown. In 1422 a large company of persons, having heard a stirring sermon by a zealot to the effect that poison might gainly yield to calling on the name of Amida, committed suicide by walking into the sea while repeating the ‘Namu Amida Butsu’. 4

notices in W. F. Mayer’s Chinese Kernels’ Manual, 5 27 instances of suicide are recorded—generals after defeat, a tyrant to escape his impending doom, a dethroned ruler, statesmen whose advice, like Alcibiades’, has not been followed, men who, with a programme of professed reform, desired to enforce their counsel by this last proof of their earnestness, a captive to avoid exile, hopeless prisoners, ministers who, having incurred the displeasure of their sovereigns, were allowed to die there rather than by the hands of the executioner, a rebel whose plot was discovered, women to avoid a marriage deemed by them to be shameful, an upright servant rather than commit a murder enjoined on him, a minister of justice under whose subordinates capital punishment was unduly frequent, those moved by loyalty to a deceased master, by grief for the death of father or son, or by shame for a son’s treachery.

In addition to suicides on such occasions as these, some of which will be noted as peculiarly Chinese, cases also occur in which misery (e.g., hopeless leprosy) drives to suicide. More frequent are cases in which suicide is committed in an access of passion, sometimes with the view of involving one’s adversary in legal proceedings in this world, or less frequently with the hope of harassing him by violations of the vengeance ghosts.

Hanging, leaping down a well, and opium poisoning have been perhaps the most common methods of suicide; the last may diminish in frequency under the present opium restrictions.

In the absence of accurate statistics it is impossible to estimate the ratio of deaths by suicide to the total population. The general impression is one of a rare and probably well-founded, is that suicide is much more frequent than in Great Britain. This greater frequency, if it is assumed as fact, may be accounted for by the low value put on individual life, a tendency to ungenerous rage, and the fact that social and religious feelings do not rigorously inhibit suicide, but rather in certain circumstances (e.g., where marriage is being urged on a widow or a bride whose betrothed bridegroom has died) approve it.

SUICIDE (Greek and Roman).—I. GREECE.—Under the name ‘suicide’ we here include all forms in which the individual kills himself intentionally, whether he does it of his own free will or upon compulsion, and whether the end of his action be selfish or altruistic.

1. Legendary suicides.—The earliest definite mention of suicide in Greek literature is the case of Epikaste (Iokaste), the mother of Oedipus of Thebes, in the Nekyia. 6 Odysseus tells how in Hades ‘I saw the mother of Oidipios, fair Epikaste, who wrung an awful deed in ignorance of mind, marrying her own son. And he said plain his father and he married her. And presently she made it known to men, then he in lovely Lydia endued sorrow and ruled over the Kadmeus by the grievous counsel of the gods. But she went to the house of Hades, fastened : high access from the lofty hall, hidden by her wool. And to him she let sorrows in the aftertime full many, even all that the knyges of a mother bring to pass.’ 7

The precise motive for suicide is not very clearly indicated here, or rather Homer does not distinguish clearly between the horror of Epikaste, the despair of Oedipus, and his self-inflicted act when life has lost all that makes life worth living, and (2) no blame attaches to suicide in itself.

1 New ed., London, 1890.
2 Hom. Od. xi. 271 f.
SUICIDE (Greek and Roman)

But the most famous and indeed the typical heroic suicide is that of Ajax. Homer does not mention his suicide explicitly, but it is clearly alluded to in Od. xi. 548 ff., where Odysseus expresses his regret at having obtained the arms of Achilles:

His suicide was recounted in the Athênaia of Arktinos in connexion with the arms of Achilles to Odysseus. It is to be noted that so far there is no mention of madness or of an attack by Ajax upon the heroes. These incidents were, however, recounted in the Little Iliad of Leschae. Also, whereas in Od. xi. 555 it is emphasized that the death of Ajax was mourned by the Greeks equally with that of Achilles, the Little Iliad told of the withholding of burial honours. But even so there is nothing to indicate that the suicide in itself was considered blameworthy. It is an act quite in accordance with the haughtiness and self-sufficiency which characterize Ajax in Homer, and of which the famous ‘silence of Ajax’ in Od. xi. 553 ff., so admired by the author of the treatise On the Heroic Art, is a fitting expression. The suicide of Ajax is the typical act of a great soul which cannot brook dishonour.

A motive of a lesser kind which prompts to suicide is excess of sorrow for the dead. The feeling is best exemplified in the Sibylline to Homer. If I lose thee, it were better for me to go beneath the earth,” says Andromache to Hector, in the same spirit in which David cries, ‘Would God I had died for thee, O Abdon, my son my son! ’ There is no horror in Homer any express mention of suicide for this reason, but Antikleia is referred to in terms which are hardly consonant with any other explanation than that she died by her own hand.

Eumaeus says to the disguised Odysseus: ‘Laertes still lives, but even more he prays to Zeus that life may perish from his limits within his halls; for he mourns exceedingly for his son that is gone and for his wedded wife, whose death beyond all else he knew grievest and brought him to unlimted age. She in grief for her glorious son perished by a miserable death (λαμαθικά φαντάσαι), so may none perish who dwells here friendly to thee and doing friendly deeds.”

The natural inference from these words is strongly confirmed by the reference to her in Od. xi. 84 ff. and 197 ff. The inter story said frankly that she hanged herself.

The list of such suicides is a long one.

Alcman, father of Thersander, had arranged with his son when he left for Crete, carrying the annual tribute of the Athenians to the Minotaur. Thersander was sent to Delos, where, having slain the monster, a white sail should be hoisted upon the returning vessels. Thersander forgot to take down the black sail which was flying; and Alcman, thinking that his son had perished, threw himself from the rock on which he was keeping watch into the sea (Σικυων) which thenceforth bore his name. Erigone, daughter of Icarus, hanged herself when she found the dead body of her father. 12 Thersander committed suicide when his daughters had hanged themselves. 12 When Euklides throws herself on the funeral pyre of her husband, her father Iphikrates threatens to commit suicide by starvation. 13

A special case of suicide to avoid shame is that to escape sexual dishonour.

Legend told how the Lexibakian rock received its name from Leukatas, who, to escape the unwelcome attentions of Apollo, plunged into the sea off the island of Leukas. 20 Phaonius tells how the women of Naxos of Leukata hanged themselves to escape the violence offered them by certain Lacedaemonians. 21

1. Suicide, in the sense of self-devotion for one’s country, has always occupied a prominent place in patriotic saga. Proclus, the last king of Athens, is a famous example.

The Lacedaemonians, under pressure of famine, resolved to invade Attica. At first they consulted the Delphic oracle as to their prospects of taking Athens and, receiving an answer that they would be successful if they did not kill the Athenian king, marched on the city. The Corinthians, who were in the city, secretly communicated to the Athenians the purport of the oracle, and the Lacedaemonians, thinking of themselves as a large army, resolved to besiege the beleaguered city and proceeded to gather firewood. When two enemy scouts approached him, he drew his sword, turned one of them with his hilt, whereupon the other, taking him for a burglar, drew his sword and slew him, thus rendering the capture of Athens impossible.

There is the similar story of Makari, daughter of Herakles and Deianeira. That such a death was deemed a glorious one is sufficiently attested.

2. Heroic suicide—The motives which in the Homeric poems seem mainly to be regarded as prompting to suicide are of a heroic nature—the sense of dishonour suffered or impending, the devotion of a high purpose, or the intolerable sorrow of a personal loss. 24

The sense of the common ills of humanity is by no means ignored—παραθηκη υπο θεον θεον θεαν ανθρωπους. 18 But there is no pessimism. Whatever the evils that darken human life, they seem to be a good thing to him who lives as the sun, and the darkest shadow that falls athwart Homeric life is the sense not of its burden but of its brevity. Life at any level is to be preferred to the useless round of an unending story.

But with the rise of religion, as witnessed in the poetry of the age succeeding the Homeric, we have a view of life which is frankly pessimistic. Hesiod conceives the present to be an age of iron, thrown into darker relief by the picture of a happier golden age gone by. 19

That life is an evil has become a commonplace. 20 πατωμα μεν μεθ φυλας εκθρασαν θειος 21 is a doctrine which becomes a buckled-rhyme phrase of later poetry—τω μεν διπαται ρευματοσ, κραπτον εις φοιλ μεθ φυλας εξειτη. 20 The logical consequence of this view of life is that man is justified in ending what he cannot mend. Whether, in fact, this pessimistic view of life actually induced a more increased practice of suicide is more difficult to establish. But in any case motives of a less heroic kind seem now to be recognized as worthy causes of suicide. Thus poverty is expressly recognized by Theognis 23 as a sufficient cause.

3. The historians.—In the historians of the 5th cent. suicide is not a particularly prominent feature, and belongs generally to one or other of the types already noticed.

Herodotus relates the legend of Nitokris, who, in order to escape punishment for her misdeeds, committed suicide by leaping into a room full of ashes. 25 Arion is compelled by the ferrymen either to commit suicide, with the prospect of being buried ashore, or to jump into the sea. 26 The daughter of Mykenos, being violated by her father, hanged herself from a tree. 27 Shame was the motive for the suicide of Spargapises, leader of the Massagetai, who, in a state of intoxication were surprised and killed or captured by the Persians. 28 And we have the parallel stories of Olympos, who, ashamed to return to Sparta when his company was killed, slew himself at Thyrai, 29 and of Panteus, who, having survived the disaster at Thermopyla, on his return to Sparta, being held in dishonour, hanged himself. 30

In Thucydides we read how in 427 B.C. the Corcyrean democrats sent the temple of Hera and, persuading some fifty of the suppliants (belonging to the oligarchic party) to stand their trial, condemned them to death. They were put to death in the place, or with strips torn from their own clothes. This night went on during the greater part of the time, until in one way or another, by their own hands or by the hands of others, they followed the building and got to know what was happening, they refused to come out. Then the Corcyrean populace broke a hole in the roof through which they showered tiles and arrows at those within. The prisoners tried to shelter themselves as best they could. Most of them put an end to their own lives. Some thrust into their throats arrows which were shot at them; others strangled themselves with clothes. When they found they were left in the place, or with strips torn from their own clothes. This night went on during the greater part of the time, until in one way or another, by their own hands or by the hands of others, they followed the building and got to know what was happening, they refused to come out. Then the Corcyrean populace broke a hole in the roof through which they showered tiles and arrows at those within. The prisoners tried to shelter themselves as best they could. Most of them put an end to their own lives. Some thrust into their throats arrows which were shot at them; others strangled themselves with clothes. When they found they were left in the place, or with strips torn from their own clothes.

In Xenophon, Hell. vii. ii. 36, we have the familiar motive of shame. Kirippo, when the Syracusan fleet under his command was captured by Iphikrates (373 B.C.), "took the spear, the sword, and the shield, and disappeared."

So Hell. vii. iv. 9, when the invading Achaeans were attacked in camp by the Corinthians, when they deserted, the Elean hipparch, who was held responsible for the attack, committed suicide (364 B.C.).

But the suicide which is more prominent in Xenophon is of the romantic type, described as ἐκκόπαστον, ἐσφάγματα ἔσω, which love faithful unto death refuses to be comforted otherwise than by sharing the fate of the beloved. Cyrus himself died, and eight of his best followers fell over him (κατεργά ήσσου). And Artapates, the most faithful of his staff, when he saw that Cyrus had fallen, is said to have leapt from his horse and thrown himself on the body of his king, so that the king ordered him to be slain over Cyrus (ἐσφάγματα αὐτῶν ἱψότω). But others say that he drew his sword and killed himself over him (κατεργά ἐσφάγματα). We have the same motive in the story of Panthela, so beautifully told by Xenophon.

The emotional value of this motive has made it very prominent in literature, as, indeed, it has everywhere and at all times been actually a very common cause of suicide.

It is familiar to the OT.3 Already in Homer Antilochus holds the hands of Achilles, lost in his grief for Patroclus he should cut his throat; and, even if suicide is not meant, Andromache's anguish for Hector almost makes her die.4 Most familiar perhaps of all is the case of Lucretia, the woman of Protesilaus, to whom she was married just before his departure for Troy. There Protesilaus was the first to leap ashore and, after slaying many Trojans, was killed by Hector. After his death his wife grieved for so much that Hermes for pity brought back Protesilaus from the dead. At first Lucretia, thinking he had actually returned from Troy, rejoiced, but when he returned to Hades he alone of all the others who fell there held her hands over his head—this for the blessed reunion hereafter: ‘Ere now for human love, for dead wife, for dead son many a man has gone willingly to the house of Hades, drawn by the hope that in the world beyond they might see and be with those they loved.5

4. Compulsory suicide.—A special interest attaches to Xenophon, Hell. vii. vi. 36, when the execution by compulsory suicide of Theramenes in 403 B.C., he says: ‘When, being compelled to die, he drank the hemlock (θάλαμον ἅμων), it was said that he threw what was left of it in the game of catullus, crying: “This for the fair Kritias!” ’ This is the first occurrence of the word θάλαμον in the historians and the only one in Xenophon. When the practice of execution by compulsory poisoning was introduced in Athens we do not know, nor when hemlock first became the recognized medium. The use of hemlock for this purpose, we may with probability suppose, first became regular in the latter part of the 5th cent. B.C. Even in the orators, however, references to it are surprisingly rare. It is not mentioned in Antipholus. Andocides mentions it only once.6 Lycurgus refers to it twice.7 It is not found in Democritus or Euphorion. Diarrhetic hemlock, however, had the advantage of hemlock-drinking over other more...

SUICIDE (Greek and Roman)

Legends told how, when Dionysos first came to Attica with the new gift of wine, he was hospitably entertained by Ikarios, to whom he revealed his intoxicating boon. Ikarios gave the wine to some drunks who in their drunken frenzy killed their would-be benefactor. His daughter, Erigone, guided to the spot by his faithful dog Stairn, hanged herself on a tree. Then there broke out among the Athenian women an epidemic of hanging, which abated only when the Athenians discovered the cause and instituted the Areia festival in honour of Erigone.

Plutarch tells of a similar outbreak at Miletos, which, obscure in origin, was generally attributed to atmospheric conditions:

'...A strange and terrible affliction once came upon the maidens of Miletos, from some obscure cause—mostly it was conjectured that some poisonous and ecstatic temperament of the atmosphere produced in them a mental upset and frenzy. For there fell suddenly upon all of them a desire of death and a mad impulse towards hanging. Many hanged themselves before they could be prevented. The words and the tears of their parents, their persuasions of their friends, had no effect. In spite of all the ingenuity and cleverness of those who watched them, they succeeded in getting out of their keep and bringing on their misery. The Athenians held that the fact that they were fearful in the face of the two most awful things in the world—death and pain—could not support the appearance of disgrace nor bear the thought of shame after death.'

Theramenes, in whose time hemlock as a means of suicide appears to have come into vogue, was native of Ceos and we have seen above that Theramnes ascribes to the Cenians certain improvements in the method of preparing that poison. There is evidence that at some period the custom by which hemlock was a recognized practice—'if not a legal regulation—in Ceos for persons who had passed the age of 60, Strabo 6 (63 B.C.—A.D. 23), speaking of Iulis, the chief town in Ceos, birthplace of Simonides and his nephew Bucylides, 

'καταβαίνεις ὁ βούλης τῆς λήστης τους νόμους, ὃς μαρτυρεί καὶ τίμησερος (542—291 B.C.) 'καταβαίνεις τῆς λήστης τους νόμους, ὃς μαρτυρεί καὶ τίμησερος (542—291 B.C.)' καταβαίνεις τῆς λήστης τους νόμους, ὃς μαρτυρεί καὶ τίμησερος (542—291 B.C.)' καταβαίνεις τῆς λήστης τους νόμους, ὃς μαρτυρεί καὶ τίμησερος (542—291 B.C.)'

Stephanus of Byzantium 9 writes to the same effect.

So too ΄Αλία, Valerius Maximus, who wrote under Tiberius, attests a similar practice for Massilia, soeller of the Cean practice as he had actually witnessed it.

In Thebes, too, the treatment of suicides attracted some remark. In Athens such differential treatment as we hear of seems rather than of a legal nature. The suicide as a victim of violence belongs to the class of those whose spirits 'walk.' According to a statement in Suidas, suicides and other victims of violent and untimely death were buried in a special place. We find a similar ordinance given by Plato. To:

The order of such ideas belongs the Athenian custom of burying the hand which wrought the suicide.

deed apart from the suicide's body.1 Josephus, in mentioning the custom, adds the unsatisfactory reason that the hand was regarded as alien to the body.2 It is more natural to connect the practice with the idea of the soul of the suicide 'walking' — perhaps to prevent his ghost from attacking the living.3

6. Philosophy.—As regards the attitude of the philosophic schools, the teaching of the Pythagoreans is condemned suicide. Against him, according to Orphic or Pythagorean doctrine, the soul is undergoing in the body a penitential discipline for ante-natal sin.4 Hence suicide is an unwarranted rebellion against the will of God on the part of the individual, whom it behoves to wait until it please God to set him free.

If we may infer his position from the Phaedo and the Laws, condemns suicide in grounds which we would characterize as religious. Religious, too, are the grounds on which Aristotle appears to regard suicide as reprehensible.5 Aristotle treats suicide as an offence not against the individual, but against the State and that of a religious kind, as involving the city in pollution and requiring therefore penalties of a religious nature. No doubt Aristotle had in view such cases as those of deliverance as the severance of the right hand and the like, to which we have referred above.

Stoic teaching was decidedly favourable to suicide. Life and death being for the wise man indifferent (πάραιτα, πάρα), morally neither good nor evil, the question of suicide resolves itself for him into a decision whether life or death is in a given case preferable. Life in accordance with nature being the Stoic ideal,6 when the conditions essential to that ideal are no longer fulfilled, suicide becomes a reasonable deliverance (ελεγχόμενος ἐγερών). Thus suicide may be demanded by a man's duty to his country or his friends or by a condition of severe pain or of physical disablement or incurable disease.7 The paradox of the Stoic position is that the question of 'to be or not to be' is decided not with regard to virtue or vice, but with regard to the ἀδιάφορα, the 'indifferent' things. It is a question of τὰ καθήκοντα τὰ δὲ παρὰ τὸ καθῆκον.8 Hence it may be proper (καθῆκον) for the happy to continue to live, for the unhappy to die.9 Goodness or badness per se has no bearing on the question.10 There is, indeed, little that differs from the Platonic position in the statement of their doctrine in Diogenes Laërtius.11 But the danger of the Stoic doctrine lay in the facility with which comparatively trivial discomforts might be held to justify suicide.

Zeno (c. 399 B.C.), the founder of the Stoic school, is said, according to one account, to have taken his own life because he had stumbled and wrenched his finger.12 Cleanthes, his successor, having developed a gum-balsam, restrained from food by the advice of his doctors for two days. The treatment was successful, and the doctor, relaxed the regime and allowed him παντα τὰ αὐτῶν, all the usual foods. But Cleanthes, having gone so far in the path of death, persisted to the end.13 For the Stoics the length or brevity of life was a matter of indifference.14

The Cynics, too, favoured suicide. Antisthenes

SUICIDE (Greek and Roman)

she is a suicide and thus not admitted immediately to the realm of Hades. 1 We have seen above that according to one tradition, the dead Ajax was deprived of certain rites of burial. The same feeling is at the bottom of the practice of severing the body from the rigd and reposing it apart from the rest of the body. So in our own country suicides used to be buried at the marches in a no man's land: or, if in the churchyard, the body must be passed over the wall and not enter by the gate. As we pointed out, this horror of shedding of blood, all interference with the natural bounds of life, so regarded with a peculiar horror the shedding of kindred blood (μακαριανας, ὀψις ἄγαλμα), 2 Ixion, who first introduced this crime—ἐμπέφανος ἀληθέως πρώτος, ο λέοντας ζήτας—won for himself a choice wreath. 3 The supreme case of kindred blood 4—which is the term used by Sophocles to denote the patricide of Oidipus—is suicide. The Greek language hardly distinguishes between self-murder and murder of kin. The suicide belongs to the class of the victims of violent and untimely death—(μακαριανας, ὀψις ἄγαλμα, ἐκθεσις, λιθανος)—the murdered, the dead on birth or in nonage, 5 the unborn victim of abortion, 6 regarding the fate of whom the popular mind was peculiarly sensitive. It seems probable that these religious and popular beliefs, the popular active theories were the really active motives at all periods of ancient Greece in condemning the practice of suicide.

II. ROMAN.—1. Heroic suicide.—What we may call the heroic type of suicide—committed either to escape intolerable shame or for great causes which seem to demand the sacrifice of the individual life—was, though common, in character the exception of the Roman Republic. Such suicides were a prominent feature in the early history of Rome, and the tradition of them undoubtedly exercised a powerful influence upon later conduct.

The typical example of self-sacrifice for the fatherland is that of the Decii. According to modern authorities, the story is true only of the younger Decius. But, in any case, both are enshrined in Livy's matchless prose. The elder, P. Decius Mus, devoted himself in 337 B.C. in a battle with the Latins near Mount Vesuvius, when he was in command of the left wing. A precisely similar story is told of the younger Decius, who at the battle of Sentinum in 293 B.C. devoted himself to death, charging into the densest ranks of the Gauls, as he fell, to escape intolerable dishonour is illustrated by the story of Lucertis, the victim of the nula lido 7 of Sextus Tarquinii. Her story is too familiar to be told here. 8

2. Penalties of suicide.—We have seen that suicide by hanging was regarded by the Greeks as a shameful type of death. When Oidipus discovers the nature of his sin, he can find no stronger words to describe his deeds than to say that they are ἐφίλετον ἀφρῶς, i.e. such as to say suicide by hanging could not expiate. The Roman feeling seems to have been precisely similar. If we quote the case of Amata, wife of King Litanus, it is obvious how active is the interesting matter preserved by Sivinus in his commentary on the passage. Vergil tells us that

1 ὡς είναι τέκτων τεινεντων προσπήθαν, ιμεσί κυρίος, ἤμες καὶ τεκτα ἀναλίαν
2 ὡς είναι τέκτων τεινεντων προσπήθαν, ιμεσί κυρίος, ἤμες καὶ τεκτα ἀναλίαν
3 ἡ ξύλινη τάξις, τάξις καὶ ἀναλίαν
4 Πέτρος, ἀπόλλωνας, ἐν Ἀρχέλάοις ἐν 1606. σημ. 317–325, καὶ Σ. Βιντ, ἐν Ἀρχέλαοι ἀρχέλαοι, 1812,
5 ἡ ξύλινη τάξις, τάξις καὶ ἀναλίαν
6 ἡ ξύλινη τάξις, τάξις καὶ ἀναλίαν
7 ἡ ξύλινη τάξις, τάξις καὶ ἀναλίαν
8 ἡ ξύλινη τάξις, τάξις καὶ ἀναλίαν
9 ἡ ξύλινη τάξις, τάξις καὶ ἀναλίαν
10 ἡ ξύλινη τάξις, τάξις καὶ ἀναλίαν
friends and requested us to consult his physicians about the issue of his illness, with the intention of voluntarily departing from this life. Although this was not his intention, his other friends did not think he would be able to resist to the pressure that was being applied to him. For it was necessary that he be made to understand that his goods should be confiscated; for if his death were voluntary, he might have committed suicide against his will. For if he were not able to resist the pressure of his other friends, he thought he would, in a certain manner, be able to resist the pressure of his own will, that is, the pressure of his own death. Therefore, he was induced to commit suicide, an act which was eminently high and praiseworthy. For to rush to death under the pressure of one's own will, is more than what many have done: but deliberately to weigh the multitude of advantages and disadvantages, to accustom oneself to the idea of death, without rejecting the point of life or death, is the conduct of a great soul.

In Ep. iii. 16 Pliny celebrates the heroic conduct of Arrin, who, when his husband Ccecilia Petus was condemned for his share in the conspiracy of Scribonianus against Claudius in A.D. 42, encouraged or helped his husband to commit suicide, first stabbing herself and then handing the dagger to her husband with the words 'Painte, non dolet.' This famous suicide is the subject of an epigram of Martial:1

A somewhat similar story is told in Pliny.2 A special interest attaches to the type of suicide mentioned by Pliny in Ep. iii. 9. Cicero Clasius, consul of Octavia a.D. 96-99, was accused of having been an instigator of suicides and was anticipated by death—probably suicide.3 I'll accusations vel fortuita vel voluntaria morte penitentia morte ipsius damnatus fuisse fuerit ut cunum credit eamdatar, volumine exire de vita, cum defundit non possit; its mirum proferre damnationes morte fugisse, quem etiam manus aliquod manum pandat consulul, egresso quoddam consulul

References are frequent under the Empire to the self-destruction of judgment by suicide. In a well-known passage4 Tacitus explains the motives, referring to the year A.D. 54, as being dire of the executioner and the desire to secure certain posthumous advantages which the suicide had over the condemned in respect of the disposal of his person and his property. Normally, it appears, the goods of a condemned person were confiscated, and he forfeited the rites of burial. The suicide, on the other hand, did not forfeit the rites of burial, and many disadvantages remained valid. These advantages constitute what Tacitus calls the 'premio festinandi.'5 In practice, however, there seems to have been considerable variation in the treatment of the goods of such a suicide. The case of the Emperor of the Roman Empire and his suicide goods were confiscated as a matter of course.6 It is clear from the evidence of Tacitus himself that even under the Empire suicide before sentence did not always save the suicide's goods from confiscation.7

The perplexities of the question and the various distinctions made may be seen in Justinian, Dig. xviii. 21:1 'De domo eorum qui ante sensentiam vel mortem sui conscius vel accusatores corruerunt,' where § 3 forms an important document with regard to suicide:

Persons accused of or caught in crime who, through fear of the charge hanging over them commit suicide, have no heirs.8 'Lapinianus,' however, writes that, when guilty persons who have committed suicide assign their goods to others, their goods are not forfeited to the fiscus.9 For it is not the fact of guilt that is involved, but the fact of the guilty conscience is held in the case of an accused person as tantamount to a confession of guilt. Therefore, for the confiscation of the goods of suicides, it is required that they must either have been accused or caught in the criminal act. Accordingly, however, to the receipt of the executioner of the goods of a person who, lying under an accusation, commits suicide are rescinded the persons who were accused of or caught in the crime of which he was accused such that, if condemned, he would have been able to be either a friend or a petitioner.

that a person who was accused of a petty theft, even if he committed suicide by hanging, was not in such case that his property should be confiscated, but that he would have been taken from himself, had he been convicted of the theft. Therefore, the mere act of suicide, if the charge in which he was implicated were of such a nature as to constitute him a convict, would have involved the loss of his property. If, on the other hand, a person committed suicide from weariness of life or impatience of pain or the like, he was entitled, according to Valerius, to the free property. According to a rescript of the emperor Hadrian, if a father, or accused of knavey, or accused of any other manner of crime, commits suicide, he would not be allowed to be his son, and therefore his goods were not to be confiscated.

Other examples of this type of suicide in Tacitus are P. Vitellius,1 M. Emilius Scaurus,2 Planica,3 L. Piso died before his trial by a 'more opportune' which was probably suicide.4 A notable feature of the Empire is the use of compulsory suicide as a means of execution. Intimation is conveyed, more or less explicitly, to the party concerned that his death is destined. The advantages of this form of compulsory death over actual execution were apparently partly aesthetic, but probably the main advantage was that it seemed to make the guilty person his own judge and executioner and thus relieved the emperor of the business which necessarily attached to an actual execution. This method left to a man his 'choice of death'—what was known as 'liberum mortis arbitrium,'5 or merely 'moris arbitrium.'6

Other examples of compulsory suicide recorded in the Annales of Tacitus are Silanus, Pompea, Sabina, Silvania, Narcissus, Julius Montanus,7 Thrasius Flaccus, Claudius Borean and his daughter,8 Valerius Asiacicus,9 Arruntius,10 Antius,11

Three examples may be selected as being the suicides of notable men with regard to whose last moments we possess detailed records—the poet Lucan, the historian Tacitus, and Hadrian.

The suicide of Lucan in A.D. 65 is thus described by Tacitus:12

Eum M. Annae Lucani caedem imperat [a.e. Nero]. In praeminentes, unis fridnere pecuniae, ut paulatim ab extremis cedere spiritum, servandi abscindere, et compositum, quod urruere, neciam vigilare, neciam victoriae, neminem mortem inimicio obesse tradisse, versus inepti retulit [Pharsal. iii. 66-69], exspect illi supreme vox fut.13

The suicide of Nero has often been described. The account given by Suetonius14 is too long to quote. The story of Seneca's death is told in Tacitus, Ann. xvi. 44-46.

It appears that in those times every suicide was more or less a passer, who was expected to make his suicide remarkable by some notable word or act. Hence Tacitus remarks: 'Senecio, ... et

The individual point of view was much insisted upon in the later Stoicism. The same set of notions about circumstances and right and wrong which make suicide, in another not. A situation of intolerable shame, for instance, might be for an ordinary man a sufficient ground for suicide. Yet it might be the duty of another man, whose case is less essential to the State, to reject the temptation. A man’s death must be in consonance with his life.

Peregrinus, according to Lucian, ἐξ ἐννοιας χρηστοῦ τοῦ δοκεῖ ἐκεῖνος ὑπὲρ τῆς παραβίατος χρήσεως τῆς Ἱερημίας Ἑβδομάδος, Ἰερουσαλήμ ἀπεδοχεῖ;¹

This doctrine of ‘propriety’ is expounded in a well-known passage of Cicero’s de Officiis, which is of course based upon Faustus.²

III. CONCLUSION.—Our review, then, of the history of suicide among Greeks and Romans shows that at all times the only valid motives against the practice of suicide have been, in the main, not ethical but religious. And consequently the penalties attached to suicide are not so much civil as religious. They affect a man’s condition not here but in the hereafter. The withholding of the rites of burial, the severance of the right hand, and so forth, all belong to the religious circle of ideas. When religious values ceased to have any meaning and were not replaced by other values, then, as in the case of the Christian, the genuine antagonism to suicide. When, on the other hand, the life hereafter was so emphasized that in comparison with that after life the life here seemed of little account, there was an obvious impulse to suicide. But that impulse was resisted and deserted—by Plato on the ground of a higher law, a great mystery which demands that we remain in our prison-house till God shall please to set us free; by the Neo-Platonists because suicide is ipso facto detrimental to the soul. The whole question is admirably put in Macrobius, Comm. in Somn. Scip. 1. 13:

1) Ἕκας Παυσανίδισ τετάρτη σελίνα ἀπόνοιας Παύσανίων ἐξεκείρετο. Oportet, inquit, animam post hominem liberam corporis passuum inveniunt. Quam qui de corpore violenter extrudit, liberam esse non putavit. Quia enim suum sapis nequaquam comparat, aut pertaetis necessitatis in multum conclusum ad hoc descendit act olim; quae contra ilium passiones habetur; ergo est ante suum sordidus pullus, hoc ipso tamen, quod exitum sordidum, sedes est. Denuo mortem debere amittit animae corporis. Sed non semet egressum, superstes corpus, sed corpus sibi adexitum, in locum, in qua infecta manus est, perversantur: cum contra ilia animae, quae se in hac vita vincula corporis philosophiae morte discessurit, adhuc extante corpus casulo et ridiculos inseruntur.

SUICIDE (Hindu).—I. Vedic.—In view of the devotion to life and its pleasures which marks the Rigveda, and which is reflected in the disapproval therein implied of the practice of svi, it is not surprising that no trace of the custom of religions suicide can be found in that text. Nor in the later Sānavātins the Brāhmaṇas is there any clear recognition of such a usage, unless we accept the suggestion of Hillebrandt⁴ that the consecration ceremony (tīrṇa)⁵ which is an essential preliminary to the most important rites, is in reality a faked form of the older practice of suicide by fire. While it is true that the generation of heat in the man who undergoes the rite is an important feature of it, the purpose of this practice, as of the fasting which constitutes even a more essential

element of the ceremony, may much more naturally be
deemed to be produced, the psychological condi-
tion best suited for the performance of the sacrifice.

There are, however, in the Brahmansas, twofold
views; broadly speaking, there is the way towards
the approval of suicide from religious motives.

In the first place, there is developed the concep-
tion that the proper sacrifice is that of a man’s self,
and there is a Dionysiac sacrifice that of a priest;
and in the second place, in the latest of the great
Brahmanas, the Sutrapatha, the closing act of both
the purusamadha and the sarvamadha, the human
and the universal sacrifices, is the giving away
by the performer of the whole of his posses-
sions, including in the latter case even the land,
and his wandering into the forest, doubtless as a
preliminary to an early death. The teaching of the
Upanisads, which emptied empirical life of all
true reality, held out union with the infinite
as the result of knowledge, and glorified the cessa-
tion of existence, must have tended to the same
result. 

As originally taught, the practice is attested by
the Brahmanas, for in the Vaisishya and the
Saktasattva, which is explicitly laid down that the sadnyadhi, who has acquired full
knowledge of the truths, the doctrine of the
sages, may choose death by voluntary starvation, by drowning
by fire, or by a hero’s fate. Earlier evidence (and
beetter proof of usage) is afforded by notices in the
Dharmanirdeshas: in Vaisishya it is expressly stated
that the world of Brähman is obtained by entering the
fire; and in Apastamba, in an interesting dis-

cussion which ends with a defence of secular life
and aims, it is admitted that in one view the ideal
was for an ascetic first to live on fruits, roots,
grass, and leaves only, then on those things alone
which become spontaneously detached, then on
water, then on air, and finally on ether alone.

With the testimony of Vaisishya the record of
the death on a pyre erected by his own wish of
Kalanos, an Indian follower and friend of Alexander,
who fell ill at Pasargada and decided on death,
without the opposition of the king, rather than after
his mode of life.

2. Buddhism and Jainism.—It is characteristic
of the general sanity of Buddhism in its earliest
form that the Buddha appears to have disapproved of
suicide, as he disapproved of all excesses of any
acetic thought. But it would be surprising if the
influence both of Brähmanism and of Jaimism had
not had its effect in making suicide respectable in
certain circumstances. Not only is the duty of
self-sacrifice deemed to excuse the action of the
bodhisattvas in committing suicide with the definite
aim of being reborn as the fish whose flesh alone
can save the people from disease, but self-destruc-
tion appears to be approved if undertaken with
the desire of securing rebirth in such a condition as
will permit entry into the Buddhistic order.

While this attitude is exceptional in Buddhism,
Jainism firmly recognizes and commends religious
suicide. It is dealt with at length in the Āyur,
the first Aīgī, and its preliminaries are described
in detail in the Ayurapachakkhāya and the Sinh-
āya. The second and fourth of the Pañinas in one
recounting. But suicide is not permitted promiscu-
ously; it is allowed to those ascetics who have ac-
quired the highest degree of perfection, and it is in
essence consists of giving up begging; and lying
in the dharamapura, the man is said to have the
right to hunger and thirst. Frequent mention is made of
death being thus brought about by a month’s
abstinence (kāramāte); this fate is recorded of the
Tirthakarmas; and that of Kṣanaka, and that of
Kendaka, of the layman Ambaśa, and of all
those celebrated in the Vaiśnavagama. At this
supreme moment of his career the ascetic must not
long after rebirth in this world or as a god; he must not wish to live on desire sensual pleasures,
but equally he must not seek for death to come
more swiftly. The final condition thus reached
by the sage (sammghajjante) is one of complete
mental and physical collapse. Practically identical
with it appears to be the pañalabāhiya, the last
of the eight stages of man’s existence as taught
by Gātika Madhahāputta. The popularity of the
practice is attested by the number of texts of
Jainism: in 1172 thus died the great secolar
and statesman Hemaachandar, followed in a short
time by his patron Kumārapāla; in 1912 a monk
at Ahmādābād, though in perfect health, starved himself to death in forty, or in thirty, days; and in
the following year a nun at Rājākot, having previously
weakened herself by austerities, died after two
or three days’ fast. Suicide, however, is still
not permitted to others than ascetics, and non-religious
suicide is regarded with especial horror by the
Jains, as they disapprove of all taking of life.

The problem of reconciling these two views is
sometimes as small as the Jains by the Brahmansal schools.

3. Hinduism, medival and modern.—Hinduism
stands firmly on the position reached in the
Dharmanirdeshas, which permits religious suicide,
while censoring ordinary forms of self-murder.
Mann expressly permits a Brähman, in circum-
stances explained (doubtless correctly) by his com-
mentators as disease or great misfortunes, to walk
straight on in a north-easterly direction subsisting
on water and air until his body sinks to rest, and
declares that a Brähman who has got rid of his body by any of the means practised by ancient
sages obtains the world of Brähman; and Mehi,
to whom the book is addressed, interprets the methods in question as
drowning oneself in a river, leaping from a height,
burning, or starvation. The Mahābhārata fully
recognizes the wickedness of suicide; nevertheless
the prince Bādurgha and his ministers resolve to die
by starvation, and for this purpose, as the ceremony
is a religious rite, douts old garments and holy
grace, drinks water, and applies his mind to de-

tion, though his purpose is eventually defeated.
An interesting tale, which appears also in the
Pāñchaentatra, is that of the hunter for whom a
pigeon roasts itself as a guest-offering; the
wife of the bird declines to survive her hus-
bond, and is saved from their sacrifice, resects him and himself ends his life by fire.

A new aspect of suicide appears in connexion with the
development of the devotion paid to the sectarian deities which is characteristic of Hindu-
ism, for suicide now means not so much absorption
in an impenetrable absolute as union with a very
personal deity. The idea is reflected in the
mythical account of the history of Mira Bai, the

devotees of Kṛṣṇa in the time of Akbar, who is recorded to have disappeared into a fissure which showed itself for a moment in the image of her chosen deity, at a divinity and a sacrifice to take place at Dwārakā. Similar considerations doubtless prompted some of the comparatively rare suicides which took place during the yātra of Visnukṣeṇa as Jagannātha. In the Chaitanya cult, the devotee who thus teaching the fame of the shrine was largely due, nor any of his followers appears to have encouraged or approved this form of worship; no allusion is made to it in the elaborate accounts of the car processions by Kṛṣṇadāsa or by Abhīnātī Fagl. It is not impossible that the conception may have been borrowed from a Saiva sect, some fusion of the two cults having taken place at Puri, but Chaitanya's own end was mysterious, and in his lifetime he had sought mystic union with the god in ecstatic trance, so that the occasional suicides of ardent devotees beneath the wheels of the car of Jagannātha can hardly be deemed unnatural or surprising.\(^1\)

The wide-spread nature of the custom, and its prevalence both with and without Brahmanical sanctions, are attested by Nicholas T. Collinrode from personal observation just at the opening of the 19th century. In 1802 the legislature intervened to prevent the practice of suicide on the island of Sagar, at the mouth of the Ganges, where, in pursuance of vows, not only were children cast into the sea to be devoured by sharks but grownup persons voluntarily underwent the same fate. This practice was confined to the lower castes, as was also the custom by which men used annually to hurl themselves from a precipice in the mountains south of the Narmadā, sacred to Kākabhūṣaṇa, in fulfilment of vows undertaken at an earlier period. This rite was carried out by mountaineers: great concourses gathered at the place on the new moon of Phalgunī, the day appointed for the ceremony, and it is significant of the passion for public recognition as part of the motive of such suicides that the man committing this fate was wont to proclaim his intention publicly and, attended by a band of musicians, to promenade in the neighbouring towns collecting alms. On the other hand, not only did the practice of anti (p. 343) flourish under Brahmanical auspices, but the custom of suicide by drowning at the specially holy spot of the junction of the Jumna and the Ganges was approved, while the practice of leper consenting to burial alive was promulgated by the grant of obsequies which were otherwise denied. The Saivas also allowed suicide by cutting the throat before the image of Śiva at the temple of Vīrankavīṣṭā, near Mūrānpur. Interference with these rites was gradual, but the final adoption of the principle of treating as a criminal offence participation in a ritual suicide has deprived the act of much of its religious character, though it is of course impossible to prevent suicide on the part of those who regard such a fate as a logical outcome of the religious convictions which they hold.

So far as religious suicide has been approved in India, it is significant that it has been in cases of men who have lived a full life and acquired a high measure of ascetic power, and that suicide in other cases has never been authorized and has instead been strongly condemned. There is obviously comparatively little essential distinction between the practice of ascetics and a pitch which deprives the ascriptive mental and physical quality, and the actual termination of life; an intermediate stage is furnished by the cataleptic condition which the Yogi seeks to induce, and of which the most famous case is that of Haridas, who even survived burial for considerable periods.\(^2\)

But in its essence the practice can hardly be traced to any origin other than the effort to supply a rationale for the old and infallible method by which the aged head of a family might be cast out to die, when he became too old to rule or be of service to his kindred—a usage for which there is clear evidence in the Pṛṣaṇa.\(^3\) In some of the Buddhist Avadānas of the elders there was substituted the doctrine that in old age it was the duty and privilege of a man to adopt a hermit's life, unless he preferred to terminate of his own will the existence which had become burdensome. The essentially popular character of the practice is proved conclusively by the pertinency with which the Jains have maintained it from the earliest period, though the doctrine of the sanctity of life as adopted by them would otherwise have forbidden approval of the custom.

A. DERRIDALE KEITH.

**SUICIDE (Japanese)**—Japan is known as a country in which an unusually large number of people commit suicide. According to the latest statistics, compiled by the Bureau of Statistics of the Japanese Government, the number of deaths by suicide in the ten years preceding 1915 was as follows:

<table>
<thead>
<tr>
<th>Year</th>
<th>Population</th>
<th>Number of Deaths</th>
<th>Deaths per Million Inhabitants</th>

The same returns give the number of deaths by suicide according to sex and age, as shown on Table I. Accoding to the methods employed, the number of deaths is as shown on Table 2. Some of the principal causes of suicide are shown on Table 3.

Among the methods of suicide used by Japanese the following three are unique and worthy of mention:

1. **Hāridārī ("belly-cutting")**, more commonly

   1. H. Garbe, Séismologie und Völkern (=O.T.A. iii. 14), Stassburg, 1899, p. 17.

2. **Yoga** ("body-cutting")

3. **Shimōdachigasa** ("mouth-casting")

called seppuku, was, until the promulgation of the new criminal code in 1873, a method of punishment frequently required of offenders from the nobility and the military class. The laws of the Tang period in China, which for several hundred years had been the model of the Japanese legal system, recognized three forms of capital punishment: beheading, strangulation, and self-execution. The last was allowed to offenders of rank, that they might escape the shame of public death at the hands of others. The criminal laws of Japan allowed self-execution to members of the royal family and to others above the fifth court-rank, except in cases of high treason. Harakiri dates from the Taira and Minamoto period in the 12th cent. and was widely practised during the Sengoku period of internal strife. During the Tokugawa period the practice developed into a complicated system with much etiquette and formality. *It was not more suicide. It was an institution, legal and ceremonial, invented in the middle ages, by which warriors could expiate their crimes, apologize for error, escape from disgrace, redeem their friends or prove their sincerity.*1

The most notable historical case of harakiri is that of the 47 Ronin, in 1703. The daimyo Asano had been obliged to commit harakiri to atone for an unjustifiable attack upon Kira, a nobleman in the Shogun's palace. A band of devoted followers, after long effort, avenged their master by assassinating Kira. They gave themselves up to justice and, under sentence, committed harakiri at the

SUICIDE (Jewish).

37

homes of the dairingos to whom, in groups, they had been promised, and these were usually placed with respect at a Buddhist temple in Tokyo; and to this day many admirers of their chivalrous loyalty pay homage at their tombs.

Although karakiri as a site was usually selected in some garden facing a residence, sheltered at the back and sides by curtains of white cotton. Within the curtained enclosure were placed two mats covered with a mattress of light blue. The couple, faithful to their mattress in the presence of superintending witnesses, with a kinsman or special friend to act as an assistant. He was clothed in special garments, and, after certain formal ceremonies, was handed a short sword with which to make the horizontal cut through the abdomen. The cut having been made, it was the duty of the assistant to behead the sufferer, that the agony of death might be short.

Though karakiri is no longer recognized as a form of public execution, the method is still not uncommon among those who seek to avoid the humiliation of public condemnation and punishment or the supposed disgrace of capture by the forces of an enemy in battle.

(2) Shinju or asatsuiki ('dying between two parties') is the death together of unhappy lovers who had previously refused to flee. It is a particularly lot and entrance upon a happier life in the next world. For the accomplishment of shinju drowning has been the most frequent method, the lovers often tying themselves together with a strong rope. So common was this form of suicide among the lower classes during the Tokugawa period that in 1729 the Shogunate issued special regulations forbidding it, refusing formal burial to the bodies, and compelling them to be made to serve any one who might survive the attempt. At present shinju is of frequent occurrence; and in recent years other forms of death, such as poison or mutilation beneath trains, have been employed.

(3) Junshi is suicide upon the death of one's lord or master with the idea of following him into the next world. In ancient times this was an act of loyalty required by custom, until the emperor Suinin (29 B.C.—A.D. 70) ordered the substitution of clay images for the bodies of attendants and favourite animals. Junshi was revived during the feudal period, not as a requirement, but as a voluntary custom whereby loyal followers, through karakiri, expressed their devotion to their masters. The drowning of almost the entire Taira clan in the western sea at the downfall of that clan and the junshi of hundreds of the family of Hojo Taka
toki at the end of his career are among the most striking manifestations of this junshi spirit. The custom was forbidden by the Shogunate in 1744, and, before the opening of the Meiji era, had become uncommon; but solitary cases have occurred from time to time. Of these the most startling in recent times was the death by karakiri of General Nogi and his wife, at the time of the funeral of the emperor Meiji, in Sept. 1912.

TASURO HARA. SUICIDE (Jewish).—Only a very few cases of suicide are recorded in the OT. The ancient Hebrews were, on the whole, a naïve people, joyously fond of life, and not given to tampering with the natural instinct of self-preservation. Nor are there any few instances recorded on the ordinary level of accidental occurrences. The case of Ahithophel (2 S 17:10) is the only one that, in the modern mind at any rate, excites loathing and reproportion. The suicide of Zinuri (1 K 10:19) and of Ahimelech (killed at his own request by his arm-bearer [Jg 16:33]) only leaves us cold; whilst, on the other hand, the death of Samson (Jg 16:30—31) and of Saul and his arm-bearer (1 S 31:4—6) inspire us with a sense of awe and a certain kind of admiration, rather than any other feeling.

But, when after the people of the persuasion became more and more affected by some of the evil influences and around them, and the difficulties and perplexities of existence kept on increasing, a much less wholesome attitude towards suicide itself perceptible. And, as cases of suicide became more frequent, it was at last found necessary to give a name to the evil. A suicide was thus, in exact legal terminology, described as 'one who purposely destroys himself.' In accordance with a general Rabbinic principle of legislation, an effort was, moreover, made to find support in the Scriptures for the new ideas and enactments which the practice of suicide brought in its train. In Midrash Rebahh, 34, the prohibition of suicide is thus derived from the wording of Gn 9:6, the little word הָרָדַע (killed), the little word זֶלַע (to take), and שֵׁלָשׁ (thrice) has been taken to imply 'thrice to take thy soul diligently' has been considered capable of a similar interpretation, and some have even held that 'Thou shalt not commit murder' is 'thrice against the Ten Commandments. An indignantly re
dicted suggestion to commit suicide rather than suffer is also by some discovered in Job 29:18 (cf. H. H. Schacht, Das menschliche Leben, Berlin, 1846—48, p. 250).

Considering some confusion of ideas which the elaborate treatment of the subject by J. Hamburger may produce in the reader's mind, it seems necessary to state that the Rabbinie, like the Christian and Moslem, has no conception of the act entirely excludes submission to a death of martyrdom from even the category of conditioned or per mission suicide, so long as the victims do not, under the stress of fear or suffering, lay violent hands on themselves (or, by mutual discovery, on one another).

The difference between an act of self-destruction during martyrdom and martyrdom pure and simple is illustrated by the striking case of Hananah b. Taryason, who, whilst suffering the pangs of death by fire during the Haydrian persecutions, is reported to have replied to his disciples' suggestion that he should open his mouth, so that the fire should enter it and consume him more quickly, in these words: 'I wish that he who has given life should take it away, but let not a man destroy himself.' 'Now, then, take the other hands, and carry the executioner to hoop up the flames and otherwise hasten his end.'

We must, therefore, limit ourselves to cases in which the act of death is, in the literal sense of the term, self-inflicted, though a division into different categories is at the same time necessary. Concerning suicide induced by the martyr spirit of patriotism we find instructive information in Josephus, where both sides of the argument are forcibly stated from the points of view of philosophers, and men of the world.

In the speeches addressed to the Jewish garrison of Masada their commanding Eleazar lays special stress on their resolve, made long ago, 'never to be servile to the Romans, nor to any other than God himself,' and then exhorts them to receive their punishment for their past sins from none other than the Deity, 'as executed by every hand'; and, on the other hand, that the heretics had not yet produced the desired effect, he adds, among other things, the further argument that death 'affords our souls their liberty, and sends us into a place of purity, where they are to be insensible to all sorts of misery,'

SUICIDE (Muhammadan)—SUICIDE (Semitic and Egyptian)

S. MARGOLIS

SUICIDE (Muhammadan).—There is no specific text of the Qur'an which forbids suicide, though it would seem that the texts which bear upon the taking of one's own life in general are sufficiently clear as to their purpose to include any kind of willful killing in private life. The following verses will indicate the bearing of the Qur'an upon the subject: 1

'If it is not for any soul to die, save by God's permission written down for an appointed term by the Maker of all things (xxii. 199; iii. 129) the spirit of the act is, of course, the same as caused the self-destruction of Rasa'd, as related by Ra'id ibn Al-Munajj, c. iii. 101; and with the permission at Madinah may be fairly compared the typical medieval instance of the death of a large number of Jews in York in the year 1186.'

Joseph was, therefore, not under similar conditions, is revealed in D.J. 311, viii. 3

In the speech which, after the fall of Jotapata, he addressed to his followers, he bade them take their lives and properties, he compares a suicide to a pilot who, out of fear of a storm, should sink his ship of his own accord, reminds them that it is a violation of God's command, an act to cast aside the soul by which God had committed to it, and exhorts them not to undermine, by an act of self-destruction, 'to run away from God, who is the best of all masters.' 1

A somewhat analogous, though much more pitiable, class is well represented by the case 2 of 400 captive boys and girls who, when they understood that they were being carried off for a life of shame, determined to end their lives by drowning. To quite another category belong a certain number of persons who are reported to have committed suicide under the stress of acute remorse for certain acts of theirs. 3 A different case, again, is that of the executioner of Hannibal b. Tetradyon, already referred to, who, on receiving in vain the dyer's assurance of freedom, is said to have destroyed himself in the flames in which the saint had died, in order to enter at once on his inheritance. His reluctance to accept the promise of freedom is, therefore, a threat of punishment from their respective fathers. 4

The judgment of a person who, in his own legal phraseology, has been proved a felo de se, is, in the main, left to God (272), 5 though a person reconciled to his end by the law is a subject of judicial chastisement (272 n2). 6 With regard to the treatment of the body of a suicide, there is a mention in the speech of Josephus referred to of the custom which demanded that the remains should lie exposed till sunset. In Steinhath, ii. 17 it is enacted that one should neither render one's garments for a suicide nor bare the shoulder or engage in any other formal mode of mourning. Care is taken, however, not to offend the feelings of the relatives of the act. 8

The treatment of the body of a suicide, there is a mention in the speech of Josephus referred to of the custom which demanded that the remains should lie exposed till sunset. 1 See D. I, e.t. 'Suicide.'

2 Walter M. Patton.
the deed was committed in order to avoid a form of death that was considered particularly disgraceful.

An early and classical example of this is the suicide of King Saul of Israel (1 Sam 15:31). Israel’s armies had been defeated by the Philistines, Saul had accused his son Jonathan of cowardice and thrust him through wither sword; last these unrecriminated corpses were then thrown through, and above. Naturally the armour-bearer was afraid to do this, so Saul fell upon his own sword and ended his life. Clearly the deed would not have been committed for the mere purpose of death, but in order to avoid defeat and shame. The sacred mark of circumcision; they were doubly unclean.

He took his own life only in order to avoid dying by such unholy手段 after having been tortured by these means.

A second case is that of Saul’s armour-bearer. When he saw that his king had committed suicide he followed the example of his master. His motive may have been in part the same as Saul’s; it may have been in part desparation at the death of his chief. At all events the armour-bearer, like Saul, took his own life only when a death which he regarded as disgraceful was inevitable.

Closely analogous to the suicide of Saul was the death of Abimelech, the son of Oldon (Jdt 7:4). Abimelech had made himself king of Shechem and a small territory about it; he sought to enshrine his dominion by the conquest of the city, a city some miles to the north-east of the city beyond which the city he drew near to the wall, where a woman threw a millstone on his head and broke his skull. He thereupon committed his armour-bearer to thrust him through, lest it should be said of him that a woman slew him, and the armour-bearer obeyed Abimelech. The death was not his own, since the death-wound was inflicted by his own command, it was murder.

A similar case in the Macabean period is reported in 2 Macc 14:37-46. A certain Rabba, imprisoned in a tower in Jerusalem, was about to be executed. Suddenly his soul left his body, his spirit was useless, fell upon his sword. As the wound thus inflicted was not fatal, he threw himself from the tower. When that did not kill him, he disembowelled himself.

At least two instances are recorded among the Hebrews in which traitors committed suicide.

Ahabbel, one of David’s trusted advisors, had been Abimelech's master and conspired against Abimelech. When he saw that David had eluded the traitors and that civil war would follow, he hanged himself. Similarly, Iddo, the seer, the begetter of Jesus Christ, when he saw that, as a consequence of his prediction, he was to be put to death, he committed suicide (14:27). Possibly his effort to end his life in this manner fails, for another account (Ac 14:19) implies that he, like Ahabbel, died by being disembowelled.

Conscience, then, at least, sometimes, drove traitors to end their own lives. Both the reasons for suicide which can be traced in ancient Israel operated in the case of Shaminash-shum-ukin, king of Babylon, 683-645 B.C.

He headed an extensive conspiracy against his brother and successor, Ashurbanipal, of Assyria. When Ashurbanipal, having defeated Shaminash-shum-ukin’s army and the forces of his allies, besieged him, Shaminash-shum-ukin, reduced to extremities, thrust himself into a burning pit, the flames falling into the hands of his brother.1 His rebellion had been exposed in, conspiracy and attempted assassination by his armoured men.2 This attempt was frustrated when the Assyrians on rebel—a prospect that might well drive a man to the less painful death of a burning pit. Shaminash-shum-ukin might have faced this, as much as another had done, had it not been for an accussing conscience.

The cases cited sufficiently reveal the ancient Semite attitude towards suicide. It was resorted to only in extreme cases.

2. Egyptian. — The attitude of the ancient Egyptians towards suicide was in general like that of the Semitic. The love of life was strong in the Egyptian. They counted the seclusion of the dead and such that it presented to them deterrents of various kinds. The inscriptions present us with two sources of information on the subject, one practical, the other theoretical.

In the reign of Thamos III (1398-1190 B.C.) a conspiracy against the life of the king was formed in the hor os, in which a number of high officials were implicated. The king apprehended this and his commissioners, to bring the criminals. From the records of this commission we learn that at least seventeen persons, who were found guilty, were left to themselves and permitted to take their own lives. It was in a way compulsory suicide.

Death by the hands of others was, however, apparently regarded as less humiliating than death at the hands of an executioner. An eighteenth person, when found guilty, committed suicide, apparently to the regret of the commission. It appears from this record that the punishment of high and formerly trusted officials was probably accomplished by the ancient Egyptian government in this way.

An interesting document written during the Middle Kingdom (2000-1650 B.C.), which is here translated by Erman and Brentano,1 The Dialogue of a Misanthrope with his Own Soul,2 indicates that, in the milieu of Egyptian feudal development, as the failure of old religions formed the stage is now closed and a sense that which speaks of life attained power, suicide was contemplated by some as an escape from life’s ills.

The beginning of the papyrus is lost, but from what remains it is clear that the writer has been in the field of warfare.

In the beginning, to find a man as to his own name, that is lost.

It was forsaken by his friends; even his brothers left him unarrested.

Deserted by all, he was robbed by his neighbors.

His former good deeds were forgotten. Although a wise man, when he would plead his own cause, he was thrust aside.

His name would have been revered, was deified.

He then determined to take his own life, but, as he stood on the brink of the grave, he was turned in favor and refused to accompany him. The dialogue then began.

The soul’s first reason for not going with him was the fear that there would be no tomb to cover his death. This afforded the misanthrope an opportunity to expose to his soul the utter futility of all mutilating the world and other achievements. The soul had counselled death by burning, but had then shrunken from that, as there would be no surviving friend to stand by the hero and make the mortal offerings. He undertook these duties himself, but then the soul refused death in any form, declaring that, even when the great built pyramids and endowed mortuary services, their tombs were in time neglected and permitted to fall into ruins, so that they were in no better case than the poor.

His soul urged that it was good for men to *follow the glad day and forget care.3 The misanthrope then proceeds to demonstrate that life, instead of being an opportunity for pleasure, is far more intolerable than death. The demonstration is embodied in four poems addressed to his soul. The first of these pictures the unjust abhorrence in which the manor’s nation羧就觉得 world by the world. The second sets forth the corruption of society. The third describes the changes of death as a glad release, justifiable suicide. It runs as follows: 4

1. Death is before me to-day
   (Like the recovery of a sick man)
   Like going forth into a garden after sickness.

2. Death is before me to-day
   Like the odour of myrrh,
   Like sitting under a sunny wind.

3. Death is before me to-day
   Like the odour of lotus flowers,
   Like sitting on the clouds of drunkenness.

4. Death is before me to-day
   Like the course of a freshet,
   Like the return of a man from the war-salute to his house;
   Death is before me to-day
   Like the clearing of the sky,
   Like a man looking thereto within to which he knew not.

5. Death is before me to-day
   As a man longs to see his house
   When he has spent years in captivity.

The fourth poem contributes to the argument in favour of suicide by expressing the conviction that in the ‘beyond’ that justice which is unattainable in this world will be experienced.

1 He who is yonder
   Shall seise (the culprit) as a living god,
   Indicting punisher of wickedness on the door of it.

2 He who is yonder
   Shall stand in the celestial barque,
   Cushing that the choice of the offerings there be given to the temples.

3 He who is yonder
   Shall be a wise man who has not been repelled,
   Praising to see when he speaks 4

This document shows how world-weary Egyptians looked at suicide 3,000 years ago. An interesting feature of the point of view is that it betrays no

1 Ancient Records of Egypt, iv. p. 456.

2 For a more complete account of it, see J. H. Breasted, Development of Religion and Thought in Ancient Egypt, pp. 139-156.

3 As translated by Brentano, p. 156.

consciousness that self-destruction is wrong. In this respect it is striking contrast to the Talmud. Rabbi Eleazar says that Gn 9 means that ‘I (God) will require your own blood from you’—a clear recognition of the sinfulness of suicide. The Semitic misanthrope, so far from betraying any such consciousness, seems to hold that the fact in the world beyond he can not only attain the justice that is denied him here, but also assist in the establishment of justice, is a reason for hastening by his own hand his release from life’s intolerable conditions.

SUKHARS.—See Rukhars.

SUMATRA.—See Java, Bali, and Sumatra.

SUMERO-AKKADIANS.—I. The term.—The ethinic expression ‘Sumero-Akkadian’ does not occur in the inscriptions, but, as the compound Kengi-Ura, translated by the Semites as Sumer u Akkad, is found, it is a perfectly legitimate name for the mixed population which of old occupied the alluvial plain of the Tigris and the Euphrates, where they flowed into the Persian Gulf.

2. Probable derivation of the names.—Many suggestions have been made as to the origin and meaning of Kengi or Kingi-Ura and Sumer u Akkad, but it must be admitted that both these points are doubtful even now.

J. D. Prince suggests that it may be a combination of ki (long form of ki), ‘land,’ and the reed, ‘land of reeds’ being a misapprehension of Babylonian ki, Chinese, however, Kengi or Kingi is rendered simply by mui, ‘country,’ and is used also as the sign for ‘the country’ in the sense of ‘our native land.’ This being the case, it is probable that the above forms are manifold from ki-ji, the name of the first character, suggesting that ki-jia may have been the unaltered form. As to Ura, that is the pronunciation given to the character ura, superimposed, when they are used for Akkad. This group also stands for the highlands of Anzu and of Palestine, and therefore indicated a mountainous region. That the Akkadian Semites (not, as formerly supposed, the Sumarians) came from some highland district is quite possible, and the name may be the meaning of Ura. Akkad, however, is probably shortened from Kengi-Ura, which in the time of the northern districts of Babylonia. In Gn 10 Akkad is named as one of the cities of Nimrod’s kingdom, after Tilb (Babylon), but Agade seems to have been the chief city before the fall of that capital city. In addition to Kingi, Sumer is also expressed by the character ura, which has, perhaps, to be pronounced uraina, ‘the land of the holy tongue,’ or language. The ideogram identified in the religious services of the Babylonian temple, and attested as sacred from prehistoric times. The connection of Sumer with the OT Shinar (Shinar) is still uncertain. Suggestions will be found in holds iv, 561, which makes it a changed form of Sininga, for Kingi-Ura, for Kingi-Ura, the best.

3. The earthly paradise.—The tract wherein lay Edin, ‘the good city,’ and the land of Tilumun, which traditionally enjoyed, in the beginning, the happiness and the innocence of the golden age, seemingly always appealed to the imagination of the ancient peoples. Here, more than in other localities, was a desire for a earthly paradise on earth. It was this, apparently, which led to the designation of Adam’s first dwelling-place as a garden eastward, in Eden (Gn 2). In the olden (Sumarian edenu) which, however, seems not to occur as a place.

Bara Qamma, 915.

Materials for a Sumerian Lection, Leipzig, 1905-08, P. 27.

There is apparently another (variant) form for Kingi, viz. Kingu, but this may be due to a pun (see P. 27). Gn 15, however, for Dur stands for a reservoir or waterway, baru would indicate the watershed of the Tigris and the Euphrates—see below, § 6 (c).

If, however, Baru stands for a reservoir or waterway, baru would indicate the watershed of the Tigris and the Euphrates—see below, § 6 (c).

See below, § 6 (c).

that linen (ken, Semiticized as kiššu) was one of the fabrics which the ancients wove, spread on their beds, and wore, and plates (banitir), and used ovena (ubun). Apparently the only simple identification of the metal was silver, 'silver' and gold being described as the 'day-bright' and the 'reap-bright' metals respectively. It is supposed that the only iron at first known—once 'black' metal was called nigna or nanna, and was probably originally pronounced anuqa (Semiticized as anuq). They knew of fire, and used braziers, and a modification of the character for 'fire', expressing the word 'now' (go), suggests the purification of the metal, and the consideration of pottery and bronze, and its uses.

5. Languages and literature. (a) There has been much difference of opinion as to the existence of the non-Semitic Sumerian language as distinguished from the Semitic Akkadian. Halevy and his followers have even contended that it was merely an 'allography'—an invention of the Sumerites for expressing their own language in another way. Such an expression as 'to pour out speech' (qude), however, for 'to call,' 'announce,' is probably too foreign to the Semitic mind to admit of such an idiom replacing the common Semitic nāšu—so also, 'to set the breast' (gupr) for 'to resist,' Sumerian, moreover, has an involved and more widely-differing grammatical construction. The complicated system of verbal incorporations, the absence of case-endings, the use of 'opposed' characters instead of 'opposites,' and other peculiarities, stamp Sumerian as being a language which Sumerites would be most unlikely to invent. Concerning its connexion with old Egyptian, there seems to be no immediate affinities with regard to both characters and words, but the theory has not been very generally accepted. Many admit, on the other hand, that Turkish contains a certain number of similar roots, such as māš (dead) and dā in enamek, 'to be,' and yrum and yrum in yrumek, 'to go;' du and de in demek, 'to speak,' etc. Turkish, however, with its longer history, has naturally developed many new forms, and the numerals differ, but perhaps it is recognizable as a very late relative of Sumerian in its pronouns.

(b) Akkadian is now accepted as the correct designation of the speech of the Semites of Babylonia, derived from what was apparently the most ancient Semitic settlement in the tract, viz. the kingdom of Agade. Akkad, as already remarked, was called by the Sumerians uthur, and the ideograph bar, by which it is expressed, is suggested by J. Sayce, 3 referring to the baris, the heroes which were regarded as 'the life of the land,' viz. the Tigris and the Euphrates. There is some uncertainty as to the division in which the Akkadian-Assyrian language should be placed, but it may, perhaps, best be considered as a branch of the Aramaic and the Canaanitic forms of Semitic speech. Its verbal conjugations belong to the former, whilst the consonantal system of its roots resembles that of the Semitic languages to which Hebrew belongs. In the use of the words, however, Akkady-Assyrian struck out a line of its own. Thus 'hand' is not tāš (Heb., Arab., etc. pād), but ụš, marsh 'naval' is not tāsh, as in Hebrew, but dūša; 'servant' is not ēbēr or ụš, but words, the comparatively rare ēbēr having been borrowed at an early date from W. Semitic speech. On the other hand, the roots of the words for 'God,' 'God,' and 'knowledge' are the same as in some other Semitic languages. The Heb. melekh, 'king,' and aru, 'prince,' are represented in Semitic-Assyrian by karru, 'king,' and madāru, 'petty king' respectively. 'Home' (bašu) and 'street' (ēlās) are from the same roots as in the other Semitic languages, but in Akkadian a quite different form is used. Other Semitic languages used the word kēlātum, from Sum.-Akk. (ḫakallu), 'palace,' 'great house,' in Sumerian. Similarly the Sumerian 'woman' and the Akkadian 'woman' have different roots. Hebrew used the Sumerian dialectic ụr, which appears as ụrū (for ụrū or ụrū) in the name of Jerusalem.

(c) Out of the Sumerian-Assyriac legends and

mythical stories have been dealt with in the art.

6. BELLODON: THE ASSYRIANS AND HEROES AND GODS (Babylonian). It is naturally difficult to distinguish the nationality of each legend, but most of them have a more or less Sumerian foundation. Among the distinctively Sumerian legends of Babylonia must be mentioned that of Ut-napishtim and his five successors, as well as those of Alapars or Adaša, Tamunzu, and Euelușkus. From their names it seems that the ancestors of the hero of the Flood, and of those of the Semites, and the hero of whose legend the Flood itself is now proved to be so, notwithstanding that his names, Atrak-šanas and Ut-napishtim, 8 are Semitic. This is shown by the very noteworthy earlier version in the University Museum, 2 which is written in the Sumerian language, without any Akkadian rendering.

In this text the mother-goddess ( Nin-tu, Aruru, and Zir-
panitu) are one of her seven, and the god of the Flood, Ut-napishtim, and the hero of whose legend the Flood itself is now proved to be so, notwithstanding that his names, Atrak-šanas and Ut-napishtim, 8 are Semitic. SUMERO-AKKADIANS

It begins with a description of Tilmun, the glorious and pure (or holy); there Enki (Es) and his spouse (Danakina) had their home, and on that account the original or legendary home of Tilmun was that of the god and the goddess. It is generally considered that Enki was the origin of Tilmun, the Greeks, who lived in this happy land were not afflicted by any of the troubles that beset the world. Every creature did exist. This happy state of things, however, was seemingly not to last, for the water-god,氨酸 readers to destroy the field (probably meaning the whole district) by means of a flood. This was to last for nine periods of a month each, and when mankind would disappear, outer waters where it melts. There was one man, however, who was faithful to the deities, and he was known, according to Langdon's translation, 'Esel' or King walked on the boat. The context seems to show that the great and pious personage whom the god thus favoured was Uttu, who had been saved by deity owing to his faithfulness. After the gap which occurs here Uttu seems to be engaged in gardening, he being becomes, like Noah, an agriculturist.

After another gap certain plants, possibly cultivated by Uttu, are spoken of, and it is stated which of them (probably Uttu) might or might not eat. One of the forbidden plants Langdon regards as the caseis, but this is doubtful. The parallel between this story and the Creation-stories in Genesis, where Adam is forbidden to eat of the tree of life and the tree of knowledge, is noteworthy, though what is attributed to the first man in the one is attributed to a prototype of Noah in the other. But Uttu's plants were not trees, and they apparently didn't have roots.

Among other Sumerian legends may be noted the story of Enlil and Ninlil, the older Bel and Belit, the legends of Marduk, and probably of Ishtar's descent into the world. It is said that the Ur of Nergal, the god of plague and death, Nergal and Eres-kii-gal, Enlil, Tiisark, and the Labbu-serpent, together with others of which none is known, may be added. Besides the legends there are many historical documents, of which the most noteworthy are the inscriptions of E-anna-tum (Sède du Pouvoir), En-anna-tum II. (cone), Ur-nin-gina (cone), Gudea (dates uncertain), and others, which have been set down upon a tablet, Erinhani, the god of the market and the house, tablet, by persons who were contemporary with or slightly later in time. As the dynasty of Ur seems to have been Sumerian, it is probable that detailed histories of the kings existed, and a fragment of one dealing with Sargartu and his son Dunug is known. This is the period (2500 B.C.) when the transformation of the Sumerian states into a Sumero-Akkadian collection of nations may be said to have taken place.

There are numerous temple-records and accounts, inventories, lists, a few letters and contracts, and chronological lists and mathematical tablets. The Sumerian lists of words are uncomparable with Semitic-Akkadian understandings. These, as well as the lists of names (places and men), are generally classified.

(d) From a religious point of view, the Akkadian legends are of the most valuable service. It seems improbable that the accounts of the Creation and the Flood first published by George Smith were Semitic compositions, though based upon Sumerian originals. This is implied by the fact that most of the names, especially those of deities (Anu, the heaven-god, Enlil, the older Bel, Ea and Danakina, the god and goddess of the waters, Merodach, the god of the gods, Anar and Kishar, the boat of heaven and the boat of earth, etc.) are Sumerian, though Tiamat (Tiwat), the dragon of chaos, King, her spouse, and Mumun, their son, seem to be Semitic-Akkadian.

The following is a list of deities in the late period of the Sumero-Akkadians may be realized when it is remembered that Sumerian names in their pantheon exceeded enormously those of Semitic origin.

—Sanmats, the sun, Bel and Belita (Belites), which have been assimilated to Shamash, the sun-god. One of the chief popular deities in the Sumero-Akkadians may be realized when it is remembered that Sumerian names in their pantheon exceeded enormously those of Semitic origin.

—Samas, the moon, Shamash, the sun-god, who are represented as the city deities of Ur and Uruk.

—Ninlil, the goddess of the moon, who is represented as the city goddess of Lagash and Uruk. She is generally stand for Merodach and his spouse, Ninhur, the teacher, and his spouse, Tanatimitum, 'she who bears,' Adam (Assyr. Adad) or Rammun (Haddur or Rimmon), and certain other descriptive names of women. The great flood was a period of existence only after the Sumerian cult had conquered. Everything tends to show that the Sumerian element of the population preponderated in religious matters, as in the literature and the art of the Sumero-Akkadians.

7. Social life.—Sumerian influence in the land of the Sumero-Akkadians was, in fact, evident in every phase of their life. The system of government was a 'great man' (beard) or 'king' (Sem. furri), who had under him various officers, and was represented in the more important civic centres by a 'head-man' (go-yen, Sem. šulitan, 'he who holds')—subjector mayor. To lighten the weight of the supreme ruler, the tables indicate that he had numerous 'servants,' or royal or vice-regal secretaries, whose cylinder-seals appear (generally beautifully- engraved specimens of insinuado art) on the documents written or drawn up on the king's or the šulitan's behalf. During the time of the dynasty of Babylon the šulitan sank to the position of administrator or officer—probably something like a mayor.

Other officials were the superintendent (anu-dina), often, apparently, the king's treasurer and palace-steward; the business-agents (dumurjan), who acted sometimes as under-secretary of the whole kingdom or half a kingdom. Naturally, there were business-agents of various kinds, and belonging to the same class were appointed to the Ur of Nergal, the god of the market and the house, tablet, by persons who were contemporary with or slightly later in time. These classes of officials had to do with the transport of 'drink, food, and oil,' and were mainly employed in political matters. The number of documents referring to the transmission of goods, etc., suggests the existence of something analogous to post offices over 2500 years B.C. Passing over the nimipur, 'director' or 'governor,' of whom there were several grades; the labu-sarru, 'grain-measurer' (Lau) or 'cassia- bearer (Tilmun), we have the saq-masga, 'district-chief,' the ninaz-akinu, director of reservoirs, springs, or watercourses, the mara, director of the fisheries, the as-sarru, director of rations, etc. Among the lesser civil servants were the caretakers, labourers, gardeners, scribes, barbers, teachers, tour guides, or 'seers,' and finally also hair-dressers (Sum. šat, Akkadian gabbalu)—a few of them being women. Connected with the royal and temple domains were also a number of shops, carpenters, tailors or cloth-workers, goat-herdsmen, shepherds, ass-herdsmen, butchers, gate-keepers, and valets.

Though it may be held that these details are of but little importance, they all tend to show how highly organized were the Sumero-Akkadians at an exceedingly early date, and the social and industrial system which they had initiated naturally formed the foundation of those of the Babylonians and the Assyrians later on. One list of late date (perhaps a copy of an earlier one) from Nineveh dated 880-850 B.C. contains about 200 official titles or designations, some of them ethnic, like 'the Iturite,' 'the Assyrian secretary,' 'the Aramaean secretary,' etc. Priests and temple officials, judges and law-courts officials, were also to be found with the Sumero-Akkadians, as with the Babylonians and Assyrians at all times.

8. Ethical character.—The numerous names of men compounded with those of deities show, independently of the temple worship and ceremonies, how religious the Sumero-Akkadians were. Each city had its favourite deity, and every man worshipped the form or aspect, shown by the appellation of the deity who was sacred as his, or his family's special protector. In addition to their religious tendencies, however, they were exceedingly superstitious, and fond of inanitions and charms, of the efficacy of which they never in danger of being cured by these means, and in all probability other advantages which men are accustomed to seek could be attained by the same means. At the head of these was the consumption of one's enemy by melting away his waxen effigy, the cutting off his life by the cutting of a string or thread symbolizing it, and the like. When seeking a sick or a dead, they gave them the deity who was sick, or dead, whose rays and wind, penetrating everywhere, revealed to them 1

1 See art. CHAMANS AND AMULETS (Assyr.-Babylonian).
everything that passed on the earth. They were therefore the gods of judgment and justice, and appeal was made to them that the sign or pronouncement asked for might be true.

In this period the Sumerian manner, was probably not better than their neighbours, but there is one point which is worthy of note, viz. that in their literature, so far as we are acquainted with it (with the exception of the legend of Gilgames and the Epic of Creation), other than its monumental or obscure passages are exceedingly rare. Moreover, it is in the same legend of Gilgames that the greatest hostility to the goddess Ishtar or Venus is shown—hostility which brought upon her hero all the misfortunes which afterwards befell him. Slavery seems to have been in full force among the Sumerian-Akkadians, but there is no proof that slaves were ever ill-treated. Ruthlessness in war was also not one of their failings, as far as their records are preserved, and they were probably the superiors of the Assyrians at all times in that respect. As a nation, whether the states be taken individually or as a whole, there is no doubt that they had a high opinion of learning and the advantages to be gained therefrom. To all appearance it was a meritorious thing to know the records of the patriarchs, and the place of Holy Scriptures, and to be acquainted with the history of their land, which enabled them to judge of the dealings of their gods with their rulers during their long existence as a nation. In like manner, a knowledge of the methods of legal procedure enabled their scribes to employ themselves usefully by drawing up contracts; and those who made a specialty of such things could read the signs in the heavens and make known all kinds of omens, thus earning the gratitude of their fellow-citizens and their own living by the fees of those whom they served. Whatever their defects, their records exhibit them as worthy people, equal in social progress to all their contemporaries at the early age at which they flourished.

§ 9. Early Sumerian dominion.—Whether the Sumerians or the Akkadians entered Babylonia first is another uncertain point, but it is to be noted that the earliest documents are in the Sumerian language, and the earliest records refer to Sumerian kings. Legends, ritual texts, hymns, compositions, and other inscriptions are Sumerian at the earlier periods, and, when these documents came to be translated, the Sumerian text always preceded the Akkadian or Semitic. Their entry into Babylonia or Assyria have taken place about 5000 B.C. or earlier, but the Semitic-Akkadians probably became prominent only about 2500 B.C. The Semites, however, were certainly numerous in the country at an earlier date, and were steadily growing in power. Sargon of Agade or Akkad seems to have reigned about 2350 B.C. (Nabonidus's date for this ruler is equivalent to 2300 B.C.), and he was certainly not the first ruler of Semitic race. The presence of such Semitic-looking names as Qadmum and Zzagip, 'the scorpion,' who reigned before the mythical Etanna,' notwithstanding that we have to make allowance for the inordinate lengths of their reigns, probably takes back Semitic-Akkadian domination in Babylonia to a date which can hardly be later than 4000 B.C. In that case we may carry back Semitic-Akkadian domination to 4500 or 5000 B.C., and even 4000 B.C., if we are not speaking of

10. Babylonia under Sumero-Akkadian rule.—
(a) The large states.—The number of states into which Babylonia was divided until the time of Hammurabi (2350-2140 B.C.) was very uncertain, but it can hardly have been less than 40 or 50. This, naturally, only shows that each state had its own ruler, and claimed independence from all its neighbours. As may be imagined, the total of these states varied at different times, owing to the constant expansion of the state. But it is easily possible to trace the gradual absorption of their smaller neighbours by the larger or more predominant centres of civilization. The name of each little state was generally that of its capital, and it is thus that we have the names of the great cities and other larger or smaller centres of civilization.

As has been remarked above (§ 4), the usual word for 'country' was kur, but another largely used is worthy of notice, viz. 'kallam, written with the sign *lem.* This identification of the land with its people implies a strong sense of nationality in the minds of the non-Semitic Sumerians, but was less pronounced in the minds of the Semitic-Babylonians after the time of Nebuchadrezzar.

(b) The smaller foundations.—Through the capitals and larger cities (as understood in those days) were numerous, there were many smaller centres and settlements, sometimes founded by prominent agriculturists or traders, but in many cases they were religious foundations. Among the former may be mentioned the city of Illi-Uras (al Ilia Ura) and the 'upper city of Enhannu (al Enhanna ou) of the tablet 23 of the Raphel collection, where also we find Larsa and Pulikku (Larsa hip, Dér al Pulikku hip, 'the fortification of the city Pulikku') mentioned. No. 26 of the same collection refers to the cities of men named Anat-Ili, Sin-nar-maiti, etc., 'the Taribun district' (for taribum), the 'god Enki district' (for Enki), the 'new Broad-street district' (for sare dudug-gi) and the 'capital city,' etc. There were also special provisions for the reception of the temple revenues, paid in kind.

11. The Sumero-Akkadian view regarding their national god.—The idea gained by the study of the inscriptions is that the people of Babylonia (and probably of Assyria also) looked upon their dwelling-place as a holy land. Every state, every foundation, had its deity, and visits to the holy places were meritorious acts. First and foremost, apparently, we have the paradise-city Eridu, the abode of the god Ea—the city whose ideograph was sometimes used, in later times, to express the land of Babylonia in general. Next came the great capital, Bâbel (Sum. Ka-dingira), 'the gate of God'—probably a folk-etymology brought about by the name Babâlam, which was possibly (with Babâlam) the true form. Near Babylon was Cûna (Cutha), the city of the god Nergal, and Dairûn, the ancient Delium, where Urâs (one of the names of Ur-ura) had his seat. Other foundations were Mûrû, where the god Mûrû (Haleed or Rimmon) was worshipped, Qatân, the seat of the god Qatân, and Lasimû, that of the god Lasimû, the swift runner. These similar names of the cities and their patron-gods remind us of Assûr, the old capital of Assyria, 3000 B.C. or uncertain in the time of Hammurabi, and the worship of the national god Assûr, and Nineveh,
SUMMUM BONUM

Modern ethical philosophy has at various times sought its constitutive principle in the will of God, the law of duty, the problem of the origin of the moral sense, the ideas or ideals of perfection, personality, progress, and evolution. For ancient ethics the ultimate reference was to the idea of good.

1. Definitions and early ideas of the good.—In its broadest acceptance 'good' is simply the term of general approval which no developed language lacks. Etymology cannot help us to a closer definition, for the etymology of ὧδος is not known and cannot be equated with the Hebrew word for 'good.'

The conjectural psychology of primitive man is of no avail, for it is uncertain, and in any case Homer was already far beyond that stage. It is obvious that primitive man did not draw our sharp distinction between moral good and other good or desirable things. There is abundant evidence in and out of Greek literature for the universal specification of good to courage in war, high birth, wealth, and other objects of approval or desire. A unifying definition of good will always remain either a more or less plausible generalization from extant literature or an arbitrary deduction from metaphysical first principles. The Platonic Euthyphro and Lysis may serve as anticipatory illustrations of all such attempts, though the one nominally discusses holiness and the other the primal object of love or friendship (the idea).

The Euthyphro leads to the insupportable dilemma of the problem debated by scholasticism: Does God love holiness (or the good) because it is holy, or is it holy because God loves it? The Lysis refers all particular loves to the primary love of which and which seems to be the good. But what intelligible motive is there for loving the good save as a remedy against evil? Near the end of the dialogue, in the attempt to define the good, in anticipation of Stoic terminology, the oikeios, the 'own,' the 'proper,' (or, as Emerson sometimes renders it, the 'friendly'), and by calling evil the 'alien.' The association in the Lysis of the good with the end or purpose dominates all later discussions and is the basis of most modern definitions from Schopenhauer to Herbert Spencer and William James. It is of course not explicit in pre-Socratic literature.

2. Homer.—In Homer we find the ethical meaning of good already existing side by side with its unmoral or half-moral use in the sense of brave or well-born. This has been and will be denied. But it is the only reasonable interpretation of such passages as Achilles' saying: 'Every good and sensible man loves and cherishes his own bride.'

The fact that Homer also speaks of a good meal, and of the ministerial services which the worst sort of ruler to the good, need not signify more than does our own language about a good dinner or the best citizens. The abstract use of the neuter ὧδος, 'a good thing,' is also found in Homer and in Herodotus.

3. The pre-Socrates.—The philosophical discussion of the good begins with Socrates. But a few passages of the pre-Socrates might be regarded as anticipatory. The ideas of Heraclitus suggest the idea of the relativity of the good, and are eloquently developed by the Platonic Protagoras. And Aristocles says that Empedocles' use of the opposites love and hate is equivalent to the doctrine that good is developable by good things. It is in philosophy found the beginnings of a classification or scale of goods in the famous scolium:

'Health is the best when all is done,
AWN 12.0 T. cf. St. Symv. 305 E.

It is with latent reference to that that Plato affirms with emphasis that not even health takes precedence of the virtue or good of the soul. It may be the highest of popular or so-called goods. It is not the good.

4. Socrates and Xenophon.—The Xenophonic Socrates identifies the good with the useful: 'If you ask me for a good that is good for nothing, I do not know it, nor have I any use for it.' There is no proof that this is a genuine report of distinctive Socratic teaching and no presumption that Xenophon had any ideas on the subject which he did not pick up from Plato.

5. Plato.—Plato's doctrine of the good has been obscured by the unnecessary mystery that has been made of its allegorical elaboration in the imagery of the sun, the divided line, and the cave in the Republic. The essential meaning of this allegory is that the different notions of the good, the so-called sciences, is only an empirical and a rhetorical. The statesmen or Socrates' reformulated republic must possess this vision and this insight. They can attain it only through the scientific and philosophical education which preserves and the practical experience of affairs with which it must be supplemented.

Further than this Plato does not wish to define the idea of good 1 as a nature, that is to say, any intrinsic or formal property possessed by the entire moral and social ideal embodied in the Republic and the Laws.

Plato's is the earliest and most effective presentation of these ideas. But no obvious thought has occurred of the many other moralists. Locke uses it to prove that moral rules are not innate or self-evident, since their 'truth ... plainly depends upon some other antecedent ... from which they must be deduced.' Hobbins expresses it thus: 'Every ethical reasoning has validity only so far as the disputants recognize a definite primaire value which determines all more

Plato did not object to the Greek equivalent of utility, but he did to ἀληθή, as Cicero did to vera, voluptas. In Laws, 733 A, Plato substitutes χάριν, but to make his meaning clear he, in sentence which Epicurus might have written,1 allows ἀληθή.2

To return to the idea of good, the Socratic censure of Anaxagoras in Phædo, 98, is sometimes misunderstood. That Epicurus truly says is that it is too simple to constitute the underlying significance of Plato's allegory. The difficulty is in the prevailing quest for subtler or more mystical interpretations to obtain a history for the demand made upon us that this in fact was Plato's essential meaning. It is then, as we shall see later, mere misapprehension when modern scholars identify the idea of good with God, confuse its plain ethical and political interpretation by the introduction of the metaphysical problems common to all Platonic ideas, or read into its ethical application in the Republic all the teleological developments of the Timæus. A part from this misapprehension, Plato's doctrine of the good is his entire ethical and social philosophy as collected from the minor dialogues, from the discussion of utilitarian hedonism in the Protagoras, Plato's first psychological analysis of the same problem in the Phædo, and the 9th book of the Republic, 593 B ff. Throughout the minor dialogues the undefinable good is the test that all affirmative claims of the virtues or exaggerated claims of the sophists fail to pass. The phrasing of Republic, 505 B ff., is equivalent to this reference to these discussions. The virtue which we are trying to define, the ability of which you boast, must be a good, Socrates urges, and the interlocutor is unable to show that it is always and unconditionally good. The consistency and symmetry of this method point directly to the idea of good as the Republic as the symbol of an absolute good, and to the Platonic guards' knowledge of it as distinguishing them from the politicians, the sophists, and their pupil disciples whom Socrates puts to confusion.

The other approach to the problem of the good is through the hedonistic utilitarian controversy. Is the good pleasure or is it something higher, virtue, knowledge, or communion with God?4 The Sophists of the Protagoras formally articulates the obvious hedonistic utilitarian argument in a way that leaves nothing for Epicurus and very little for Bentham and Mill to add. The eloquent rejection of the point of view in the Phædo and Republic is then an inconsistency only for critics who fail to observe by what nice distinctions Plato's affirmations are guarded or who refuse to interpret the apparent antimony by the psychology of the Phædo and the conclusion of the whole matter in the Laws.5 The measured preponderance of pleasure might arguably be the right measure if pleasure were really measurable or reliably measured6 or if what the multitude call pleasures were really pleasant.7 Plato's final feeling is aptly expressed in the words of Matthew Arnold:

'...that joy and happiness are the magnets to which human life forever turns, and that the reader, confused by his mind by doubting. The real objection is to low and false views of what constitutes happiness. Plato apprehends ability and words to employ because they have been so used as to suggest such views.'8

2 Cf. Shorey, Unity of Plato's Thought, p. 22, Class. Phil. x. 325, Jowett, Intro. to his tr. of the Phædo, 162, Epic. iv. 24. 'In eating homoeas rel ac semen unam

The comparison of the idea of the good with the sun is of great interest for the study of the theory of religion, but need not detain us here. The words to employ because they have been so used as to suggest such views.

SUMMUM BONUM

mythical, and superstitious. In Apuleius 'Pellucilis a Ephesu' actually over a contest which might cause it to be mis-
taken for one of a list of demons.1

6. The idea of good and God.—The identification
of the idea of the good with God could do no
harm if taken merely as religious poetry. The
goodness of God is His chief attribute both
as a negative criterion in the theological canons
of the 
Eöpexia—so to the Stoics held that God was
the cause of good only, never of evil—and positively
in the teleology of the Tiwanes. Plato is perhaps
not unwilling to hint at the identification in such
passages as Rep. 506 c and 517 b. But the
idea of good are both expressions of the highest
ethical ideal, and the language which Plato used
of both is, as Emerson and Arnold would put it,
a ejaculation 'thrown out as it were at certain
great objects which the human mind makes
and feels.'2 As Epictetus says,

'God is beneficient, but the good also is beneficient. It
is natural therefore that the true nature of the good should be in
the same region as the true nature of God.'3

But in fact the two terms and the two ideas came
to Plato in different trains of thought and as
symbols of distinct traditions, and could not
be identified without wresting the Platonic texts from
the plain purport of their contexts and attributing
him a system of metaphysics which he did not
care to construct.4 By the same methods of inter-
pretation Epicurus could identify God and the idea of
the good in the philosophy of Jesus with the aid
of Mt 195, Mk 1018, Lk 155.

7. The minor Socrates.—We shall make only
briefer reference to the so-called minor Socratics.
The fundamental theory of the Cyrenaic hedonism
differed little from that of Epicurus and of the
Socraticus of the Platonic Protagoras, though special
points of distinction were laboured in the schools.
The idea of good are both expressions of the highest
badness that only the pleasure of the present moment counts, perhaps
because 'the next may never come,' is a tempera-
mental attitude rather than a philosophy. This
attitude was widely held by many anecdotes, and
strongly appealed to Homer.5 Walter Pater's
Renaissance and the chapter on the 'New Cyrena-
icism' in Marino the Epicurean commend the
Cyrenaic position to the modern generation
in the form: 'Be perfect in regard to what
is here and now.' 'Burn always with this hard,
gem-like flame.'

Cynicism is only a crude, harsher anticipatory
form of Stoicism. Antistheus is said to have
affirmed toil and hardship (r
g
) to the good and
to have prayed, 'Let me be mad rather than feel
pleasure.'6

We do not know enough about the 'Megarians' to
interpret Eudicles' pronouncement that the
one is good,7 though Comperz undertakes
to interpret it.

8. Aristotle.—The first sentence of Aristotle's
Ethics and the first sentence of the Politics repeat
as a truism the main thought that emerges from
the Platonic quest for the good. Aristotle
recognizes that the problem of ethical theory is to
assertn and define the nature of this good that
can be shared in by men of different action and choice presuppose. As he proceeds,
Aristotle seems to repudiate the debt to his teacher,
to which every page of the Ethics testifies, by his
insistence on metaphysical objections to the theory
of ideas in general and so to the idea of good in
particular.8 The polemic has of course no relevance
to the ethical problem. And, when Aristotle con-
templatively asks,9 How would a weaver or a
carpenter be profited by knowing the absolute
idea of good?10 he forgets that he himself has just
borrowed the Platonic imagery of the unifying
'skóras, or aim, to prove that a generalized concept
of the good will be practically helpful.11 As Sir
Thomas Browne aptly puts it,

'Aristotle, while he labours to refute the ideas of Plato, falls
upon one himself. His sumnum bonum is a chimera, and
there is no such thing as his felicity.'12

Aristotle himself admits that the synonym
happiness, 
epihelmu
c, which he attributes to the good, is
only a blank cheque.13 Happiness is of course,
as Plato said before him and after, 'our
being's end and aim.'14 Cicero, while repudiating
pleasure, assumed happiness to be the end as a
matter of course,15 and Leslie Stephen says:

'Good means everything which favors happiness . . . nor can
any other intelligible meaning be assigned to the word.'16

It depends upon you conception of happiness or
your definition of pleasure whether, with Epicurus,
Bentham, and Herbert Spencer, you add pleasure
as a third synonym or with Plato, Cicero,
Cerules, Haulet, Macaulay, Arnold, and Jowett,
protest that to this idea is either to confuse the right
use of language or to suggest a false ideal of happiness.
The definition of happiness with which Aristotle
fills out the blank cheque is a somewhat lame
and feeble concept of the good, and is no
answer. What hinders us, he asks, from pronouncing happy
the man who energizes in accordance with
complete virtue and is sufficiently equipped with
external goods, not through any chance time,
but for a complete life?18 Later philosophers
interpreted the Aristotelian definition of happiness as
a trimming compromise between Epicurean hedonism
and the severe idealism of Plato's Gorgias and the
Stoics. Cicero sometimes argues that in theory
there can be no adequate sanction for virtue except
on the Stoic principle that nothing else is a good.19
Sometimes he affirms that in practice the Peripa-
tetes, who regulated external goods, give no
larger place to them in their own lives than do the
Stoics, who evade this concession by a change of
terminology and denominate what the rest of man-
kind call goods not goods, but 'preferred.'20

Otherwise Aristotle's contribution to our topic
is slight. He is not deeply interested in the funda-
mental problem.21 He reviews the hedonistic con-
troversy, in substance conciliating with Plato, but
unable to make out from the time of condensing
superiority to Plato's pursuit of edification.22 The
poetical alliteration of the idea of the good in
the Résépahn would of course be unsympathetic if it
were incomprehensible to him. But the statement
of an eminent scholar, that he never alludes to it,
overlooks the fact that Plato's distinction there
between the method of pure dialectic and that of
the sciences23 is one of Aristotle's fundamental
ideas recurring throughout his writings.

In the end Aristotelianism, in this matter as
in others, comes back to an extreme form of the
Platonism which it begins by repudiating. In
Neo-Platonic interpretation and the mystery of
the Middle Ages and the Renaissance the desire
by which the Aristotelian first mover moves the
heavens is the yearning of all creation towards
him as the supreme good. This interpretation is
supported by concomitator two or three and anti-

ons verbs in the Aristotelian text, was blended with the poetical doctrine of Platonic love as the aspiration for ultimate beauty identical with ultimate good. But this theme would demand a volume.

9. The post-Aristotelian schools.—The summum bonum was one of the two or three chief topos of debate in the post-Aristotelian schools. Cicero tells an amusing story of a Roman pro-consul who proposed to convene a world's congress of philosophers and settle the question once for all.

Locke argues from the diversity of human tastes that the philosophers of old did in vain inquire whether summum bonum consisted in riches, or bodily delights, or virtue, or contemplation. Locke's argument has been used against the utilitarian preference of all things to 'happiness' or pleasure by Coleridge, Hazlitt, Macaulay, and many other. Edith Mill says, "the question concerning the summum bonum is the same thing as that concerning the foundation of morality. And it is idle to expect men to cease discussing that. Horace, e.g., had no metaphysician. He is interested only in "good magis ad nos pertinent, et nescire malum est," and he sums up the history of the science in three problems:
(1) Divitis bonum, an sint virtute beat?, which was the primary man's conception of the difference between the Peripatetic and the Stoic good; (2) Quid ad amicitias, usus recteque, trahat nos, the compatibility of disinterested friendship with human advantage; (3) A virtus equa sit virtutibus, quae vellex, qui lex egressus could eyes.

Locke's impatience of the question is perhaps a survival of Renaissance distaste for the scholasticism of the medieval literature of nominalistic pure as seen in Albert's report of the treatise of Paralas.

The title of Cicero's de Finibus exhibits the continuation of the theme of the good. Cicero resumes for all practical purposes the net outcome and the influence on modern literature of the post-Aristotelian discussion of the summum bonum.

10. The Epicureans.—The Epicureans revived the thesis of Plato's Protagoras and insisted that pleasure 'rightly understood' is the only conceivable end for a sentient creature. They then, like modern utilitarians, devoted themselves to the revaluation or the restatement in their terminology of all ethical values—what the Epicurean in Cicero's styles 'ed am adn accommodare Turquent nostros,' fit our examples of human virtue into the theory.

They also, like their modern analogues, complained bitterly of the critics who had misunderstood their meaning. These tactics irritate Cicero, who says that he knows the meaning of the Greek 'bonum' only as a synonym of the Latin 'bene.'

The Epicurean summum bonum may be discussed in a corner. No one would dare proclaim it to a large audience. And the heroic deeds of Greek and Roman heroes who gave their lives for their country are sufficient proof that the quadrupled opinion will not prevail.

11. The Stoics.—The Stoic doctrine is more sympathetic to the moralist and the orator and has the further interest of a strictly deduced and ingeniously elaborated scientific system. In essence

3 The fragments are most conveniently consulted in M. Aurina's Epicureanorum veterum fragmenta, 3 vols., Leyden, 1805-08. The more significant of these texts are correctly translated in R. D. Hicks, Stoic and Epicurean.
4 Epicurus in Hicks, p. 171. 5 De Fin. i. 10.
6 See, e.g., Epicurus in Hicks, p. 172; Seneca, ep. 64, 88; Cicero, in Fin. i. 20, 22; ib. ii. 4, 22; ib. ii. 17, 9, 25.

it is the old paradox of the Soctates of the Gorgias, that nothing is really good except the good moral. All other so-called values are either non-existent or insignificant, when weighed against this. 'Sunt enim Socrates pluraque mirabilis Stoicorum,' says Cicero in Laelius, 44, and in the Tuscules, v. 12, he takes for the text of the entire doctrine a fragment of Plato's Menexenus.

In the refutation of Epicurean hedonism and the working out of the system the supreme end was variously defined and deduced, and the schools and sects of philosophers were minutely classified by the various 'ends' or principles of the supreme good which they held. The demonstration that pleasure is not the end and the detailed deduction of Stoic ethical principles could take their start from the idea of nature and the life according to nature or from the abbreviated formula, the constant life. The statement from nature, as set forth in Cicero, presents nothing analogous both with the 17th and 18th cent. philosophy of 'self-love' and with the modern logic of evolution. Pleasure is not the end, because it is not in fact the beginning, of animal or human activity. The earliest and fundamental constat of all sentient life is not towards pleasure as such, but towards self-preservation. The pleasure is, so to speak, a by-product. Upon this supremeness in the rational animal man the recognition that the true self, the higher self, is the spiritual life of man, the beginning of his true life, then becomes the end. And it matters little in practice whether all other ends are annihilated or merely dwindle to insignificance in comparison with this. Thus Cicero sometimes treats the entire suppression of the animal or lower self as a falsity of Stoicism, and Cicero, or Epicurus, or Plato, or Aristotle, or Proclus, or Plotinus, or any innumerable company of men, or an indescribable condition of absolute and disregarded life.

12. The sceptics.—The various schools of sceptics impartially assailed all dogmatic systems. But they did not for that reason admit that they lacked a moral ideal or the conception of the supreme practical end. Their scepticism was meant to the end of tranquillity or impermanency of soul and the guidance of life by reasonable probability.

13. Developments of Platonism: the ascetic ideal.—In the Greek-Roman empire, the literature of moral and religious edification reproduces all these points of view and ideas, but retains little interest in the dialectic of the schools and the philosophy of ethics. The influence of Platonism reveals itself not only in the softening and refinement of Stoic technicality and paradox, but also in the increasing prominence of another idea, if not idea, of good—the ideal of detachment from the world and the flesh and approximation to God through the lonely purity of a spiritual and contemplative life. Plato's Phaedo and the eloquent digression of the Theaetetus are the classic expression of Greek idealism of virtue. It is a human mood or temperament of renunciation and reaction. The opposition of the theoretical and the practical life was debated in the Antiope of Euripides, and this personal ideal of an intellectual, attributes to Pythagoras the three types of life associated with the tritipartite psychology of Plato's Republic and employed as an ethical commonplace in the beginning of Aristotle's Ethics. Therefrom philosophy was the way of life, and the summum bonum was the happiness embodied in or to be attained by the wise man. The latent and still unresolved contradiction between the social conception of the Virtue and this personal ideal of an intellectual, salvation and happiness is apparent already in Plato and Aristotle. The artist Plato paints two companion pictures of the Socrates of the

SUN, MOON, AND STARS (Introductory)

Synopsis and the Socrates of the Phaeon and leaves their reconciliation to the ingenuity of modern interpretation. Will the sage take part in politics? To this question of the later schools the Platonic idealists: 'Out of the politics of his own city, the city of God.' But Plato's practical decision appears in the prescription of the Republic that the philosopher must descend into the fellowship of man; in his journeys to the court of Syracuse, and in his devotion of the last years of his life to the laborious composition of the Laws.

In Aristotle the contradiction is disguised, but pervades the entire Ethics. Happiness is activity in accordance with virtue, but if finally appears that there are intellectual as well as moral virtues, and the highest activity is the pure contemplation of thought which the student may enjoy interrupedly and God eternally. The life in accordance with ethical virtue is secondary. The Stoi sage is distinguished from the Cyrenaeic and Epicurean in Honezz by his immersion in political activities.

Chrysippus said that Aristotle's theoretical life was only a form of hedonism. The literature of Stoicism harps on the words carpe diem, as the literature of to-day on the words 'social' and 'socialized.' And many modern critics have taken the Stoics at their own estimate and praised Stoicism on this score as against Platonism. But Cicero points out that in fact the Academy and the Lyceum were the chief schools of oratory and political science. And Seneca says epigrammatically:

'Quorum tamen nemo ad rempublicam accessit, nemo non solus.'

14. Neo-Platonism. The divorce between culture and life in the declining period of the Greco-Roman empire confirmed these tendencies, and Neo-Platonism, the predominant philosophy of the last three centuries, constructed its system and its ideal out of the eloquent passages of the Phaedo, the Gorgias, the Republic, and the Theaetetus that Plato answers;

SUN, MOON, AND STARS (Introduction).

In every quarter of the globe the star-studded heavens have attracted the attention and challenged the scrutiny of mankind. Very especially was this the case in the low-lying plain of Babylonia, with its pellicul atmosphere, and hence the study of astrology and astronomy, while practically universal, reached a remarkably high stage of development in that region. On the one hand, the fixed stars, of various degrees of brilliance, are ranged immovably in groups that stamp themselves upon the visual organs; while, on the other, the moon, the sun, and the five visible planets seem to be constantly changing their respective positions. Such phenomena were interpreted by primitive man in a subjective and anthropomorphic fashion, and his notions regarding them were still in vogue when genuine scientific inquiry entered the field, so that until about 1500 A.D. astrology and astronomy remained an inextinguishable mass of confusion.

1. The seven planets. In the northern regions of the Old World every object was regarded by the primitive mind not merely as personal, but also as sexual. In the north-east the twin concepts of Yang and Yin long survived amongst the Chinese as a philosophical formula, classifying all existing things as male (= good) or female (= evil). Persian dualism retains the twofold principle in its most incisive form. In the Middle Ages, Christian ideas were for a time excessively influenced by the antithesis of God and Satan, though here the sexual dichotomy characteristic of the primitive mind has disappeared.

Now this tendency of the aboriginal mind towards sexual personification left some of its earliest deposits upon the observation and study of the stars. Even the simplest observations of the planetary movements brought to light the striking fact that

2 See works cited in the footnotes.

3 Paul Shorey.
the elongations of the two inferior planets, Mercury and Venus, never reached beyond a certain limit, and that these bodies traversed the zodiac as if held within a narrow groove. The moon and the three superior planets were less restricted in their motions. It was therefore quite in keeping with the imaginative and symbolizing proclivity of the primitive intellect to represent the Sun, Mercury, and Venus as the family, travelling, in relatively close company, like nomads in the ecliptic. Of this family the Sun came to be regarded as the father, Venus as the mother, and the others were looked upon as more vagrant males, who on occasion, however, might act as a disturbing influence in the union of the Sun and Venus.

In speculations of a still earlier period it was the sun and moon alone that formed the marriage relationship, the sun being usually the husband and the moon the wife; only in exceptional cases were the positions reversed. Even now, too, the relations between sun and moon were represented as homosexual and pederastic. But in the ancient Orient and in Egypt the septet of planets had already begun to assume an independent character. In comparison with the two greater luminaries that the idea of a marriage between sun and moon hardly left a trace behind.

In the most remote ages the periods of revolution peculiar to the several planets had been studied, with results which led to their being arranged in the following sequence (with the earth, of course, at the centre of the universe)—Moon, Mercury, Venus, Sun, Mars, Jupiter, Saturn. The sun's superiority in size was enough of itself to give him the median position. The planets named before the sun alternated as morning and evening stars, or in other ways; and of the twofold characteristic thus exhibited one aspect might be regarded as good and the other as evil. The three last-named, or exterior, planets formed a triad by themselves, and they appeared to the observer as less under the control of the sun than his own family or the moon. The middle place amongst them was occupied by Jupiter, who might thus be deemed their king, and the king as such, according to Oriental ideas, was considered the sun, the giver of life and light, was likewise good, it followed that Mars and Saturn must be evil—by the principle of alternation, namely, which is the basis of such classifying and one's coat-buttons, in ideas about even and odd, and in other primitive superstitions. Mars with his relatively short period of revolution became the youthful turbulent demon, while the slowly-revolving Saturn was figured as the hoary-headed begetter of evil.

Not only, however, do men look upwards towards the planets, but the planets themselves look downwards upon men and events on the earth. They were even supposed to impress their own characters upon earthly affairs, intervening therein as their nature prompted. In the case of the sun and the moon the action was obvious to all, and by analogy it was attributed to the other five planets as well. These ideas were so simple and natural that, at the time when, in the oldest civilized lands, such as Babylonia and Egypt, the earliest scientific observations and records of the planetary motions were collected, they had permeated all study of the subject. The consequence was that these naive ideas continued to mingle with the subsequent results of genuine astronomical inquiry. Aboriginal man came upon a fresh vein of ideas when he divined a mutual connexion between the lustre of the stars and that of the metals. The metals with which he was acquainted being precisely seven in number, it was natural to associate with them, not the fixed stars, but the seven planets. The parallels were as follows: the Sun with gold, the Moon with silver, Mars with iron, Mercury with quicksilver, Jupiter with tin, Mars with copper, and Saturn with lead. Hence in medieval, and even until modern, times, the metals were indicated by the planetary symbols. Then alchemy attached special symbols to other substances; and as alchemy and astrology were intimately connected with each other throughout their entire course, it may be well to give a list of the symbols used by alchemists in the Middle Ages:

- ☀ gold, ☡ silver, ☢ iron, ☣ quicksilver, ☤ tin, ☥ copper, ☦ lead, ☧ antimony, ☩ lime, ☩ sulphur, ☪ tartar, ☫ salt, ☬ sulphuret, ☭ sulphuric acid, ☮ ammonia, ☰ distillate and sublimate, ☱ precipitate. As will be shown in dealing with the horoscope, the symbols of the four traditional elements were derived from the two 'houses' known as ἐπόγευς and μεσογέως respectively.

We have thus sketched the main lines of thought by which the planets came to have their particular significance in astrological speculation. More remote considerations must here be left aside. Suffice it to say that, in the final scheme of astrology, Mercury became the lord of wisdom, cunning, arts, and eloquence and was likewise bi-sexual; Venus became the lady of love; Mars, the lord of war and violence generally; Jupiter, the ruler of gods and men; Saturn, the lord of cruelty and truculence. The Sun, Jupiter, and Saturn were propitious by day, and the Moon, Mars, and Venus by night. The planets infected with their own qualities such as were born under their influence, but in certain situations their normal action might be completely reversed.

2. The ecliptic and the zodiac.—Civilized man is still affected by the variation of times and seasons, and in a yet higher degree this was the case with primitive man. The latter could hardly remain indifferent to changes of temperature and weather in their connexion with day and night, or with summer and winter, or, again, with the varying position of the sun in the sky. In his inquiring mind his interest in the heavens was quite as great as his desire to take note of the fluctuating brightness of the moon at night. He noted that the period of menstruation coincided with that of a lunar revolution. In the life of primitive man, accordingly, there was no concern of importance but was somehow related to the movements of the sun or the moon. As soon, however, as the planets came to be regarded as endowed with personality, the interventions of sun and moon in human affairs began to be thought of as the conscious and voluntary actions of higher beings, whose purpose it was to bring the fortunes of nations, monarchs, and individual human beings to bear on continuous correlation with their own particular activities in the higher sphere.

The planets Venus and Mercury, being represented as respectively the wife and the son of the sun, must inevitably, according to human notions, exert an influence upon the actions of the being personified as husband and father. But, this being so, it was impossible to leave Mars and Saturn out of account. Now these five smaller planets, equally with the larger two, confined their movements to a certain narrow belt of the firmament. The only difference between the circular paths of the sun and the moon and the
paths of the smaller planets is that the latter exhibit certain peculiar convolutions, which were called epicycles, and may be illustrated by a curved line as follows: \( \Gamma \) or \( \Lambda \). The orbits of the sun and the moon, no doubt, also showed many deviations from the path of simple revolution about the observer's own point of view. But the only changes which a dweller on the earth could discern in the smaller planets was the shifting of their several positions among the fixed stars, and their concomitant variations in apparent magnitude. Investigation of these planets, therefore, did not reach beyond investigation of their paths in the firmament.

After sunset about one-half of all the stars are visible. The great mass of these lie in the broad equatorial circle of the heavens between the sun and a point 180° E. of the sun. The lines bounding the stars of the circumpolar vault and those of the southern hemisphere are not constant, but fluctuate inversely. The stars, however, that come into consideration in regard to the planetary orbits travel from east to west, passing below the horizon one after another, so that just before sunrise the other half of the stars, i.e., those lying between the sun and midnight, are again visible. Thus, an examination of the sky made twice in one night, viz., shortly after sunset and shortly before sunrise, will embrace practically every important phenomenon in the starry heavens. These accordingly were the two times of astronomical observation to which prime importance was ascribed throughout antiquity, and in relation with which all observations were brought.

In the course of one night, then, primitive man could see almost all the stars visible in our latitude. One of the few exceptions was formed by the stars which happened to be situated in the sun's meridian for the time being. Their light was lost in the sun's beams, and they were meanwhile invisible. After sunset and before sunrise, moreover, there was a short period of twilight, causing a degree of obscuration such that brighter stars remained visible only when they were over 12°, and fainter stars only when over 15°, E. or W. of the sun. In virtue of the sun's movement in the zodiac, the observer of the morning and evening sky might witness the following phenomenon. On a particular evening of the year a star, especially one situated in the zodiacal belt, would be visible for a few minutes after sunset, and for a few minutes after sunrise. Now, such a star remained invisible for a certain time every year, and the astrologer spoke of it as being "combust," i.e. dissolved in the overpowering beams of the sun. Then, after a period of 24 to 30 days, according to its brilliance, the same star reappeared shortly before sunrise. The star's disappearance from the evening sky in the west was termed its heliacal setting, and its reappearance in the morning sky to the east its heliacal rising.

In the astronomy and astrology of both East and West throughout the entire ancient era the heliacal rising and setting of groups of stars were carefully noted, and employed in registering the date of events. So far, the earliest known instance of this, found more than once in historical records, is the heliacal rising of Sirius, the \( \alpha \) of the Egyptians, which was pronounced \( \alpha \) or \( \beta \), and translated to ἀργες τος της Ιέρων, by the Greeks. By this means, long before the building of the pyramids, the Egyptians were able to calculate the length of the sidereal year, as well as a particular era of about 1500 years, at the end of which the first day of the sidereal year coincided with that of the tropical year. Half-way through the period of invisibility the star and the sun lie in the same meridian. The corresponding proximity of a star to any of the planets but the sun is called a conjunction, and every conjunction was astrologically of great importance. But when the sun and the corresponding pair, the occurrence is known as the conical rising of the star in question. It is to this conical rising, not as in ancient times to the sidereal rising, that the phenomenon is attached by modern scientific astronomy.

The Egyptian sacred year was subsequently adopted by the Romans as the Julian year, with the intercalation of a day in every fourth year. This computation allowed for the fact that the sun seems to move forward some \( \pi \) radians of his orbit every day. This might have suggested a division of the ecliptic into 360 parts, only a trudging error being thus involved. What was actually done, however, was to divide the great circle into 360 parts, involving a still larger error of adjustment. The calculation of the yearly period and its division into twelve months—of which we shall treat more fully below—together with many other things, were thereby greatly simplified. But the sun's orbit of 360 degrees, with a day for each degree, left some 3\(^1/2\) days of every year out of account. Now we still speak of a solstitial solstice and a solstitial equations. The meaning thereby the two points at which the sun reaches his greatest declination north and south respectively. Originally, however, the residual 3\(^1/2\) days were divided between the two solstices, the sun being actually represented as passing in his declination, so that he could still traverse the 360 degrees of the ecliptic in 360 days. In the ancient Egyptian calendar this whole redundant period was transferred to the time just anterior to the heliacal rising of Sirius, five days being inserted in ordinary, and six in leap (or temple) years. In the early Roman calendar the intercalation was made at the winter solstice. To the Babylonian calendar, which, with a displacement of the year's beginning, is still in use as the Jewish calendar, we must return when we deal with lunar computations. But it noted here, however, that for astrological and astronomical purposes the Babylonians placed the compensatory interval for the most part at the beginning of spring, but sometimes at the beginning of autumn.

The time at which this yearly intercalation was made was dependent in the main upon the fixing of the zero meridian in the movable vault of heaven. The points through which this zero line might be conveniently drawn were many. Once it was fixed, astronomy and calendar were brought into harmony, and a definite instant established for commencing the day. The Babylonians began the day with sunrise, and the year with the spring equinox, thus placing the zero of the ecliptic upon the first point of Aries. Among the Jews, the day began with sunset, and the civil year with the autumn equinox; and, had the Jews studied astronomy independently, they would have drawn the zero of the ecliptic through Sirus. In the early Roman, as in our modern, calendar the day is reckoned from midnight, and the year from the winter solstice; hence, therefore, the zero would lie in the first point of Capricorn. The Romans, however, as classical writers inform us, borrowed their astronomy and astrology from Babylon, and accordingly it is the Babylonian zero point that is found among the Romans, as also in later developments, and even in the astronomy of the present day. The Egyptians fixed their year from the rise of Sirius on the ecliptic, the corresponding zero meridian passing through Sirus. With this, however, the beginning of the day did not harmonize, for, according to notices found in the Mantheparvane and other hieroglyphic texts,
the Egyptian day was reckoned from sunrise. This
dislocation likewise is probably due to Babylonian
influence of a very remote date.

We have seen that the ecliptic, and indeed the
circle of the zodiac, divided into degrees, took
account correspond approximately with the sun's daily
change of position among the stars throughout one
year. These divisions, however, were found in
conveniently small, and their eclipse of a degree
when portions was divided into constellations, each having an arc
of 30 degrees, and three subdivisions of 10 degrees, or
decanates. This division came about in two
ways. In the first place, at any given time some-
thing like one-twelfth of the ecliptic was "comb-
bust"; and, secondly, each of these twelfth was
traversed by the sun in about the same time as the
moon required for one complete revolution.

In this way the annual course of the sun was
furnished with the 12 zodiacal signs of the ecliptic.
Moreover, in the earliest times the synodical
period of the moon was divided into three, viz.
waxing, dominant, and waning moon, and this
division was adhered to by later astrology. Now
to each of these synodical thirds of the moon's
course corresponded a movement of the sun extend-
ing to some 10 degrees, and thus in time arose the
idea of the division of the ecliptic into 30 degrees.

The trisection of the moon's period just noted
probably led in very remote times to the institution
of weeks of ten and five days. It does not appear,
however, from what we have so far learned of
ancient Eastern history, that these measurements
had any practical significance. It was only in
astrology and astro-mytology, with its historical
legends, that the 30 deccanates (or the 72 semi-
decanates) were actually made use of. This chron-
ometry, no less than that explained above, was in
vogue throughout Babylonia and Egypt, if not else-
where. (A final vestige thereof was the Egyptian
practice of assigning 401 susabti to the dead—
365 for the days of the year and 36 as guardsians
for the ten-day weeks.) In astrology of the higher
type, to the time of Kepler, calculations were
made by means of the degree and, above all, of the
decanate; and the moon from her tenth to her
twentieth day was always spoken of as being in
her domain. In general, however, the method of
reckoning which was adopted for both
astronomical observation and astrological inter-
pretation, was that of the well-known 12 zodiacal
signs, although these were variously designated in
the several civilized lands of antiquity. It like-
wise appears that the division of the astrological
scheme of months, as appears from the following
parallelism: Libra, tawret (Bab.), Tishri (Heb.),
followed by Scorpio, arsh-enennu (Bab.), Mar-
cheshan (Heb.); then Sagittarius, kisilum (Bab.),
Kisley (Heb.), etc. The names of the months were
also indicative of their meteorological conditions;
thus, e.g., the winter rainy season was symbolized
by Capricornus (originally the marine animal
Hippocampus guttulatus), Aquarius, and Pisces,
all in some way connected with water.

Here, moreover, we again meet with the practice
of portioning out good and evil, or rather male
and female, alternately. Astrologically the zero point
of this distribution lay between Cancer and Leo,
approximating, therefore, to that of the Egyptian
Siris-year. Leo, Libra, and Sagittarius came to be
recognized as male; Virgo, Scorpio, and Capricornus
as female. It is worthy of remark that as a result
of this law of alternation the astrologer was actu-
ally forced for thousands of years to speak of
Taurus as feminine. Then the planets the zodiacal
signs, and also allotted severally to the planets; thus Cancer was assigned to the moon,
Leo to the sun, Gemini and Virgo to Mercury,
Taurans and Libra to Venus, Aries and Scorpio to
Mars, Sagittarius and Pisces to Jupiter, and Capri-
cornus and Aquarius to Saturn. The particular
planet was called the 'lord of the mansion' belong-
ing to its respective sign or signs. Tradition tells
us, however, that the 360 degrees (or 30 degrees
of the mansion). (Those of the Egyptians have
been transmitted to us not only by the reports of
Marcus Manilius, but also by an annalane notice
found in the so-called Papyrus of the 12 zodiacal
signs. Likewise survive in the Coptic designations of
the months. A comparison of the various lists shows
us that in the course of thousands of years the tradition remained unaltered, though in that of
Mandulis there is a dislocation to the extent of one
zodiacal sign.)

The ecliptic of the sun is traversed approxi-
mately also by the moon, and in relation to the
latter it was measured by a unit of the sun's
course, viz. the arc described by the moon in one
day. In order to correspond, therefore, with the
moon's period of 28 days, the ecliptic was divided
into 28 lunations. But as the sun, during the moon's sidereal period, has moved
nowward by about two lunar stations, astrological calculation assumed a period of about 30 lunations, i.e.
the time between one incident of the sun and
another, as the measure of a month. In order to
delimit these stations, however, the astrologer did
not portion out the ecliptic in a fresh series of
constellations, but distinguished each of the 28
by a dominant star in the ecliptic. In contradis-
tinction to the older method of dividing the 30
days of the moon's synodical period in three, there
rose subsequently the plan of dividing its sidereal
period in four. Once in each of these quarters
each of the seven planets was recognized as the
lord of a lunar station, the order of sequence being
the same as that in which, in the horoscope of the
hours, the planets became lords of the ascending
at sunrise. Thus came about the division of the sidereal month of 28 days into four weeks of 7 days,
with Sun, Moon, Mars, Mercury, Jupiter, Venus,
and Saturn as successive lords of the lunar stations
in each week. This astrological scheme of naming
the days of the week after the rulers of the lunar
stations still survives throughout Christendom,
while, on the other hand, the canonical books of
the Old and New Testament wholly avoid the use of
such designations, distinguishing the days of
the week by ordinal numbers alone.

The various locations of the five smaller planets
were usually designated by the horological, signs
into which the sun's path is divided, as is especi-
ally shown in regard to Egypt by the Berlin
Demotic Papyrus, p. 8279.

3. Spherical astronomy and the astrological
houses.—Observations of the astral motions
within the scope of natural vision are design-
nated spherical, and when these have been duly
adjusted they are, by way of contrast, called cos-
mical, while the actual occurrences themselves are
spoken of as sidereal. Modern scientific astronomy
likewise must always take the direct spherical
observations as its starting-point, only then pro-
ced to elaborate its way towards the higher
levels of knowledge. The astrology and astronomy
of the ancient world never got beyond the spherical
stage. Hence it was necessary from the outset to
lay down fixed bearings for observational purposes,
such as would be furnished by two这些年, one run

1 If we take the planets, therefore, in the reverse order of their prescriptive order on the earth, viz. Saturn, Jupiter, Sun, Venus, Mercury, Moon, and suppose that each planet in turn
precedes over an hour of the sun, then, if, e.g., Saturn passes
over the first hour of the day, he will also precede over the
8th, 16th, and 22nd hours; the 22nd hour accordingly will fall
to Jupiter, the 3rd to Mars, and the 1st to the Sun; hence Saturday is followed by Sunday, and so on.
ning east and west, the other north and south, through the observer's own position.

In connexion with nearly all ancient systems of religion are found sacred edifices of great age whose longitudinal axes lie exactly east and west. The determination of this east and west line, i.e. the parallel of latitude, was thus one of the early triumphs of the human mind. The oldest known instrument employed for the purpose was the stile, which afterwards developed into the gnomon of the sundial, and indeed, the sun-dial itself. The stile was a vertical shaft fixed in the centre of a circle. In the morning, and again in the evening, the shadow of the pillar extended a considerable distance beyond the circle, while for an hour or two before, as also for an hour or two after, midday the extremity of the shadow lay within the circle. It was necessary, therefore, to mark the two points at which the shadow, forenoon and afternoon, terminated precisely upon the circle. The straight line joining these two points supplied an accurate east and west alignment, which could thus be secured on any sunny day at any season of the year. The use of the gnomon, in some form or another, seems to be common to primitive and the older civilized peoples.

Simple trial and observation showed that a stationary position was to be found in the north pole of the firmament and the star lying nearest to it. The direction of the meridian line through any given point of observation could then be ascertained by the following expedient. Two horoscopes stood face to face upon a line lying roughly north and south. The observer on the south, holding up before him the split rib of a palm leaf, moved it into such a position as enabled him through the figure to see the pole star directly above the crown of his companion's head. Then the observer on the north, looking through the slit, saw all the then culminating stars from the southern point of the horizon upwards, and in this way projected his meridian upon the celestial vault.

The east and west points of the horizon, and the meridian of the observer, having been ascertained, the earliest facts of observation regarding the paths of the planets could be brought into relation therewith. The fixed stars, indeed, never varying in their positions relative to one another, also rose and set at constant distances from the east and west points respectively. On the other hand, the sun, the moon, and the five smaller planets rose and set at points never twice the same successively, and sometimes north, sometimes south, of due east and due west respectively twice a year, viz. as he entered Aries and Libra. The extreme limits of his northward and southward movements in the ecliptic were called the tropical points, and the two constellations concerned came to be known in astrology and astronomy as the tropical constellations of the zodiac. Corresponding results were established with reference to the other planets.

But there is likewise an apparent daily revolution of fixed stars and planets alike around the position of the observer, each of them crossing his meridian once in every 24 hours, while if they lie in the equatorial circle the interval takes place exactly 6 hours after they rise in the east, and 6 hours before they set in the west. Hence the observer's celestial equator, too, is always laid out in 12 segments corresponding to the 12 constellations of the zodiac; and if we disregard the sun's daily eastward movement of one degree, we find that every two hours the zodiac changes its position relatively to the equator by one whole zodiacal sign of 30 degrees. Now the intermediate positions of the signs during these two hours being left out of account, the observer's celestial equator was once for all divided into 12 apparently stationary parts, each of these having its own meridian. The illustration below shows an equatorial section traversing the horizon and the celestial sphere. These parts were called 'houses,' and all the conditions found within them were treated as if stationed in their respective middle lines. Now, as the enumeration of the houses began in the east, and then proceeded downwards under the eastern horizon, i.e. according to the order in which the phenomena of each successive house arose would appear in the middle of the first house, the due west point in that of the seventh, the meridian in that of the tenth, and the opposite meridian in that of the fourth. All primitive astronomical and astrological study of the sky was occupied, and indeed necessarily occupied, with the rising, culmination, and setting of the heavenly bodies, with the passage of planets, normal stars, and constellations from one house to another, and with the mutual positions of the planets as measured by the houses they happened to occupy at any given time.

It would appear that these houses were sometimes divided in two, as, e.g., in Egypt in the time of King Seti; and this led quite naturally to the division of the day into 24 hours, and eventually to the arrangement of the dial-plate of our clocks. For more exact observations, however, each house was subdivided into three decanates, and each decanate into ten degrees, the advantage of this being that the sphere of the observer had the same number of parts as the ecliptic, while the boundary lines defining the parts of each coincided every four minutes.

This method of parceling out the sun's apparent daily course must have been instituted at a very remote period, in an age indeed when the astronomer had not yet grasped the idea of a circular orbit, but still thought of the solar path as a square. In the figure representing the horoscope this quadrative form was retained, and it has remained in use till modern times, and, in fact, till the present day. To this method of delineating the stellar paths in
the horoscope by means of the square we shall frequently have occasion to return, as a considerable number of symbols relating to God and the world were evolved therefrom. In interpreting the horoscope the various positions were so far as possible brought into relation with the first house, and with the latter as starting-point the astrologer, applying the principle of even and odd as in the case of the equinoxes of Jupiter, and Saturn, alternately assigned to the other houses an essential character of benefit or bane. Thus the twelfth house was unfavourable, the eleventh favourable, the tenth—apart from its special position—unfavourable, the ninth favourable, the eighth supremely unfavourable, and so with the rest. This mode of interpretation was also arrived at along another line of thought, and, being thus supported by two ostensible proofs, it was believed to be established beyond dispute. The second proof in question was that supplied by the 'aspects,' of which we shall treat presently.

The plan of indicating position by means of zodiacal signs and houses could at best give approximate results. For the sake of simplicity it was assumed that the boundary lines of the several signs always coincided with those of the square, and that the number of a Babylonian double-hour sign moved instantaneously into another house, whose number was one less than that of the house which it had vacated. For all further deductions within the limits of plane geometry, the entire contents of any particular zodiacal sign were regarded as concentrated in the middle point of the sign and the house then congruent therewith.

The enumeration of the astrological houses from the east downwards towards the west, then eastwards again above the horizon, so that account is first of all taken of the invisible regions of the celestial heavens, had its origin in the fact that the attention of the astrologer was primarily directed towards the rising of the stars, and accordingly the houses were numbered in the order in which the stars contained in them at any given time would reach the eastern horizon and become visible.

4. Aspects.—The term 'aspects' was used in astrology to denote the relative positions of the houses and zodiacal signs, or of the stars situated in the houses at any given time. Planets in the same sign and the same house were said to be in conjunction; planets in opposite signs and houses, in opposition. The other possible relations amongst the celestial phenomena are divided with references to regular inscribed polygons. Thus, if a planet were situated in the twelfth or the second house, then the line joining the middle point of either of these houses and that of the first house would form one side of a regular inscribed dodecagon; in

which case the planet in question was said to be in dodecagonal aspect to the east point, or 'horoscope' in the original sense. As in the same way planets in the eleventh and third houses furnished the side of a regular hexagon, their aspect towards the east or west house was that of sextile. Similarly planets in the tenth and fourth houses were in quartile or square, and those in the ninth and fifth were in trine. The line joining the middle point of the eighth or the sixth house with the east point was not a constituent part of any regular figure within the circle, and suggested at best a cross dodecagon, formed thus, which was regarded as the violation of all order. But as conjunction and opposition are rest positions at the twelveth aspect, the eighth was the only visible house having no aspect towards the horoscope. The principle of alternate numeration likewise pronounced this house unfavourable. In the astrological application of spherical astronomy it therefore signified the house of death.

Prior to the stage now reached, the exclusive concern of the astronomer had been to map out the heavens with such precision as would enable him to fix his observations by means of a verbal record. His conception of aspects, however, i.e. of the relations of the stellar positions to the horoscope, led him to assign values to the stellar positions themselves, and as soon as these came to be represented as anthropocentric or concentric, the initiative was given to the science of Judicial Astrology. Now we may emphasize the fact that the original scheme of the horoscope was depicted as a square, and that, before it became possible for astrology to speak of regular polygons, the conception of the sun's apparent diurnal motion as a circle must have been thought of as the ultimate. The very language of astrology shows it to have been a kind of exorcism, not inherently connected with astronomy at all. Even in the Middle Ages a distinction was still maintained between Natural Astrology and Positive Astrology. The former dealt with the actual, and especially the baneful, influence of the planets upon meteorological changes—wind, storm, hurricane, thunder, lightning, and earthquake. It was accordingly bound up with the naive and fantastic weather-lore of primitive man, and is to some extent still in evidence in scientific meteorology. In regard to the latter it is even yet frequently true that sub iudice sit.

Positive or Judicial Astrology, on the other hand, was concerned from the earliest times with the supposed influences of the planets upon the fortunes of men and nations. It is now regarded by all sober minds as an extravagance of the human intellect, as something that the race has finally left behind. In Judicial Astrology it was no longer merely the place of a star to the horizon which determined the east point, that was specified and appraised, but also the aspect of two planets with respect to each other. If one planet, for example, was situated in the eleventh house and the other in the eighth, the two were said to be mutually in quadrile. Here again, moreover, we find the alternate distribution of good and evil: conjunction was good; adjacent aspect or aspect in dodecagon was evil; sextile was good; quartile relatively evil; trine specially good; absence of regular aspect was specially evil, and opposition relatively good.

Since the line between the eighth or the sixth house and the east point did not form the side of a regular inscribed polygon, these two houses were deemed of inferior value. For the anthropocentric mind of the astrologer it was therefore a short step to regard them as houses of misfortune. The eighth house thus became the house of death, and the sixth the house of pains. We shall see later that in the reciprocal relations between the macrocosm and the microcosm the left arm became a synonym for the house of death and the left leg for the house of pains, and that in consequence these bodily parts themselves came to be regarded as evil ones.

As emphasis was laid likewise upon the mutual correspondence of east and west—an idea that was corroborated by the principle of alternate numberings—the twelfth and second houses were counted
SUN, MOON, AND STARS (Introductory)

54

unfavourable. In primitive plane geometry the inscribed and circumscribed polygons are pre-eminently regular figures, and once the alternate enumeration gave the same result. Consequently the eleventh, fifth, fifth, and third houses were reckoned necessary, while the tenth and fourth again, were relatively evil. These symbolical interpretations, however, were sometimes set aside, sometimes even reversed, especially those connected with the invisible half of the sky. In the instance of our own world, in the stars culminated, was supposed, by a very natural symbolism, to preside over dignities and offices, while the fourth house, lying directly beneath us, came in similar fashion to be associated with parents and ancestors, as those who had passed into the under world, and inferentially with all the other ties of kinship. On the ground of a certain analogy with the eighth house, i.e., that of death, the twelfth became the house of enmity (καταδινησιν), and, by a further analogy, the second became the house of poverty. As the second house, however, was situated in the sky belonging to the under world and therefore opposite to ours, it became the house of fortune and riches, and for the same reason the sixth house, that of pains (or, according to another interpretation, that of service), became the mirror of the ancient house of death and the eleventh, adjacent to the house of enmity, became that of friendship (συμπαθεια). On the ground of similar considerations the third became the house of brothers, and the fifth the house of children. Finally, as the first house was specially associated with the quenct of the astrological oracle, the seventh belonged to the quenct’s companion, in the ordinary course of things, wife or husband.

The designations of the various houses were therefore as follows: (1) life, (2) riches, (3) brothers, (4) parents, (5) children, (6) health, (7) marriage, (8) death, (9) religion, (10) dignities, (11) friendship, and (12) enmity. But this arrangement gave only the general scheme of astrological prognostication, and in the course of thousands of years various changes were introduced. Our information regarding any particular era of astrological speculation is defective, and we speak only in a general sense when we say that from first to last the system detailed above remained essentially unchanged. It was all along recognized, moreover, that the scheme must be specially adjusted to special circumstances. Thus in the case of sickness the real querent was the invalid himself, and it was about him, therefore, that the first house supplied information. The counterpart was meanwhile not the wife, but the disease itself, upon which accordingly light was cast by the seventh house. The tenth house, in which the stars culminated over the patient, symbolized the physician, while the fourth, lying directly beneath in the under world, signified medicine. Account was also taken, of course, of the eighth house as the house of death, and of the sixth as the house of health. The houses of friendship, enmity, riches, brothers, and children were not supposed to yield any influence upon the course of the disease. Nor was much importance attached, in such cases, to the symbolism of the sun’s planetary family; and, in fact, according to Greek accounts of Egyptian astrology, neither Venus nor Mercury was taken into consideration at all.

5. The astrological conception of the world.

—The enormous advances that have been made with the aid of modern instruments and the practical application of the natural sciences, as well as the great contrast that obtains between the ancient and the modern scientific point of view, are matters of common knowledge. It is impossible to understand the theories of nature held by the ancients without a clear conception of the difference between their fundamental standpoint and our own. According to the older view of the world, which can be traced backwards for 5000 years before Christ, and which still held unquestioned sway for 1000 years after Christ, all natural objects issued in parallel lines from certain primary causes of universal operation. Modern science, on the other hand, assumes that the various groups of physical phenomena proceed by differentiation from certain primordial forms. While the ancients, therefore, looked upon the diversity of things as original, and their common elements as due to external influences, the moderns assume that the properties which objects have in common are inherited from a single primary form, and that their differences have been produced by external conditions, such as, e.g., the struggle for existence.

The two conceptions, however, are not held stringently apart, nor does history show a rigid line of demarcation between the two later than the earlier. Even in Genesis (10:16), for instance, we have a table of nations which stands in complete agreement with the modern point of view, more particularly in the circumstance that it traces back all nations to one universal race. More much in accordance with the ancient conception, on the other hand, is the Greek Deluge-story of Deucalion, according to which human beings were generated spontaneously from stones cast upon by the formative powers present in the air. The theory of parallel processes may be called the 'ancient astrological,' or, again, the Oriental astrological, or, as it is more technical, the 'starry heaven' theory. It had its birth amongst the early civilizations of the East, and its leading science was astrology; nor is it yet a spent force among certain Asiatic peoples of to-day. Now even our modern science, with its discovery of steam-power and its remarkable utilization of electricity, does not enter so profoundly into contemporary experience as did the ancient astrological conception into the life, thought, and feeling of the distant past.

Perhaps the most effective resistance to the more harmful issues of the astrological theory of the universe was made by the peoples living around the Mediterranean, but the Scriptures of the Old and New Testaments are likewise free from the evil outgrowths of that view. Nevertheless, we must remember that even the Biblical writers were children of their time, and could therefore hardly avoid expressing their thoughts in terms of the recognized philosophy of their age. Hence, just as we have come to recognize that the thoroughly going study of Biblical Hebrew cannot dispense with the philological investigation of Arabic, Ethiopic, Babylonian, Syriac, etc., so we are now beginning to realize the impossibility of understanding the tenor of Biblical modes of expression apart from a view of stages of the astrological conception of the world common to the Babylonian, the Egyptian, and other ancient civilizations.

We must again refer to the square form of the horoscope, as furnishing the ground-plan of this theory of the world. The figure shows us the link which the theory had with astrology, and also with other two occult sciences, viz. Alchemy and the Kabalah.

It is of interest to note that the symbols used in astrology for the four cardinal points were not corresponding to the points of the compass. Thus the points of the compass were determined by the observer on the north, the fixing of the cardinal points was effected by his own position in the world. The heavens were therefore seen by the latter from the opposite point of view, and the
four houses in question took a reverse form, so that △ came to mean north, ▽ south, ▶ east, and ◄ west. With this exception, however, all further inferences were drawn from the proper form of the horoscope, i.e. from the figure it presented to the observer on the north.

\[ \text{Diagram of houses} \]

The tenth house, as the sumnum colosum, and the fourth, as the innum calum, embraced everything in the world above and the world below respectively. The upper world as a whole, however, consists of the eighth, ninth, tenth, eleventh, and twelfth houses. In the hieroglyphic script of Egypt, accordingly, heaven is represented by the exterior boundary of these five houses, thus:

\[ \text{Diagram of heavens} \]

which, of course, according to the Egyptian practice in such matters, is only a contour, and really stands for \[ \text{Diagram of heavens} \]. The same proportions and angles are likewise retained in the Egyptian representation of the goddess of heaven, who broods over the earth—God—a phenomenon which will meet us again when we treat of Egypt. The under world was represented, of course, by the same figure inverted. Now we find two different ideas attaching to each of the houses numbered ten and four. According to one conception the sumnum colosum contains the heavenly upper ocean, from which rain falls (כַּלֶּלֶת כַּלֶּלֶת in the Biblical narrative of the Deluge), while the innum calum embraces both the ocean of the under world and the subterranean water from which the fountains of the deep are fed (כַּלֶּלֶת כַּלֶּלֶת; also the sources of the Nile in Herodotus). According to the other conception there lies above us first of all air, then fire; and beneath us, first earth, then water. Now the latter theory furnished also the alchemistic symbols of the elements—symbols which are still written by doctors in old-fashioned mysterious recitals, and were in common use among physicians and apothecaries a hundred years ago. Thus, for example, ▽ sigill. signifies terra sigillata; lunabre. △ restr. = lunabre. terrestres; △ flor. -drast. = aqua florum auranti- orum; or something was to be boiled leni △, i.e.

\[ \text{Diagram of elements} \]

lenti colore. Distilled alcoholic liquors were known as 'burnt water,' and were denoted by a combination of the symbols for water and fire, thus: △. To this day the device △ displayed upon rustic insns indicates the licence to sell brandy. This combined symbol △ was used not only in alchemy but also in the Kabbala, where it represented the Star of David. It became, in fact, a symbol for God (just as the fire-eye, i.e. △, was employed in Christian symbolism to signify the Holy Spirit); for, by the rules of the Kabbala, the combination of the principal consonants of ח ("fire") and כ ("water") yielded the word מ"ח ("heaven"), which in its turn was the cabalistic equivalent of מ"ח ("God"). Thus the term God could be expressed by the secret sign △ as the synthesis of fire and water. In the synagogue all pictorial representation of God was forbidden, nor was it allowable to give utterance to the tetagram מ"ח unless absolutely necessary. In the same way, therefore, as the word מ"ח had to be resorted to as the oral designation of God, the symbol △ came to be used in the architecture of the synagogue as His graphic designation. This figure, moreover, not only contains within itself the symbols of the four elements, interfaced with one another, but, besides the upper and lower triangles signifying fire and water respectively, it also shows four extra-numerale triangles, which could thus be regarded on cabalistic principles as metaphysically symbolizing the four consonants of the tetragram. Hence, even in passages of ancient Christian works where we might expect some such phrase as 'with God,' we actually find the cabalistic device

\[ \text{Diagram of tetragram} \]

signifying מ"ח.

According to the astrological theory of the world, however, not only the perpendicular section through the universe, but the surface of the earth itself, was thought of as quadrate, since the cube, as the ideal geometrical figure, was the accepted symbol of the world as a whole. This idea finds frequent expression even in later cabalistic writings treating of the origin of salt, which, of course, also crystallizes in cubes. The scheme of the horizon, accordingly, became a comprehensive map of the world as well. As previously explained in
connexion with the points of the compass, the
horoscope was in this case the opposite point of view. In the centre
was the navel of the world, which every nation
sought to claim for its own territory, and as the
site of the national sanctuary. The figure also
supplied the four pillars, viz. N.E., N.W., S.W.,
and S.E., upon which the heavens are supported.
Of these the best known was the S.W. pillar, as
it was there that Athis had been relieved by
Hercules.

6. Anthropomorphic nomenclature of the
sphere.—The square horoscope was not the only
expedient resorted to in setting forth the relations
of the stars, as another method was also in use
among the Egyptians. From a time anterior to
Menes until the final period, the high priest
Helopolis was known as \( \text{\textino{\textomega}} \), i.e. 'chief
astrologer.' We may note in passing that this
office was held by Iotis-pheru (of whom name
the literal Greek translation was Heliodorus), the
father-in-law of Joseph (Gen 41:5). Tables of ob-
servations made in Egypt during the Twentieth
Dynasty are still extant, and in these are recorded
the times at which the fixed stars cross the middle
lines of the house, and also of the double-hours.
The astrologer on the north found the
meridian of the place of observation by look-
ing through the slit of the palm-leaf rib above
the bald crown of his companion. The middle
meridians of the first and seventh houses were
given by the horizontal line, while the observer
found those of the eleventh and ninth houses by
lines projected over his companion's right and left
eyes, and finally those of the twelfth and eighth houses by lines above
the right and left elbows. It is probable that
the sixth house was in like manner associated with
the left knee, and the second house with the
right.

From this point of view the left arm corre-
sponded with the house of death and the left leg
with the house of sorrows, and on this account
there eventually arose a superstitious aversion to
using the word 'left' at all. In particular, all
actions performed by the left hand came to be
regarded as unlucky. It may well be the case
that this additional handicap, more than left-
headed before astrology asserted its sway, but
the ban thus laid upon the left extremities of
the body undoubtedly supplied a further reason
for excluding the left side and especially the
left hand from all actions of great and critical
moment.

7. Applied astronomy and astrology.—Alike
in the greatest and in the smallest affairs of life un-
civilized man is affected by the changes incident to
the day and the season, by the phases of the moon
by night, and by the ebb and flow of the tides.
Hence the observation of sun and moon with a
view to a standard movement of the sun, or, in
other words, to the construction of a calendar, was
a vital condition of all progress in civilization.
But, as the periods of the earth's rotation about its
axis (i.e. the apparent diurnal movement of the
sun), of the moon's revolution, and of the sun's
apparent annual revolution, are incommensurable
with regard to each other, the early attempts to
frame a serviceable calendar were attended with
no small difficulty. As the lunar month made
more impression upon the primitive mind than the
actual solar year, endeavours were made in the
earliest calendars to base the latter upon an integral
number of the former; and all sorts of expedients
were tried in order to harmonize the two periods.
At a further stage in the growth of civilization
the determination of the true solar year became
the subject of inquiry, the length of the true lunar
month being then left out of consideration. Here
again, however, the residual fraction of days pro-
vided difficulties, and the difference between the
calendars of Western Europe and Eastern Europe
(Russia) shows that these difficulties have not yet
been overcome. In the pre-Christian era there was
a disparity between Babylon, with its cyclically
adjusted lunar year, and Egypt, with its solar year,
or, rather, its two unequal solar years. Other
civilizations employed other types of calendar. A
purely lunar calendar is still in use among Muham-
madans.

The outstanding periodic phenomena of the
apparent courses of sun and moon were registered
in these calendars, and were celebrated as occasions
of joy or sorrow according to their influence upon
human life. In such feasts and fasts the moon
and the sun were, first of all, personified, and they still
continued to be revered as divine or heroic beings
even after the particular days connected with their
movements by astrology and astronomy had been
duly set down in the ritual literature, the corre-

dated calendars of ancient and modern civilized
peoples.

8. Lunar, solar, and planetary. The
assumptions of the ancients vary as to the phases of the moon
and the sun as could be registered in the calendar
was undoubtedly a forward step in the mental
development of primitive man. But the notion
that the movements of moon, sun, and planets
were effected by powerful and conscious beings, more or
less endowed with free will, was an open door to all
illusion. The religion and mythology of the lowest
races are permeated with this idea. Amongst more
highly civilized peoples, again, we find a stock of
myths of like purport, which, partly indigenous and
partly exotic, forms a kind of illicit religion or
superstition, and which shows many points of con-
trast with the teachings of the recognized national
cult. In periods distinguished by a high state of
civilization this supplementary religion finds accept-
ance only amongst the lowest and least enlightened
ranks of the people, while at times, when culture is
at a low ebb, it extends its sway over the leading
classes as well.

In cases, however, where a relatively advanced
and purified form of religion found its way into a
region already civilized, the old representations
of moon and sun as personal beings, as also the
narratives that had grafted themselves upon their
festivals, degenerated into mere legends. As illus-
trations of this process we may name the Metamor-
phoses of Ovid in the Roman religion, the stories of the Thousand
and One Nights in Islam, and
Grimm's domestic and popular tales in Christianized
Germany.

But it was also possible that a fusion might take
place between the older and the newer narratives.
Thus, apart from the sphere of religious history as
such, there are many medieval kings and heroes
whose actual name, as we know, or, in
other words, to the construction of a calendar, was
a vital condition of all progress in civilization.
But, as the periods of the earth's rotation about its
axis (i.e. the apparent diurnal movement of the
sun), of the moon's revolution, and of the sun's
apparent annual revolution, are incommensurable
with regard to each other, the early attempts to
frame a serviceable calendar were attended with
no small difficulty. As the lunar month made
more impression upon the primitive mind than the
actual solar year, endeavours were made in the
earliest calendars to base the latter upon an integral
number of the former; and all sorts of expedients
were tried in order to harmonize the two periods.
At a further stage in the growth of civilization

SUN, MOON, AND STARS (Introductory)
The disengagement of this secondary astro-mythological element from the Christian system of thought has now become one of the prime tasks of the modern historical theologian. It is not possible for any earnest scholar to reject the fundamental idea of such analysis, and the extent to which the work of elimination shall be pursued depends entirely upon his individual theological leanings towards the more orthodox or the more liberal side. In regard to Conuncus, Buddha, Zarathushtra, and Muhammad, as also in regard to the Alexander romances, the Christian theologian concedes the rights of the method without hesitation. Further, the OT and the Life of Jesus have from ancient times been the nuclei of a mass of legendary stories (the Talitha, etc.; Gospels of the Infancy, etc.), which all theologians have for centuries regarded as apocryphal; and it cannot be disputed that the study of astro-mythology has rendered valuable service in throwing light upon the origin of these spurious additions to the lives of the leading personalities of our religion. Once more, there is a group of writings which, though reckoned apocryphal by evangelical Churches, are still included in the canon; and, as might be expected, the bearing of the astro-mythological theory upon these writings is estimated by the two great parties within Christianity in precisely opposite ways. And when at length the theory is applied to certain constitutive elements in the OT, and to the life of Jesus as given in the evangelical records, the theologians who concede its rights in these domains are fewer still in number. The explanation of this fact must be sought in the fact that such criticism seems to undermine the historicity of the Biblical narratives, and to leave nothing but a mass of mythical stories about the planets, which have crystallized around certain more or less unreal figures in the history of Israel. The logical result of the process appears to be the subversion of every constituent of Christianity save its ethics.

Taken in this sense, the comparative study of astrology and astro-mythology rests upon an impenetrable foundation. The implications of its results, as was said above, may quite well be looked upon as a chapter in that most rigid orthodoxy and the broadest liberalism. Hence it cannot be non-suited by either of the warring schools; it is reconcilable even with those of its critics. Just as comparative philology is an ideal and impartial science, so must the comparative study of myths assume a like impartiality; and the indispensable framework of this study is formed by the planetary deities of astrology.

PROPHECIAL ASTROLOGY. From the theological point of view, prophetic astrology must be regarded as by-way towards superstition, and, indeed, as one of the main sources of superstition. It was evolved by gentle gradations from what we may call 'calendar astronomy.' Primitive man discerned parallelism not only in the processes of nature, but also in the State and in human life; now, even in the forms and organs of animals he read analogies and homologies, and many other fields of observation presented similar correspondences. But by far the most obvious and unmistakable cases of parallelism were those which subsisted between the planet and its influences and the rising or setting of the sun, moon, on the one hand, and the periodic variation of the tides, of light and heat during the day, and of the seasons, on the other. Hence arose the notion of planetary causality—of course, in the form of a peculiar kind of animism, according to highly complicated laws, ordained either by themselves or by a superior power, and who sought to bring all events, great and small, in their sphere of influence. Where the trend of thought was polytheistic, the planets were regarded as gods; where it lay towards monotheism, they were but the messengers of a Divine will beyond them; or, as the case might be, an invisible state was supposed to hang over the gods themselves.

From the standpoint of the ancient astrologer, the supreme function of all learning was the observation of the phenomena of the sky and the drawing of inferences bearing upon a parallel series of facts otherwise veiled. The primary task of astrology was to ascertain the positions of the planets in relation to one another, to the zodiacal signs, and to the observer himself, and then to make deductions therefrom. This was astrology properly so called, and it required for every particular case a direct reading of the sky. A cloudy night, however, rendered such direct readings impossible. Now, the Konuyunj inscriptions, dating from the time of the Assyrian king Assurbanipal, yield evidence for a continuous series of actual observations. From these we learn that, notwithstanding the complexity of the planetary movements, the periodic repetition of essential phenomena had been calculated for each particular planet. Thus the astrologer could, by consulting his charts, discovering every particular sequence of planetary movement, and could substitute these for direct observation. It is true that, owing to trifling inaccuracies in the data thus supplied, this course was avoided for thousands of years; but at length the momentous step was taken. No doubt, it still remained necessary to bring certain recorded positions to the test of actual observation, but, with these exceptions, the processes of the practical astrologer were thenceforward pursued in the study. Our earliest evidences for this procedure date from the period of the Persian monarchy.

So far as astronomy itself is concerned, this was a progressive movement; but, from the standpoint of observational science, it was a backward step. It issued finally in the determination and mathematical calculation of the planetary orbits by Kepler. But, in our estimate of Kepler's discoveries, we must always bear in mind that he was still under the spell of the astrological conception of the universe. It was his firm belief that his discoveries were only the most rigid reflections of his own mind, and had exalted astrology to the level of a perfect and independent science of simple calculation, while in reality he had given the death-blow to its pretensions.

From the time of the earliest attempts to draw up a calendar—through the period of the Sumarians and Akkadians—to the days of Kepler astrology underwent no essential change, save that it gradually abandoned the method of direct observation of the heavens in favour of, first, a partial use of tables containing earlier observations, and, finally, a purely arithmetical determination of the positions occupied by the planets at any given time. Astrology, be it remembered, was a study of international importance. Wherever, therefore, in the history of any civilized country we can trace some slight advance in astronomical science, we find corresponding records, practically contemporaneous, in all the civilized countries of that epoch. Additions to men's knowledge of the stars were welcomed always as an auxiliary to the prediction of the planetary positions. As all the available evidence goes to show, however, astrology, throughout its entire career, had but one method of adapting this knowledge to the needs of the hour, and, of universal application, a more or less clearly realized principle of alternation. In the main, the positions of the planets were made
the basis of prognostications of the unborn, but they were also used as a means of filling up locana in the knowledge of the past and the present.

10. Astrology and medicine. — In the ancient Oriental view of the world, astrology, religion, and therapeutics went hand in hand. In the conviction that all things in the universe proceeded in parallel lines, men spoke of a macrocosm (primarily that of the heavens) (microcosm) and a microcosm (primarily the human body), and sought for far-reaching analogies between them. Thus — to take one of many examples found in Sanskrit literature — the Vedas and their allied texts exhibit attempts to establish an exact equivalence between the number of the bones in the human body and that of the days in a year. Simple as would have been the task of enumerating the bones accurately, they were purposely numbered wrongly, so that the desired numerical relations might be educe; the lower jaw, for instance, was said to be composed of eighteen single pieces, not including the teeth, just because the number of purely fictitious, could, as the twentieth part of 360, be used for purposes of speculation. The method was applied in every field, and things which did not harmonize in fact were arbitrarily made to do so.

In the ancient East the therapeutic art was based upon the two fundamental postulates of air in motion and liquid in motion, and it was supposed that in the human body the air passed along the arteries, while the liquid traversed the veins. The solid substance of the body (its earthy constituents) and its native heat (its igneous constituents) were regarded as forming a fixed and constant mass; earth and fire, in fact, were probably never considered in their physiological aspects until the Hellenistic period. The astrological references hitherto discovered in Babylonian and Egyptian texts show that air and liquid alone were taken into account. In the further development of these notions, special prominence was given to the air by the pneumatists, and to the blood (i.e., liquid, and a mixture of the four principal humors, viz., water, phlegm, yellow bile, and black bile) by the hematists. We cannot enter here into the particulars of the antagonism maintained between the two schools for several thousand years, but we may mention that of which we can trace in the period when the Pyramids were built, and which, again, moved the hematist Aristophanes to the mortal hatred wherewith in the Clouds he arraigned the pneumatism of Socrates before the Athenian populace. Suffice it to say that, in all references to the facts of nature found in the Pentateuch, the Jewishistic sections of Genesis, in particular represent the pneumatic, and the Elohist portions the hematistic point of view, whereas the Priestly Code exhibits no scientific tendency at all. The pneumatists regarded the nose as the most important organ of the body. We may recall the numerous phrases formed with ἐνο in the OT, and the large noses of the singers in the chorus of the Clouds. Even amongst the inscriptions from Nineveh, which must, on the whole, be reckoned to the first days and the prominent part in the OT and the Talmud. Among the Babyloniens and Etruscans, again, as also amongst the various peoples influenced by them, hematopathic and pneumatological forms of inspection of the liver. The coneiform texts which treat of this hepatoscopy are without number, and have been read and translated mainly by Jastrow.

In the ancient East, and even in Greece, the hematists were for the most part firm believers in astrology, omens, and all that we now brand with the name of superstition. To dreams, above all, they attached great importance, while the pneumatists, on the other hand, as is shown by the writings of Hippocrates, declared dreams to be unworthy of consideration. The pneumatists seem to have borne the reputation of being enlightened physicians, and the hematists of not infrequently falling into the case with the pneumatist Socrates as delineated by Aristophanes. From certain fragmentary indications we may perhaps gather that in the main the Christians of the early centuries were hematists in their knowledge of nature.

From the mental standpoint of the hematistic astrologer every actual group of relations amongst the planets mirrored itself in all synchronistic events and conditions, and thus the entire horoscope would be reproduced in the variations and peculiarities found in the liver — the central organ — of the newly-born sacrificial animal. An expert examination of the liver could therefore quite well take the place of a direct observation of the sky. The practice of hepatoscopy was extensively diffused, and diagrams illustrative of the art are still extant. The method adopted by the Babylonians was to dig out the breast, and let the liver be called oracular squares by means of a right-angled system of ordinates, a device reminding us of the square sections shown by the extant Egyptian projection of the heavens made in the time of King Seti, and likewise of the square figure used as the ground-plan of the normal horoscope. Among the Etruscans, however, hepatoscopy applied a polar projection in its construction of oracular fields, and to this arrangement corresponds the system of regular polygons designed to represent the relative positions of the planets in the circular horoscope.

Another way of dispensing with direct observation of the heavens was to watch the forms assumed by certain substances when suddenly placed under new conditions, as it was supposed that the forms thus produced were determined by the configuration of the planets at the time. Oil or melted tallow was dropped into water, or water into oil, and the diviner took note of the resultant forms. We read that when Darius established himself in the reign of King Hammurabi of Babylon for the express purpose of interpreting these formations. This mode of divination still survives in the superstitions practiced of dropping molten lead upon a cold surface.

A further variety of oracle was found in dreams, to which reference has already been made. Dreams also were believed to run parallel to the facts of astrology, and might, therefore, be substituted for the latter. But, as dreams were held to have their origin in the blood, their significance was concealed by the hematists only.

Finally, every unaccountable phenomenon of nature — from the movement of an animal to a monstrous birth — everything, in short, that touched human life at any point, came to be associated with planetary influence, and might become the basis of divination. The Library of Sardanapalus contains thousands of tablets in which such superstitions ideas and practices are expounded with the most precise casuistry. They seem to have been regarded as the supreme and final expression of wisdom, and might relate to matters a thousand years old. But these fallacious issues of man's search for knowledge, involving such a prodigious expenditure of energy in efforts of discovery and in the ultimate explanation in the fundamental misconception of astrology, viz. that the incidents of life, being dependent upon the contemporaneous con-
The dates given are themselves products of astrological speculation, and cannot be regarded as historically established, but they are nevertheless worthy of notice. On the 24th of June, B.C. 7 (or 6, according to a previous calculation), a vision of John the Baptist. On the 15th of April, B.C. 6, at 5 a.m., the annunciation to Mary (instead of the conception of Jesus), and, at the same time, the observation of this 'new star' by the Magi. Between the 24th of June, B.C. 6, and the 25th of November, B.C. 6, occurs the visit of the Magi to King Herod. After the 25th of November, B.C. 6, the Magi notice the re-appearance of the stellar configuration at the annunciation. On the 27th of December, B.C. 6, the stellar configuration becomes stationary (σαθρ αφρη), and the Magi worship the infant at Bethlehem.

Now the horoscope of the 15th of April, B.C. 6, can be re-constructed thus:

and supplies the following apotelesmata capable of interpretation:

1. The horoscope of the day appears (with sunrise). (2) Aries is in the ascendant. (3) Mars, as lord of the house of Aries, presides over the birth. (4) The sun is in the ascendant. (5) Saturn is in the descendant. (6) Jupiter is in the ascendant. (7) Mercury is in the ascendant. (8) Saturn is in the second house. (11) The moon enters the eighth house. (12) Venus is in the twelfth house. (13) Mercury, in the house of Mars, and likewise in immediate proximity to Mars. (14) Saturn is in his retrogradation, or "detraction." (15) Moon enters in his σωμαν, or 'exaltation.' (16) The moon in her νερονεια. (17) Venus in her νερονεια. (18) Venus is in sextile ('morning star'). (19) Jupiter is in proximity to his house Pisces. (20) Jupiter in trine (adiectus trigonum) with his house Sagittarius. (21) The sun in trine with his house Leo. (22) Moon's motion is direct. (23) Jupiter is direct. (24) Mars is direct. (25) Venus is retrograde. (26) Mercury is direct. (27) Mercury is combust. (28) Mercury in immediate proximity to the sun. (29) Mercury is invisible. (30) Mars is not combust. (31) Mars is nevertheless invisible, and is, in fact, entering upon its invisible period of three months. (32) Mars is separated from the sun by Mercury. (33) Saturn is separated from the sun by Jupiter, though the latter is combust. (34) Jupiter is combust. (35) Jupiter is separated from the sun by small planets. (36) All the morning stars are visible. (37) All the evening stars are invisible. (38) Mars is situated in his nocturnal triangle. (39) The terrestriai triangle contains Mars only, its nocturnal lord, situated in Taurus. (40) Mars is in opposition to his house Scorpio. (41) The moon in trine with her house Cancer. (42) The moon is in her domain. (43) The trigonum of fire contains its lord conjunct in Aries. (44) The trigonum of water contains its nocturnal ruler, the moon. (45) The moon and Venus are in trine. (46) The trigonum of air is empty. (47) Saturn and Jupiter are in conjunction. (48) This conjunction occurs in Aries, and is thus conjunction maximus, and dominates the entire horoscope. (49) This conjunction is preceded by a conjunction magnum, occurring in Pisces (indicating the astrological necessity for the forerunner, John the Baptist). (50) Saturn is in opposition with the ascendant et al. (51) Saturn is in conjunction with Mercury. (52) Mars and Mercury are in different houses, but close together. (53) This conjunction occurs in Aries, and is thus conjunction maximus, and dominates the entire horoscope. (54) Saturn is in conjunction with Mercury. (55) Mars and Mercury are in different houses, but close together. (56) This conjunction occurs in Aries, and is thus conjunction maximus, and dominates the entire horoscope. (57) Saturn is in conjunction with Mercury. (58) Mars and Mercury are in different houses, but close together. (59) This conjunction occurs in Aries, and is thus conjunction maximus, and dominates the entire horoscope.

The dates given are themselves products of astrological speculation, and cannot be regarded as historically established, but they are nevertheless worthy of notice. On the 24th of June, B.C. 7 (or 6, according to a previous calculation), a vision of John the Baptist. On the 15th of April, B.C. 6, at 5 a.m., the annunciation to Mary (instead of the conception of Jesus), and, at the same time, the observation of this 'new star' by the Magi. Between the 24th of June, B.C. 6, and the 25th of November, B.C. 6, occurs the visit of the Magi to King Herod. After the 25th of November, B.C. 6, the Magi notice the re-appearance of the stellar configuration at the annunciation. On the 27th of December, B.C. 6, the stellar configuration becomes stationary (σαθρ αφρη), and the Magi worship the infant at Bethlehem.

Now the horoscope of the 15th of April, B.C. 6, can be re-constructed thus:

and supplies the following apotelesmata capable of interpretation:

1. The horoscope of the day appears (with sunrise). (2) Aries is in the ascendant. (3) Mars, as lord of the house of Aries, presides over the birth. (4) The sun is in the ascendant. (5) Saturn is in the descendant. (6) Jupiter is in the ascendant. (7) Mercury is in the ascendant. (8) Saturn is in the second house. (11) The moon enters the eighth house. (12) Venus is in the twelfth house. (13) Mercury, in the house of Mars, and likewise in immediate proximity to Mars. (14) Saturn is in his retrogradation, or "detraction." (15) Moon enters in his σωμαν, or 'exaltation.' (16) The moon in her νερονεια. (17) Venus in her νερονεια. (18) Venus is in sextile ('morning star'). (19) Jupiter is in proximity to his house Pisces. (20) Jupiter in trine (adiectus trigonum) with his house Sagittarius. (21) The sun in trine with his house Leo. (22) Moon's motion is direct. (23) Jupiter is direct. (24) Mars is direct. (25) Venus is retrograde. (26) Mercury is direct. (27) Mercury is combust. (28) Mercury in immediate proximity to the sun. (29) Mercury is invisible. (30) Mars is not combust. (31) Mars is nevertheless invisible, and is, in fact, entering upon its invisible period of three months. (32) Mars is separated from the sun by Mercury. (33) Saturn is separated from the sun by Jupiter, though the latter is combust. (34) Jupiter is combust. (35) Jupiter is separated from the sun by small planets. (36) All the morning stars are visible. (37) All the evening stars are invisible. (38) Mars is situated in his nocturnal triangle. (39) The terrestriai triangle contains Mars only, its nocturnal lord, situated in Taurus. (40) Mars is in opposition to his house Scorpio. (41) The moon in trine with her house Cancer. (42) The moon is in her domain. (43) The trigonum of fire contains its lord conjunct in Aries. (44) The trigonum of water contains its nocturnal ruler, the moon. (45) The moon and Venus are in trine. (46) The trigonum of air is empty. (47) Saturn and Jupiter are in conjunction. (48) This conjunction occurs in Aries, and is thus conjunction maximus, and dominates the entire horoscope. (49) This conjunction is preceded by a conjunction magnum, occurring in Pisces (indicating the astrological necessity for the forerunner, John the Baptist). (50) Saturn is in opposition with the ascendant et al. (51) Saturn is in conjunction with Mercury. (52) Mars and Mercury are in different houses, but close together. (53) This conjunction occurs in Aries, and is thus conjunction maximus, and dominates the entire horoscope. (54) Saturn is in conjunction with Mercury. (55) Mars and Mercury are in different houses, but close together. (56) This conjunction occurs in Aries, and is thus conjunction maximus, and dominates the entire horoscope. (57) Saturn is in conjunction with Mercury. (58) Mars and Mercury are in different houses, but close together. (59) This conjunction occurs in Aries, and is thus conjunction maximus, and dominates the entire horoscope. (60) Saturn is in adiectus conjunct with Venus. (61) Saturn is in adiectus conjunct with Mars, but triplicitly intercepted.
SUN, MOON, AND STARS (Introductory)

(62) Jupiter has no aspect with the moon. (63) Jupiter is in aspectus confinis with Venus, but intercepted by Saturn. (64) Jupiter is in aspectus confinis with Mars, but doubly intercepted. (65) Venus has no aspect with the moon. (66) The sun is in aspectus confinis with Venus, but doubly intercepted. (67) The sun is in aspectus confinis with Mars, but intercepted. (68) Mercury is in aspectus confinis with Venus, but tritly intercepted. (69) Mercury is in aspectus confinis with Mars, but quadruply intercepted. (70) Mercury has no aspect with the moon. (71) Mercury is in aspectus confinis with Venus, but in opposition to the moon. (72) Mars is in trine aspect with Venus. (73) Full moon is just past the equinox. (74) The sun is in opposition to the moon. (75) The tropical signs only Aries is occupied, but it contains four planets. (76) All the planets except the moon and Venus are under the influence of the sun. (77) The lord of the sun's house emerges from the sun's beams. (78) Hence the conjunctive maxima also emerges. (79) All the visible planets and the moon are situated in the diurnal sky. (80) All invisible planets are in the nocturnal sky. (81) The lord of Saturn's house is Mars. (82) The lord of Jupiter's house is Mars. (83) The lord of Jupiter's house is Mars. (84) The lord of the sun's house is Mars. (85) The lord of Mercury's house is Mars. (86) The lord of Venus's house is Jupiter. (87) The lord of the moon's house is Mars. (88) The lord of the house of Mars is Venus. (89) The horoscope, i.e., Aries, is masculine. (90) The other occupied houses are feminine.

Several points of detail may be left out of account. By making the horoscope more precise, and dividing it into decanates and houses, we might multiply indefinitely the ninety particulars given above. These data of the positions occupied by the planets were known as opodesminata. The manner of computing and interpreting these results can be interpreted only in part at the present day, as our information regarding ancient modes of astrological interpretation is at best fragmentary. According to the opinion of the ancients and such modern interpreters as are of this opinion, the planets, no doubt, have also been made in certain particulars. So far, however, as we can test the interpretations of this horoscope, it corresponds with the evangelical narratives of the life of Jesus even in the smallest details.

13. The development of astronomy and astrology among the various peoples.—The foregoing sketch makes it evident that primitive peoples constructed their calendars by direct observation of the heavens. Similarly, it is amongst these primitive peoples, as indeed we might expect, that we find the first steps of the transition from astronomy to astrology. Thus, in the interior of some of the larger South Sea Islands, as, e.g., Borneo, a primitive astronomy and astrology are found amongst the aborigines, while the inhabitants of the sea board, as also of the smaller islands, especially in the Caroline, Marshall, and Carolines, the science of the stars, partly because their nautical interests demanded a more thoroughgoing observation of the heavenly bodies, and partly because they were influenced by the higher standard of culture attained by the Asiatic races, as is shown, for example, by the fact that the Malay language contains words borrowed from Chinese, Sanskrit, Arabic, and Persian. Of the pictorial writing of ancient Mexico, part of the calendar is all that has hitherto been deciphered; but even this suffices to show striking correspondences between the civilizations of America anterior to its discovery by Columbus and those of the ancient Asiatic races, and not least in astronomy and astrology. The development of these sciences already attained in the Babylonian period or later in the time of Alexander the Great is practically the same as that which now prevails throughout China, in part of Japan, and, above all, in India.

In the West, likewise, the results of astronomical inquiry show the same signs of superstitious conceptions. The earliest successful attempts to eliminate these conceptions and their effects from astronomy were made about A.D. 1500. It is evident that the work of civilization the educated classes tried to throw the number of horoscope overboard. Certain of the Church Fathers wrought strenuously to oust it from its place. But, on the one hand, the vexed question regarding the date of Easter, which was simply a consequence of combining the lunar calendar of Babylon with the solar calendar of Egypt, and, on the other, the attempt to fix a year for the birth of Christ, gave astronomy since more a certain advantageous prestige in Christian life and theology. Fresh vantage ground was also won for it in the secular learning of the Middle Ages by the Western drift of Islam into the Jewish Kabbalah. As to the extent, the astronomy of the West, and, in particular, the coalescence of astronomy and astrology in the later culture of Western lands, is a development or an importation from the astronomy and astrology of the ancient East.

Until the time of Kepler, astronomy was always bound up with astrology, and its progress was for the most part of a meagre kind. This may seem incredible so long as we confine our investigation to a short period abounding in records, but it is always unsafe to argue from the silence of the earlier records that the apparently fresh facts set forth in the later constitute an intellectual advance. No candid observer in the field of astrology could fail to notice that, while this or that forecast might happen to be correct, yet in many cases the configuration of the planets, however skilfully interpreted, could not be reconciled with the facts of experience. Certain details of astrological procedure were, therefore, constantly being left behind, as in an ever-seething witches' caldron; and, on the other hand, long disused methods were once more resorted to. This was especially the case when, in periods of unrest, races and civilizations were shaken and mingled together. Detailed research in a newly circumcised period may thus produce the illusion of rapid development in a science which, in its leading features, really remained unchanged from age to age.

The fundamental tenets promulgated by astrology as inviolably true were manifold. From the fourth house, as it seemed, welled up the subsoil water and the springs which fed the rivers, while from the tenth house came the rain. Now when primitive man found the moon in either of those houses he anticipated a flood. But the moon was evidently connected also with the occurrence of menstruation, which was regarded as a periodic overflow of blood. The regular blood phenomena tended to corroborate another so fully that the sovereignty of the moon over the liquid element was deemed indisputable. An example of a different kind is furnished by the horoscope of disease, or rather of the évéraxev. Here the invalid was the quencher, and his remedy the quenched, and information regarding them was supplied by the first and seventh houses respectively. Now, in the regular horoscope the sixth house was significant of pain and the eighth of death, and thus the entire western section of the sky from 45° above the horizon to 45° below it was the region of disease. In this expanding, however, the great distinction among the planets as the source of heat, is situated between three and nine o'clock p.m., and this again is the time when the invalid shows symptoms of fever. An easy explanation was thus provided for the increase of febrile temperature, while on the other hand the validity of the science was demonstrated once more. Astrology simply abounded in specific applications, and the good.

Thus the leading principles and ideas of astrology were looked upon for centuries as incontrovertible. Its failures were attributed to points of secondary measurement, and it seemed most convenient to change the time of ebullition by a whole double-hour, and so to shift the entire horoscope by one house—an artifice...
which would in general quite invert the first interpretation. Corrections and alterations were thus made in matters of detail, while among the more progressive peoples the general tendency was towards over-refinement in interpretation and an ever-expanding casuistry.

Accordingly there was no real development in the astronomy and astrology of the ancient East within historic times. The explicit references of the inscriptions go as far back as the period of Sargani-sar-ali and Naram-Sin. From the reign of the former eight short texts are all that have as yet been preserved of the latter sixteen only, all of the same date. It is not to be expected, therefore, that we shall trace all the details of later astrology in such meagre records. It is surely sufficient for our purpose that the later period, the archives of which may quite well extend backwards to the monarchs just named, yields a mass of evidence to show that astronomy and astrology by this time reached the status of a closed and nomended system. Inscriptions from the age of Hammurabi make it clear that full instructions had already been drawn up for the practice of divination by caps in connection with the written horoscope. We have also from a period about a thousand years before Christ come the inscribed boundary-stones, the dates of which are indicated by their arrangement of the planetary symbols. Thereafter the richest vein of astrological records is found in the library of Sardanapalus. We learn from these that there was a system of observatories covering the whole kingdom, that there was an established scheme of relays for the professional astrologers and of serial reports regarding their work, and that a State library had been established for the purpose of supplying all needed information in astrology and the auxiliary arts of divination. It is to be regretted that as yet only the Reports of the astrologers and the instructions regarding horoscopes have been properly edited. The cuneiform texts of the period between Sardanapalus and the beginning of the Christian era are not so rich in relevant information. The astronomical texts of this epoch, however, have found a thoroughly capable editor in Kugler, whose labours were based on the preparatory studies of Strassmayer and Eppel, but who, unfortunately, engaged as he was with the productions of a relatively short period, has failed to grasp the subject in its entirety. A final resumé of Babylonian astronomy and knowledge of the science of the Chaldeans' current in the days of the Roman Empire. From the beginning of our era astrology and astronomy languished on in the various Asiatic countries, but they were borne westwards by the Arabs. Mesopotamia always remained more or less of a terra incognita for countries influenced by Greek-Roman civilization.

On the other hand, Egypt became permanently merged in the Roman Empire, and, at a later period, in the Byzantine Empire. It was Egypt, therefore, that brought Babylonian astronomy and astrology into contact with the West. Even in the most remote times, in a period, it may be, anterior to the First Dynasty, astrology, religion, and medicine were combined as one science at Heliopolis. The high price of Heliopolis, officially invested with the star-studded panther's skin, was all along the supreme State astrologer until the imperial age of Rome, and he bore the title of 'great in vision' already alluded to. A hierarch of this order, in a little book written in 418 as the father-in-law of Joseph—that of that Joseph who was himself an interpreter of dreams (40th, etc.), and practised the art of divination by birds (44th, 12), referred to in connexion with Hammurabi. On the wall of a tomb dating from the reign of Seti I. we find lists of stars, times of culmination, etc. Extensive tables of ephemerides and a fragment of planetary divination according to the different houses, together with corresponding collossal and horoscopic texts, have survived from the age of Augustus. We possess even horoscope-texts drawn up in the Imperial period. Our minor records of later Egyptian astrology are not generous.

Greek-Roman civilization throughout its entire geographical and historical range, until the establishment of the world-empire and its swift decline, has never produced such monuments as we find in the great empires of the East. Observatories of colossal proportions, attached to primeval temples containing archives by which the positions of the planets might be traced and tested for centuries and millenniums, were never the work of Greece and Rome. Among the Etruscans, therefore, and subsequently among the Romans, it was the surrogates of astrology that occupied the central place. Apuleius explicitly asserts that the Chaldeans were the founders of astrology and astronomy. But, so far as the Romans concerned themselves with the study, they appealed to the productions of the sages of Alexandria, of whom the most celebrated were Herophilus and his astrologer Ptolemy, called Hecateus and his astrologer Ptolemy of Alexandria. At a later period Claudius Ptolemaeus (A.D. 100-178) was regarded as the final authority in our twin sciences, and beside him we catch a glimpse of the somewhat legendary Horus Trismegistus. But, as has been already indicated, the claims of astrology were not left unchallenged in this period. About the year A.D. 200 the famous physician Serapion of Alexandria published six books προς μαθηταςαυτος, of which the fifth was directed προς ωσελαβλητως. Heprefaces his con- dition by a sketch of the entire system of know-ledge possessed by the Χαλδαιος, and in this he provides valuable materials for a thoroughgoing digest of the astrological texts in the library of Sardanapalus.

In this later period, however, astrology has maintained some degree of progress in the Far East. Among the Chinese and Japanese, occult art, in the modern 'fengshui,' seems rather to have taken the form of geomancy. Just as in the Near East, astrology grew up to its zenith in China and Japan and the interpretation of the planets in the celestial vault has been transformed into divination by the carapace of the tortoise. Similarly the Gypsies have developed a system of fortune-telling from the open constellation, the designation of the convexities of the palm as 'mounts' of the various planets shows us that this practice also is a surrogate of astrology.

LITERATURE.—The significance of astronomy and astrology for the interpretation of the religious conceptions of the ancient East, as also for the exegesis of the Bible, has only recently been recognized. There is as yet no comprehensive work dealing with the subject. Contributions to the study have come mainly from the hand of H. Winckler (especially in Josafat von den alten Orients, Leipzig, 1897), of whom A. Jeremias (Die Pan- balgionisten, der alte Orient und die egyptische Religion, Leipzig, 1907), and an able ally. Pugitive essays have appeared in considerable numbers, principally in publications of the Vorderasiatische Gesellschaft and the Orientalistischen Literaturzeitung; Hirsch (Leipzig) has also issued a number. At first the new exegetical theory encountered very strong opposition, but more and more it has been conceded to have value. More recently, however, the work of Winckler, already referred to and appealing as it gives it a partial reverse. K. SCHMIDT (Almabibliotik, vornemlich im 15. und 16. Jahrhundert, Berlin, 1902) and the present writer, writing in the light of medicine, have studied the ancient astronomy and astrology, and have arrived at the same results as Winckler, though by a very different method and with the present work, sixteen of the present writer's essays on the subject, and these have appeared in various periodicals, the theological, esp. Die Angaben der Berliner Pflanzenkunde, p. 8279, Berlin, 1903, Das Horoskop der Eryxangal Christi, do., 1903. These publications are based upon cuneiform texts, on epigra- phic (or denotic) texts which have only recently become accessible.

SUN, MOON, AND STARS (Introductory) 61
SUN, MOON, AND STARS (Primitive).

Knowledge of the movements of the heavenly bodies is of varying degrees by most primitive peoples. In the earlier stages of civilization that continued observation which is necessary to arrive at a reasoned explanation, which is the foundation of a scientific study, is not possible through lack of proper means of recording its results, nor is it called for by the practical requirements of a population which lives chiefly by hunting. For an agricultural people, however, foreknowledge of the recurring seasons becomes essential, and it is necessary that some means should be found to mark the proper seasons for performing the operations to ensure the food supply. In the stars, their regular motions of rising and setting, primitive man has found the earliest and most convenient calendar. In default of a theory based upon a series of observations, the supposed motion of the sun, moon, and stars, the phases of the moon and the motion of the stars, the shape and character of the sky, have been explained by formulas composed of material drawn from the religio-philosophical traditions. The celestial bodies, equally with his fellows and material surroundings, he considers to be animated with a personality like his own, though more powerful. Departing from this fundamental assumption, primitive man has fashioned for himself, in his legends, a fairly complete explanation of the celestial phenomena which come under his observation.

1. Sun and moon.—It is almost universal among primitive races that both sun and moon should be regarded as alive and quasi-human in nature. Their sex differs among different races, but the moon is invariably female and the sun male. Relation between them, varying in character, is also recognized. Among the Dieri of Australia the sun is the daughter of a Dieri woman, who after her death went into the earth. The natives of Encounter Bay say that the sun is a woman who has a lover among the dead. Each night she descends among the dead. At her rising she appears in a red kangaroo skin, given her by her lover before he went into the earth. The sun is a woman who was digging yams and reached the West; after wandering round the earth she came back to the other side, and has done the same ever since. The Warunjerji say that the sun is the sister of every one. This may be compared with the story of the origin of the sun told by the Arunta. At Alice Springs there is a tradition that in the Alcheringa and the universe created, there was a spot now marked by a stone near the country of the Bandicoot people, in the form of a spirit woman, accompanied by two other Panunga women, who were sisters, the elder of whom carried a child. The spirit woman went up into the sky, and she does this every day, visiting the old spot at night and rising in the morning. A medicine-man could see her in the hole, but not a person with ordinary vision. The two women settled among the Bandicoot people, and originated a local sun totem. This totem may be compared with the sun totem of the Inecs. The sun has a definite relation to each individual member of the various divisions, belonging itself to the Panunga division, as did the two women. Among these people a ceremony connected with the woman and the child is performed, in which symbols of the sun are worn.

The Maori held that the sun married the moon, and they had a fight. Each damaged the other. The sun was so ashamed that he became bright, in order that people might not be unable to look at him. The moon was not damaged, and it is said that she sees that her mouth is damaged and that one eye is missing.

It is interesting to note that, while the sun is a man and the moon a woman, the Maori word for sun, eng-olrig, is feminine, and e-oapu, the moon, is masculine. The Bushman story goes that the sun was an old man, from whose armpit light radiated; some children threw him up in the sky, where he stuck. Occasionally both sun and moon are feminine. Among the Mantras the sun is a woman, who is continually being pulled by a string held by her lord. The moon is a woman, the wife of Muyang Bertang, who sits in the moon making nooses for men.

(a) Origin and movements of the sun.—The origin of the sun, as related in the Tembeli legend of Sam-mor and his battle with Naing, has advanced beyond the anthropomorphic stage. When Sammor had imprisoned Naing, he rolled the fire which he had fought into a ball, and this, as the sun, still required man to watch Naing. This conception of the sun as inanimate is probably due to external influence, but it has a parallel among the Gallinomeros of Central California, where the hawk and the coyote, after jostling one another painfully in the darkness which then prevailed, collected two masses of inflammable substance; the hawk then flew up into the sky with them, and lighted them with flint. They give light as the sun and the moon. The Wurmnerji believe that the sun was made by Puppu-imbul, one of the race inhabiting the earth while everything was dark. This personage, it is hardly necessary to point out, belongs to the race of demiurges of which Prometheus is the type.

The sun did not always cross the sky in the same leisurely manner as at present. The great feast of Mani, the Maori hero, was that he tamed the sun. According to one version, he beat him so unmercifully that he lamed him, and he has walked slowly ever since. In Samoa the sun had a child by a Samoan woman, who trapped the sun by a rope made of vines. Another Samoan legend has it that the Sun was trapped by ropes of the swallow, and made him promise to go slowly. The same or an analogous explanation is found in Aztec folklore and in North America. On the other hand, in Australia and in Mau-mau, it is the sun who is not set. In the myth of the aborigines of Victoria, Norralie decided that the sun should disappear at intervals, and addressed it in an incantation, 'Sun,
SUN, MOON, AND STARS (Primitive)

sun, burn your wood, burn your internal substance, and go down.' The sun now burns his fuel in a day, consuming fourteen hours, as the fire does. Brough Smyth, Aborigines of Victoria, iv. 430. In Melanesia Qat (the Melanesian hero) went to Qong ('night') and begged assistance. The latter put him to work, and in twelve hours or so crept up from the horizon and sent the sun crawling to the West (Cordining, JAI, Feb., 1881). In a Brazilian myth, a man ('the great serpent') who owned night sent it in a gourd to his brothers; when he saw marriage; the messenger grounded the gourd and let it out. Various explanations are given of the sunset. The simplest is that the sun sinks into a hole, occasionally the hole from which he arose. The Dieri say it sinks into a hole near Lake Eyre, and in the night travels underground to the East, in the same manner as it was believed to do in ancient Egyptian belief. Not infrequently the sunset myth takes the form of a legend of a personal hero plunging into the body of a personal myth. Mani was caught in the mouth of Hine-nui-te-po, 'Great Daughter of Night,' and thus brought darkness and death into the world. Since then the sun descends into the under world, and repeats the battle with Hine-nui-te-po every night. An explanation of sunset is that Mani took fire, and when it burnt him he plunged into the sea. Among the Basutos, all men were transformed into great monsters. He also was swallowed, but cut his way out. The Zulu story of the rescue of Princess Utombele is of a similar character.

Origin and movements of the moon.—The moon occupies a prominent place in primitive folklore for which her periodical growth, diminution, and disappearance, phases more marked than those of the sun, are explained in a similar manner. Like the sun, the moon is regarded as a living person. Allusion has already been made to the variation in the attribution of sex to the moon among different peoples. One or two further instances which illustrate other points of lunar mythology may be added. Among the Arunta the moon is a big man (etwa olunruhu). They say that, when there was no moon in the sky, a man died and rose again as a boy. The people ran away. He said, 'Do not run away or you will die. I shall die, but will rise again in the sky.' He grew up and died, reappearing as the moon. Since he was not always visible, he goes away to his two wives who live in the west. A second legend of the origin of the moon, which is found among the same tribes, relates that the moon was carried by a black-fellow in the hollow of his shield, who hid it in a clink of the rocks during the day. Once it was stolen from his shield while lying on the ground. He pursued the robber but could not catch him, so he shouted that the moon should go up into the sky and give light to the people during the night. In South-East Victoria in one myth the moon is an old man who climbed a tree to pick grubs. His sons made the tree grow to the sky as he devoured the moon. The Dieri say that there was once no moon; the old men held a council, and a muara-muara gave them a moon in order that they might know when to hold their ceremonies. The same reason for the moon's existence is given among the Todas.

The marks on the face of the moon are explained in various ways. The Eskimos say that these marks are the ashes which were smeared on his face by his brother, when he was about to be embraced by a white stone at Temple Bar in the Macedon Range, leaving her charings behind. Every child
conceived at this stone belongs to the Evening Star totem, although it is in the lizard totem country, and any child conceived near the stone is a lizard. One of the beliefs that is closely associated with this is that the ancient men who danced around it and sang choruses as they walked around it were the Pleiads, with the leaders being the Great Bear (Ursus). The Pleiads are considered the most important group of stars for primitive peoples, who were known to the Indians of North America as the Great Bear. The stories of the Pleiades with women among different races is remarkable. It is clear that these legends which attribute an heroic and human origin to the Pleiades contain the germ of a conception which have been utilized by modern astronomers in mapping out the heavens.

3. Signs and omens. —The train of thought underlying primitive astronomical theory would seem peculiarly adapted to foster the magical conceptions and analogies upon which astrological reasoning is based. Omens and signs, favourable and unfavourable, are and have always been the object of constant observation in the past of savage and semi-civilized people. It is, therefore, not surprising that peculiar powers in controlling human events should be attributed to those heavenly bodies which are regarded as endowed with powers similar to but greater than those possessed by human beings. Even when a stage has been reached at which the magic powers of the witch no longer gain credence, belief in the power of the moon or the first star of the evening to grant a wish remains. The following story is an example of such beliefs told by the Hos of Chota Nagpur. In this story, however, the sun threw a hatchet at the moon and cut her in two.

For practical purposes among most primitive peoples the stars perform a more important function than the sun. By their rising and setting the times of the feasts and ceremonies are determined, and among agricultural peoples their movements serve as a calendar by which the various operations in cultivating the soil are regulated. In the Torres Straits, Tagai marks the time for new yams and the migrations of turtle; Seg, the time for another kind of yam. The Murray Islanders also use Tagai as a mark in navigation. The rising of the constellation Dorgai, which coincides with the North-West Monsoon, is the time to 'make dance.' The natives of Borneo, especially the Dayaks, watch for the Pleiades to determine when to prepare their ground for planting. When it is estimated that the wet season is approaching, men are sent out for the purpose of seeing the rising of the Pleiades. The Kenyaks and Kayans of Borneo measure the length of the sun's shadow by means of a marked stick with the same object (G. Hose, *JEA*).
falls for seven days in accordance with the number of stars in the group; three days' rain follows the rising of the group Atuel, while the star Toro is peculiarly troublesome. Well, all the time Lembergo, 'animal crop grass' (? F. P. Müller, 
Folkloristische Ewethete' (Ge-Dialekt), Globus, 
Jxix. Jan. 1901). These beliefs, however, may be regarded as generalizations from important as well as trivial data, and as resulting in a 
magic connexion. A less doubtful case of intimate relation between cephalic and terrestrial phenomena occurs in the widely distributed belief, still common in European folklore, that fertility of crops and success in an enterprise depend on an 
action undertaken while under a waning moon. The Lithuanians weed boys on a waxing, and girls on a waning moon, believing that in the one case it provides strength, in the other, slenderness and grace.

An instance of a belief which most nearly approaches astrology is quoted by Tylor (Prim. Cult. 4: 192) from Shortland. The Maoris when besieging a 'pa' believed that the result could be foretold by the relative position of Venus and the moon; if the planet were above the moon, the foe would conquer; if below, the home force would be victorious.

LITERATURE.—No comprehensive study of primitive astronomy on the American continent is as yet available. The best general work is Dr. E. B. Tyler, Prim. Cult. 2 vols., 1904, and A. Lang, Myth. Rel. and Beliefs, 1907, which is supplemented by a number of minor works. For ceremonies connected with the Pleiades see R. Andrews in Globus, 1891, p. 395; a chart of the Pleiades, contributed chiefly by W. W. Skelat, Meanig Magic, 1900; Skelat-Blagden, Fagan Races of the Malay Peninsula, 1902; A. W. Howitt, Nat. Nat. Fr. and Aust., 1881; Spenst, Nat. Rest. Fr. Dent. Aust., 1888; A. C. Haddon, Head Hunters, 1901; A. C. Hollis, The Mazat, 1908; Sir G. Grey, The Last of the Chibcha, 1853.

E. N. FALLAIZE.

SUN, MOON, AND STARS (American).—
1. Sources.—A large part of our knowledge of the astronomy and astrology of the American Indians is derived from their traditions as reported by early European and American missionaries and travellers who had the advantage of contact with the various tribes before European influence had extensively modified their modes of thought, but they paid little attention to astro- nomicall details. The few communications mentioned by them are seldom identified, and the identifications are frequently indefinite or incorrect. A number of works by native authors give tribal tradition in authentic form, but little astronomy.

In Mexico and Yucatan a few codices, which escaped destruction at the hands of the Spanish priests, contain many complex astronomical symbols of which little is definitely known as yet, but from which, undoubtedly, much will eventually be learned. They are supplemented by hieroglyphics on structures and monuments. In Guatemala there is the Popol Vuh, or 'Book of the People' (ed. and tr. E. Sisson de Bourbourg, Paris, 1863), and in Peru Samaymacas's Spanish account of Aymara Quichua antiquities (tr. Markham, Haskiit Society, 1873). These manuscripts either are of pre-Columbian origin or present pre-Colonial material with slight European modifications. They include some myths and legends having an astronomical basis (cf. also Brinon, Anales de la Ciencias, Philadelphia, 1885; and Tres relaciones de antiguas personas, ed. Ximenes, Madrid, 1888). Although even scientific travellers have often shown indifference towards astronomical traditions, but ethnologists now recognize the importance of this subject and are collecting material which, in spite of the long contact between Indians and Europeans, affords some evidence of native origin.

In North America these traditions are supplemented by a few comparatively reliable written accounts collected amongst the Osages, Pawnees, and Huchens (Dorsey, in 9 REVIE, p. 93; Field Columbian Museum Report, xi pl. 2; Louis Agassiz, Collected Researches on American Natural History, iii. 57 ff.). The two first are intimately associated with the biennial Algonquian ceremony of the wigwam, which represents the Hyades, Pleiades, morning and evening stars, sun and moon, and probably the Milky Way and part of Scorpius. The last chart shows the Winter Solstice, Great and Little Bear, Northern Crown, Orion, Hyades, Pleiades, Milky Way, and probably Capella; that of the Huchens depicts as stars or constellation the Southern Cross (Sagittarius and Antares), the Deer (Taurus), which is pursued by the Dog, a Woman bearing a child (Hydra), and the Bear (Ursa Major and other signs. The winter counts of the Western tribes represented each year by some important event, which is pictured upon an alternate Loga-Natural Signs, or Mysterious Signs, are names denoting the signs, and other. The winter counts of the Western tribes represented each year by some important event, which is pictured upon a picture, being. Naturally the names are given to the astronomical figures. That of Lone Dog, for example, presents the plummet toward the horizon, which is the Pole Star, and the circle the sun. The Tripods of Pueblo secret societies furnish numerous stellar names, as is shown by W. G. Beede and W. F. Fossey in REVIE, JAP, and Amer. Anthropologist. Tablets inscribed with astronomical characters have been found at Rock- ford, Illinois. With the little that is known of North Carolina and South Carolina. Excepting the rayed solar face, crescent moon, and morning and evening stars, the characters upon these tablets have not been satisfactorily deciphered.

The Mexican calendar stones present another and an elaborate source of astronomical symbolism, to which considerable study has been directed (see Calendar [Mexican]). Inscribed stones of astronomical significance have also been found in the Chincha region of Colombia. The symbols seem to correspond with those inscribed to the Chibcha calendar and constellations by Duquesne (cf. Bollati, Antiquarian Researches, London, 1860; also Humboldt, Recherches, and Lembourg, in Century Mag., x91, p. 385). A circular gold 'codice' from Cuzco presents a solar rayed face surrounded by twelve unknown symbols (Bollett. op. cit. p. 146; Markham, Cuzco and Lima, London, 1856, pp. 107-128; Wissler, Peruvian Codices, Jap. 1900). The Sun, the Moon, and the Star, Kingsborough, Narratives of the Discoveries at Tiahuanaco (London, 1821, iv) present Peruvian symbols of the sun and moon, Osiris, the Pleiades, and other constellations, but they are as scarce and fragmentary as symbols of European origin. The most valuable source of astronomical knowledge is the Peruvian star charts, such as the map of the quinity, of the ruling class, who wrote during the first quarter of the 17th century. With the exception of a prudential reference to the symbol of bulls and lions, this chart presents only the native concepts. It gives symbols of the sun and moon, morning and evening stars, the Milky Way, and all the zodiacal asterisms (cf. Hagar, in Congres Rendu de Congres International des Americains, Paris, 1900, p. 271 ff.).

2. Scientific knowledge.—The use of gnomons, natural and artificial, was widespread in America. Amongst many other tribes, the Chippewa and Ojibeway have that they will deliberate in determining the seasons and the time of day by the position and direction of the solar shadows. The Pueblos have measured and named the sunrise points on a great scale and to divide the year into two periods of six months, and the time of the equinox is determined with great care. The Zuñis used as a gnomon an erect, sandstone slab adored with a solar motif (Dellenbaugh, The Americans of Yesterday, New York, 1901, pp. 305-306; Fowkes, Annual Cerem-
onies at Walpi, Leyden, 1895).

At Chapulleepo, in 1775, a stone was found under which the crossbow arrows crossed, presumably to the equinocial and solstitial sunrise points (Bollett., in Memoirs of the Anthropological Society of London, i. 210 ff.). The main doorways of the chief temple of Cuzco fronted the north-east, and a large stone platform at Tiahuanaco probably served as a solar dial. The
sidestones of the pyramids of Mexico and Central America are often aligned to the cardinal points. In Mexico, Noble describes a perpendicular shaft in the pyramid of Xochicalco which permitted the rays of sun to fall upon an altar in an interior chamber. The shadows cast by the steps of the pyramid of Papantla were observed for calendar purposes (Humboldt, Researches, ii. 87), and tradition indicates a similar use of the steps and columns at Cuzco known as the Monkeys' Dance.' Mrs. Zelia Nutall, moreover (Boas Anniversary Volume, New York, 1906, pp. 290-299), points out various photographs in the Mexican codices which represent priests observing the stars to determine the time. The different divisions of time were marked by the sounding of drums or trumpets in the temples. The priests used various methods to fix the position of the asterisms. They observed them through the doorway of the temple, which was elevated above the surrounding country, sometimes placing forked or bifurcated sticks within the doorway to define the position more exactly, and sometimes using a peculiar figure representing the drawn-up limbs of a seated man for the same purpose. A possible use of rows of upright stones is also indicated. The Indians are said to have noted the solutions and equinoxes by means of the shadows cast by certain columns. Those on the equator were held most sacred, because at the equinox they cast no shadow (Garcilasso de la Vega, Commentarios reales de los Incas, vi. 22). These columns have never been found, but circular stone sun-dials, called intihuatanas, 'the sun tied up,' exist on the Carhu hills at Cuzco, where the 'columns' are said to have stood, and elsewhere. A shadow is cast thereon by a small erect stone, which, Squier suggests, may rightly have been known as the inti rucana, or 'sun-finger.'

The most advanced American nations, such as the Maya and Aztecs of Mexico, and the Aymaras and Chibchas of Peru, seem to have attained a astronomical knowledge nearly, if not fully, equal to that of any people prior to the invention of telescopes; they had learnt all that could be learnt by the unaided eye. Their principal practical incentive to stellar observation was the accurate determination of seed-time and harvest, this being elaborated into a calendar. They do not seem to have attained to the heliocentric system, but they knew the cause of the lunar phases, and distinguished the five brighter planets. The Mexicans estimated their synodic periods accurately, as some of the Peruvians observed sun-spots (Humboldt, Vues des Cordillères, ii. 92), Researches, ii. 173; Salamanca, op. cit. p. 131; du Gourec, op. cit. p. 835), large spots being sometimes visible to the naked eye through the mist or light cloud (garwa) which is of common occurrence in Peru. In some myths the sun and other celestial bodies, and even the earth, are represented as balls or globes. This does not necessarily imply either European influence or ignorance. It may be an analogy derived from the supposed hollow ball of the sky.

3. Astrolab.—A system of astrology was undoubtedly in vogue in America. The Tonalamallti, or book of lucky and unlucky days, included in the Mexican codices, indicates the propitious and unpropitious times for performing certain actions. In the Codex Vaticanus a human figure appears surrounded by stars on a day of good fortune and a cometary or zodiacal association. The commentator says that the influence of moon signs upon the moment of birth was an established belief.

'... The Mexicans,' says Salasung (Historia general de las costumbres y Españoles, iv. Intro.) 'take much care to know the day and hour of birth of each person in order to conjecture his destiny, life, and death, but they do not base their prognostications upon the positions of the stars.' Nevertheless, the stars warn a god that he must go away in five years (H. Phillips, jun., in Proc. of American Philosophical Soc. xxi. 617f. (Philadelphia)). In Guatemala diviners were called upon to determine the propitious date for each monthly festival. As soon as a child was born, it was brought before the diviner, who, observing the day of birth, told what the child would be and what disposition it would show. He examined these things after consulting a book which contained the month and day signs (Ximenez, Las Historias del origen de los Indios de Guatemala, Vienna, 1837, pp. 158-160). In his divination he would consult the stars for divination by observation of the stars, and the chief priest dwelt away from the Inca capital that he might observe them and meditate more freely. He, at the solstice of the mountain deserts lived priests who contemplated and adored the stars 'almost without ceasing.' People visited them to learn about lost articles, absent friends, and future events. Even the wild tribes of Ecuador and Peru regard some of the constellations as propitious to man, others as hostile (Lorente, Hist. del Peru, Lima, 1860, p. 229; Markham, Cuzco and Lima; von Tschudi, Travels in Peru, New York, 1854, p. 288; Relation anómima, in Tres relaciones de antiquiedades peruanas, pp. 157, 164, 178).

It is said that the coming of the Spaniards had been predicted many times by these observations. Atahualpa's general is quoted as saying to his ruler just before the arrival of the Spaniards became known: 'My lord, I watched the stars last night, and saw in them the preague of a great calamity.' Later, Atahualpa himself declared that the appearance of a comet in the heavens was the sign of a high rank, and that a similar sign had been seen in the skies a short time before the death of his father, Huayna Capac. He was murdered after. A divine order has been published according to the appearance of the moon, is said to have foretold to Huayna Capac the death of his son and heir Atahualpa, and the order of the Inca rule. Comets and a thunderbolt which fell upon that Inca's Cuzco palace occasioned analogous predictions. Similar prophecies were recorded but not so clearly. The middle of the stars (Garcilasso, Commentarios reales, te. Markham, Babshyt Society, v. 29, i. 14; Humboldt, Views of Nature, London, 1856, p. 429; Prescott, Conquest of Peru, bk. ii. ch. 6).

4. Ritual.—The ceremonies of the various tribes also include astronomical features; in fact many of their elements seem to have originated in the wish to imitate on earth the aspects and movements of the celestial world. The initiations of animals in the dances of the primitive tribes arise among those more advanced to elaborate figures, dances, and processions reflecting the ordering of the sun and stars across the sky, and the progress of time and of the seasons. The American Indians as a whole are a thoughtful and religious race, much given to ceremonial. Even their games and sports, even their ordinary duties of domestic life, are made part of the religious ritual to be ceremonially performed, and from the grandest to the most insignificant details of their ritual much is based upon astronomical symbolism.

In the various ball games found from one end of the continent to the other, the movement of the ball originally represented that of the sun (Brinton,
SUN, MOON, AND STARS (American)

Among the Chibchas, prior to the contest, the opposing teams were carefully instructed in the use of magic, and the players were supposed to depend upon the amount of magic power thereby developed (Mooney, in RRBW, p. 301 ff.). In Yucatan and Central America the ball court itself represented the celestial sphere. The game was won by the player who drove the ball through a stone ring upon which two interlaced serpents, symbols of the eternal years, were sculptured. The Pueblo Indians, however, associated the result of which determined the control of Xibbalba, or Shadow Land; and Mrs. Nuttall asserts that the ball courts were also used as astronomical observatories. The Araucanians saw the divine will in the result of the game, and used it to decide the fate of those accused of crime.

It is probable that the annual ceremonial hunts, once common in the South-western United States, formed a terrestrial imitation of the celestial Hunter, as in Peru, and foot-races also symbolized the solar journey. In the Mexican game of ‘those who fly’ the celestial revolution was symbolized by four migrant snakes about a pole at the end of four cords wound round it (Clavigero, Historia, ed. Mora, Mexico, 1844; Nuttall, op. cit. p. 24 ff.). Dice games, common in North America, reflect the celestial imagery on their boards. The Mexican game of Patolli uses a cruciform board representing the four celestial regions, through the divisions of which a stone marker progresses like one of the celestial bodies (Schaghen, op. cit. vi. 8; Cullin, American Indian Games’ in RRBW; Nuttall, op. cit. pp. 82, 87). A serpent-dance in which the dancers imitated the motion of the serpent existed until recently among the Miemacs and other Northern tribes, and in Peru. In the North the dance symbolized the movement of the Pleiades across the sky (Hagar, in Congrés international des Américains, New York, 1902, and JAPL xii. 92 ff.). The famous serpent-dance of the Hopis, figured on Mexican and Central American monuments, was a rain-making ceremonial performed in August under the sign of the Tiger Sun (Leo). The well-known mural paintings on the wall of the Tigers at Chichen Itza represent a similar ceremony also dedicated to the Tiger Sun. In the Mandan buffalo-dance, twelve dancers divided into groups of four painted black, and doubtless the Diamond Serpent, enacting the yearly course of the sun within the building. The importance of the star cult in Peru is indicated by the fact that the Peruvians made images of all their constellations.

5. Mythology and star lore.—The arch of the sky was generally regarded as a kind of transparent roof, over which the heavenly bodies walk. The Chinooks on the north-west coast and the Peruvians represented it by two oblique lines meeting in an acute angle. Possibly the ‘Maya arch’ possessed a similar symbolism. The Peruvian box the sky is seen as a woman’s breast. The sun above the sky, a huge god, is personified and cohabited with female deities, progenitors of the stars and of mankind, but seldom or never as the supreme celestial powers. They

1 Collection of A. F. Chamberlain; Hagar, Peruvian Astronomy, Salamayrus Chur.
were the objects of a celestial cult existing practi-
cally everywhere in America, in which, at different
times and places, the sun, moon, and stars con-
trolled all life and death—were symbolized by
heroes or by natural objects. The Maya pyramids, for
example, were considered to be the sun ob-
turned into stone, and the pyramids of the
Maya kings were sacred places where the gods
were said to have dwelled. The Aztecs, on the
other hand, were more focused on the sun and
moon, and their calendars were based on the
solar and lunar cycles.

The sun and moon were also central themes in
many indigenous American myths and legends.
The sun, for instance, was often seen as a
powerful and dangerous entity, capable of
burning everything in its path. The moon, on
the other hand, was often associated with
wisdom and knowledge.

Among the Peruvians, the sun was symbolized
by the god Inti, who was considered the
creator of the world. The moon was symbolized
by the goddess Llullaillaco, who was often
represented as a beautiful woman with a
full moon on her forehead.

Eclipses were a particularly significant event
in many cultures, as they were seen as
opportunities to communicate with the
gods and to observe the movements of the
suns and moons. In some cultures, such as
the Maya, eclipses were considered to be
portents of change and were used to
predict the future.

In the Americas, the sun and moon were also
seen as symbols of the seasons and the
cycles of nature. The summer solstice,
for example, was celebrated by many
cultures as a time of renewal and
growth, while the winter solstice was
seen as a time of rest and
reflection.

In summary, the sun and moon were
central figures in many indigenous American
myths and legends, and their
movements were considered to
have significant implications
for the lives of the peoples who
worshiped them. Whether
symbolized by gods or natural
objects, the sun and moon
were seen as powerful and
mysterious entities, capable of
ingravidating the lives of all
deeply connected to the
natural cycles of the
world.

The Peruvians represented the sun as a
carried in the prime of life, who impressed his
footprint on a rock to mark the height of his power.
This affords an explanation of a world-wide type of
solar legends. Throughout America the solar rays
become the conventionalized face of a man upon
which appear marks called tears by some, but
perhaps having a pathological meaning. The
Mexican hero Cihli shoots three arrows at the sun
and succeeds in wounding him. The enraged sun
returns one arrow, which pierces Cihli's forehead
(Mendieta, op. cit. p. 77). The sun is the
Spider woman of some western tribes, the Ojibwa Wig-

tum of the Great Spirit, and the Kauk the field of
the solar tortures, while the Katenai Coyote manufactures the sun out of grease made
into a ball (Chamberlain, in AAOJ xvii. 69). In
Peru an oval plate, the symbol of the All-pervading
Spirit, ultimately manifested in fire, earth, air,
and water, was called the image of the true
sun, of which the solar orb was only the reflection.

The sun, says the Quichua, Bnas Valera, was the
caller of the earth, and the light was that part
of his divinity which the Creator had imparted to
him. It was considered sacrilegious to look at
his face; but early writers give several accounts of
Inca rulers (particularly Huayna Capac) who
did so, and who declared their scepticism of the
supremacy of an object which never rested, but
ternally moved upon its track like a driven
animal, whose face the clouds obscured. From
the nature of their light, gold was sacred to the
sun and silver to the moon.

Eclipses were regarded as attacks made by some
insect or animal upon the object enshrouded. In
accordance with this, the noise was made to frighten
away the attacking monster, although the Tascalan believed that the
sun and moon were fighting. To induce them
to cease, red-skinned people were sacrificed to the sun
and aylmhos to the moon. The Peruvians thought
the sun was angry when his face became obscured,
while under like conditions the moon was believed
to be ill. If her light disappeared altogether, she
was dead and would fall from the sky upon earth,
killing everyone upon it. Dogs were beaten, as
the moon was thought to be fond of them because
they had rendered her a certain service, and it was
hoped that their cries would induce her to uncover
her face. A similar custom existed in Mexico
(Ixtlilxochitl, Hist. des Chichimeques, Paris, 1840,
vol. 6; Oviedo, Hist. gen. y nat. de las Indias,
Madrid, 1848, 1. viii. 6; Garcilasso, op. cit. xi. 1).

The altruisitic spirit of the Pueblo community
may be seen in the legend that the moon was once
a serpent, and that it was transformed by the
sacred Father Sun, who gave it a new form that
people might sleep at night. According to the
Sux, the diminishing of the moon is caused by
the nibbling of field mice, which thus prevent it
to allow the Indians to get sufficient sleep.

The profile face of the woman in the moon is figured on the Salamaclaua

— continued —
chart. The Osages and the Mexicans seem also to have observed her. As the sun, being a male, watches over the fortunes of men, so the female moon is the guardian of women, to whom appeals for protection and aid are made.

According to the Micmacs and Ojibwaw, the stars are the lights of camp-fires before the wigwams of the dwellers in the land of the sky. Here and there one sees the trees and huts, and the brightest represent the largest fires before the dwellings of the chiefs. By other North American tribes they are described as birds that fly to the sky at night, and are the sun and moon. Some Brazilian tribes regard them as rifts in the canopy of the eternally glowing sky-land (Seler, Codex Vaticanus, London, 1902, p. 44; Hagar, Micmac Star Lore, MSS; Nery, Land of the Amazons, London and N.Y., 1901, p. 47). These simple and primitive notions existed coincidently with the division of the sky into constellations bearing the names of animals, plants, and frequently of inanimate objects.

Among the American tribes we find single stars named after individual objects, and groups forming true constellations; but probably nowhere in America is this more clearly demonstrated than in the Aztec form, which has become conventionalized like our own to such a degree that the derivation of the name is not really apparent from the alignment or other features. The morning and evening stars were naturally the most important of the stellar host. In the legends of the Cherokees, Peruvians, and others, the morning star appears before the first rising of the sun. It is the great star, the warrior, or messenger who goes in advance to announce the coming of his solar master. Its advent was hailed with incense and dances. It was widely symbolized by an equal-armed red cross. An Ojibwa legend makes it an older sister, who at her own desire was borne by the winds into the eastern sky, whilst her brother ran up a high mountain to hunt. So, according to Diodorus Siculus, the divine youth Hesperus went to the summit of a mountain at night to study the stars and a great wind carried him into the sky, where he became the evening star (Schoolcraft, Hiawatha Legends, Philadelphia and London, 1836, p. 90 ff.).

Among the Chodos the morning star was the errant man selected by the moon to be his assistant chief and to call the people together. He used to get up early during war expeditions, long before dawn, in order that the people might see him so that the enemy would not find them. That is the reason why he gets up so early now. Morning Star has three brothers, Evening Star, North (Pole) Star, and South Star. Their father's name was Great Star, and he was the chief of the people (Dorsey, Traditions of the Caddo, pp. 7-8, 15).

In America the evening star was usually regarded as a woman, because it governed the time of family reunion at home, though among the Zunis it is the twin brother of the morning star. In Mexico it is the Lord who comes with his torch to light the dwellings on high, in Peru the female maize-grinder, the truth in the west, while among the Micmacs it is leader of the stellar tribe. Its symbol is frequently a white cross. It is the mother of all things to the Skidi Pawnee, who keeps a garden in the west in which the sun rests at night, where the corn is always ripening and much buffalo meat is stored (Schoolcraft, op. cit. p. 90 ff.; Cushing, Zuni Folk Tales, New York, 1901, p. 378; Dorsey, Traditions of the Skidi Pawnee, 354; Hagar, Peruvian Astron., ch. on 'Cult and Symbol,' pp. xv, 3). As the converse of the morning star, the Cadasso believe that the evening star would go back a long distance upon the trail and warn his people if the enemy approached (Dorsey, Traditions of the Cadasso, p. 15).

The identity of the planets, whether the morning or the evening star, was recognized in Peru, Mexico, California, and parts of South America. The Peruvians made Mercury the ruler of merchants, travellers, and messengers. The Amazon tribes call it 'Deprieved of Fish,' since it is believed by them to cause a scarcity of food. The Cherokees believed Venus in Peru governed the daughters of the rulers, and women generally, dawn, rains, and flowers; Mars, war and soldiers; Jupiter, public matters and food supplies, and the wind; Saturn, father of the Peruvians placed Venus alone of all the stars in the dominion of the sun, evidently because it alone is sometimes visible in the full solar light. Because of its brilliant rays they called it Chasca, 'Curling Hair.' Because of its beauty they said that the sun never permitted it to wander far from its presence—a poetical interpretation of the fact that Venus never departs as far from the sun as the major planets. They also called this planet Chasquei, 'the Messenger,' because its swift passage from star to star suggested the swift running messenger upon the highways (Hagar, Peruvian Astrons., ch. on 'Cult and Symbol'). In the codices it is represented by numerous symbols, in the temple of Mexico by a high column, and in the myths it is identified with Quetzacoatl. The Californian Indians say that the daughters, Mercury and Venus. Twenty men kill them, and after fifty days they return to life (Mendieta, op. cit. pp. 89, 83; Nuttall, op. cit. p. 53; Emerson, Indian Mythes, Legends, and Traditions, Boston, 1885, p. 481; Nery, op. cit. p. 251; Explication Codex Telleriano-Remensis in Kingsborough, Mexican Antiquities, 101).

The Milky Way in North America generally, and among the Guarani of Paraguay, was the path of spirits, over which the souls of the dead pass between this world and the sky-land of the hereafter. Those of the good follow the broader and easier path, those of the evil the narrow and difficult path. It is the Cherokee and Pueblo 'Way of Meal,' the Micmac 'Ancient Trail' and 'Way of Reeds,' the Californian 'Backbone of the Sky,' the Pawnee 'Dust raised by Buffalo Racing.' A Manx legend calls it the 'Great Song Drift of the Skies' (Stevenson, op. cit. p. 25; Cushing, op. cit. p. 581; Dorsey, Traditions of the Skidi Pawnee, p. 57; Hagar, Cherokee Star Lore [in Rosa Anna, op. cit.]). The Milky Way is a path for the gods, and at Zuñi, as among the ancient Sumerians, it is associated with a gigantic celestial serpent. On the Osage star chart it is figured as a river, and it appears as a celestial stream in the mythology of the Peruvian and Amazon Indians. In Peru, as in the legends of the Ojibwas and Cherokees, and as in the Euphrates region, China, and Japan, this river is associated with the passage of souls. The Cherokees and the Kutenai also call the Galaxy 'the Way of the Dog,' the tribes of Guiana 'the Way of the Tapir' and the 'Path of the Bearers of Whitish Clay' (Brett, Indian Tribes of British Guiana, New York, 1832, p. 107; Chamberlain, in AAQJ xvi. 69).

In the sand paintings of the Mission Indians of California the outer circle is called 'Our Spirit,' a name of the Milky Way. The whole represents the world resting on the Milky Way. A gate or door to the north permits the escape of the soul at death.

The Cherokees recognize two dog stars, Sirius and Antares. In spite of the identical name of the former in our tradition, this is probably a native name, for it is explained by a Cherokee legend which bears no resemblance to its Oriental analogue. In it the two dogs act as guardians of
SUN, MOON, AND STARS (American)

‘The Way of Souls,’ at the extremities of which they are stationed, as ‘the Double Sun’ or ‘the Corral,’ with food before they will permit the souls to pass.

The Winnebagoes, Ojibwas, and Huichols also recognize a dog star, and the Hindus and Zoroastrians likewise place two dogs upon the way of souls. The Chippewa say that a dog gifted with prophetic powers talked with its master, the pair becoming two bright stars in the south (Dorsey, Traditions of the Caddo, p. 25).

The ancient Mexicans recognized a conspicuous constellation in the star-jore and ritual of the American Indians, though in North America they share the leadership with Ursa Major. Throughout America they are known as the stars of harvest and of the propitious rains. Their Pervuan name ‘Granary’ is echoed by the Eskimo ‘Sharing-out of Food.’ In allusion to their alignment they were generally known as a group of various objects: in Peru ‘the Dogos,’ in Guatemala ‘the 400 Young Men,’ and in Mexico ‘the 400 Rabbits,’ patrons of feasting and of intoxication. They are also the Algonquian ‘Sweating-Stones,’ referring to the seven stones with which the sacred last of the medicine-man was heated. Their Maya name and Miamc symbol, the rattle of the rattle-snake, suggest an association with the group of stars. ‘The Way to the Dead’ and Teothuacan, for these mounds are traditionally dedicated to the stars, and from some of them have been exhumed large and erect rattle figures, which were evidently used as altars.

Another important aspect of the group is that of ‘the Dancers,’ suggested by the twinkling of the closely grouped stars. The whole stellar world follows the group, as they perform their cosmic dance across the sky; and while on earth, their rising was hailed by Brazilians, Cherokee, Micmacs, and probably many other tribes, with an initiatory song and dancing referring more or less directly to the eternal procession of the heavens. The Iroquois, Housatunnucks, and Cherokee have, or had, an explanatory legend which describes how a group of boys, while dancing, ascended to the sky and became the Pleiades. Among the Caddos there are seven brothers who played all day long. Being soled by their mother and refused food, they danced round the house, gradually rising from the ground until they reached the sky; they disappeared in spring, when work time begins (Dorsey, Traditions of the Cadde, p. 64). The Blackfeet believe that they ascended because their fathers gave to their sisters, instead of to them, the yellow skins of the buffalo calves they had slain. In revenge they determined to go away each year when the buffalo calf skins became yellow. This occurs in May, when the Pleiades are hidden in the sunlit. The Kiowas call the Pleiades ‘the Star Girls,’ and they are probably represented by the dancing stellar maidens who descend to earth in the poetic legend of Algon. The seventh Pleiad appears in the Cherokee and Iroquois legends, in the former as a boy who is knocked down with a pole before reaching the sky, in the latter as a star whose light is dimmed because of his desire to return to earth (James Mooney, letter to author; R. W. Wilson, AAOJ xv. 149; Emerson, op. cit. p. 72; Sergeant, Housa- tunnuck Indians, Boston, 1753; Domenech, Deserts of the North American Hemisphere, 1853; Heswather Legenda, p. 116 ff.; Mrs. Erminnie Smith, in 2 REEW, p. 80).

Almost invariably seven stars are attributed to the Pleiades, though in some, notably those of the sixth magnitude while their companions are of the third and fourth, may be seen by one with strong sight or in a clear atmosphere. The Cherokees also relate that the seventh Pleiad fell to earth at the time of an annual festival, the bearded man, who warned them of the coming flood. So in Peru the approach of the Pleiades to the meridian enabled the llamas of Ancamarca to warn their shepherd of the coming of the annual deluge or rainy season. The Mexicans have six ‘tonontemocue,’ or stars which fall at the deluge, seem to have been Taurid meteors (Mooney, in 7 REEW, p. 621; Explication Codex Telleriano Remensis, p. 1). In this connection look at these stars (the Pleiades), runs the Pawnee song, ‘they will be guided aright.’ Many tribes actually did use them as a guide by night (Morgan, League of the Iroquos, Rochester, N.Y., 1857, ii. 106). Everywhere the Pleiades are a peaceful, beneficent, and friendly constellation; and there are some indications in Peru and elsewhere that they were once regarded as being (or having special influence over) the home of souls.

The pole star of the Northern hemisphere seems to have been observed by all, or nearly all, the northern tribes. It is the Ojibwa ‘Man who walks behind the Leon,’ or homeward, who, metamorphosed into a firefly, flew to the sky; in another version a hunter of bears. The Kutenai call it a female grimly bear; and this small constellation is a part of what seems to have been a Pleiad that includes Ursa Minor and Ursa Major. The Sioux declare that ‘all stars walk around the pole star, which is the star that does not walk.’ The Michmaks describe it as a bear hidden in a den, about which a group of hunters (Ursa Minor) eternally circle in a vain attempt to discover it. The Pawnees call it ‘the star that does not move,’ and regard it as the chief of the stars. In the Southern hemisphere the pole is indicated on the Salcamaychans chart as the apex of two slanting lines, which form the sky roof of the world. To it point three stars of the Southern Cross, called the male group, and having pliable attributes. The Maya name of Vega is ‘Scrotum Star,’ but this star ceased to mark the north pole several thousand years ago. The Peruvians used the Southern Cross to indicate the divisions of the night, the Mayas to indicate the seasons (Emer- son, op. cit. p. 58; Le Fèbvre in AAOJ vii. 106; Chamberlain, ib. 1770; Copway, Traditional His- tory of the Iroquois Nation, London, 1850, p. 113 ff.; Dorsey, Traditions of the Cadde, p. 80).

The stars of Ursa Major seem to have been called ‘the Bear’ by the Indians of practically the whole of British America and the United States. An accompanying legend is found in almost identical form among the various Algonquian tribes, the Housatunnucks, Iroquois, and the Cherokee, but is given most fully by the Miemaks. The four stars of the body of Charles’s Wain, or the Dipper, as Americans call it, form the body of the bear. The three following stars, δ, ζ, η, with four trailing behind them in the form of a bow (γ, ε, η Bootis, and Arcturus), are seven hunters, who are put out all at once. The little star, Alcor, close to the second hunter, is the pot in which they intend to cook their meat. Corona Borealis and α, δ Bootis form the den from which she climbs down in the spring. In the summer she runs across the sky with the hunters in full pursuit; in the full she is overtaken and shot, and begins to fall over on her back. The blood from her wound overflows the northern horizon, the blood of the foremost hunter, the robin, and, dripping upon the trees of earth, it gives to the foliage its blood-red autumn hue. But the bear eternally returns to the spring, and, climbing down, though her den invisible (below the horizon), to issue forth again in spring, and thus eternally to renew the celestial drama. The seasonal features of the
legend correspond accurately with the actual positions of the stars in the early evening. There is good reason to believe that this is a native legend, or at least one of pre-Columbian origin, though the evidence is not conclusive. As far as the American Indian system — the Huron, the Micmac, the Iroquois, etc. — is concerned, there is no native Indian system of which the date is known.

In connection with the hunting concept, it is noteworthy that the Wichitas regard the Great Bear as the patron of all hunters. The Pimmans, known, as the French, as "the Fishers," and the Zuñis represented them by seven white pebbles in the rites of the "Priesthood of the Bow." The Pawnees described Corona Borealis as a circle of chiefs, in whose honour was founded the society of "Chief Dancers."

The Belt of Orion among the Point Barrow Eskimos becomes three men who were buried in the earth by the Miamis for their own amusement," the Zuñi "Hanging Lines," and the Patagonian "Tree Bolas," or round stones with which animals are slain by hunters. The Peruvians, like the Basques and the people of Deccan, call it "the Siexa." The whole constellation is the Zuñi "Celestial Hunter" pertaining to the sun. In Peru it is symbolized by crossed arrows, and relates to hunters and hunting. A myth makes it the Promethean figure of a criminal raised aloft for punishment by two condors. It may be connected with the Mexican Citi, "the Bowman." The names of a few other constellations and single stars have reached us, but present no features of special interest.

In view of the similar and wide-spread symbolism associated with some constellations in America, a more or less uniform system of celestial symbolism may have existed through a large part of the continent, similar to the primitive symbolism of the eastern continent in some elements, yet unique in others.

Unquestionably many of the symbolical concepts have been transmitted from tribe to tribe for long distances. Many of them are of pre-European, or at least of pre-Columbian, origin, and the analogies which they present with Oriental ideas are striking. These concepts have not a like effect of independent causes or by pre-Columbian intercommunication between the continents. The weakness of the former explanation lies in the complexity and conventionality of the concepts, and in the difficulty of tracing the symbolism to any natural basis. The American zodiacs, for example, reveal analogies with the ancient Oriental zodiacs in every sign, yet in few if any instances, either in the Orient or in the Occident, are we able to explain why these signs were so named or why their symbolical attributes are what they are. The zodiac is older than its seasonal associations; its origin remains unknown, yet we find it in similar form in America and in the Orient. The same argument applies, although perhaps less forcibly, to a large part of the astronomical symbolism of America.

LITERATURE.—The literature has been given throughout the article.

SUN, MOON, AND STARS (Buddhist).—The astronomical ideas found in Buddhism do not form an independent system, but have developed in close relation with Hindu theories. The problem is rather to determine what stages of development are to be found in the canonical and later books. Thibaut 1 divides Indian astronomy into three periods: (1) that of the Vedas and Brahmanas, (2) the middle period with a fully developed native Indian system, and (3) the later, or Buddhist influence. The Buddhist scriptures cover a long time, some of the later containing references to the Greeks, but it is to the middle period, and rather to the early stages of this astro-nomical notions of these works belong. They are in the main the same as those that we find in the Purânas. The Hindus had two important uses for astrology: the sacrifices and astrology, neither of which was countenanced by the Buddhists. The latter had no special motive for paying close attention to astronomical theory beyond that required for determining the periods of the lunar month with its fast-days, the period of Retreat in the rainy season, and the divisions of the day.

1. Position of sun and moon.—The heavenly bodies that we see are the vehicles of gods, who have been thus reborn through their merits, and who are associated with the thirty-three gods, but below them in rank. The moon, the sun, and the constellations come as gods in the retinue of Sakka and in that of the Buddha. The sun, moon, earth, and the asura Râhu occur along with the guardians of the ten quarters as world-protectors. When sun and moon occur together, the moon is always mentioned first.

In the scriptures there is no systematic description of the heavenly bodies, but the account given in the Sârasvatâyoga 2 corresponds to scattered notices in earlier works and probably underlies them. The earth, a flat disk, is 1,203,450 leagues (yojanas) in diameter and 3,610,350 in circumference. In the centre is Mt. Meru, rising 84,000 leagues above the surface of the earth, and round it the moon and stars, shining in the sky, range on the four continents round Mt. Meru. Night is caused by the sun passing to the other side of Mt. Meru. The diameter of the moon is 49 leagues and the circumference 147 of the sun 30 at 150 leagues. The moon shows us the visible part (vimñana) of the god is one league higher in position than the moon. It is of crystal outside, gold within, 3 and hot within and without. The moon is of silver outside, of jewel within, and cool within and without. The sun has three paths—gvoice, navavoice, and govithi—according to its apparent course in the ecliptic during the seasons along the equator, and above or below. 4 This fact appears to be referred to in the Sûliû, 5 where the sun and moon are spoken of as going along their paths or out of their paths. Whether there was any early theory

10 The ratio of the diameter and circumference of a circle is thus 1 : 3, Sûrya, v. 271. This is the domi-
11 so, but more correctly, in the Vîra Purûsa, Skt. I., ch. 8.
12 Sûra Purûsa, Skt. I., ch. 8.
of the cause of revolution, apart from the choice of the god of the luminary, is not clear. The Chinese sources of A. Rémusat state that five vortices of wind support and move the vehicle of the sun in the required directions, and five other vortices similarly do for the moon.

2. Eclipses. — Eclipses are due to the asura Rahu, who is stationed at the moon's nodes, and periodically swallows the sun and the moon. The length of time that the moon stays in the crippled or sickly Rahu when he was drinking the ambrosia produced at the churning of the ocean, appears not to be early Buddhist, nor even ancient Hindu. It is absent from the account of the churning in the Vyuha Purâna.2 Buddhistha describes Rahu not as a head, but as having a complete body, of which he gives the dimensions.3 The Puranic notion of Ketu as the slowed body of Rahu at the descending node, although mentioned in Mahâyânaputtâ, 164, and implied in Abhidhânapadipika,4 61, among the "nine planets," is a late borrowing from Hinduism. Two ancient sutras describe the moon and sun as being afflicted by Rahu and appeasing to Buddha, who commands Rahu to let them go.6

3. Planets. — The stars also are said to move along and out of their paths.4 The term here used for star in Sanskrit is rÂjÂyâ, and probably refers to the planets, as Buddhaghosa understands it in this context.

The only planet distinctly mentioned in the Sutta is Osadhi-busk. This is what Venus may be inferred from its being described as the brightest of the luminaries next to the moon and as possessing the meaning of "sun." The Sanskrit recension of the Dipha passage in Mahâyânaputtâ, 71, definitely identifies it with Venus by substituting Uana, one of the Sanskrit names of this planet, for Osadhi. The name Osadhi-busk is unexplained. The phrase Osadhi-busk târâ, "like the star Osadhi," is clear as "it does not mean 'planets' (sain osadhi-patak),' lord of plants (or of the sun-plant), a title of the moon. The possibility that osadhi is a corruption of asvastä,7 although it is not certain, is supported in texts or commentaries to support it. The same is the case with the view of Kern that it is a corruption of asvastä Sakkavu, a derivative of usanà.8

4. The lunar zodiac. — The term naksâtrat is taken from late Vedic times applied especially to 27 or 28 constellations lying roughly along the ecliptic and forming a lunar zodiac; and from the Buddhist use of many of them as proper names it may be inferred that they were known to the early Buddhists. They are as follows:

 1. (Aṣaṣata, Arâla), (2) Bhargava (Arâla), (3) Katibha (Pleides), (4) Rohini (Hyades), (5) Magaśrâ (f, d, e, Orions), (6) Pusuta (Gemini), (7) Phasusa (Taurus), (8) Phusa or Tasia (f, y, Cancer), (9) Aśimëla (f, g, Hydra), (10) Magha (Regulus), (11) and (12) Pushta- and U tras-phagwâni (f, g, Regulus).7 (13) and (14) Sasta (Betel), (15) Sâi (Auriga), (16) Visakhâ (Libra), (17) Anuradha (f, x, 4th quadrant), (18) Jetthâ (Antares), (19) Rakshadala (f, Scorpii), (20) and (21) Naha- and U tras-assâli (f, e, 4, 5, Saggittarii), (22) Abhijâ (Vega), (23) Savâpa (Aquila), (24) Dhaniji or Savîjha (Orion), (25) Sasa-bhada and Pushta-phagwâni (the square of Dacus), (26) Revi (Pisces, etc.) 9

No. 22 in this list is not in the Abhidhânapadipika. It was omitted in Hindu astronomy, but the existence of Abhijjha (Skr. Abhijjha) in the Buddhist system may be inferred from the statement that the number of nakṣatra is 211 and from the existence of Abhijjha as a proper name.10 It also occurs in Mahâyânaputtâ, 165, and in the list of Rémusat.11

References to other fixed stars than nakṣatras are rare in all Indian literature. The descent of the Heavenly Ganges, a myth relating to the Milky Way, occurs only in the canon, but never in any astronomical connexion. In Jâtaka, vi. 97, seven sages are mentioned, but their names are not those which Hindu mythology gives to the seven rîṣis, but those of the stars of the constellation of Major. The name Sakata, 'the cart,' in Digha, ii. 234, is probably a name of Rohini, as suggested by S. Kono.12 It is so named by several Hindu astronomers.4

5. Months. — The moon in the course of a year may be full in any of the nakṣatras, and we find such expressions as Visakhapûramasam, full-moon when the moon is in Visakhâ;13 but there has been established earlier than Buddhism a system of twelve lunar months, with names derived from certain of the nakṣatras. These are:

 1. (Chitta (Mar.—Apr.), (2) Visakhâ (Apr.—May), (3) Jeththa (May—June), (4) Asvastä (June—July), (5) Pha.$ (July—Aug.), (6) Pushta-phagwâni (Aug.—Sept.), (7) Assaya (Sept.—Oct.), (8) Magaśrâ (Oct.—Nov.), (9) Suta- or Kaurava (Nov.—Dec.), (10) Pushta-phagwâni (Dec.—Jan.), (11) Macla (Jan.—Feb.), (12) Pusa (Feb.—Mar.).

These names were later applied in Hindu systems also to the twelve solar months, and the number of sun appears to be always lunar, as well as in the Ocenean chronicles.

The month is divided into two parts (pa$kha), the dark (kâla) from full to new moon, and the light (pa$kha, pujas) from new moon to full. Whether the month ended with full or new moon is not clear, but the fact that the dark half is mentioned first and that the months of Retreat began the day after a full-moon day and ended on a full-moon day, suggests that the full-moon day was the end. Both methods were in use by the Hindus in Vedic times, as they are at the present day.

6. The week. — The division of the half month at the eighth and fourteenth or fifteenth day easily led to the reckoning of seven days as a usual period (aottâha), but there is no trace in the Vedic writings of the system (no doubt non-Indian in origin) of naming the week-days from the names of the sun, moon, and planets. These names occur in the order of the days of the week as the first seven of the seven planets in Mahâyânaputtâ, 22 and 23.

7. The year. — In Aûgâstaca, i. 213, where the length of a year of the gods is given, it is said to be a year of twelve months, the month being made up of 30 days (and nights). This gives a year of 360 days, and is in use in India and China. The number 30 is probably 23 and sometimes 20, and sometimes 25 days, after the number of days of the year. The months may be named by adding together the 15 days of each half of the lunar month. In practice the number would sometimes be 29 and sometimes 30, as the number of days of the year. The months may be named by adding together the 20 days of each half of the lunar month. In practice the number would sometimes be 29 and sometimes 30, as the number of days of the year. The months may be named by adding together the 20 days of each half of the lunar month. In practice the number would sometimes be 29 and sometimes 30, as the number of days of the year.
the year: (1) with the full moon of Kattika, (2) with the month Chitta. 1 The former is implied in the usual Buddhist reckoning of the three seasons, in which the cold season is always mentioned first. This period was the end of the Retreat, in which the annual redistribution of robes took place. The second mode of beginning the year is implied in the *Dipavamsa* and in the list of vies months in the *Abhidhammapaddhati*, which begins with Chitta. 2

8. Seasons.—The ancient Hindu seasons are three: *hemanta*, the cold season from Magasira to Phagguna; *gimika*, the hot season from Chitta to Assaha; and *ocean*, the rainy season from Sava to Kattika. These dates, however, would vary from year to year through the irregularity caused by the lunar months and occasional intercalation. 3

*Dipavamsa* (Cey., xii. 44, calls Jetha the last of the hot months. *Vasa* in the sense of Retreat does not correspond with the eclipse of the moon and of the sun of that period. The Hindu subdivisions of the seasons into five or six 4 are not found in Pali works, but there are occasional references to autumn (varhati) as the early part of *hemanta* and to spring (casrata) as the early part of the hot season. 5 M. J. Thibaut, p. 308, states, given the list of six, and *taiti* 6 also describes other systems of division used in various localities. 7

9. Astrology.—Indian astrology, as the science of omens drawn from celestial phenomena, is known to have been developed in ancient India. It is still practiced in *Dipa* (Sansk.), i. 10, as a base science and false means of livelihood. In the *Sutta Nipata*, 927, the monk is forbidden to devote himself to magic (*slabha-bhuma*) to the interpretation of the dream, the sign, and the *nakata*.

That such a science is possible is generally taken for granted, but in the Jataka there is a tendency to ridicule the belief in lucky name, sign, andomen. 8 There is no reason to think that this sceptical attitude is primitive; it is rather the rationalizing of a single individual or of a school. The survival of the belief within orthodox Buddhism is shown in the collection of *suttas* drawn from the canonical books called the *Paritta*, which, among other formulas intended to ward off hostile powers or to win their favour, contains the two *suttas* on the eclipse of the moon and of the sun. 9

A fragment of a MS of an astrological work in corrupt Sanskrit has recently been discovered in East Turkestan at Khotan. It is called *Budhavatara-nasakalakramasastra* and appears to be a handbook on astrology, as well as by the reference to the *ra* *karaha*, who makes known to the congregation the known and unknown days, nights, months, years, 10 and the phases of the moon. 11 The latter is similar to that in Hindu astrological works, such as: the new moon, the full moon and the eclipses of the moon are causative of the gods, the planets, the signs, the houses, the evils of the time, and the day of the month. 12

There can be little doubt that it is borrowed from some Hindu work and, like later works of this kind, it shows the influence of Greek astronomy in the use of such terms as horos, and the names of the 12 signs of the zodiac (Pisces, Scorpio, etc.) along with those of the *nakatas*. 13

LITERATURE.—The sources and authorities are given throughout the article. 14

SUN, MOON, AND STARS (Celtic).—1. Very little is known about the astrology and astronomy of the Celts during the Druids, as we learn from Cesar (de Bell. Gall. vi. 14), discussed and transmitted to their disciples many questions regarding the stars and their motion. They had observed the passage of the moon by it if they regulated their calendar. Their months and years began with the sixth day of the moon (Pliny, xvi. 66, 250); they counted by nights (Cesar, vi. 18. 2), and their cycle was one of thirty years (Pliny, xvi. 95, 250).

The discovery of the calendar of Coligny has made it possible to determine these general ideas for the Gallo-Roman period. This calendar gives a year of 354 days, divided into twelve months of twenty-nine and thirty days alternately. To establish agreement between the lunar and the solar year a month of thirty days was intercalated every two or three years. At the beginning of every fifth year there was complete agreement between the two methods of calculation; and probably this was the occasion, as Julian remarks, on which were held the quinquennial sacrifices of which Didoros speaks (v. 32. 6).

Astrology, properly so called, does not seem to have been practised by the pagan Irish. But in the ‘Lives of Saints’ there are to be found some superstitions which are derived from popular interpretation of the stars. The foster-father of Columcille goes to ask a prophet when he should begin to teach the child to read. The prophet after having examined the heavens replies that he must begin immediately (Lives of Saints from the Book of Lismore, i. 812). Manannan mac Lir used to know by studying the sky when there would be fine weather and when bad (Conowm’s Glossary, P. 114).

The scientific observation of stars was also in use among the ancient Irish. Loeg observes the stars to ascertain when midnight comes (Meos Uladh, 13). Irish astronomy dating from the early Middle Ages have been preserved. They are founded on the system of Ptolemy, and seem to be translations of foreign works. The Irish word ‘day’ is borrowed from the Latin. Yet the Irish were particularly clever at calculating dates, and in the *Saithar na Rann* it is told that every intelligent person should know the day of the solar month, the age of the moon, the flow of the tide, the day of the week, and the chief saint’s festival days. Perhaps in the ancient Irish and Welsh texts there are traces of the name of the primitive Celtic calendar. The year was divided into two halves or into four periods of three months, the month being divided into two parts. The periods of time most in use were those of three nights and three days, or nine nights and nine days, while the most common cycles were those of three years and of seven years. In Armoricain Brittany and in Wales the names of the complementary days which served to convert the lunar year into a solar year (Brit. *gourdecs*, Welsh *dyddion dyddon*) have been preserved. Several popular superstitions are attached to them. Thus a medical manuscript from the Peninsula of *Cultry* contains a list of unlucky days, and in Irish literature there are numerous examples of births delayed in order that they may take place on a lucky day, and of disasters which might have been prevented if an undertaking had not been engaged in on an unlucky day.

1 Whitney, p. 270. 2 Vinaya, i. 137. 3 There is no reason to think that the year ever began with Sava. The recurring phrase *Kontha chakramata* does not mean the full moon of Kattika ‘in the fourth month,’ but ‘at the Chakrimaya festival.’ See T. W. Rhys Davids and H. Oldenberg, in *Buddh. Stud. xiii. (1888)* p. 354, n. 2; *Jataka* vi. 221; *Dipavamsa*, xv. 1. On the Chakrimaya, or ‘Four month’ celebration, see art. FESTIVALS AND FASTS (Hindu).

The Gallic god Belenos had been assimilated to Apollo as a healer rather than as a sun-god. We have no evidence of worship of the stars among the Gauls except a few dedications to the sun and the moon in Gallo-Roman inscriptions (A. Holker, "Altkeltische Spruchschatze," 3 vols., Leipzig, 1896-1913), and the mention of the worship of an image of the sun (AS, 4 Sept. ii. 197 C). No conclusion can be drawn from the representation of stars on the shields of the Orsos-arch, found at Matenagus, near Toulouse (Orsos), and a sword from the wheel that is an attribute of a Gallo-Roman god assimilated to Jupiter; for the stars may be ornaments or armorial bearings, and the wheel may be a divination-wheel or a symbol of the thunder as well as a symbol of the sun. Some customs of the ancients may be connected with the beliefs relating to the stars—e.g. the gathering of the mistletoe and the beginning of the years and months on the sixth day of the moon (Pliny, xvi. 230), the dread of the Asiatic Galatians during an eclipse of the moon (Polyb. v. 78).

The evidences of the worship of the sun and the moon in ancient Ireland are not numerous. The most explicit text is in the Confessio (§ 60) of St. Patrick, in which he alludes to worshipers of the sun. G. Keating (History of Ireland, ed. D. Connolly, 2 vols., Dublin, 1853-1856, i. § 133) says that one of the Danann was named Mac Gréine, 'Son of the Sun,' because his god was the sun. A passage of Cormac's Glossary (p. 54) tells us that two methods were used to save some pictures—e.g. that of the sun—on the altars of their idols, and Keating (ii. 11) relates that in Colmcille's time a priest of Tirconnell who had set up images of the sun and the moon in the church was carried off by a devil. The king of Ulster, Loegaire, swore by the name of the elements—the earth, the sun, and the wind (W. St. Boroma, RCæl xii. [1892] 221 f.).

SUN, MOON, AND STARS (Chinese).—I. INTRODUCTION.—The Chinese view of the sun, moon, and stars taken as a whole may be likened to a well-developed system of three different sciences:—the thread of astrology, the thread of religion, and the thread of astronomy. Astronomy means here the observation of the heavenly bodies and the truths deduced therefrom, chiefly for the use of the people. It may therefore be called 'observational' astronomy, as distinguished from what is called 'physical' or 'descriptive' astronomy, founded by Galileo after his invention of the telescope, and it may also be called 'practical' astronomy, as distinguished from what is called 'theoretical' astronomy, founded by Newton on the hypothesis of the law of gravitation. The religious view of the Chinese concerning the heavenly bodies may be called astrological, and their astrological view may be called religious in the comprehensive sense of the term. But a clear line of distinction can be drawn between them. The idea of deity or God is always present and predominant in the religious view, whereas it may be vague and even absent in the astrological view. The latter is concerned chiefly with the influences of the heavenly body upon men, while the former is concerned chiefly with the relation of God to men as revealed in the heavenly bodies—i.e. God's messages and warnings derived by means of the observation of the heavenly body.

The Chinese term for the study of the heavens is tien shen, literally 'the system (or order) of heaven.' The term is not limited to purely astro-

nomical knowledge, but has been applied equally to astrological and religious beliefs or views concerning the heavens.

Chinese astronomy has been of much interest to many European scholars, its great antiquity being widely admired.

'The progress of Astronomy among the Chinese,' says John Williams, 'is a subject of highest interest whether it be considered as recording observations of the heavenly bodies made by one of the most ancient and primitive races of mankind, which appears in extremely remote time to have advanced to a high degree of perfection; or as peculiar, beautiful, and important which has preserved the manners and customs established by its early rulers more than two thousand years before the Christian era, in a great measure unaltered to the present day, or whether the fact that at a period long anterior to the commencement of civilisation among the Western nations, and when almost universal barbarism prevailed among them, astronomy had been carried to a great degree of perfection by the Chinese, as manifested by their still existing records, whose authenticity is not only strongly asserted by that people, but is acknowledged by some of the most eminent European scholars of the present day.'

It has been said by some of the authorities of our own century that the antiquity of Chinese astronomy is 'greater even than that of almost any other nation.' But the study of the heavens in China is not pursuit of knowledge, or astronomical knowledge, merely as such. Being a highly practical nation, the Chinese, who could to know anything, generally have some end or ideal in view to the attainment of which knowledge is merely a means. The present case is not an exception. It has been well to arrange all the various ceremonies, social and governmental affairs, and, most important of all, their agricultural work according to the seasons, the Chinese, even at the earliest period of their history, felt a great need of a proper calendar, the formation of which required astronomical knowledge. Apart from this, there were other motives—the religious and the astrological. The latter explains itself, and the former has a dual purpose. We then see, and the Chinese sought to know the laws of the heavens, which were for them, in some sense, divine, in order to apply them to their own conduct, social as well as individual. The doctrine of the imitation of, or the conformity of men's conduct with, the laws of the heavens has been much held by Confucians, and especially by Taoists, and even found in most of the Chinese classics. On the other hand, they believed the celestial phenomena to be God's revelations or warnings to men, they wanted to know them in order to re-adjust their conduct.

Both the astronomical and the religious views of the Chinese concerning the heavens are as old as their history, and it is difficult to tell which is earlier; their astronomy is a later development. The Chinese term for 'astronomer' is t'ieh shu or t'sing tsh, which may be translated 'the man of sun' or 'the man of stars.' According to the Chinese records, the former term did not occur until the 5th cent. B.C., and the latter is of still later date. Kepler says that astronomy is the wise mother and astrology the foolish daughter. If we may adopt this saying with a little modification, we can regard the astrology of the Chinese as the daughter of their astronomy, and the latter as the mother. They seem to have few different views for the thousands of years influenced the Chinese mind, and the astrological view, though the latest, has almost since its birth been the most powerful. Even at the present day among many of the Chinese astronomy has not divorced itself from religion, nor has it disowned or rid itself of astrology, as Western astronomy has since the 16th century.

II. THE ASTRONOMICAL ASPECTS. — The

---

Chinese are great believers in their ancient classics, so that to deal with their ancient views and beliefs is to a great extent to deal with their modern ones as well. The great antiquity of Chinese astronomy has admitted of many of the best European scholars of both the last and the present century. According to tradition, a sort of calendar was invented by Fu Hsi (3528 B.C.) for the benefit of the observations of the phenomena of the heavens. The reformation of the calendar and the rectification of intercalation are attributed to Hwang Ti, or the Yellow Emperor (2695 B.C.). In the record called Shih Ki of Shih Ma Chien, China is said to have sprawled the region of Tsuan Hsu (beginning 2513 B.C.) a conjunction of the five planets was observed by the Chinese in the constellation called Yin Shih or Shih.1 It has been carefully examined by the French astronomer, Jean S. Bailly, that such a conjunction did take place on 29th Feb. 2449 B.C., which would be the 65th year of Tsuan Hsu's reign. In the time of the emperor Yao (2556 B.C.) the Chinese already knew the exact, or almost exact, number of days in a year, had a way of determining solstices and equinoxes, and had in use an intercalary system and some instruments of the eclipse of the sun. The 5th day of the 5th month of the year, the knowledge of the five planets and of the twelve zodiacal signs, and most probably of the 28 stellar divisions.

In the 'Canon of Yao,'1 the first book of the Shu King ('The Canon of History,' we read):

Thereupon Yuann commanded Ho and Ho 3 to have reverence to the great heavens, and to calculate and delineate the movements of the sun, moon, the stars, and the zodiacal spaces; and so to deliver respectfully to the people.

He separately commanded the second brother Ho to reside at Ye-ec, in what was called the Bright Valley, and there respectively guide the rivers and to adjust and arrange the labours of Spring. "The day," he said, "is of long and short, and the star is Ho 7; you may thus exactly determine mid-summer. The people begin to disperse; and the birds and beasts breed and copulate."

He separately commanded the third brother Ho to reside at Nan-sea, and arrange the transformations of the summer, and respectfully to observe the extreme limit of the shadow. "The day," he said, "is at its longest, and the star is Ho 7; you may thus exactly determine mid-summer. The people are more disturbed; and the birds and beasts have their feathers and hair thin, and change their coats."

1 See Williams, Observations of Comets, Introduction.
2 A large collection of ancient documents, discovered A.D. 279; see James Legge's tr. in Chinese Classics, Hongkong, 1861-72, vol. iii. p. 149.
3 One of the 58 stellar divisions determined by a, b, and other suffixes, extending north and south from the equator, and dividing part of the Milky Way.
5 Names of two families which had been hereditary officers of the Board of Astronomy since the times of Hwang Ti.
6 Neos in a space of heavens extending over 112° and embracing the seven constellations of the southern quarter. The star in Neos is, according to the view held by Chinese scholars and adopted by many Western scholars, such as James Legge, William Jones, and the Rev. John Swete, to correspond to Gamma, the southernmost star in the constellation of Cancer.
7 After an elaborate calculation Williams says (p. 31) that the date is the same as the one on the day mentioned in the Shu King. He then says: "Thus a strong presumptive proof is again afforded of the veracity of the Chinese history as recorded in the Shu King."
8 The central star of the seven constellations of the eastern quarter, corresponding to Alpha Scorpii.

He separately commanded the second brother Ho to reside in the west, in what was called the Dark Valley, and there respectfully to consider the phenomena of the completing labours of the autumn. "The night," he said, "is of the medium length, and the star is Hsi 3; you may thus exactly determine mid-autumn. The people begin to feel at ease; and birds and beasts have their coats in good condition."

He further commanded the third brother Ho, the star is Hsia 3; thus you may exactly determine mid-winter. The people keep their close corners; and the birds and beasts become thick."

The emperor said, "Ah! you, Ho and Ho, a round year consists of three hundred, sixty, and six days. By means of an intercalary month do you fix the four seasons, and complete the determination of the year. The number, in exact resonance with this, regulating the various officers, all the works of the year will be fully performed."

In the 'Canon of Hsun,' the second book of the Shu King, it is recorded that, having accepted the throne which had been often offered to him by the emperor Yaun, the emperor Hsun examined the gem-adorned sphere and the gem transverse tube in order to regulate the seven directors or planets.

Both the commandment of Yaun and the examination of Hsun are supposed to have taken place at the beginning of their reigns. The observations of the heavens in the history of the seven directors or planets is of great importance. According to another book of the Shu King, called the 'Punitive Expedition of the Princes Yin,' in the reign of King Tsang of Tsang (2556-2465 B.C.) this emperor failed to foretell an eclipse of the year 2555 B.C. (3), and it was considered such a great crime that the prince of Yin, who was then commander-in-chief of the imperial armies, received orders from the king to punish him with death on exact time.

The Chinese then commenced their observation of eclipses from a time not later than the 22nd cent. B.C., though some European scholars regard the Chinese as having observed the eclipse of the 5th day of the 5th month of the year 1236 B.C., in the Shi King ('Book of Odes'), as the earliest recorded eclipse in all history. In Ma T'wan Lin's Encyclopaedia more than 600 eclipses of the sun are recorded from 2168 B.C. to A.D. 1229. There are many other kinds of heavenly phenomena which have been keenly observed by the Chinese from a very early period as well. From 611 B.C. to A.D. 211 alone comets are recorded by the Chinese, with the title of William's Observations of Comets. The spots of the sun were observed and recorded by the Chinese not later than A.D. 301, i.e. 1508 years before the assumed first discovery of solar spots by Galileo in 1610. He further says, it was by the astronomers who had failed to foretell an eclipse of the year 2555 B.C., who were the first to record the observation of a solar eclipse. In A.D. 1061 the Chinese recorded 34 observations of solar spots, from A.D. 301 to 1906, are recorded in Ma T'wan Lin's Encyclopaedia, which was published in A.D. 1323, i.e. 258 years before Galileo's observation. In the same Encyclopaedia a great number of instances of the observation of moving or shooting stars are recorded from 1122 B.C. to A.D. 1290. Meteors have been observed, and recorded by the Chinese since, as early as 1578 B.C. The Bamboo Books record: 'In the tenth year [of the emperor Kwei of the Hia dynasty, i.e. 1579 B.C.] the five planets went outside of their courses. In the night stars fell like rain.' Comparing with the solar eclipse of A.D. 1562, remarks E. B. Knobel, when they had the great display of meteors, the interval gave 104 periods of 33-11 years. Now Leverrier's period for the November meteor is 33-23. This is the only possible place to direct that.

1 The central star of the seven constellations of the northern quarter, corresponding to Alpha Aquarii.
2 The culminating star of the seven constellations of the western quarter, corresponding to the Pleiades.
3 When it is said, it says the editor of Yang Ch'ing's Shu King (James Legge's) that the year consists of 365 days, we are to understand that Yaun was speaking in round numbers. The years mentioned in the book of Yaun were evaluated by the astronomer of successive dynasties.
4 In vol. 3; Legge's tr., London, 1856, p. 299 f.
we have here the earliest record of a shower of heavenly stars.

III. DIVISION OF THE STARS.—1. The 28 sius or shes.—In common with the Hindus, Arabs, Babylonians, Persians, and Copts, the Chinese have the division of the celestial system into 28 divisions, or the zodiac into 28 signs, or sius or shes. According to the interpretation of Sun Ma Kuang, a great scholar of the Sung dynasty (A.D. 960-1279), the term "shes has the meaning "to reside (or to stop) somewhere" and sius means "an abode," and both words mean the "houses of the sun, the moon, and the five planets in their revolution residing in turn in the divisions of the sphere indicated as the 28 abodes. This meaning is very similar to that of the Hindu nakatras ("stars" or "asterisms") and the Arabian manadil al-kamar ("lunar mansions"). There is, according to Knobel's calculation, a concordance of the determinants of the sius, the nakatras, and the mandzils in fifteen divisions, of the sius and the nakatras in four divisions, of the sius and the mandzils in five divisions, and of the nakatras and the mandzils in four divisions. This remarkable resemblance attracts the attention of many eastern scholars and seemed to them a sufficient reason for presuming that all these systems sprung from a single source. The conclusions arrived at are different. Some scholars hold that they are included in India and the Chinese borrowed it from there; others are of opinion that the Chinese borrowed from the Arabs; another opinion is that the Babylonians were the originators; while still others say that the origin is to be found in Central Asia or some part of Persia. Unfortunately none of these conclusions is supported by satisfactory evidence.

But there are differences as well as resemblances between these three systems, and the Chinese division has its own peculiarity. The Chinese divisions are very unequal in the angular intervals and therefore cannot present the daily stations of the moon, as the Hindu divisions do. They are measured on the equator rather than on the ecliptic. According to G. Schlegel, there is no connexion at all between the Chinese asterisms and the lunar zodiac. Some of the names of the 28 sius were known to the Chinese as early as the time of the emperor Yang (2356 B.C.), while the earliest Babylonian record concerning the lunar mansions is the earliest Hindu record of the nakatras named after the Vedic deities are much later than that. The nakatras, in their recent forms at least, are apparently assimilated to the Chinese sius, and the whole system of junction stars is undoubtedly an imitation of them. J. B. Biot and his son were the first to demonstrate the identity of the Chinese sius and the 28 lunar mansions of the Hindus and Arabs. They concluded that this arrangement of celestial divisions was invented by the Chinese and borrowed from them by the Hindus and Arabs for purely astrological purposes.

"To this day," says J. M. de Groot, "no considerations of importance have cancelled these views [of Biot], and though they have been more or less violently combated by Weissenhovell and other authorities of renown, yet it seems that most investigations of oriental astronomy silently subscribe to them." 3

4 According to Agnes M. Clerke's art. "Zodiac" in Encyc., the sius being invented and the nakatras or divisions of the zodiac being of Indian derivation. The nakatras in their recent organizations were, as far as possible, assimilated to the Chinese sius. The whole system of nakatras and the nakatras, as signs without an imitation of the sius; the choice of them by the Hindu astronomers of the century was to be the cause of a considerable change in the consideration of the Chinese, compiled with a widely different intention.

2. The twelve kungs.—Besides the division of the lunar cycle into 28 unequal parts, the Chinese, in common with the Hindus and Western nations, divide the zodiac into twelve equal parts as follows:

These names are found in Chinese books written several centuries B.C.—e.g., Tso Tsuan, Erih Ya, etc. The Hindu zodiac signs, which are probably of Greek origin, entered China at a much later date.

3. The four quarters and the five kungs.—The Chinese divide the heavens into four quarters. The eastern quarter is called Tsang Lung ("the Blue Dragon") and is associated for astrological purposes with the season of spring, the planet Jupiter, the element wood, the colour blue, the taste sour, and the virtue of benevolence. The southern quarter is called Chii Niu ("the Red Bird") and is associated with the season of summer, the planet Mars, the element fire, the colour red, the taste bitter, and the virtue of propriety. The western quarter is called Pe Hwun ("the White Tiger") and is associated with the season of autumn, the planet Venus, the element metal, the colour white, the taste sweet, and the virtue of righteousness. The northern quarter is called Hsian Wu ("the Black Warrior," or "the Black Tortoise," as it has also been interpreted) and is associated with the season of winter, the planet Mercury, the element water, the colour black, the taste salt, and the virtue of wisdom.

In Siih Ma Chien's Siit Ki the stars are divided into five kungs, or palaces—middle palace, eastern palace, southern palace, western palace, and northern palace. The middle palace consists of the northern circumpolar stars, and the other four are like the four quarters stated above. This system of division is followed by Pan Ku in his History of the Later Han Dynasty.

4. The three yuans and the two kuan.—The three yuans (palaces or stellar spaces) are (1) Tsu Vi Yuan (the Middle Palace), consisting of the northern circumpolar stars, (2) T'ai Vi Yuan (the Upper Palace), consisting of stars in the west and south, and (3) Tien Su Yuan (the Lower Palace), bounded by two chains comprising Hercules, the upper part of Ophiuchus, etc. The two kuan, or kinds of officers, are (1) luing kuan, the internal officers, consisting of groups of stars inside the equator, and (2) weng kuan, the external officers, consisting of groups of stars outside the equator.

This system of the division of the heavens is peculiarly Chinese and is very ancient. In the Tien Wun, consisting of eight chapters, written by Wu Hian, an astronomer of the Yin (or Shang) dynasty (1796-1122 B.C.), the astronomer assigned to the Middle Palace for four stars or officers, consisting of eight stars, to the Upper Palace one star, consisting of one star, to the Lower Palace four stars, consisting of eight stars, to the internal officers five stars, consisting of 24 stars, and to the external officers nineteen seats, consisting of 93 seats. In the Tien Wun Sing Chan, written by Kan Te, an astronomer of the state of Tsi, and the Tien Wun, written by Hseu Hien, an astronomer of the state of Wui (both astronomers lived about the 4th cent. B.C.), the method of division is identical with that of Wu Hian, but the numbers of officers and stars are greatly increased. If we add these estimates together, we get 283 officers, consisting of 1464 stars.

5. The three yuans and the 28 sius.—There is a
SUN, MOON, AND STARS (Chinese)

popular book consisting of 31 songs by Tan Yuan Tau of the Sai dynasty (589-617), called Pu Tien Ko. It divides the stars into three yuana and 28 sius, consisting of 1069 stars, and, besides these, 11,520 stars. This system of division is followed by Ma Twan Lin and others.

IV. THE RELIGIOUS ASPECTS. —I. Animistic view. —The animistic view which the Chinese took of many things in nature is seen in their attitude to the sun, moon, and stars. Many of them regard the heavenly bodies not as merely inanimate bodies, but as dwelling-places of spiritual beings or as spiritual beings themselves; e.g., there is, it is said, a cock in the sun and a hare in the moon, the palace of angels; the hare is said to be sitting under a tree pounding medicine in a mortar. These spiritual beings have supernatural powers, though the supreme power is not attributed to any of them, but to Tien, Shang-ti, or God alone. Hence the movements and appearances of the heavenly bodies are interpreted by means of regular, lifeless, or inevitable, for omens or with them there is a will which causes them. This may well be the will of the heavenly bodies, of the spiritual beings who dwell in them, or of God, the Supreme Ruler.

2. Comparison of the heavens with the earth. —In the heavens there are the sun and the moon; correspondingly on the earth there are the yang and the yin, the two contrary conceptions applied to phenomena mental and moral as well as physical. Yang is the male principle, associated with heat, day, etc., and yin is the female principle, associated with cold, night, etc. The sun is called 'the great yang,' and the moon 'the great yin.' It is also said that the sun is the 'crystallization of the yang,' and the moon the 'crystallization of the yin.' The five planets are said to correspond to the five elements of the earth, and therefore Mars is called 'the planet of fire,' Mercury 'the planet of water,' Venus 'the planet of metal,' Jupiter 'the planet of wood,' and Saturn 'the planet of earth.' Similarly, the different stars and constellations are believed to correspond to the various portions of the surface of the earth. In the chapter called Tien Kwen ('The Heavenly Canon') in Chou Chih's Shih-Ki, in which all the beliefs mentioned above may be found, we read: 'The twenty-eight siu or constellations correspond to the twelve chows, or provinces. . . . The source of this (saying or belief) is of remote antiquity indeed.'

It is a popular saying in China that 'the stars of the heavens above and the configurations of the earth beneath correspond with each other.' A great number of stars—a.g., the twenty stars constituting the two chains of the Tien San Yuan, or the Lower Palace—are believed to correspond to certain countries in China and are given the names of those countries.

In some of the ancient books the heavens are said to be spherical and the earth square, the heavens dynamic and the earth static. There are also ancient stories or mythologies which represent the heavens as having a hollow place in the north-west round which all the stars revolve, and the earth as having a hollow place in the south-east towards which all the waters run.

3. Comparison of the heavenly bodies with men. —Heaven, earth, and men are believed to be the three great powers or genii in the universe. The heavenly bodies are regarded not merely as separate, but as having a society like that of men. As the Chinese state was an empire, so the heavenly society was believed to be an empire. This can be observed in the names of the stars. The coining of significant poetical or mythological names for the heavenly bodies was probably to render easier the task of discriminating and remembering them. Many stories grew round those names, which are regarded by some as fables and by others as truths (or even the names of the stars in the Tai Vi Yuan, that Upper Palace, the northern polar star (Polaris) is where the emperor is. The reason is quite plain, as Confucius said: 'He who exercises government by means of his virtue is like the northern polar star, which keeps its place, and all the other stars turn towards it.' The Great Bear, or the Spoon, as it is called in China, is said to be the imperial chariot, and its motion round the northern polar star is said to be the emperor viewing his empire in all directions. Names of some of the other stars are: the Empress's Palace, Crown Prince, Prince, Prince, King and Military Officers, Law-Court, Prison, Armoury, Storehouses, Kitchen, Bed, Canopy, etc.

4. relation between the heavenly and the earthly empires. —The empires are not separated from one another without intercommunication. Tien, or Shang-ti, the Supreme Ruler, governs both, but the heavenly one more directly. The ruler of the earthly empire used to be called Tien Ti, 'the son of Tien (or God.)' Entombment used to be regarded as the appointment of God, the rewarder of the good and the punisher of the bad. Therefore, when the Son of Heaven was good and his empire well governed, auspicious phenomena used to appear from God in the heavens, and, when he was bad and his empire in disorder, threats used to appear. There are many heavenly phenomena which are regarded as God's threats—notably eclipses. The Lunan of Odes refers to an eclipse of the sun of the date 29th Aug., 775 B.C., which was carefully verified by John Chalmers.

'The sun was eclipsed—
A thing of very evil omen,
First the moon looked small,
And then the sun looked small,
Henceforth the people
Will be PLAID and neglected.
The sun and moon present evil
By not keeping to their proper paths;
All through the kingdom there is no [good] government.
Because good men are not employed.
For the sun was eclipsed—
It is a small matter,
But now the sun is eclipsed,
How dreadful is that!

In the Confucian classic called Tsun Tsu ('Springs and Autumn') the eclipse of the sun which took place on 20th April 610 B.C. is recorded. The writer says: 'On the occasion of an eclipse of the sun, the Son of Heaven should not have his table spread as lavishly as usual, and should have drums beaten at the altar to the spirits of the land, while the feudal princes should present offerings of silk to the spirits of the land and have drums beaten at their courts, thus manifesting their own service of the spirits and so teaching the people to serve their rulers, according to the respective rights of each, as was customary in ancient days.'

The word 'eclipse' used here is the same as the word 'eat.' The eclipse of the sun or the moon is described, in some of the Chinese stories, as the sun or moon is being eaten by a certain animal, and the beating of drums is said to frighten the animal away.

The sun in the heavens is also said to correspond to the ruler on the earth; e.g., when the people wished the death of Kie, the tyrant (reigned 1818—
1753 B.C.), they said: 'O sun, why exprest thou not? Let us die together with thee.' Therefore the eclipse of the sun is generally regarded as a threat from God to, but as having a society like that of men.
numerous examples, and the edict of the emperor Ming Ti (A.D. 257–269) after the eclipse of the sun in 233 is most illuminating:

'We have heard,' says the emperor, 'that if a sovereign is regarded as elegant and humane, he will never be without a beneficent name because of his calamities and perils. These are divine reprimands sent to recall him to a sense of duty; and the sun and rain are among the worst warnings that the rod of empire is not wielded aright. Ever since we ascended the throne, our inability to continue the glorious traditions of our ancestors and carry on the great work of civilization has now culminated in a warning message from heaven. Accordingly, we harken to the demands for personal reform, in order to avert impending calamity. The relationship, however, between God and man is that of father and son; and a father, about to chastise his son, would not be deterred were the latter to present him with a dish of food. We do not therefore consider it a frill, of our duty to act in accordance with certain memorials advising that the Grand Astronomer be instructed to offer up sacrifices on this occasion. Do ye governors of districts, and other high officers of State, seek rather to rectify your own hearts; and if anyone can devise means to make up for our shortcomings, let him submit his proposals to the throne.'

Comets, even more than eclipses, are regarded as God's threats. When the comets appeared in 524 B.C., travelling eastward towards the Milky Way, an officer said: 'This is a broom to sweep away the old, and give us new. God often makes us feel the effect of his displeasure by giving us sacrificial calamities by fire.' The stars or the spiritual beings who dwell in them sometimes descend from the heavens, either by themselves or by the will of God, are born on earth, and go to their place of abode after their earthly life.

In The Annals of the Bamboo Books there are the following legends:

'He's mother (the mother of Wun Tung, 268 B.C.) was called Tu Pion. She witnessed a great flash of lightning, which surrounded the star Chu (or Dehie) of the Great Bear with a brightness that tallied all the country about her, and thenceforth became pregnant.'

His mother was called Niu Tel. She witnessed a star like a rainbow come floating down the stream to the islet of Hiva. Thereafter she dreamed and received it, and was moved in her mind. We must not therefore consider it a frill, of our duty to act in accordance with certain memorials advising that the Grand Astronomer be instructed to offer up sacrifices on this occasion, when it moved itself in the palace of Yio-pong, after which she brought forth Yung Hu (the emperor, 253 B.C.).'

His mother was called Si-Ki. She saw a falling star which went through the constellation Mao, and in her dream her thoughts were moved till she became pregnant, after which she swallowed a spirit's pearl, ... and gave birth to Yu (king 2236 B.C.) in Shih No.

There are 28 heroes in Chinese history who were believed to be the 28 sius, or constellations, descended. A great man on earth may become after death a spiritual being; in heaven and dwell in one of the twelve jiang (the ancient princes) and stars. There were 28 heroes. There are a great many stories, love stories, and mythologies based upon beliefs of this kind.

5. Sacrifices.—We read in the 22nd book called Ky Tong (The Foundation of Sacrifices) of the Li Ki (The Book of Rites), a collection of treatises on the rules of propriety or ceremonial usages, one of the five Confucian books or canons.

'Of all the methods for the good ordering of men, there is none more urgent than the use of ceremonies. Ceremonies are of the kind, and there is none of them more important than sacrifices.'

Among various sacrifices there are sacrifices to the sun, moon, and stars. We do not know when these rites began, but they have long been performed under each dynasty from the 23rd cent. B.C. down to the time of the present Republic of China. In the 29th book of Li Ki, called Ki Fu (The Laws of Sacrifices), it is said:

'With a blazing pile of wood on the Grand altar they [the Emperors, from Emperor Shun 2250 B.C. to King Wu 1125 B.C.] sacrificed to Heaven. The wood was fed with the wood of the Grand (or three) mound, they sacrificed to the Earth. (In both cases) they used a red victim.'

By burying a sheep and a pig at the altar of Great brightness, they sacrificed to the seasons. (With similar) victims they sacrificed to (the spirit of) cold and heat, at the pit and the altar, using the wood of cremation and the wood of the Grand mound, they sacrificed to the Earth. (In both cases) they used a red victim.'

In the 21st book of Li Ki, called Ki I (The Meaning of Sacrifices), it says:

'The sacrifice in the suburb of the capital was the great expression of gratitude to Heaven, and it was specially addressed to the sun, with which the moon was associated. The observance of the Sun (dynasty, 2259-1766 B.C.) is said to have continued to the dark,'Connor the Yin dynasty (1799-1122 B.C.) they did so at noon. Under the Kau dynasty (1122-656 B.C.), they sacrificed all day, especially at daybreak, and towards evening.

'They sacrificed to the sun on the altar, and to the moon in the hollow—to mark the distinction between the doors (of the one) and (the brightness of the other), and to show the difference between the high and the low. They sacrificed to the sun in the east, and to the moon in the west.—to mark the distinction between (the forgoing) of the former (and) the withdrawing (of the latter), and to show the correctness of their (relative) position. The sun comes forth from the east, and the moon appears at the west; the days are now long, now short; when the one ends, the other begins, in regular succession—thus producing the harmony of all under the sky.'

These are the sacrifices at the equinoxes; that to the sun at the vernal equinox in the eastern suburb, and that to the moon at the autumnal equinox in the western suburb. They were not performed under each dynasty, and can also be found in The Ritual of the Manchu Dynasty. The former is called Chou Zi, 'The Moon, Sun,' and the latter Sh E, 'The Evening Moon.'

In the dynasty of Chin (255-206 B.C.) they sacrificed to what they called the eight gods, i.e. the god of the heavens, the god of the earth, the god of war, the god of the sun, the god of the moon, the god of the sun, the god of the moon, and the god of the four seasons. In Hon Shu ('The Book [or History] of the early Han Dynasty') (206 B.C.—A.D. 25) it is said: 'There were such eight gods in the ancient times, but their origin is unknown.'

In the dynasties after the China dynasty different temples were built for their sacrifices. Even at the court sacrifices were performed under each dynasty, to the sun, moon, and stars can be found in different places. In Peking there is the world-famous Tien Tan ('Temple of Heaven'), and in it there are altars of the sun, of the moon, of the 28 constellations, and of some other stars and groups of stars. In the Manchu dynasty (1644-1911) sacrifices were offered in the Temple of Heaven once every spring and once every autumn. Even since the establishment of the Republic of China (1911), a grand sacrifice was offered in the Temple of Heaven by Yuan Shi Kai, the first Chinese President.

The 15th of the eighth lunar month is a Chinese holiday called Tsung Tsia Tze ('the mid-autumn holiday'). The moon is said to be always at its fullest and brightest on this evening if it is visible, whereas it is not so on the same date of other lunar months. A family festival used to be, and in some places still is, held in Chinese houses on that evening. The offerings to the moon should be the same as to the God of Heaven. The ceremony is similar to that of Chinese ancestor worship.

On this holiday schools, shops, etc., are closed, and farmers cease work for a few days. Relatives and friends exchange presents, chiefly

1 Red was the special colour of victims under the Chou dynasty.

2 SZE xxviii. 201 f.

3 Ib. p. 218 f.
SUN, MOON, AND STARS (Chinese)

There seem to be other reasons why the Chinese should be grateful to the sun, moon, and stars—especially to the sun for its great and various benefits—but the fact is that they attribute these benefits to Tien, God, rather than to the heavenly bodies themselves. Indeed their sacrifices to these bodies are sometimes an indirect way of expressing their gratitude to God.

7. Sun-worship, moon-worship, and star-worship.—Is there, or has there been, sun-worship, moon-worship or star-worship in China? The answer to this question does not seem to mean by the term ‘worship.’ If by worship we mean the ‘adoration, sacrifice, praise, prayer, thanksgiving, or other devotional acts performed in honour of the Supreme Being or God,’1 it is certain that there is no such worship in China, and perhaps also that such worship has never existed there. None of the heavenly bodies is conceived by the Chinese as the Supreme Being. The Supreme Being is, for them, Tien, God, and God only. Nor can we find such worship in China if we take the term ‘worship’ to mean (1) the ‘prostration which arises in presence of a superior being,’ or (2) ‘the reverence and whom we fear or reverence,’ or (2) ‘the feeling and act of worship’ which involves primarily submission and fealty, and ‘is the attitude of inferior beings to the supreme or intelligent beings which are absolutely dependent.’2 The Chinese do not regard themselves as absolutely dependent on any of the heavenly bodies or on the spirits dwelling in them, but they regard the heavenly bodies or their indwelling spirits as dependent on Tien, ‘God,’ as they themselves are. It is true that they believe these heavenly bodies to possess powers which do not belong to men, but they also believe that men have powers which these bodies do not possess. What more is, some of them believe that certain men have the power of subjugating the spirits of the heavenly bodies, as magicians have the power of controlling spirits.

There are certain passages which have been regarded as evidence of sun-worship in China. In the 9th book of Li Kí, called Kiao Teh Seng (‘The Single Victim at the Border Sacrifices’), a passage says:

‘At the (Great) border sacrifice be [the Son of Heaven] welcomed the arrival of the longest day. It was a great act of thanksgiving for Heaven, and the sun was the chief object considered in it.’

Legge, commenting on this, says:3

‘The sun becomes the object of the 60th tablet of Heaven. Fang Kieh says: ‘(The Son of Heaven) was welcoming the arrival of the longest day, and therefore he regarded the sun as the residence (for the time) of the spirit of Heaven. That spirit could not be seen; what could be looked up to and beheld were only the sun, moon, and stars.’

The present writer need not give his own translation here, but he must point out that the idea that the sun was regarded as the residence of the spirit of Heaven is not implied either in Fang Kieh’s commentary or in the text.

With reference to the passage in the book—on the meaning of sacrifices, namely:

‘The sacrifice in the suburb of the capital was the great expression of gratitude to Heaven. The sun and moon were addressed to the sun, with which the moon was associated.’

Khán Hào, a Chinese commentator, says, according to Legge:4

‘Heaven is the great source of the (the course of nature and duty), and of all the visible bodies which it brings out, there are none greater than the sun and moon. The spirit of the object of the suburban sacrifice was a grateful acknowledgment of Heaven, the sun was chosen as the resting-place for its spirit (or essence). The idea in the institution of the rite was deep and far-reaching.’

---

2. JAP. H. BUXTON, Translations and Notes, London, 1863, p. 25.
3. SBE xxvii. 427, n. 1.
4. SBE xxvii. 218, n. 2.
The same remark may be made on the translation of this passage, viz. that there is neither in the text nor in the commentary the idea that the sun was chosen as the resting-place of the spirit (or spirits). The ultimate purpose in both these cases was to express gratitude by means of sacrifices to Heaven, but not to the sun or the spirit of the sun. Heaven is invisible, and they thought that for the object of sacrifice something visible was necessary. Therefore, the sun was chosen as a symbol. Neither of these two cases therefore can be regarded as an example of sun-worship. There does not seem to be any other case.

Legge says concerning the last example:

'It must be borne in mind that the rites described in the text are those of former dynasties, especially of that of K'ao. I cannot bring to mind any passages in which there is mention made of any sacrifice to the sun or sun-spirit in connexion with the great sacrifice to Heaven, or Shang Ti, at the service on the day of the winter solstice in the southern suburb.\(^1\)

Hence it is only by taking the term 'worship' in a very comprehensive sense, and by ignoring the purpose of the sacrifices, that we may say that the fact that the Chinese sacrificed to the sun or sun-god is that they worshipped it. It is the same with regard to their worship of the moon and the stars. In whatever sense we may be justified in saying that some of the ancient Chinese and other ancient savages worshipped the sun, moon, and stars, such worship occupies a very insignificant position in China compared with the worship of other natural phenomena or the spirits of them. If by sun-worship, moon-worship, etc., we mean one who regards the sun as the only or the supreme object of worship, we may say with conviction that the Chinese are not, as they have never been, sun-worshippers, moon-worshippers, or star-worshippers.

Literature.—See the works quoted in the footnotes.

SUN, MOON, AND STARS (Hebrew).—

The Hebrew conception of the universe, as we find it in the OT, is not scientific in the modern sense of the term. The cosmology of the Hebrews (see art. COSMOLOGY (Hebrew)) is characterized by the simplicity and savagery of primitive folk. The attitude of mind is one of awe and wonder, not of critical inquiry; and to pry closely into the secrets of the divine government is felt to indicate a want of reverence, and even to be dangerous. Moreover, we rarely find in a people which seems to have had an innate genius for religion to think, even after it had progressed beyond the stage of quite primitive ideas of the universe, that religion itself was an object of study or of knowledge.\(^2\) We need not expect, therefore, to find in the OT any inkling of the modern science of astronomy. The Hebrew shepherds without doubt, like the Phoenician mariners (cf. Pliny, H.N vii. 57), closely observed the sky, and learned from the scrutiny many lessons of practical value for their every-day life. It is equally likely that at an early date the Hebrews were wont to worship the stars and planets. There are later traces of this worship in the OT (cf. 2 K 17\(^3\))\(^4\) And, besides

\(^{1}\) STE xxvii. 218, n. 2.

\(^{2}\) On this point Lucian Magni's 'Religio Latinarum' (Judaism (1897) will be found suggestive. It has been argued elsewhere (W. Jay Hudson, Law of Psychic Phenomena 10, 1907) that ignorance of, or indifference to, what we term science might co-exist with a perfect knowledge of the laws of the moral and spiritual universes.

\(^{3}\) It is quite unnecessary to suppose that the idea of worshiping the stars and planets was borrowed, though, of course, the Hebrews would have been more and more into contact with people who were addicted to this worship. Whether and to what extent the Babylonian and later Jewish occultism is a disputed matter (see K. Marti, Religion of the OT, p. 36 f.). Cf. the proper names יָאָשָּׁים (Jg 12\(^3\)) and יָאָשָּׁים (Ezr 4\(^4\)) derived from יָאָשָׁ, and the Arabic يَاشِم, Serer.'

\(^{4}\) This is probably derived from סין, 'China,' and so also Beth-shenesh, a place sacred to the sun-god. Commentators have seen in Mal 3\(^8\) (4) the conception of a winged solar disk such as this, the figures suggested by various constellations no doubt gave rise to a number of curious fables and fancies. On the other hand, the OT, as we have it, a collection of much-edited writings, preserves few traces of the astronomical and astrological lore of the early Hebrews themselves. Since in the course of their national development the study of the stars and planets became more and more associated with the idolatrous practices of surrounding nations, it was easier to avoid, or even to remove, references to astronomy and astrology (cf. Dt 18\(^5\)) This would account for the fact that most of the references preserved in the OT are of a very general nature.

The chief planets are, of course, alluded to frequently. The sun (שֵׁמַש), is spoken of as ruling by day (Ps 136\(^6\)), and is often referred to as coming forth (from one chamber) in the morning and going in (to another chamber) in the evening. Its magnificence (Jg 5\(^7\)) and its powerful nature for good (Dt 33\(^8\)) or for evil (2 K 4\(^9\)); cf. Ps 121\(^10\)) impressed the Hebrews, as they have impressed all peoples ever since, as a manifestation of the hand of God. In the OT, the sun is called, metaphorically, 'month,' יִשָּׁר, a word which is common to all the Semitic languages, though not, in fact, in use in the OT. Another word, שֶׁבֶרְנָה, which occurs only three times (Ca 6\(^11\), Is 24\(^12\), 30\(^13\)), designates the moon as the 'white one' or the 'pale one.' Rarer still is a word וכש (perhaps connected with the Assyr. kuv'[u], 'headdress' or 'cap'), which denotes the full moon (perhaps the moon-god clothed in the splendor of his tiara), and is, as is most common word is בְּדֵת, which means 'new moon,' and also 'month.' Thus the new moon was regarded as marking a new period or month, and the use of יַשְׁרֹא, יֶשֶר, and בְּדֵת for both moon and month shows that among the Hebrews the month and year were lunar. The moon rules the night (Ps 136\(^6\)), and, like the sun, is a power for good (Dt 33\(^8\)) or for evil (Ps 121\(^10\)). Its pale brilliance made it the emblem of beauty (Ca 6\(^11\)). In a few passages reference seems to be made to eclipses (Am 8\(^14\), Is 35\(^15\), Job 9\(^16\) et al.). And we are once told that 'the sun stood still, and the moon rested,' after the battle of Armageddon (Re 16\(^17\)). Similarly the sun and moon are regarded as enemies (Jos 10\(^18\)). In late writings there are several allusions to the worship of the sun (Ezk 8\(^19\), Job 31\(^20\); cf. 2 K 22\(^21\)) and moon (Dt 4\(^22\)). Other planetary worship is recorded in the OT. Thus, in all probability, Venus\(^2\) as the Morning Star is referred to in Is 14\(^23\) under the name יְהָטָל, הָלוֹל, or יְהָטָל, הָלוֹל (lit. 'the glittering one'), though it should be mentioned that some expositors have been in the term an Arabic name for the moon (חלָל, הָלוֹל). W. Louts (PLP 5, 1, 'Sterna') indeed argues that the Arabic word means 'new moon,' which would be unsuitable; as we find among the ancient Egyptians, Babylonians, Assyrians, and Persians. But the present writer has pointed out (Journal of the Manchester, Jewish, and Oriental Society 4 (1899)) that the word that usually translated 'wings' will bear another meaning. The meaning may be 'skirts' rather than 'wings,' and the figure of the glorious robe that flows from the sun.\(^3\)

1 In Jg 14\(^19\), Job 9\(^20\) the word translated 'sin' is not שַׁנָּה, but לְכָה (cf. Is 35\(^13\)) are probably derived from סין, the name of the moon-god in Babylonian. In Ex 3\(^11\) Sina is described as 'the mountain of Ecbatana,' i.e., the sacred mountain. This passage suggests that it was in Ecbatana that the he-goat was kept, and that the he-goat in Babylon was Shamas, the moon-god.

2 The writer clearly intends a miracle to be understood (so C. Steuernagel, De la cosmologie dans le Talmud, 244). The terms used by the expositors (e.g. W. H. Bennett in 'Joshua,' SBOT, 1899) regard the passage as poetic and figurative (cf. Jg 5\(^7\)).

3 Another description of Venus is קַשָּׁר ha-shāhmayim בָּשָׁם יִשָּׁר, 'the queen of heaven,' mention being made of cakes which were baked for her (Jer 7\(^28\), 44\(^17\)).
SUN, MOON, AND STARS (Hebrew)

but, according to Zimmern and Buhl's edition of Gesenius's Lexicon (Handworterbuch, 1905) it can denote the old moon as crescent. Further, in Am 9:9 (see below) there is an allusion to Saturn (κλαίνω = kloan = Assy. klama'tu; and ἱερόν, kloyn = Assy. kaimun). The stars, again, are alluded to frequently in a general way, and the references to particular stars or constellations, and these require special attention. The earliest of them is found in Am 5:31. Since, however, the same terms occur, with others, in the context of Job which contain more precise references to astronomy, it is best to consider the Job passages first. In Job 9, in a description of God's almighty power as manifested in the marvels of the material world, Job is represented as pointing to God as one who shaketh the earth out of her place, and the pillars thereof tremble. Who commandeth the sun, and it riseth not; and sealeth up the stars. Who alone spreadeth out the heavens, and treadeth upon the waves of the sea. Who maketh the Ash, Kš'ël, and Kš'el, and the members of the south. The context indicates that the terms in the last two lines (ψω, 'ash; γαλακτος, kš'ël; γεως, kšemah; γεως, hadrel témâd) designate particular stars or constellations. We are helped, too, by the fact that three of their terms occur in Am 5:31, Job 38:3, Kš'el in Am 5:31, Is 13:1, Job 38:3; 'ash in Job 38:3; but there is considerable uncertainty as to the correct interpretation of some at least of the terms.

1. ψω, 'ash, or better ψω, 'ayish, as in Job 38:3, and better still ψω, 'ayish, as suggested by the Syriac (Pesh. smy). In Job 9:6 LXX has ἀστροφος, Vulg. 'Asper'; in Job 9:7 LXX has ἀστροφος, Vulg. 'Vesper.' Modern expositors have found in the word either the Great Bear, the Pleiades, Hyades, or the Northern and Southern Crown. 'Ash in Job 9:6 has to be taken in connexion with the other passage, 38:3, in which, according to the Messianic text, it is said: 'or dost thou guide 'ayish with her young?' (גֵּרֵס וְנֶפֶשׁ וְנֶפֶשׁ הָאֵשׁ). It is noteworthy, too, that what in Arabic corresponds to the Great Bear is called nash, 'the bear,' and that the three tail stars of Ursa Major are called bandat nash, 'children of the bier' (i.e., in this case, 'mourners'). It is true that no philological connexion can be established between the Arabic, nash, and the Arabic phrase 'children (or daughters) of the bier' is suggestive as regards 'ayish and her children. It might seem natural to expect to find a striking constellation like the Great Bear mentioned in Job 9:6, and it would be fitting that it should be assigned the first place, though it may be mentioned in passing that possibly the Hebrews thought of this constellation not as a Great Bear, but as a lioness with her young (cf. with Ewald, Arabic 'ayush, and see A. Dillmann's Commentary). But there is some force in the argument that 'ayish can hardly be Ursa Major, because the constellations in Job 38:31 are referred to an account of their meteorological importance. Some expositors, therefore (e.g., M. A. Stern, Nöldcke, Schrader), have thought that 'ayish represents the Pleiades. The great objection to this is that there is very good reason to think another Hebrew term (see below) designates that constellation. The 'children' of 'ayish would certainly suit the Pleiades, which are sometimes represented as a hen with its chckerens. But, on the other hand, the smaller stars surrounding or adjoining a star of the first magnitude might in several cases be described as its children. The Pleiades not being probable, some scholars agree with the Vulgate of Job 9:9 in thinking that 'ayish represents the Hyades (so, e.g., Hoffmann, Schiaparelli); and this view has the support of the Syriac (Pesh. smy). Moreover, the term 'ayish was among the names of certain stars of great meteorological importance. Elsewhere in Hebrew 'ash means 'moth.' Friedrich Delitzsch has suggested that it may have the same meaning here, since, a giant star (μαυ) seems to have been given to the star by the Assyrians (see T. G. Pinches, in Hastings' DB, s.v. 'Astronomy'). Now, the Hyades, a great red star of the first magnitude (Abelbaran) and five stars of the fourth magnitude, resemble our letter V or the Greek A. And Schiaparelli points out (p. 58) that 'in the butterfly stage, when the moth is at rest, its wings are not held detached from the body, as happens with most other butterflies, but spread themselves out in it such a way as to form a cloak, more or less similar (according to the several species into which the animal can be divided) to an isosceles triangle. The suggestion is that one of the authors of the passages in Job 'ash meant 'moth,' which was a name for the Hyades. In that case, assuming the identity of 'ash and 'ayish, the 'children' of 'ash or 'ayish would be the minor Hyades which surround Aldebaran. Against this it might be urged that it is easier to explain 'ash as short for 'ayish than to account for 'ash as the original form, and that 'moth' does not seem a likely name for a constellation (especially the Hyades, apart from its form). The question of identification cannot be decided definitely. But, as the Pleiades has to be excluded (see below), there are reasons for thinking that the other 'children' of the Hyades is intended. The Great Bear was no doubt as well known to the Hebrews as to other ancient peoples; but it would not be in the least surprising to find no mention of it in the OT, the references to astronomy being so few.

2. γαλακτος, κš'el, usually translated 'fool.' In Job 9:6 LXX has ἀστροφος, Vulg. 'Orion'; in 38:31 ἰδας, Vulg. 'Aretaurus'; in Am 5:31 LXX omits, Vulg. 'Orion.' In the LXX οἰασ, Vulg. 'splendor earum.' Some of the Rabbis of the Middle Ages (Saadya, Abulwaid, and others) identified the word with the Arabic Suhail and interpreted it as the term for a constellation. The prepondering view of the versions is in favour of Orion, a constellation which was popularly thought of as a giant who was bound in chains to the sky. Kš'el occurs elsewhere in Hebrew with the meaning 'dullard' or 'fool,' and modern expositors commonly think of the giant (Orion) as a fool in the sense of an impious person who had rebelled against God. But the Arabic equivalent of the root (κš'el, kandah) means 'to be thick, plump,' which suggests that kš'el itself need not mean anything more than 'thick.' In the big, bulky one); and the Cheyne says (art. 'Orion' in EB), kš'el ought not to be confounded with nābāl ('fool' in the sense of impious person). In Job 38:21 there seems to be a reference to some myth current among the giant being spoken of as bound with cords; but what exactly the myth was is quite uncertain. In Am 5:9 kšemah (see below) and kš'el are again mentioned together ('seek him that maketh kšemah and kš'el, and the black darkling, and the thick bounding,' etc.) as well as in Job 38:3 ("Dost thou bind the bands of kšemah, or loose the cords of kš'el?"). Further, in Is 13:2 we find the curious expression 'their kš'elîm' (often translated 'the stars of

1 It seems certain that the Syriac word does denote the Hyades or the chief star of the group (cf. Barthélemy).
SUN, MOON, AND STARS (Hebrew)

This seems to indicate that primarily *kimdah* was used to denote stars of the first magnitude, in distinction from lesser stars (*kobitam*). In any case it is pretty generally agreed that it has one of the most brilliant constellations, and it did not fail to arrest the attention of the ancients.

3. *kimdah*, literally 'a group, cluster,' cognate with Arabic *kima* (אכ*), 'to heap up.' In Job 9* LXX has *dialis*, Vulg. 'Arcturus,' Pesh. and Targ. *kpt*; in 38* the renderings of the Versions differ only to the extent that the Vulg. has 'Pleiades,' in Am 5* LXX omits, Vulg. has 'Arcturus,' Pesh. and Targ. *✘*. Most of the ancient authorities, in fact, understand the Pleiades by *kimdah.* Several modern expositors, however, prefer to think of Sirius (e.g., G. Hoffmann). But the word itself suggests we are to look for a compact cluster of stars, and, of course, we must seek for one that early attracted attention. The Pleiades, as Schiaparelli says, is the best known of such clusters, and also that only one which has in consequence of its conspicuous light awakened universal attention at every time and among all peoples' (p. 62). The expression of *kimdah* in 38* is not to be understood metaphorically.* The Arabic name for the Pleiades, *thargayya,* also means 'cluster,' and Bar Ali mentions it as an explanation of *kimdah.* The word *kimdah* itself has also been connected with the Arab *kimdara* 'house,' and the Assyri *kimtui* 'family.' In either case the name would suit the Pleiades.

It should be noted, further, that, according to some, the Pleiades are in the Talmud v. *Rosh ha-shanah,* 11b, God brought the flood by causing *kimdah* to set instead of rise in the morning, and by removing two stars from it. This is given as the explanation of Rabbi Joshua. According to R. Eliezer, the changes took place at a season of *kimdah* when it was wont to set in the morning, and what God did was to make *kimdah* rise in the morning on the day in question and lose two stars. This caused the flood. According to Stern, the dates mentioned are exactly the morning rising and setting of the Pleiades, and seem to prove that in the time of Rabbi Joshua and Rabbi Eliezer the Pleiades were a well-known constellation. Many of the Jews identified the Pleiades with *kimdah.* It is further represented in the Talmud (ib.) that God afterwards sets things right by taking away two stars from it. It diminishes its rain-producing power. *kimdah* is a conspicuous constellation.

4. *kpt* (99*), *kimdah* témân, lit. 'chambers of the south.' The LXX renders *tapest Köln* Vulg. 'interior Assyria.' We seem to require mention of another definite constellation. This has given rise to the suggestion that the phrase designates the bright star Canopus or the constellation to which it belongs (so Stern). Other expositors regard the text as corrupt, and, emending *kpt* see in the Hebrew the uncertain constellation, and in the second (mpt) *Gemini,* 'the Twins.' But we are not obliged to find in *kimdah* témân a special constellation. 'Chambers (or store-houses) of the South' might, as K. Budde says ('Hbr., in W. Nolte's *Handwörterbuch,* 18*), denote a whole group of constellations in the southern sky. Dillmann (loc. cit.) thinks that the author of Job cannot have known anything of the stars of the southern hemisphere, but that it was known to him, as one who had travelled, that the farther one goes south the more stars and constellations become visible. To those who dwelt in the north these were, so to speak, enclosed in the innermost chambers of the vault of heaven, and were therefore invisible. This would explain the expression 'treasure-houses of the South' (cf. Pr 24*; Job 37*). The word *hder,* coming from a root meaning literally 'to possess,' in the plural would mean the term 'penetralia.' Schiaparelli gives reasons for thinking that the reference is to the imposing constellation found on the charts of the Ancients and extending beyond the Cross, and the Centaur; but whether this was visible to the author of Job depends upon the date of the book, which is uncertain.

In Job 38* we find another difficult astronomical term. The LXX renders it as follows: 5. *ŋΔ, mazzadírith* in his season, or dost thou lead in the *kimdah* of women who are young? We have already dealt with three of the terms which occur here. 'We have now to consider—

The Hebrew *ŋΔ, mazzadírith* is used in the LXX to denote something having to do with rain, and especially something which produces rain. It is used in the same sense in the Tanakh, in a number of passages throughout the Bible, as a sign of the approach of spring.

The Hebrew *ŋΔ, mazzadírith* is used in the LXX to denote something having to do with rain, and especially something which produces rain. It is used in the same sense in the Tanakh, in a number of passages throughout the Bible, as a sign of the approach of spring.
It is not necessary, however, to regard *mazzārîth* and *mazzâlîth* as identical. We have found reason to think that another word denotes the Hyades as a constellation, and we would adduce from this supposition that *mazzārîth* may be a further description of some of the stars in this group.1 The word *mazzārîth* has also been identified with the Great Dog, whose chief star is Sirius. This, as the brightest, and most fixed, astronomical reasons as well, everywhere attracted the notice of the ancients.

6. It should be noted further that in Job 57* another constellation, *zâdîth,* or *mazzâlîth,* which bears some resemblance to *mazzārîth.* The passage runs: 'Out of its chamber cometh the whirlwind, and cold out of *mazzârîth.*' This word might also come from *zârîth,* 'to scatter.' On that assumption, it has been supposed to mean 'scattering' or north winds. Another suggestion, however, is that it is a corruption of the Babylonian *mishri,* 'the northern (star)' (so Edi, s.c. Mazaroth). A more recent conjecture is that of Schiaparelli (p. 60 ff.). He suggests that the correct punctuation of *zâdîth* is *mizrîth* or *mizzîrîth,* i.e. the plural or dual of a word *mizri,* *mîzrîth,* which is referred to in more than one room for *winnowing.* Schiaparelli points out that the arrangement of the stars of the Great Bear is such that they might be thought to resemble a *winnowing fan.* To the ancient Hebrews these stars actually suggested a ladle, which, with its cavity and handle, is very like a *winnowing fan.* The plural *mizrîth* would indicate more than one instrument. Schiaparelli, therefore thinks that the word might designate the Great Bear and the Lesser Bear; and in that case, of course, the dual *mizzîrîth* would be a still more suitable description. The fact that the Phoenicians used the Lesser Bear when at sea to find the direction of the north is noteworthy in this connexion. The suggestion is very ingenious. But unfortunately *miszrîth* is not the term which denotes a *winnowing instrument* of the shape required. The word for that is *raḥāth* (the other term mentioned in Is 30*). *Mizrîth* is apparently the *midhir* of modern Syria, a pitch-fork with six prongs, and the Great Bear can hardly be said to resemble that.

7. Some divines have found yet another reference to astronomy in the *zîrîth, nāyāṭh bôrîth,* of Job 26*. Meaning literally 'the seeing serpent,' the words have been supposed to refer to the *Lion of the north,* the *Lion of the Bear.* There is nothing in the context, however, to indicate that the author had any star or constellation in mind.

The OT contains very few definite references to astronomy, though the prohibition in Dt 18* shows that it was practised. We can hardly say that there was no astronomy amongst the ancient Hebrews, in spite of the fact that the present allusions are late and due to Assyro-Babylonian influence. In Is 47* (post-Exilic) we read: 'Yes let them deliver thee, the dividers (i.e. workers) of heaven (כְּזַת הָנָבָא), the gazers on stars (כְּנַצְת הָנָבָא), those who make known each new moon (כְּנֵשְׁת הָנָבָא), from the things that are coming upon thee.' The word translated 'dividers' occurs here only, and LXX has for the whole phrase of ἀστρολόγοι τό αἰωνὸς ἑπεξεργασμένος. It has been connected with an Arabic word 'to divide' (باحر، lit. 'to cut into large pieces'), a meaning which suits very well, since the Babylonians divided the sky for astronomical purposes into signs of the zodiac, and those who 'make known each new moon' (or the 'monthly prognosticators') would be persons, like the Assyrian and Babylonian astrologers, who noted lucky and unlucky days, preparing monthly

1 almanacs or calendars based on astrological calculations (see Cheyne, *Isaiah,* PB, 1888).

In Dt 8*, according to AV, Daniel became chief of the *astrologers* (בַּלְאֹת) in Babylon; but the correct translation of the word is 'conjurors' or 'enchancers.'

SUN, MOON, AND STARS (Hindu).—1. The sun.—Solar worship has been described as the real religion of India. Nor is it difficult to understand how in a country flooded with sunshine, where every phase and function of life is dependent upon the kindly warmth of the sun and his destructive energy and power are felt in the uttermost extremes of heat, it should have been a stern and early business to win his favour and placate his wrath. In the ancient verse of the *Gāyatrī* every Hindu begins his day with prayer and ascription of praise to the sun, the giver of light, heat, and fertility. In his mid-day devotion also he remembers him and renders homage to the same deity. It is apparently true that at no period in India was the worship of the sun to any great extent exclusive. There are no distinct sects at the present time who maintain the sun alone and bear his name. The essentials of his worship, however, are present everywhere and in all the sects, more or less avowedly, or in disguise, and amongst the lowest and most impious he has his practical and decisive influence on daily life is universally recognized.

In the Ṛgveda Śūrya, or the sun, is worshipped under many names and forms. The three chief aspects under which he presents himself to his worshipper are the rising, culminating, and setting sun. These are not separated or distinguished as three deities, but are varying forms of one and same god, each of which he displays himself with different attributes and as exercising different powers. Especially is he reverenced as Savitr, the giver and sustainer of life, who each morning wakes the world and at sunset is again carried by his most ancient chariots, perhaps the most ancient of all, is under the name Mitra, the Persian Mithras; whence some have conjectured that India derived her solar religion from the West. If borrowing took place on either side, it is probable that in those early days the indebtedness was Persian. As Mitra, the sun was associated as a member with an early triad, symbolized by the sacred syllable *Oṃ,* Agni or fire, Vayu the wind, and Mitra. This triune aspect also was manifested in the sun as the heavenly fire, and he bore corresponding epithets or titles, *astrīpāt,* 'three-footed'; *śvādratana, dhatavāyata, triyogāyata,* 'three stepping,' *avorshipped by the gods* (so Pinches), *sûryā,* 'sun,' *sūrya.* The last name was appropriated more particularly to Viṣṇu, the sun as the all-pervader, who in three strides traverses the three worlds, earth, heaven, and hell. He is invoked as *Pāṇār,* the guardian and preserver of the cattle, the companion of travellers, and guide of the soul on its perilous way to the lower world.

1 See the conjecture made above on p. 99, note 4.
and expels diseases and all the subtle and traded influences of darkness. The beneficent office of physician and healer of bodily ills, which later are ascribed to the Sūnas, are in the first instance that of Sūna himself.

There seems no reason to reject or doubt the statement of Sankara in the 10th cent. that in his time there existed distinct sects of sun-worshippers, Sauryas, or adherents of which the members were accustomed to carry branded on their forehead and breast the symbol of their deity. They have, however, all died out and been forgotten.1

Not many temples dedicated to the worship of the sun have survived, nor is it probable that at any period in Indian history they existed in any considerable number. That at Konarak in Orissa is the best known, and architecturally of the most interest. It is, however, neglected and ruinous, and attracts no worshippers. There is another at Gaya, and a small but much-frequented shrine at Benares, where the fire-sacrifice is offered in honour of the sun.

Among the non-Aryan peoples of India and the sub-tribes, who may be described as on the borders of Hinduism, sun-worship is much more open and confessed. The Sūnas (Sūnas), of whom the Sūna of whom the Sūnas, who sacrifices, is the best known, is the most interesting. As many of the sun-worshippers, perhaps because they are identified with the sun, it is possible that it was a totemistic rite.

The worship of the sun is also an important part of the daily life of the Hindu. It is observed in all the important religious ceremonies in India. It is observed at the time of the new moon, at the time of the full moon, and at the time of the partial or total eclipse of the sun. It is also observed at the time of the solstices and equinoxes.

The sun-worshipers of India are known as the Sūnas, and they are considered to be the most ancient of the sun-worshippers. They are known to have existed in India since the earliest times, and they are mentioned in the Rigveda, the oldest of the Hindu scriptures. They are described as being a race of people who worship the sun, and they are said to have lived in the north-eastern part of India.

Rahm and Ketu, with Saturn, are deities of ill omens who presage sickness and all kinds of trouble, and to be born when one of these is in the ascendant is a grave misfortune. The remaining planets are propitious, especially Mercury, Venus, and Jupiter, in concert, and they give the gifts of wisdom and all knowledge and skill.

In the Rigveda nakṣatra is the name for a constellation in general. Universally, however, in later astral lore, the semblance of the nakṣatra are the lunar mansions, or stations, through which the moon passes, as the sun through the twelve signs of the zodiac. Originally these seem to have been 27 in number, but in the later literature and in astronomical tables 28. Mythologically they are the wives of the moon and daughters of Dakśa, one of the Adityas. Like the planets, the nakṣatras are important and influential deities, whose countenance is sought before undertaking a journey or making arrangements for marriage or other domestic rites. Every Hindu boy’s horoscope contains a reference to the nakṣatra under which he is born, and the best is the name of one other than that which is given him at the special name-giving ceremony (nānaddheya), which is written in the horoscope and is stated to contain always a secret word from the name of the nakṣatra through which the moon was passing at the hour of his birth.

A. S. Geden

SUN, MOON, AND STARS (Iranian).—Astronomy received much attention in ancient Persia, as is obviously implied by the current tradition that the Magi, the sacerdotal class of the Medes and Persians, were highly skilled in divination, an art which depended largely upon a knowledge of the heavenly bodies, astrology and astronomy being sister sciences in antiquity. The part which the veneration of the sun, moon, and stars played in the national religion of early Iran is well known (see art. ZOROASTRIANISM), and there is no need to stress it beyond the fact that much in the light of a professed astrologer and star-worshipper as in that of a wise man and prophet (cf. Diogenes Laërtius, Proem. i. 6, ἀστρονοµον ἂν εἰς ἀστερον αἰτίας, i. 122; Clementines Homilies, i. 3-6, Recognitores, iv. 27-29; Suidas, Lexicon, s. v. ἀστρονοµος, ἀστρονοµὸς—all collected in Jackson, Zoroaster, the Prophet of Ancient Iran, New York, 1899, pp. 250-273). The Asta and the Pahlavi books, especially the Bundahish and Dinâ-i Mainâq-i Kârat, contain frequent allusions of an astronomical nature; and Persian literature, after the Muhammadan conquest of Iran in the 7th cent., contains similar references. These three sets of sources furnish our chief supply of information, supplemented by comparisons drawn from Babylonian and Assyrian, as well as by other material.

1. Conception of the universe.—The ancient Iranians naturally based their astronomical system upon a geocentric conception of the universe. It is probable that in the earliest times the shape of the earth was regarded as round and smooth; although it is not altogether clear whether the Astavan word skaruna, ‘round’ (cognate with the Greek σφαῖρα), signified merely circular, or whether it actually meant spherical (Presệt, v. 36, xix, 19). It is almost certain, however, that in later times the globular form of the earth was recognized by the Persian astronomers, possibly influenced by Ptolemy, who was a great authority among the Arab-Persian scientists. The spherical shape may be inferred from two Pahlavi passages which apparently contain the idea of the cosmic egg—a wide-spread notion in antiquity. The first of these passages occurs in the Dâd-i Mâhâ, i. 11 (tr. in SBE xxiv. 85): ‘The sky is arranged above the earth, like an egg, by the handiwork of the creator Atharhâzand; and the earth, in the midst of the sky, is just like as it were the yolk amid the egg.’

The second Pahlavi passage is found in the Dinkart, ii. 74 (ed. Peshotan Sanjana, Bombay, 1876, ii. 72): ‘The world and the other creatures are placed together in the midst of the sky, like the bird in the midst of the egg; the sky surrounds all, as the egg does the bird’ (tr. Casartelli, Mazdâyanasman Philosophy, Bombay, 1889, p. 107). In the arrangement of the universe the earth was regarded as encompassed by the atmosphere (Av. vâyu, Phil. wâiz; or Av. vâsaka, Phil. spân), above which was the sky or firmament (Av. O.P. asman, Phil. Așmani, lit. ‘stone’). The earth; Plutarch again rose the sun, the moon, and the pyrean realm (Av. a mano yâsâ, lit. ‘endless lights!’), the abode of Ormazd and his angels. Through a misapprehension of the true facts, however, and not knowing the relative position of the sphere of the stars (cf. Phil. Atrâ-Visrâv, vii. 1-13; Bundahish, iv. 4; Zât-Spâram, vii. 6; Sâyast lâ-Sâyast, xii. 5; Gr. Iran. Bund., tr. Darmesteter, Le Zend-Avesta, ii. 310; Dâd-i Mâhâ, i. 11, xxiv. 2; Av. Vendidad, vii. 52; and consult Jackson, ‘Die iranische Religion,’ § 66, in Geiger and Kuhn, Grundriss der iranischen Philologie, ii. 671-672).

3. Sun and moon.—In the Zoroastrian ritual, as preserved in the Avesta, both the sun (hvora) and the moon (mâh) receive high veneration individually, and each has a special hymn of praise devoted to its glorification (Yâdst, vi. and vii.); besides, minor litanies and prayers are consecrated to their particular service (Sîrâzd, i. 11, ii. 11; Yâdst, vi. 1-7; Vindâk, i. 1-10; Nyûdâk, i. 1-10, ii. 1-11). A similar degree of reverence was accorded the moon among Parthian and Sassanian times, as is shown by the Pahlavi texts themselves and by allusions in the Greek and Latin classics (e.g., Phil. Sâyast lâ-Sâyast, vii. 1-3; Dinkart, i. 61, 6, the former translated by v. 297-298, and the latter by Peshotan Sanjana, Bombay, 1875, i. 47, and tr. p. 48: cf. also such classical writers as Strabo, xv. 3, 13, p. 732; Ammianus Marcellinus, Hist. xxxii. 3, 36; Pliny, Hist. nat., xxxvi. 11, 12; Strabo, Geogr., xxxvi. 11, 12; Apollodorus, Theog., xxxvii. 13; and Nicolaus Damascenus, frag. 66, p. 401, ed. Mührer). The supremacy of the sun among the heavenly bodies is naturally emphasized in the Avesta (e.g., Yâdst, vi.), and its various positions in the heavens are described in Bundahish, v. 1-7, and Sâyast lâ-Sâyast, xxi. 1-7. In the latter passage there are to be found special observations of the midday and afternoon shadows with respect to the sun’s altitude in the various zodiacal constellations. Solar observations were important in determining the various times of day for performing the sacrifice.

The moon, like the sun, is invoked because of its beneficent influence (Yâdst, vii. 1-7), and there are several specific allusions to its periodic phases (e.g., Yasna, xiv. 3; Yâdst, vii. 2-4; Fragment, ii. 13-14, 29; Dâd-i Mâhâ, ii. 6, xxvii. 5; tr. West, SBE xvii. 210-211, 215). The connexion between the moon and the tides was fully recognized in Sassanian times, and a crude attempt was made to explain it (see Bundahish, xii. 12, 13, 14-17; Zât-Spâram, vii. 14-17). Eclipses, both of the sun and of the moon, were regularly taken into account ‘in the calculations of the astronomers,’ at least under the Sassanians, as is shown by Dâd-i Mâhâ-i
Dinik, lxix. 1-7, and the cause of these observations was thought to be the intervention of two bodies that revolved around the sun in particular. Six to seven of these, are alluded to as guiding the quarters of the heavens into which the Zoroastrians divided the firmament. The chief star in the Avesta, as elsewhere, is called Tishtya (Av. *Tishtya*). Only its upper part, unconnected with Sirius, is alluded to. Tishtya is regent of the eastern division of the sky, an opponent of the meteorites, and the bringer of rain by overcoming Apascha, the demon of drought (*Yad)*, viii. 1 f. (*Bundakdih*, ii, 7, v. i., ix. 2). The fixed star Satavaha (Av. *satavaša*), Phl. satavā, `having a hundred servitors', which is possibly to be identified with Fomalhaut, is an ally of Tishtya, and lord of the southern heavens (*Yad*, viii, 9, 32, 43, 44; *Bundakdih*, ii, 7, v. 1, xiii. 12; *Sāyastā-l-Sāyastā*, xiv, 5, vi. 16). The guardianship of the west is entrusted to Yavant (Av. *yavant*, Phl. *sawand*, 'victorious'; cf. *Yad*, xxx, vii. 12, *Apidh*, ii, 8; *Bundakdih*, ii, 7, v. 1; *Maino-i Khorat*, xlix. 12; *Sīkand Gāmānī Vīyār*, iv, 28-38), while the keeping of the north is consigned to the constellation of Urha Manah (Av. *hāt-pō-trinīya, Phl. hāt-pō-trinīya*, 'with seven signs'; cf. *Yad*, viii. 12, xii. 28, xiii. 60; *Bundakdih*, ii, 7, v. 1, xiii. 12; *Maino-i Khorat*, xlix. 12; *Sīkand Gāmānī Vīyār*, iv, 28-38). The Pleiades (Av. *pāz-īz-īz*) are mentioned in the Avesta (*Yad*, vii. 12), and there are certain other allusions that may contain the names of special stars, though their interpretation is open to question (see Kari, in F. Miuller, in the Avesta in Zarathoést., ii, 7-29, Bombay, 1904). In giving an account of creation, the Pahlavi book *Bundakdih* (ii. 5) sets the number of stars at 6480 (or 64,800, according to another reading). This figure is not uninteresting when taken in connexion with the fact that astronomers generally allow that between 5000 and 8000 fixed stars are visible to the naked eye. Regarding the identification of certain of the major stars, though some are positively sure, reference may be made to a monograph by Muncherji P. Kharegert, 'Some Heavenly Bodies mentioned in Old Iranian Writings', Bombay, 1914, p. 372. The Pleiades are divided into two sub-divisions: *Tora* and *Madras*, in the Avesta, *Zarathoést.*, ii, 7-29, Bombay, 1904. In giving an account of creation, the Pahlavi book *Bundakdih* (ii. 5) sets the number of stars at 6480 (or 64,800, according to another reading). 4. Planets, meteorites, and comets.—In contrast to the fixed stars and regular constellations, the planets, meteorites, and comets were held by Zoroastrians to be disturbers of the established order of the universe, and consequently to be of Ahiranian origin and evil nature—a point of view directly opposed to that of Babylonians, where the planets were looked upon as distinctly beneficent in character (cf. Jastrow, *Religion of Babylonia and Assyria*, Boston, 1895, p. 379). Of course, the planets Mercury, Mars, Jupiter, Venus, and Saturn (the only five then known, but making seven with the sun and the moon, by the side of which they were usually mentioned) were held given, respectively, in Pahlavi the eponymous names *Tr*, *Vahrām*, *Akharmazd*, *Anāhīd*, and *Kēvān*, derived from divine names, including the name of the god Ahura Mazda himself, because these beneficent powers influenced the most intimate influences exercised by the planets (Bundakdih, i, 1-2; *Sīkand Gāmānī Vīyār*, iv, 1-5; *Zād-šaram*, i, 10, iv, 7-10, vi. 1-2; and consult the list in al-Āmmari, in *Sāhān*, Col. 172). The Persian treatise *Uṣūl-i Īslām* (tr. Vullers, *Fragmente über die Religion des Zorooster*, Bonn, 1831, p. 52) states that they originally bore the names of demons, but were afterwards given the designations of the planets. At the same time it is not impossible that we have in the Babylonian translation of the Babylonian names of the planets, *Nabu, Nergal, Marduk, Istar, Ninib*, as they appear from the equations, Marduk (lord of the gods) = *Aθārmazī = Jupiter; Nergal (god of war) = *Vahrām = Mars;* and *Istar = Anāhīd = Venus;* on the confusion between *Sīrīn* (Sūrīn) and *Sīkand* (*Zorooster*) 2) compare the note by Gray, *ERE* i, 798; and, for the Babylonian names of the planets, see *Jastrow, Religion of Babylonia and Assyria*, pp. 370, 484-486. This parallel, in any case, is of interest because the Sanskrit names given by the Hindus to the planets show no likeness to the Babylonian (cf. Weber, *Vorlesungen über indische Literaturgeschichte*, Berlin, 1878, p. 268 f.). Shooting stars are alluded to in the Avesta (*Yad*, viii. 8) under the name of *karmān sādor*, a designation meaning, perhaps, 'worm stars'; and there are several passages in both Avesta and Pahlavi literature, which allude presumably to comets (*Yasna*, xvi. 8; *Bundakdih*, v. 2, xxviii. 44, xxx. 17; *Dādāstān-i Dinik*, xxviii. 55, lx. 2).

5. Signs of the zodiac.—The names of the twelve signs of the zodiac, at least in Persian times, correspond in concept with those familiar to us through the Greek and Latin designations, and are parallel likewise with the Babylonian, from which, like the Indo-Germanic zodiac in general, they are believed to be derived, and of which their names are translations—a phenomenon precisely paralleled in India and in most of the Asiatic countries (see Ginzel, *Handbuch der Chronologie*, Leipzig, 1906, pp. 78-88). Thus in Pahlavi we find *Parāk* ('Rām', *Aries*), *Tārā* ('Bull', *Taurus*), *Pē-pathur* ('Two-figures', *Gemini*), *Kalhak* ('Crab', *Cancer*), *Sēr* ('Lion', *Leo*), *KhuSak* ('Maiden', *Virgo*), *Tartādūk* ('Balance', *Libra*), *Gasdām* ('Scorpion', *Scorpio*), *Nēmosp* ('Half horse', *Sagittarius*), *Vahik* ('Goat', *Capricorn*), *Dīt* ('Water-up', *Aquarius*), *Mašīk* ('Fish', *Pisces*). The names of the twenty-eight lunar mansions, as recognized in the subdivisions of the astronomers (Av. *zūrāt-i hāmārdakān*), are given in the *Sāhān*, and it is probable that the various designations is by no means sure, and the individual identification of the names remains, therefore, uncertain, even when compared with those in the Sogdian and Khorasanian list, given about A.D. 1000 by al-Birūnī (*Chronology*, tr. Sachan, p. 227 l.).² Possibly some further light may be gained from a study of the terminology used for these asterisms by the Hindus, Chinese, and Arabs, if not by the Babylonians (see Ginzel, *op. cit.*, pp. 70-76). Such an attempt has already been made from the Sanskrit side, in comparison with Avestan and Pahlavi, by a Parsi scholar named Anjali, in a piece entitled 'Asterisms in Iranian Literature' in *Cmna Memorial Volume*, Bombay, 1900, pp. 216-227.

6. Prediction of events.—Like the reference in the preceding paragraph to the minor civilizing influences used by the astronomers (*Bundakdih*, i. 3), there are kindred allusions in Sasanian literature to the calculations of the astronomers or to the com-
SUN, MOON, AND STARS (Iranian)

87

putations made by astrologers with regard to observing favourable or unfavourable conjunctions of the stars (e.g., Dātāstān-ī Dinik, lviii. 3; Sikand Īrānūnī Vījār, iv. 28; Epistles of Mānuśīkār, p. 256). These were known even though written in Pahlavi. Astronomers, however, disagreed with his ‘wise men and constellation-knover’ (dānavakn va axtar-mārān in the Pahlavi text Kārātūn-ē Ārtakshārī Pāpakān, ii. 4–5, ili. 5–6, or Pahlavi, p. 1808, pp. 10–11, 15–16), and their knowledge of the position of the stars at the moment enabled them to predict to him future events. In a Pahlavi work dated A.D. 881 and entitled Epistles of Mānuśīkār, ili. 9–11 (re-translated by West, SBE xxviii, Introd. p. xlvii), there is a specific allusion to a set of astronomical ‘tables’ (Pahl. zık, cf. Arab. zij, and the Byzantine Gr.ζῆς of Theodorus Meliteniotes, ed. Usener, Ad historiam Astronomicae Symbolae, Bonn, 1876, p. 14), which were constructed by ‘the great Shatru-ayār’. See, more fully, art. SUN, MOON, AND STARS (Muhammadān), p. 599 below.

The recurrence of such events, as well as those of Ptolemy and of the Hindus.

7. Astronomical works.—Some of the works from which citations have been drawn above, like the one last quoted, actually belong to the early Muhammadān period (i.e., the third century of the Hegira), but were composed in the Pahlavi. Astronomy, influenced by Arab science, continued to flourish in Iran under Muslim rule. The notable scientific achievements of the great savant and chronologist, al-Bīrūnī of Khiva (973–1049), are sufficient to prove that fact, and it is certain that computations of the positions of the heavenly bodies must have played an important part in the reform of the calendar and establishing the new Jaliālī era, in 1079, by the Seljūk sultan, Jalāl-al-dīn Malikshāh, under the direction of a commission of scholars headed by the well-known astronomer-poet, Omar Khayyām. Omar, in fact, had been summoned to Nīshāpūr by the sultan, four years previously, to make observations in the royal observatory, and there he constructed the Zīj-i Malikšāh, ‘Astronomical Tables of Malikšāh’, which were employed in the royal calendar reform. The names of two of his colleagues engaged upon the reform were Abū’l-Muẓaffar al-Iṣfahānī and Māmān ibn Najāb al-Wāṣīṭi (see Browne, Literary History of Persia, iv. 349, p. 163). A section of a large work composed in 1082–1083 by Kāi-Kān and entitled Qā绝缘-Nāmeh (ch. 34) was devoted to ‘astronomy and mathematics’ (ed. Teshrīhu, 1255; tr. A. Quatremère, Paris, 1897; cf. Browne, Lit. Hist. Pers. ii. 277). The Persian poet Anvari, of the 13th. century, was a great astrologer, and a conjunction of the planets in the sign of Libra, calculated to take place on September 16, 1188 (or in October of the preceding year, according to other accounts), led him to predict dire calamities for that day; but happily they did not occur (see Browne, Lit. Hist. Pers. ii. 368; Horn in Gīrāt, p. 362–365). In the 14th. century, the Mongol ruler Hulagu Khan, grandson of Chingiz Khan, established a celebrated observatory at Maragha, in Azerbaijan, Western Persia, the building of which was begun in 1256, and of its ruins are still to be seen (cf. Wilson, Persia: Life and Customs, New York, 1895, p. 77). Hulagū’s astronomer-royal was the learned Naṣīr-al-Dīn of Tūs (1201–1274), whose Zīj-i Hūrānī, or almansiya and astronomical tables, was a notable contribution to science (see Browne, Lit. Hist. Pers. ii. 484–486). The names of several other andover Medieval Persian astronomers, with a mention of their tables, are found in the Byzantine treatise of Theodorus Meliteniotes, referred to above (ed. Usener, pp. 13–14). Best known among the astronomical tables, however, are those of Ulugh Beg, grandson of Timur and founder of the observatory at Samarqand, in which the astronomers (albeit in 1231–1232), and eventually, written in Arabic, were translated into Persian and were made accessible in Europe through a Latin version by Greaves (Gravius, London, 1622), and in Latin and Persian and Latin (Oxford, 1665), and more recently by Bailly (London, 1843) in Memoirs of the Royal Astronomical Society, xiii. 79–125. With reference to the present state of astronomical studies in Persia itself, one of the largest meteorites in the world is preserved as a curiosity in the Shah’s palace at Tehran to-day; but there is no astronomer-royal to know its true value, and Persia must still wait a renaissance before independent work in studying the heavens is done by those of native birth.

3. Influence of the heavenly bodies.—The astrological aspects of Persia’s early studies of starlore and sun have already been indicated above. In fact, there is little reason to doubt that ‘judicial astrology’, or the attempt to determine scientifically the presumed influence of the heavenly bodies upon the world or upon the destiny of events, is taken more highly than natural astrology, or astronomy in our sense, which confines its investigations to determining the motions and positions of the stars, sun, and moon, in order to gain more strictly scientific results, as well as their influence on the welfare of mankind (e.g., Yat, vi. 1–5, v. 5; Bundahish, vii. 2–4, and elsewhere), while the stars also entered into the sphere of human activity by exercising a kindly sway over events, the most powerful of them being the star Tsītryā, aided by Satavānās in the Avesta (Yat, viii. 1–62; Strīzh, i. 13, 18), combats the demon of drought, when invoked by men, and confers blessings upon his faithful worshippers. The victorious star Vanan, (Yat, xx. 1) regulates the influence of evil; and Hapīr-īrānī (Ursā Major) is effective even in tempering the torment of the souls in hell, a region located in the North (Martano-dī, lxxvii. 12, 13; cf. Yat, vi. 15–21; Sikand Īrānūnī Vījār, iv. 31–33). The three fixed stars or constellations just named are regarded in the Pahlavi book Sīyatat la-Sīyatat (xiv. 5–6), which was written about the 7th. and 8th. century, but contains, in the section about the Tsītryā, exercising an influence upon the efficiency of the sacrifice during the time of their ascendancy. In another chapter of the same work (Sīyatat la-Sīyatat, xxii. 1–7) a specifically fortunate character is ascribed to the shadow of the noonday and afternoon sun when occupying certain positions in the zodiacal signs; and in Dātāstān-ī Dinik, vi. 9, the stars are synonymous with destiny. The malign influence ascribed to the planets has been sufficiently indicated above, and need not be referred to again in this section.

Sufficient reference has likewise been made to the part played by astrological astronomy and horoscopes both in Sassanian and in Muhammadān-Persian times. We need only recall the allusion to the last of the Parthian kings, Ardavan, and his astrologer Astūnūnī Īrānūnī (al-Bīrūnī, Gronoendy, tr. Sascha, p. 63). A good illustration, in the 17th. century, of ephemerid tables that were used also for horoscope purposes may be found in a work translated from the Arabic, Persian, and Turkish, with a Latin commentary,
SUN, MOON, AND STARS (Japanese).

In the ancient mythology of Japan the sun-goddess plays the most important role, while the moon-goddess, her brother, occupies an insignificant place, and almost nothing is told about stars. The commonly accepted story is that the sun-goddess (Aiorior panta, a blue hunch-backed deity) and the moon-goddess (‘Izuki-yemi, ‘the ruler of the moonlight night’) were born, together with the storm-god (Susa-no-wo, ‘the swift-impetuous’), of the couple who were the progenitors of all the deities and archipelago. In this story the creation of these deities is conceived evidently as a generative act, whereas another version makes the emergence of the two deities from the ‘white copper’ mirrors the work of the male progenitor alone. Perhaps a more interesting version of the story is that the sun and the moon were produced out of the eyes of the progenitor, when he was washing in order to purify himself from the stains with which he had been contaminated on his visit to the infernal world after the death of his consort. Though there are these different versions, the common trait and predominant factor in the story is that the sun-goddess is considered to be the supreme ruler of heaven and earth, and also the progenitrix of the ruling family, who claim to have handed down from the goddess herself the insignia of the throne (see below). Now the relation between the sun-goddess and the moon-goddess is based on the natural phenomenon that the two are visible alternately by day and by night. The story is as follows:

The sun-goddess once commissioned her brother, the moon, to go down from their heavenly abode to earth to see Ukemochi, a heavenly wine. When the moon obtained the moon with the food-stuffs taken out of her body, the moon became so enraged and threw them into the food. The sun-goddess was so disgusted with her brother’s wantonness that she said to him: ‘That is a wicked deed. I must not see your face again.’ Hence the sister and brother appear alternately in heaven.

The intention of the story is evident, but at the same time it shows a characteristic of the sun-goddess as the matron of agriculture, which played a great part in the myths and worship of the goddess.

Thus, in contrast to the prominent role played by the sun-goddess, the moon plays a very inferior part, a much smaller part is played by the stars. A star-god is mentioned in the ancient myth, but his rôle is quite ambiguous, while a festival in honour of certain stars (the stellar constellations called the Hordman and the Weavermaid) was derived from China. All other stories and worship of stars are much later and were introduced chiefly through Buddhist agency.

Though some of them may have been derived from other sources—Hindu, Persian, or Chinese. The most prominent star-worship is that of the Pole star, together with Ursus Major. These stars, conceived as a female deity, are worshipped by Buddhists as the protector of the country as well as of individual fortune, while the Shintōists identify them with the Ōkotsū, ‘palace of iridescent subtlety’ (Shi-hi-kyō in Sino-Japanese), where the highest deity, Shin-tō, is supposed to reside. It is believed that the sun and moon, stars and constellations (Minaka-nushi), are believed to reside. But this Shintō worship is of late origin; it was especially emphasized by a Shintō theorizer in the early part of the 19th century.

When Buddhism was introduced into Japan (6th cent.) questions came up as to the relationship between the indigenous deities and the Buddhist pantheon, the Buddhist teachers tried to discover analogies between them and to explain that the Buddhist deities were the original nomina and the native ones their later manifestations. The most striking analogy was found between the sun-goddess and the aspect of Buddha’s personality conceived in the sun-myth. The difference in gender concerned the syncretist but little, partly because the Japanese language had no genders at all, partly because the manifestations of the sun-goddess were not sex-specific. The result was an identification of the Japanese sun-goddess with Buddha Vairocana (‘the illuminator’), and this conception exercised a wide influence on doctrine and worship during the sway of the syncretic Shinshō from the 8th century onward. In the middle of the 19th century it was dissolved by force. Among the theorets of the Shinshō syncretism we may cite one, Kanera (1402–81), who explained sun, moon, and stars as corresponding to the three insignia of the throne, i.e., the sun to the mirror, the moon to the jewel, and the stars to the sword. This eclectic theory was backed by the popular conception of the ‘three-illuminating bodies’ (San-kō) and their worship. People even nowadays regard with simultaneous appearance of the three as an auspicious occasion for worship and as a sign of special blessing to the country—e.g., when on an autumn day the clear sky and the comparatively weak light of the sun cause the new moon and a certain star (Venus) to be visible to the eyes. Not only was various conceptions of the celestial bodies were used for methods of divination and predictions. In these methods Hindu, Persian, and Chinese elements may be detected, and their influence is still a living force among the mass of the people.

SUN, MOON, AND STARS (Muhammadan).

I. ASTROLOGY—1. Name. Among the Muslims the technical name of astrology is ʿilm (or ʿiniʿat) al-ḥabām an-nuṣyāmīn, 2 science (or art) of the decrees of the stars, ’ilm al-ḥabām, science of the decrees. Sometimes, though rarely, in place of al-ḥabām its synonym ʿiḥrād is found. Another name is an-nuṣyāmān (niḥrān) or ʿilm an-nuṣyāmān. On the other hand, the names ʿilm (ʿiniʿat) an-nuṣyām, science (or art) of the stars, ’ilm al-ṭarāqān, mean astronomy as we know it today, and they also mean both of these sciences taken together. The word ḥabām also signifies ‘judgments’, ‘judicial decisions’; accordingly the first of the above mentioned terms given above in the Middle Ages translated in the Latin versions of Arabic works by scientia judiciorum stell-
2. Divisions.—The Muhammadans usually arrange the science of astrology under five principal heads:

(a) The fundamental principles of astrology, viz. the different divisions of the ecliptic, the properties of the various celestial places and of individual planets, the methods of determining the ascendant and the 12 celestial houses (bay'at, 'domus'), the planetary conjunctions, etc.

(b) Prognostics of a universal character (al-akhbām 'ālā umūr al-'alam), viz. those which refer to the vicissitudes of kingdoms, dynasties, religions, and classes of men, events, winds, rains, the prices of goods, etc. This part of astrology, which Ptolemy calls ṣawtulmam and kalēdn, 'universal apotelesmatics,' is usually called by the Arabic term al-qa'āma al-qārī 'ulūm annur muni, since a great part of these prophecies is deduced from the planet which has the dignity of 'significator' (qārīn, dālī, ḥujjat) at the moment when the sun enters Aries, i.e. at the beginning of each tropic year. This universal part of astrology is subdivided into three sections: (i) predictions drawn from the various kinds of planetary conjunctions (qārīn, qārīn), (ii) predictions based on the 'revolution annur mundi,' (iii) predictions relating to the 'mutations aeris' (taghasyur al-hand), i.e. to meteorological phenomena, and which are deduced from the lunar stations, or from the heliocentric rising of Sirius, etc.

(c) Individual prognostics relating to the vicissitudes of individuals, derived from the planet or other celestial place which may happen to be the 'significator' at the moment of birth, and therefore of influence on the future of the individual for successive tropic years. This part of astrology Ptolemy calls ṣawtulmamīk and the Arabs al-mawālid, 'nativitates.'

(d) Mu'mid, 'interrogations' (fawqīj, fawqīj), or that part of astrology which is concerned with replies to questions, e.g., the circumstances of a distant relative, the author of a theft, the hiding-place of a runaway slave, etc. The 'interrogations' are always connected by the Muhammadan astrologers with the division of the heavens into 12 'domus.' From the astrologers who follow the pure tradition of Ptolemy do not admit the 'interrogations.'

(e) Ḩiyārāt, 'elections,' i.e. the choice of the propitious moment for doing any particular thing. The most common method is that of determining such a moment by seeking in which of the 12 celestial 'domus' the moon is found at that particular moment. This was also very probably the method employed by the Greeks; but along with this the Muhammadan astrologers use another method, of Indian origin (but also attributed to Dorotheus), which consists in deducing the fitting moment for action from the place which the moon then occupies in one of the 28 lunar stations or mansions (mānāt). The 'elections' also are not admitted by the astrologers who follow Ptolemy's teaching.

3. Place among the sciences.—The science of the stars, which is also known as the Tetrabiblos, or Quadrupartium, consists of two parts: the first studies the appearances of the heavenly bodies either with respect to each other or with respect to the earth; the second seeks the relations and significations of those appearances, the changes which take place in the sublunar world. The first part is a science which stands by itself, and can be studied independently of the second; this, on the contrary, cannot do without the first. This conception that astrology is but the sister of astronomy, a branch, that is to say, of the 'science of the stars,' which in its turn is a part of 'mathematics' ('ulum rlqdiyāyih, 'ulum al-lamīnayyih, ta'alum), is common to all the Muhammadan astrologers and astronomers, and is accepted also by some philosophers (al-Farābî in his De Scientiis, and the Ibyan ag-sa'af, or 'sincere companions' of the 10th cent. in their Epistles, by the author of the Mosafīt al-alum, or 'Encyclopedia of the Sciences' (10th cent.), and by the great historian philosopher Ibn Hālīkān (Proleg. lib. vi. cap. 13; M. G. de Salines' Fr. tr., Paris, 1862-68, iii. 122 f.).

Astrology, however, is classified in a different way by the majority of the philosophers. Muhammad writers are usually divided into four great categories: (a) sciences which relate to religious law ('ulum sharā'īyayih), that is to say, in addition to theology and canon law, the learning which serves as an introduction to them, namely, grammar, lexicography, rhetoric, poetry, history, etc.; (b) intellectual or philosophic sciences ('ulum ṣaqilayyih or hikmāyyayih), which the author of the Mosafīt al-alum, thinking of their origin, calls 'ulum al-saqā'af, 'foreign sciences.' The intellectual or philosophical sciences in their turn are for the most part divided into the three sections already fixed by the later Greek peripatetics and by the Neo-Platonic expounders of Aristotle (e.g., Ammonius, Simplicius, and Johannes Philoponus), namely: (a) metaphysic (al-hikmah al-'ajam, théōría, τα μετὰ τὰ φυσικά); (b) natural sciences (al-fikhnayyih al-'atbīyyayih, 'natural philosophy,' φυσικά); (c) mathematical sciences (al-fikhnayyih ar-riqādīyayih, μαθηματικά). These last correspond to the Quadrivium of Boethius, namely, arithmetic, geometry, astronomy, and music; but the others are divided into two parts, the natural sciences are subdivided into eight fundamental parts, named for the most part after the titles of the corresponding Aristotelian works, namely: Ausculatioophysica, Generatioet corruptum, Cosmum et mundum, Meteoroe, Mineralia, Vegetalia, Animalia, de Anima. Avicenna (Fia allām al-alum al-ṣawtulmamīk, in Ti rul 11, Constantinepol, 1266 A.H. [=A.D. 1881], p. 71 ff.). Muhammad al-Akāfī an-Suhawī (Irshād al-qāṣīd, ed. A. Sprenger, Calcutta, 1849; the author died in 749 A.H. [=A.D. 1348]), Hājjī Hālīfān (in the introduction to his Lexicon bibliographicum et encyclopaedicum), and others consider astrology as one of the 7 (or 9) Puruṣ' 'secondary branches' of the natural sciences, placing it, that is to say, beside medicine, physiology, interpretation of dreams, alchemy, the science of talismans, etc. This same classification of the natural sciences is found in al-Ghazālī (fī 105 A.H. [= A.D. 1111]), who, in his Tahāfūt al-

1 Each of these two great categories afterwards gave place to the distinction between the 'mathematical' (al-ahdām) sciences—a distinction which has its origin in Aristotle (E. S. G. Zeller, Die Philosophie der Greecen, Tübingen, 1873-83, ii. B. 177).

2 Other divisions, indicated in the writings of the Ibyan ag-sa'af, in the Mosafīt al-alum, etc., are useless for our present purpose.

Avempace, in the Tahafut al-tahafut, Cairo, 1319 (1901), p. 121, admits, as corresponding to Arabian teaching, the eight fundamental parts of the natural sciences; but he denies that the so-called derived branches are sciences. Medicine, he says, is an art (sindah) and not a science; it has a practical and not a theoretical character; according to Avempace the same category with divination from the flight of birds and from the movement of quadrupeds (zijar) and divination in the form of vaticinations (khahānādā), with physiology and with the interpretation of dreams, all being arts which have as their aim the prediction of the future, but which are not sciences either theoretically or practically, however it may be supposed that one may sometimes derive some practical advantage from them.

A curious classification is found at the beginning of the untitled book De Interrogationibus (Pet-ma'sulid) of the astrologer Ya'qūb al-Kindī, who lived during the 3rd cent. A.D. (cf. H.B.). According to the catalogue of the Arabic MSS of Berlin (W. Ahlwardt, Verzeichnis der arab. Handschriften, Berlin, 1857-99; v. 275, no. 5871), he maintains the classification of astrology, medicine, science of the stars; the last, being based not on observation, but on deduction from analogy, occupies a place between the other two.

3. Sources.—(a) Greek.—These are represented by the classic (if we may call it so) astrology of the Tetrabiblos or Quadruplicatum of Ptolemy; by the writings of Dorotheus Sidonius (1st cent. A.D.), which go back to the Greek-Egyptian tradition; by the great treatises of Menelaus and Ptolemy on the division of the zodiac into signs, and of Vettius Valens (2nd cent. A.D.); by the book on the 'decani,' the 'interrogations,' and the natalies of Antiochus of Athens (2nd or 3rd cent. A.D.), which appears especially to follow the Babylonian tradition; by the Kapris, or Contilgoarium, falsely attributed to Ptolemy; by some works ascribed to the mythical Hermes; and by an author whose name (Etimos, Zimos?) is cited by Arabic writers in a form so corrupt as to be unrecognizable. Of another Greek writer, Teucer or Teuccur of Babylon, the Arabs had knowledge through Iranian sources.

(b) Islamic.—The Muslim writers mention seven or eight Indian astrologers, whose names, however, has not as yet been possible to identify with the corresponding Sanskrit. The most important is K.n.k, or K. lkh, who, according to some Arabic writers, appears to have come to Baghdad to the court of the khalif al-Mansūr, bringing thither astronomical books of India, and, according to others, making known Indian arithmetical astrology. Of the Arabs attribute to him writings on the mumāddar (that is, on the method of ascertaining a factitious ascendant of the nativity), on the nativities, and on the conjunctions of the planets; it is therefore plain that he had adopted the part of Indian astrology called in Sanskrit horā or jātaka, which arose through Greek influence. This confirms a conjecture of F. Boll (Sphaerae, Leipzig, 1903, p. 414 f.), who, from the citations contained in the Introductio of Abū Ma'shar (or Alhambour), infers that K.n.k. had before him various texts of distant Greek science. For his representation of the figures arising in the heavens together with the 'decani,' but in general, Muslimu astrologers cite simply 'the Indians' (al-Ihind), which points to the Alhindīs.

We must further add that the influence of Indian astrology made itself felt sometimes through Persian writings and oral teaching, as is apparent from some Indian words which have passed into the Arabic terminology in an Iranian form—e.g., darjān (Ind. drekāhvat).

(c) Persian.—These are in the Pahlavi language or Middle Age Persian. The writings of Teucer of Babylon (second half of the 1st cent. A.D.) on the figures arising in the heavens together with the 'decani' reached the Arabs through a Persian version, where the name of the author, on account of the ambiguity of the Pahlavi writing, was afterwards spelt by the Persians and Arabs Tinkalās (also Tankalīsh or Tankallāsh); so that in the Introductio of Abū Ma'shar his teachings were given as 'teachings of the Persians' (mardtibāk air. Pār.) and have become synonymous names of constellations (cf. Boll, p. 415 f.). Another source was Buzurjmihr's commentary on the astrological Abodaer of Vettius Valens; the Pahlavi translation of this treatise was 'selected,' which became in Arabic al-bīzīdah and was afterwards variously and strangely corrupted by Arabic writers. The Muslims also cited as a source of astrological teachings the mythical Zoroaster (Zaradust in Arabic writings, Zarust at in modern Persian writings), whose name indeed was already frequently found in Greek astrology of the 4th and following centuries. A fourth source is the book of the natalities of [al]-Andār- zahr, son of Zādānfarrah; but we lack information about this personage, whose name is corrupted into Alincedegol in the Latin version of Alcabitius (al-Qāhīs), and into Andrapgar in the Latin version of the book of the Jiw Ibn 'Eznat on the natalities which always draws on Arabic sources. These astrological writings are ascribed by the Arabs to Ardashir the Wise (the trusted counsellor of the successor of the khanqāh) seem to be late Muslimian falsifications.

We do not know exactly when all these works hitherto mentioned were first translated into Arabic, but it is certain that the compilation of them was known in the second half of the 8th cent. A.D., that is, when Musulmān culture began. If the indication placed at the end of the unedited 'Ard mūfīd al-nāma'ah of Hernes (MS in Bibliothek Ambrosiana in Milan) is true, this book would seem to have been translated in the month Dhū l-Qu'dāh, 125 A.H., namely, in September 743 A.D., while the Umayyad khalifs were still reigning. The first version of the Tetrabiblos is due to Abū Yaḥyā al-Baṭrīq, a translator of the time of al-Manṣūr, the second Aḥbābad khalīf (130-158 A.H. [A.D. 754-775]); Dorotheus and Antiochus are also mentioned in the writings of Mā 'shī (Messahala) in the second half of the 8th cent.; all the other Greek authors mentioned above are amply cited by the astrologers of the 9th century. As has already been said, the writings of the Indian K.n.k seem to have been known at Baghdad in the time of the khalif al-Manṣūr; and about the middle of the 9th century, we shall search among the astrologers, especially among the 'followers of al-Kūnī' (Alchabas) formed expressly on Indian models. It is almost certain that the Persian books were translated by members of the family...
Nawbhat, known by their translations from Pahlavi into Arabic (cf. Kitāb al-Fīrāt, pp. 244, 274), whose head was astrologer at the court of al-Manṣūr; and in any case the antiquity of Iranian astrology is supported by the fact that in the works of Māshā’ī Allāh, according to the Latin translation of John of Seville, technical terms of Iranian origin are freely used: e.g., *ahdleyg (ahludyg), alicohen (al-kududah), taliyak.*

Side by side with the written sources there was, without doubt, the oral tradition of the peoples converted to Islam. Among the Syrians Christianity had almost suffocated astrology, although Bardeanes (154–222) had reconciled Christian dogma with an attenuated form of predestination by means of the stars; all the same we know that at Harrān, the ancient Carhae, special astrological traditions flourished along with other pagan sciences.

It is further probable that Theophilus, son of Thomas, a Christian of Edessa who was astrologer of the khaliif al-Mahdi (A.D. 755–756), and who has been cited by several Muslim astrologers as an authority on the subject of 'elections,' again took up with Syrian oral tradition. In the same manner it is natural that there were absorbed into Muslim astrological doctrines and practices of the Aramaic centres (tending to paganism) of Mesopotamia and Babylonia, of the Egyptians, etc. Finally, we must not forget the Judaic element which had a notable part in the first ages of Musulmān astrology; in fact, among the principal writers on astrological matters in Arabic in the 2nd and 3rd centuries of the Hijra are the Jews Māshā’ī ‘Allāh, ibn Bishr, Rabban al-Talāri, and Sanad ibn Allī. 5.

5. Special character.—The civilized peoples over whom the Arabic domination of the 7th, 8th, and 9th centuries extended, viz. Greeks, Copts, Syrians, Persians, and Indians, had already imagined all the possible fundamental combinations concerning the influence of the stars over mundane events; consequently it was impossible for the Musulmān astrologer to find out anything substantially new. On the other hand, the principal justification of astrology consisted precisely in presenting itself as the jealous preserver of that which an age-long respect and veneration had taught, the wise of preceding generations. The office of the Musulmān astrologers consequently was reduced to a choosing of what seemed suitable among the many principles and methods of their predecessors, and an arrangement and combination of elements of very diverse origin, amplifying and completing particular points on which it was easy to give free rein to fancy. All this, as we have said, was done with the widest eclecticism. But, though nothing really original is met with in the field of astrologers properly so called, there is, all the same, a point on which Arabo-Musulmān astrology is far superior to other astrologers, including the Greek, and represents a real progress. This consists of a wide and continued application of spherical astronomy and of exact mathematical processes to the methods of astrological research. Among the Greek astrologers the calculations are very rough; area of the ecliptic are substituted for area of the equator, right ascensions for oblique ascensions; rough tables, useful for a determined terrestrial latitude, are also employed for different latitudes; the latitudes of the planets are neglected in the calculation of the radiations (projectiones radiorum, *māfirīsh ash-šulw*). Among the Greeks, however, we see a clear disposition of an ordered method of determining mathematically the 12 heavenly ‘domés,’ which, however, form one of the hinges of the astrological system. Ptolemy himself, teaching minutely in the *Tetrabiblos* how the ‘directio’ (*epórion*) is calculated, completely neglects the latitude of the planets. Characteristic is the fact that Ptolemy, in the *Almagest*, occupies himself with three problems useful only to astrologers (identification of the shadow of the planet in the solar disk with respect to the ecliptic and to the horizon, position of the stars with respect to the sun in consequence of the daily motion of the sphere, appearance of the solar eclipses calculated with respect to the sun), and which even in astrology are of very small importance; and, on the other hand, he does not make the slightest allusion to other problems of spherical astronomy which would be of capital importance for apotelmatics. Musulmān astronomers, on the contrary, teach exact calculations, and often even prepare tables for all the mathematical problems required by astrology: determination of the 12 eccentrics; *domes* of heavens, ‘directio,’ ‘revolutiones annorum,’ ‘profectio,’ ‘projectio radiorum.’ Thus astrology, among the Musulmāns, becomes an art which demands a mathematical preparation, and which tends to give an ever greater mathematical complication and exactness to its methods of research among celestial phenomena. E.g., the *manarr* in astrology (‘passage [of the planet] through the houses’ or ‘supereminentia,’ of our astrologers) corresponds exactly from an apotelmatic point of view to the *kávmpopóros* of the Greeks; but whilst for the Greeks this takes place when a planet is situated to the west of another, viz. has a lesser longitude, for the Arabs the *manarr* takes place when a planet in its own epicycle is distant from the apogee of the epicycle less than another planet is distant from the apogee of its own epicycle. Consequently, its calculation in Musulmān astrology is not a light matter, and requires the employment of complete planetary tables. We can understand, therefore, why the theory of the *manarr* of the planets is not only expounded in several treatises of spherical astronomy, but has also given rise to special monographs. The importance of all this is plain; in the Hellenistic world astrology flourishes while astronomy decays; in the Musulmān world of the Middle Ages astrology becomes a potent ally of mathematical and observational astronomy.

6. Polemic concerning astrology.—From Islam astrology must have had a much better and more respectable reception than from Christianity. The latter had to combat in the teachings of astrology an entire world of pagan ideas and cults; it had to contend against the polyhymnian and dualistic wish of the Christian free will. In the 7th and 8th centuries A.D., however, the pagan elements of astrology were completely modified; they were so entirely hidden under a verbal formalism as to be no longer recognizable; and, on the other hand, orthodox Islam, with its doctrine of predestination, which excluded the freedom of human actions, was, at bottom, very far removed from the *clausura* of the Stoics and of many astrologers of antiquity. When we consider that the first Musulmān theologians took no heed whatever of the sciences which did not appear to have any relation to the religious combat of Islam, we easily understand how astrology had been able to advance unimpeded through its first stages almost up to the end of the 2nd cent. of the Hijra. It is not, therefore, astonishing that Abū Ma’shar, writing his *Introductorium* in 845 A.D., among the ten categories of persons hostile to astrological teaching, makes no mention whatever of opponents of astrology, and that he makes his defence of astrology to consist (Introduction, 1. 5, fol. b 2 v., b 3 v.) only in an amplification of the arguments with which Ptolemy (*Tetrab.*, 1. 3)
had already manifested the material and moral advantages of foreseeing the future, and there was no reason to be adverse to the work. The 'philosopher of the Arabs,' al-Kindi, who died a little after 870 A.D., regards astrology as an integral part of philosophy (Islam, falsafah); he seeks its confirmation not only in the four mathematical, but also in the physical and metaphysical doctrines; 1 and he opposes it to many popular prejudices. Al-Kindi was perhaps the only one who endeavoured to refute astrology. But it is a question whether the arguments and preconceived notions form the principles and the methods of astrology.

But matters soon underwent a change. Towards the end of the 2nd cent. of the Hijra the knowledge of Aristotle 2 became more diffused and profound, and in this there was no place for astrology; hence the philosophers commenced to make war against it. On the other hand, the theologians were not slow to see in the influence attributed to the stars over human actions a menace to the severely monothestic conception of Islam, more especially when later on there filtered into Musalman theology an opinion of the idea of predestination (dalil, karama), which, we believe, in the case of certain of continued creative acts became more prevalent. Moreover, the daring predictions concerning the duration of Islam 3 became an evident danger to dogma. Thus the pelagic against astrology became prevalent.

The most ancient confusion which we possess is that of Abu'l-Qasim Is'a ibn Ait, 4 drawn up in the first half of the 10th cent., and preserved in the third part of the famous Mathematical treatise Ibn Qayyim al-Jauziyah, Mi'tah dar as-altahad. 5

After an exordium in which he admits that the stars may have some influence on such natural phenomena as earthquakes and storms, 6 but confines the practice of foretelling the future by their means, he divides his dissertation into three distinct parts. The first has reference to the discordance among astronomers as to their fundamental principles concerning the nature of the causality of the stars, and an exposition follows of several fundamental principles for astrological calculations on which the various writers disagree—e.g., the method of determining the planetary 'termini,' the 'significator' (da'd, sherm), the 'pars fortuna,' the male and female nodical signs. The second part consists of the examination of many principles which are affirmed by the astrologers, but which are repugnant to good sense (mutazabat). In the third part Is'a ibn Ait cites some of the arguments adopted by the astrologers in favour of their science, and refutes them.

Contemporary with 'Isa ibn 'Ali is the famous philosopher-al-Farabi (q.v.; † A.D. 950), who, as a profound student of Aristotle, used to write against, but he was not opposed to astrology. We have a work of his on that subject, 7 which, however, is not so vigorous a conflagration as we should have expected from such a philosopher, and from such childish reasonings. This is explained by the fact that the work is merely a series of notes, published by a disciple who was to be found.

The philosophers contemporary with al-Farabi did not all share his hostility to astrology; in fact the schools which had been less subject to Aristotelian influence favoured it, as was already the case with al-Kindi. 8

With reference to this a special place is held by the Iywan as-Safa', 'Sincere Companions,' who flourished in al-Bayzah towards A.D. 900 and whose writings have provided astrologers with the mystical doctrines of the heretical Bani'is, a branch of whom was the Carmalists, which are mystical, and which, in the climate of the 3rd cent. A.D. (9th cent. A.D.) caused political disorders in the 'Iraq, and who founded an independent kingdom in N. E. Africa. The Carmalists hadraped great advantage from astrological predictions based on the theory of the great planetary conjunctions. 9 One can therefore understand that the Iywan as-Safa' did not only admitted, with Aristotle and other Arabic philosophers, that the changes (generation and corruption) of the sublunar world were consequent upon celestial movements, but also that the planets foreshadow the future and have a direct influence upon the will and the moral character. The great encyclopaedic work of the Iywan is based with these astrological ideas, among which the theory of planetary conjunctions occupies the principal place.

Favourable to astrology also are those other philosophers who lead up to Abu Sulaiman Muhammad ibn Tahir ibn Bahram as-Sijistani al-Mantaghi, who died in the 10th cent., and whose written works on astrology, a considerable number of which in the sublunar world are concerned upon celestial movements, but also that the planets foreshadow the future and have a direct influence upon the will and the moral character. The great encyclopaedic work of the Iywan is based with these astrological ideas, among which the theory of planetary conjunctions occupies the principal place.

Averroes (q.v.; † 1198) undertakes to compare astrology, not only in his great encyclopaedia, as-Sa'di, 'The Recovery of the Health of the Soul,' and in the as-Najdi, but also in a special work of which a full remuneration was made by Mehrem. 10 He demonstrates that astrology has no foundation, and proceeds to show that, even admitting its theoretical truth, it would be impossible for men to acquire a knowledge of it.

Averroes (q.v.), or Ibn Rushd († 505 A.H. [A.D. 1118]), is also a decided adversary of astrology, as appears from the severe judgment referred to above (§ 3) and from the passages in which he inveighs against astrology on Aristotle. But it would be useless to continue the review of the philosophers, who after the 10th cent. A.D. are all in agreement on this question. It is more interesting to consider the position taken up by the theologians, who—owing to the motives indicated at the beginning of this section —engaged, towards the end of the 9th cent. A.D., in a relentless war against astrological theory. 11

We have already seen the attitude of al-Jubbi. We may add here that Ibn Hazm († 486 A.H. [A.D. 1064]), who fiercely opposed the scholastic or speculative theology of al-As‘arî in Spain, gives his ideas on astrology in al-Fiqh fi l-mitali 'a-rahbi wa 'm-nilal. 12 He divides those who believe that the future can be foretold by means of the stars into two classes: (1) misbelievers and polytheists, against whom he will fight, and (2) those who first are those who maintain that the stars and the

1 Cf. the quotations in M. Steinheinscher, ZDMG xvii. [1864] 134; and chs. x. and xl of the anonymous Latin pamphlet De erroribus philosophorum (written in the second half of the 13th cent.), ed. F. Mutsonnet, Siger de Brabant, Louvain, 1868-11, pp. 18-32.

2 Ed. Théophile, son of Thomas, the astronomer of the third 'Abbasid khaliif (see above § 3), maintained that the reign of Islam would last only 600 years ( Ibn al-Maltak, Proph., ib. ib., ch. liv., tr. de Blanc, ii. 522). The philosopher al-Kindi calculated that the duration of the kingdom of the Arabs would be 605 years (see O. Lottin, 'Al-Malik al-Ali'ad,' in Monatsh. f. Klassische Forschungen, Festschrift an H. L. Fleischer, Leipzig, 1875, pp. 323-390).

3 Men like al-Jalib († 555 A.H., 969 A.D.) and the famous theologian al-Ash'ari († 503 A.H., 1116 A.D.) and al-As‘arî († 394 A.H., 1005 A.D.) were against astrology.

4 According to Ibn al-Qafi, ed. Lippert, p. 241, he died in Paris at the age of 30. He wrote in Arabic, C. 955 A.H., c. 956 A.D. (see H. R. H., also Fris, p. 120).

5 A work, included in the praesto of the Libellus copiosissimum ad magisterium juiterorum astronomorum, which al-Qahabi had written for Saif ad-dawlah, prince of Armenia, who resided from 553 to 556 A.D. (see H. R. H. p. 244-247).

6 Cairo, 1533-35 A.H. [A.D. 1905-07], ii. 158-196.

7 See A. Dhahabî, al-Makhtûbât fi 'l-Mathbûtât, p. 213.

8 See also a brief account by I. Goldziher, 'S nationalisten of the 19th century. (A.B.W, 1913, pp. 20-25.

heavenly spheres are intelligent beings, agents, of eternal duration, and disposing of earthly things either with or without God. The second are those who hold that the stars and the celestial spheres, whilst without intelligence, have been created and established by God as indicators of things which are to be followed.

The preserver of Ash'arite dogmatic theology, al-Ghazālī [† 505 A.H. [A.D. 1111]], opposes astrology in his Ḩußā'-ulām-ad-dīn, 'The Revival of Religious Sciences'.1 And the same attitude we find in the famous Ḥanbalite, Ibn Ṭamīyīyah [† 723 A.H. [A.D. 1325]].3

But the most vigorous and complete condemnation of astrology is contained in the Miftāḥ dar as-salāḥ of Ibn Qayyim al-Jauziyyah [† 751 A.H. [A.D. 1350]],5 one of the most noted theologians of the Ḥanbalite school. Only the famous work of Fico della Mirandola, Adversus astrologiam, can be compared to the 110 closely printed quarto pages of the condemnation written by this Muhammadan theologian, whose impassioned polemics press upon the adversary with an infinity of subtle distinctions which prove the force of his dialectic.

In the theological world perhaps the sole defender of astrology is Faḥr ad-dīn ar-Rāzī [† 606 A.H. [A.D. 1210]], cited above. Famous especially for his great commentary on the Qurʾān, he composed many metaphysical and astrological works, and studied medicine and mathematics. Without doubt his confidence in astrology is due to his cultivation of the sciences, and this confidence already appears in his commentary on the Qurʾān.

No theologian seems to have followed Faḥr ad-dīn ar-Rāzī in his bold interpretations of Qurʾānic passages and of religious traditions. Besides, after the writings of Ibn Qayyim al-Jauziyyah and his predecessors, polemics about astrology could no longer reckon on any novelty of argument. The considerations developed by the great philosopher of history, Ibn Ḥaldūn [† 805 A.H. [A.D. 1400]], in his historical Prolegomena,6 are alone deserving of notice.

7. Astrology in common life.—The four orthodox schools of jurisprudence and the Shi'ite school were already in existence when the war of the philosophers and theologians against astrology became fierce; accordingly, the anathema launched against it in the name of religion did not occupy much space, and the mere fact that this had its chief foundation in religious doctrine. Among some jurists of a rather later age, however, we meet with open hostility to astrology. In Muhammadan law the buying and selling of useless things is forbidden; therefore some jurists7 teach that one may not sell or buy books of astrology. Another legal prescript does not admit the testimony of misbelievers; therefore some jurists, regarding the astrologer as a misbeliever, deny him the right of acting as a witness.8 But, before theological anathema smote it, astrology was deeply rooted among all the classes of society. The courts of the Ḥāfdhīs kTAILS at Baghdad and of the numerous small dynasties which arose in the Muhammadan world after the 3rd cent. of the Hijrā received astrologers with great favour and consulted them on all sorts of questions, not only on questions of destiny, but also on striving matters of daily life. At the

2 Majmū'ut al-tawāṣel, Cairo, 1293-94 A.H. [A.D. 1876-77], i, 352-53.
3 Eld. ch. 23, 226-227 A.H. [A.D. 945-946], ii, 190-196.

foundation of Baghdad in A.D. 762, and at that of al-Mahdiyyah (in Tunis) in 916, the astrologers, either by their acts or by their quarrels, indicate the propitious moment for beginning the work. Many writings on apotropaeisms are dedicated to khilāfs, sultans, and princes. In Turkey, even at the beginning of the 19th cent., one of the chief posts at court was that of muṣaf-al-hakīmah, or chief of the astronomers. The case was similar in Persia, in India, and in Muhammadan central Asia.1 In the Thousand and One Nights not only is the astrologer with his astrolabe mentioned several times but (pp. 79 and 80 of the Egyptian ed.), but there is also a complete dissertation on the elements of astrology (Nights 254-257, in the story of the slave girl Tawaddud). Further, the considerable number of old Arabic astrologies still existing in the East and in South Europe would alone suffice to prove the great diffusion of astrology throughout the Muhammadan world; and it found strong support among the students of astronomy. Cases of persecution of astrologers by the State are extremely rare. Al-Jāḥi, Fatīmīd khalīf of Egypt, who in 404 A.H. [A.D. 1013-1014] prohibited the study of astrology, was himself of the Muslim persuasion and cultivated it, was an astrologer himself, and that decree of his is one of many acts of madness committed in the last years of his life.

In the Middle Ages, the most important writings into which European civilization has penetrated (which with the Copernican system has destroyed the bases of astrology) astrology has lost its importance and renounced the monopoly of the popular classes, among whom it has degenerated into a form of prediction without any serious mathematical and astronomical basis. On the other hand, in countries where there is little or no European influence (e.g., in many parts of Morocco) apotropaeisms still flourish, but accompanied by only rudimentary astronomical knowledge. To-day in S. Arabia the function of the astrologer is exercised especially by the gāṭī,3 i.e., by those whose duty it is to see that canon law is observed.1

8. Influence of European astrology.—The astrology of the Latin Middle Ages from the beginning of the 12th to the end of the 15th cent. is really Arabic astrology. Its sole sources are Arabic (Albohali, Albohazan, Alumasar, Alcabītius, Alchindus, Almansor, Alphadol, Aomar, Gergis, Hal, Haly, Helen Rodan, Messahala, Zahed, etc.), and this is not surprising, and not only on account of the standard Arabic translations from Arabic (e.g., the Tetribulos or Quadrupartitum of Ptolemy, and the Apocryphon or Centiloquium); the technical terminology is literal translation or mere corruption of Arabic words. In the 10th cent. the humanists rescued from oblivion the poem of Manilius and the crude compilation of Firmicus Maternus; but this was a mere literary exercise of no importance for the astrology of the 17th century.

In the Byzantine world also Muhammadan astrology leaves deep traces in many versions from the Arabic and Persian, and even in the Latin; 4 so that side by side with the works derived from the classic Greek authors appear those of 'Abū maʿṣar, 'Aḥṣaf (Ahmad ibn Yūsuf ibn ad-Dāyāh), Masūdā (Māšā Allah), Ẓābl (Saḥīl ibn Ḍisr), and other Arabic writers. Thus it is natural that in Byzantine astrological writings Arabic and Persian names of planets or technical terms which no longer correspond to those of classical Greek.

3 The Arabs and the Persians are called indiscriminately Persians.
Finally, the Jewish astrological literature of Europe, in which a conspicuous place is occupied by the works of Abraham ibn Ezra († 1167), is based exclusively on Arabic sources.

Jewish astronomers have left us no work setting out the content and history of Muslim astrology. For biographical and bibliographical notices of individual astrologers reference may be made to master copies of the Mafraj al-'aqliyyah and the Nihaya al-'aqliyyah. The mathematical side of Muslim astrology and the history of several technical terms are set forth in the present writer's annotations on al-Battani, Opus astronomi- num, Leipzig, 1899-1900, volume 2, beyond two or three small pre-sepulchral writings of no importance, printed or lithographed in Cairo, and the dissertation of D. Renier published by D. Loth (see above, p. 290, n. 2), there are no add. of complete astrological works in the original text; there are, on the other hand, a number of Middle Age Latin versions (16th-17th cent.), several of which have been cited in the course of the article.

II. ASTRONOMY.-1. Name.-The names 'ilm or sindat al-an-nújum, 'science (or art) of the stars,' has for its subject the study of the celestial bodies and astrology and astronomy. For the former science Avverroes 1 adopts the expression sindat an-nújum al-ta'dilimiyah, 'mathematical art of the stars,' which is the title of the original, the de Scientiis al-Farabi, where Gerard of Cremona translated it by 'astronomia doctrinalis,' misled by the double signification of the adjective ta'dilimiyah. The astronomic art of observation and calculation is denoted by Avverroes' sindat an-nújum al-tajribiyah, 'experimental art of the stars.' Special names of astronomy are 'ilm al-harâb, 'science of the form of the universe,' and 'ilm al-fizîk, 'science of the celestial spheres.' The branch of astronomy which deals with the construction and use of instruments for determining the time, especially for the purpose of regulating the times of the religious ceremonies, is in Arabic named 'ilm al-magât, 'the science of the time appointed for the canon prayers,' and he who cultivates it is called muwwaqit.

2. Greek and Muhammadan conception of astronomy does not exactly correspond to the modern conception. Al-Farabi says in his treatise de Scientiis 2 that astronomy is that science which frees the various motions of the celestial bodies and the earth from these three points of view: (a) number, figure, order, and respective positions of the spheres and of the celestial bodies; their magnitudes and distances from the earth; immobility of the earth; (b) celestial motions and their consequences with regard to phenomena (sunrise and sunset, eclipses and oppositions, eclipses, etc.); (c) magnitude of the inhabited part of the earth, that is, the land in zones or circles of influence of geographical co-ordinates; effects of the rotation of the celestial sphere in regard to parts having different latitudes (varying lengths of day and night, differences in the positions of the points of the ecliptic, etc.). This scheme of the content of astronomy is found also in later writers, with the sole difference that the study of the magnitudes and distances of the celestial bodies and spheres comes to be considered under a category (d) separate from (a).

According to Avicenna, the astronomer studies 'the parts of the universe as far as regards their figure, their respective positions, their magnitudes, and their distances from each other: he further studies the motions of the spheres and of the celestial bodies, the estimate (kifârî) of the spheres, of the axes (k. qâbîb) and of the circles (kifârî) on which those motions take place. All this is contained in the Almagest.' 3

The limits of astronomy are well defined by Ibn Haldun († A.D. 1406):

Astronomy consists of the study of the celestial bodies and motions as they appear to us; 'it is a most noble science, but it does not give, as is often supposed, the form of the heavens and the disposition of the spheres and of the stars, but only their motions as they are seen in reality. It only indicates that from those motions there result for the spheres those forms and those dispositions. Now, it is known, it is not strange that from one and the same thing there should result necessarily two different things; therefore, when the celestial motions are observed, those motions give us information concerning the nature of the stars, and of the sphere we are peeping into, but the sphere is by no means determined, the feeding which does not at all guarantee the truth. Nevertheless, astronomy is an important science, indeed one of the fundamental parts of natural knowledge.'

The diversity of criteria and of purposes by and for which the physicist ('naturalis') studies celestial phenomena, in contrast to the astronomer ('astro- nomus'), is in the best and most automatic fashion treated on Muhammadan astronomy, viz. the unedited al-Qânin al-mas'âdî, composed in Arabic by al-Biruni († A.D. 1058):

(a) General notions and fundamental hypotheses for the geometrical representation of celestial phenomena; (b) mathematical chronology, conversion of one era into another, festivals of various peoples; (c) spherical trigonometry, construction of the celestial sphere and systems of co-ordinates; phenomena of the diurnal motion of the stars, with reference to celestial latitudes, magnitudes, solar altitudes, right and oblique ascensions of the points of the ecliptic, etc.; (d) form, dimensions, etc., of the earth; problems relating to terrestrial latitudes and longitudes; the direction of Mecca with regard to other places on the earth; (e) geometrical astronomy on a spherical-geographical and astronomical basis; (f) the sun; (g) theory of the moon; solar and lunar parallaxes; (h) synodical, eclipses, appearance of the new moon; (i) fixed stars and lunar phases; (j) the rotation of the five planets; geometric distances and magnitudes of the celestial bodies and spheres; (k) problems in the passage of a spherical astrologist (calculation of the twelve celestial 'domus' of the 'applicaciones,' of the 'projections radium,' of the 'directiones' and 'protractions,' of the 'revolution sacrarium,' of the 'mansiones,' of the planetary conjunctions, of the millenary periods).

Muhammadan astronomical writings, almost always in Arabic, can be classified under four groups:

(a) General elementary introductions which represent a perfected form of the passage of Geomich, Geonomics, the introduction of Potenly, were for the Greeks; belonging to this category—to cite only a few— are: the Almagest. The most important and best known are: 1. de Imaginiens Spheres of Athelai (or Thabit) Ibn Qurra (A.D. 901), the compendium of Alfragucus or Al-Farghuni (A.D. 1042), of the consolidated and re-edited edition of (1344-45); (b) systematic treatises corresponding in type to the Almagest, Alhacen, 1115), the commentator Alhazen; 2. the empiricist Alhacen, the treatise Almagest of Geber (or Jabir) Ibn Asaf, printed at Nurnberg, 1584, would belong to this category if it had not omitted all the mathematical and astronomical tables; (c) treatises of spherical astronomy for the use of calculator and observers; there are called ziy (plur. ziyd, ziyd, ziyâd); they presuppose a knowledge of the general principles of comography and consist essentially of tables for calculation, illustrations of the use of the tables, and indications as to the manner of solving problems of spherical astronomy (for the most part without demonstration); the only treatise of this kind published and translated is that of Al-Bukhârî; 3. of the Persian treatise of Ulugh Beg only the polemical fragments, the use of the tables, and the polemical or theological character of the tables have been edited and translated; (d) writings on special subjects—e.g., stellar catalogues, treatises on instruments, etc.

1 Prolegomena, bk. vi. ch. xvi. (tr. de Slane, Ill. 145.).
3 E.g., Muhammad al-Akhrî-ibn Sa'bînî, Irzhd al-qâbil, Calcutta, 1843, p. 84. 4 Râsîlâ al-fâqîm al-ulâm al-qâbilî, in the Târîh al-Khâshî, Constantinople, 1588 A.D. (1661). The same definition is found in al-Majrîtâ, al-Arabî, Almagest. ar-rasîl, for al-Majrîtâ, the definition of the tables of al-Hawârizmî, ed. with an excellent German commentary by H. Butler, 1914.
3. Relation to Islam.—Muhammadan religious ritual bases some of its prescriptions on elements of an astronomical character. The hours within which prayers and all other religious exercises are considered valid depend on the latitude of the place and on the epoch of the solar year; further, the legal time for the night prayer is between the end of the evening and the beginning of the twilight. Both these times are valid unless the face is turned in the direction of Mecca; hence the necessity of solving the astronomical-geographical problem of the azimuth of Mecca. The beginning and the end of the day is given by the hour when the sun sets, which is determined not by the civil calendar, but by the actual appearance of the new moon; and the beginning of the day is given by the morning twilight. Finally, the five daily prayers are determined by the appearance of the new moon, which is to be prepared in time. All this presupposes a certain degree of astronomical knowledge; and, although the Shari'a lawyers, when they were brought in contact with pure calculation for the appearance of the new moon, but require the actual sight of the phenomenon, it is evident that the religious precept must be a real stimulus to scientific study. The astronomers of the early centuries have undertaken so much research into the complex phenomena of the twilight and of the conditions of visibility of the new moon—phenomena which were well known to the astrologers of the Graeco-Roman astronomers. On the other hand, many passages of the Qur'an set forth the benefits which God has vouchsafed to men by means of celestial bodies and motions; and they invite reliance on the goodness and providence of God. Astronomy thus becomes an ally of religion.

4. Sources.—(a) Arabian.—A first element of an eschatological interest is due to God, and finds expression in the New Testament. Like all other peoples who dwell in hot countries and are compelled to prefer night to day for travelling, the Bedouin made use of the stars for guiding their wanderings and for calculating (approximately) the hours of the night; they were thus familiar with the principal appearances of Venus and of Mercury, the phases of the rising and setting of the more brilliant stars, and above all the annual course of the moon determined by noting its position in relation to 22 successive groups of stars called for this reason manzil al-qamar, 'lunar stations.' Further, among the essential agricultural tribes, the seasons and many meteorological predictions (especially those for rain) were strictly connected with the annual rising of certain fixed stars or with the waxing and waning of the lunar stations. Hence, even in the 16th and 17th centuries, Arabic astronomical treatises are full of references to the lunar mansions and their amsat, or cosmic settings.

(b) Hebrew.—The first scientific element of astronomy in Islam is to be found in the 14th B.C. (A.D. 771), which came to Baghdad with a second embassy in 148 B.C. (A.D. 772-773). It is generally accepted that Sphæria by Abū ʿAbd Allāh al-Mārghānī, written about A.D. 698 (the year A.D. 773) by Bedæus. From this work (which the Arabs called al-Sind Hind) Ibrahim ibn Ḥabib al-Fazari drew the elements and the methods of calculation for his astronomical tables (ṣij) adapted to the Muhammadan lunar calendar. Almost contemporaneously Yahyā ibn Bāzīr composed his Tarikh al-ʾafāj, 'The Composition of the Celestial Spheres,' which was based on the elements and methods of the Brāhmagupta-siddhantin and on other data furnished by another Indian scientist (name unknown), who came to Baghdad with a second embassy in 148 B.C. (A.D. 772-773). It seems that almost at the same time there was translated into Arabic under the name of al-ʾArkan fī ṣināʿat al-ʾarz by Yahyā ibn Bāzīr, probably drawing on oral teachings of learned Indians, into his Al-ʾarz al-ʾarz, written about A.D. 750 by the Indian astronomer Sūkṛavara (name unknown in Arabic). This work has never been translated into A.D. 750, while the last version of the 15th century by the same author. Some of the data of this work are not yet translated into Chinese, probably because they are too complex for the Chinese, who have always preferred to translate the works of the Greeks, viz. by means of combinations (sometimes very complicated) of eccentrics and epicycles; or

1 For details see Našimi, Ḥasan, pp. 140-146, 213-233 (Arabic) 123-143, 213-233 (Greek).
2 Abū ʿAbd Allāh al-Mārghānī, written about A.D. 698 (the year A.D. 773). This work has never been translated into Chinese, probably because they are too complex for the Chinese, who have always preferred to translate the works of the Greeks, viz. by means of combinations (sometimes very complicated) of eccentrics and epicycles; or

3 This Indian idea occurs also in some Arabic works which are not astronomical, e.g. Ibn Qutbah, Libri poetà et pastoral., p. 498f.

4 So al-Birūnī. On the other hand, Ibn al-Qiftī (a source of less authority) has 156-718.

5 Some astronomical teachings.—We may here refer to some special points, which have an importance for the history of the general ideas of celestial phenomena. The only system received by the Muhammadan peoples was the geocentric. Aristotelian philosophy, the authority of Ptolemy, and the requirements of astrology of the Graeco-Roman astronomers, imposed obstacles to the conception of a heliocentric system, which, in any case, could not have been demonstrated by irrefutable reasons or, in the absence of telescopes, have procured any real advantage to practical astronomy. The lack of telescopes kept Muhammadan astronomers from becoming acquainted with other planets that were already known to the Greeks. The use of representing their motions is altogether that of the Greeks, viz. by means of combinations (sometimes very complicated) of eccentrics and epicycles; or
impressing on the other spheres diurnal motion. This ninth sphere, accepted by all the later astronomers, was called ‘the universal sphere,’ ‘the greatest sphere,’ ‘the sphere of the spheres,’ ‘the smooth sphere’ (al-falak al-‘alâs), ‘the sphere of the zodiac,’ and ‘the sphere par excellence,’ a name which indicates the precession of the fixed stars. The sphere of the astrologers—e.g., Avicenna and Ibn ‘Tufail—accept these nine spheres; Averroës, however, under the influence of Aristotle, cannot bring himself to accord the number of eight. In the theological camp the nine spheres did not find many opponents, in spite of ‘the seven heavens’ mentioned in Qur. ii. 27; it was held that the specification of the number seven did not imply the rejection of a superstitious number. In fact, several theologians saw in the eighth and ninth spheres respectively the ‘seat’ (kurus) and the ‘throne’ (harsh) of God mentioned in the Qur’ân.

Doubts were not wanting, however, concerning the unity of the sphere of the fixed stars. Faqr ad-din ar-Râzî informs us that Avicenna, in his book as-Shifâ’, declared: ‘Up till now it has been maintained by some that the sphere of the stars be a single sphere or be several spheres, placed one above the other.’ Ar-Râzî, in his discussion, had no practical importance. Still the number of eight, combined with the Aristotelian theory of solid spheres in which the heavenly bodies are infixed without being able to move themselves, did not easily accord with the other conceptions of the Ptolemaic system. Aristotle, who was ignorant of the motion of the precession of the equinoxes, and who consequently held that the fixed stars are really immovable, assigned to the eighth sphere the apparent diurnal motion of the celestial vault from east to west, a motion which the eighth sphere impressed also on all the others. But Ptolemy, on the contrary, attributes the precession of the equinoxes on account of which the fixed stars have a slow and continued increase of longitude, came implicitly to attribute to the sphere of the fixed stars two motions in opposite directions—one diurnal from east to west, and the other from west to east. Ptolemy had no occasion to notice and correct this contradiction, which was soon perceived by the Arabic writers. The contradiction would have been easily eliminated by supposing that the fixed stars moved by the precessional motion within their own sphere, supposed accordingly to be fluid and not solid; and Avicenna in the Jâbîrisi (1039) introduced into pure astronomical teaching the doctrine of the solid spheres of Aristotle, it was necessary for the physical reasons set forth above to add a ninth sphere without stars,

(b) Order of the planets.—The order of the planets followed by almost all the Muhammadan astronomers is identical with that of Ptolemy, although they recognize, together with the Greek astronomers, the ecliptic as the limit of the planets. Two main writers, al-Hasan ibn ‘Allâh (c. 1140) held it more probable that Mercury and Venus were above the sun on account of their analogy to the superior planets in having epicycles and apsidal seats, and retradial and retrogradations. Al-Bîtrjî (1200), moved by physical reasons connected with his special system of planetary motions, placed the sun between Mercury and Venus.

(c) Obliquity of the ecliptic.—The obliquity of the ecliptic with regard to the celestial equator is one of the fundamental elements of astronomical calculation. The Greeks, from Eratothenes (230 B.C.), had assumed that the constant value of 46° 51' 20"; i.e., they held it to be invariant. The astonishment of the Arabic astronomers must have been great when they found by their observations an obliquity sensibly less; at first they could not decide whether the discrepancy was due to a real diminution of the obliquity or to a defect in the ancient observations. Al-Battânî leaves the ques-

UNION undecided and declares that he chooses the excellent value found by himself (23° 35'), 'since this was observed by us with our own eyes; the other, on the contrary, was received through the medium of the ancients.' It will be observed that this did not lead to a difference, but to an agreement, since both the centuries following the proposed revolution, and even before, observed that the obliquity of the ecliptic was subject to a very slow regular diminution, which therefore came to be admitted by all the astronomers; in Europe, on the other hand, we must refer to Tycho Brahe (1546-1601) to see it affirmed in the midst of opposition which lasted through the greater part of the 17th century. The Muhammadan astronomers had no means of determining whether this diminution was continuous or periodical and within what limits it was contained.\(^1\) Abū 'Ali al-Hasan (c. 1260), who had accepted the hypothesis of az-Zarālī as to libration, believed that the obliquity oscillated between a maximum of 23° 53' and a minimum of 23° 33'; Fārūq ad-dīn ar-Rāzf\(^2\) admitted a continuous diminution on account of which the ecliptic would coincide one day with the equator. It appears from it again, so that the Tropic of Cancer will pass to the south and that of Capricorn to the north. Nasir ad-dīn al-Tūsī († 1274 A.D.) confined himself to setting forth the eight possible hypotheses as to the continuity or the periodicity of the diminution, without giving preference to any.

(d) Precession of the equinoxes.—The precession of the equinoxes, an effect of which the equinoctial points retreat from east to west along the equator and cause a continuous increase in the longitude of the fixed stars (calculated precisely from the point of the vernal equinox or the first point of Aries), is one of the greatest discoveries of Hipparchus, accepted by Ptolemy. It was accepted by all the Muhammadan astronomers, who, from the first half of the 9th cent., assigned it a value much more exact than that of Ptolemy (39 years), viz. 34° 32'; later, a continuous series of observations indicated other values still more approximate to the true one. There remained a question which celestial mechanics alone has been able to solve: Is this precession to be regarded as continuous, so that in many thousands of years the retreating equinoctial points will accomplish the entire circuit of the ecliptic, or is it a finite period, such as in Hipparchus's writings so as to be reduced to one oscillation, more or less great, of the equinoctial points? The first hypothesis, which is the true one, is accepted by Ptolemy; the second was followed by some Greek astronomers after the Christian era, who held that the equinoctial points, after having advanced 8° in 640 years, retreated 8° in a similar lapse of time, returning thus to the primitive point. According to them, the precession was 45' a year. Finally, it is necessary to observe that, while some Indian writers are quite ignorant of the precession, others admit it in an oscillatory form with axes of 54° or 48° (namely, 27° or 24° from the one part and from the other of the equator, P. Picusim), which they imagined by gross mistakes and not for scientific reasons.

(e) Hypothesis of libration or precession.—The great majority of Muhammadan astronomers held that there was a continuous precession, rigidly attributing the discrepancies concerning its value to the imperfection of the observations of the Greeks. We know only three writers of the second half of the 9th cent. who, through Indian influence, accepted the hypothesis of the variable, which, in the form of the empirical law of the Greek astronomers mentioned above and of the Indians. On the other hand, Thabit ibn Qurra († 901) suggested that the discrepancies in the precessions previously accomplished were due to an apparent irregularity of that motion, and that they were connected with the discrepancies relative to the obliquity of the ecliptic. In an epistle which is preserved by Ibn Yuhayya ibn Sayyid, he says that he had risen till then kept his own calculations private, because he regarded them as uncertain and only provisional. It seems that these secret papers formed the treatises which have come down to us only in two unedited Latin translations under the title De motu octave sphere or De motu accessus et recessus.\(^4\) In this tractate Thabit notes that, if all the known observations were exact, there would be a slackening and an acceleration in the motion of precession and in the increase and diminution of the obliquity of the ecliptic. In order to explain these apparently irregular variations, he proposed the following hypothesis:

The eighth sphere, viz. that which contains the fixed stars, has a movable ecliptic, the extremities of whose axis rotate about the equatorial points of an ideally fixed sphere 33° 33' in respect of the equator; the complete rotation on these two small circles, having 1° 15' 47" of radius, is accomplished in 4717\(\frac{3}{4}\) years. In this period the equinoctial points would seem to accomplish, with a motion not uniform, an oscillation of 4° 6' 20" forwards and 4° 6' 20" backwards; in a similar time there will take place an unequal variation of the obliquity of the ecliptic.

The hypothesis of Thabit was received in its entirety by Ptolemaeus (1275-1308) and by his commentators Reimond and Nūr ad-dīn. The oscillation of the equinoctial points is called by the Arabs ḥarakat al-thālīya waʿl-‘alā, 'motion of advance and of regression of the Latin motion.' The Arab designation was also used in Europe trespassatio equantur. This does not seem to have had supporters among the Muhammadans of the East after the 11th century. It had greater fortune among the Muhammadans of the extreme West (Syria and Morocco). Towards 1060-70, at Toledo, al-Zarālī, in order to make his observations consistent with those of his predecessors, suggested that the poles of the ecliptic circulate about the equatorial poles, so that the equinoxes advanced one by one unequal amounts to a fixed point. This hypothesis was treated irregularly by 2°, accomplishing, i.e., an oscillation of 2° forwards and 2° backwards with reference to the fixed point ideally fixed. Every arc of 16° would have been passed over in 759 years, so that the complete cycle of the libration would be accomplished in 3837 years, the motion of az-Zarālī, explicitly denied by Averroès,\(^2\) was accepted by al-Ṣajījī (c. 1050), at Cordoba, and by Abū 'Ali al-Tūsī (c. 1030). In Morocco; it also found great favour among the Jews and Spanish Christians and had an influence on the Hebrews, who, on a basis of Arabic sources, compiled about 1570 the Tabulat Alphonsin.\(^3\)

(f) Motion of the solar apogee.—Ptolemy (followed by all the later Greeks) says that he found the longitude of the solar apogee to be equal to that observed by Hipparchus, and consequently believes that it is immovable at 65° 30', while the apogee of the five planets move with the motion of the precession. It is a merit of the Arab astronomers of the Khalif al-Ma'mūn (813-833) that they recognized that the solar apogee is subject to the

---

\(^1\) A suspicion arises, however, that this tractate may rather be by a grandson of Thabit, viz. Ibrahim ibn Sinan ibn Thabit, who wrote concerning libration (as al-Biruni and Ghazinur al-Dīn also).

\(^2\) Metaph., p. 60 (Quirks, bk. IV, § 15).

\(^3\) It must be noticed that those Hebrews combined the hypothesis of Az-Zarālī with the most fantastic elements in it viz. the admitted a continuous precession accomplishing the circuit of 360° in 40000 years (4° 6' 20") and a 2° 6' 30" approach of 23° 33' to the fixed point. This law was to be always corrected on the basis of an inequality accomplishing its own period in 5000 years. They evidently wished to introduce this hypothesis of precession with the same precision of a thousand jubilee periods of 49 years and a thousand sub-historical periods of 7 years!

\(^4\) Tīrībī, XLI, 12.
motion of the fixed stars and of the planetary apogees, i.e. to the displacement of longitude due to the precession of the equinoxes. But the solar apogee has also another very small proper motion in longitude which, according to Leverrier, is only 11.6 arc minutes yearly. This motion must have escaped the Muhammadan astronomers. The determination of the longitude of the apogee is not easy and, in times when telescopes and pendulum-clocks were not yet invented, it was fortunate that we have Precession in the minutes of a sign; on the other hand, there was no term of comparison with ancient observations. One understands, therefore, why the majority of Muhammadan astronomers did not give to the solar apogee any other motion than that of the precession, attributing the small discrepancies to the imperfection of instruments and observations. It seems that Thabit bin Qurrah, however, dared to affirm the existence of a proper motion. Al-Biruni² informs us that Thabit, author of a tractate on the inequality of the solar year, had determined 365 days, 6 hours, 9 minutes, 9 seconds, as being the length of that interval which we call anomalistic, i.e. the time which the sun takes to return to its own apogee. If, then, the same Thabit (if we may rely upon a piece of information which Regiomontanus and Copernicus seem to have kept to himself) is right (for the sphere cited above) determined the length of the sidereal year as 365 d., 6 h., 9 m., 12 s., it is plain that he must have attributed to the solar apogee a proper motion added to that of the precession.³ Certainly the values found by Thabit are excellent, since, according to the moderns, the anomalistic solar year is 365 d., 6 h., 15 m., 54 s., and the sidereal year 365 d., 6 h., 9 m., 10 s. It is beyond doubt that az-Zarqali determined with great exactness (1251⁻²) every Julian year) the proper motion of the apogee, as distinguished from that due to the precession; and he is therefore supposed that the centre of the eccentric of the sun moved over a very small circle, and by this was also settled the variation of the eccentricity of the solar orbit. Among us the proper motion of the apogee was discovered only in the 16th cent. by Kepler and Longomontanus.

(g) Third lunar inequality.—We need not notice other modifications of special points of Ptolemaic doctrine through which we must at least make a reference to a controversy carried on from 1586 to 1571 in the Academy of Sciences of Paris without any definite conclusion being arrived at, viz.: Is the diminution in the variation or downward inclination to be ascribed to Abo ‘l-Wafa’ (†988), or to A. Sedillot maintained, rather than to Tycho Brahe? There would have been no reason for this dispute if that part of the Almagest relative to the movements of the moon had been better studied, and if the analogous discussions in the works of other Arabic astronomers had been examined with care. Carra de Vaux⁴ has demonstrated that the hypothetical theory of the variation was nothing else than the ρηδοςέννης of Ptolemy, i.e. the difference between the ρηδοςέννης of Ptolemy, i.e. the difference between the ρηδοςέννης of Ptolemy, i.e. the difference between the ρηδοςέννης of Ptolemy, i.e. the difference between the ρηδοςέννης of Ptolemy, i.e. the difference between the ρηδοςέννης of Ptolemy, i.e. the difference between the ρηδοςέννης of Ptolemy, i.e. the difference between the ρηδοςέννης of Ptolemy, i.e. the difference between the ρηδοςέννης of Ptolemy, i.e. the difference between the ρηδοςέννης of Ptolemy, i.e. the difference between the ρηδοςέννης of Ptolemy, i.e. the difference between the ρηδοςέννης of Ptolemy, i.e. the difference between the ρηδοςέννης of Ptolemy, i.e. the difference between the ρηδοςέννης of Ptolemy, i.e. the difference between the ρηδοςέννης of Ptolemy, i.e. the difference between the ρηδοςέννης of Ptolemy, i.e. the difference between the ρηδοςέννης of Ptolemy, i.e. the difference between the ρηδοςέννης of Ptolemy, i.e. the difference between the ρηδοςέννης of Ptolemy, i.e. the difference between the ρηδοςέννης of Ptolemy, i.e. the difference between the ρηδοςέννης of Ptolemy, i.e. the difference between the ρηδοςέννης of Ptolemy, i.e. the difference between the ρηδοςέννης of Ptolemy, i.e. the difference between the ρηδοςέννης of Ptolemy, i.e. the difference between the ρηδοςέννης of Ptolemy, i.e. the difference between the ρηδοςέννης of Ptolemy, i.e. the difference between the ρηδοςέννης of Ptolemy, i.e. the difference between the ρηδοςέννης of Ptolemy, i.e. the difference between the ρηδοςέννης of Ptolemy, i.e. the difference between the ρηδοςέννης of Ptolemy, i.e. the difference between the ρηδοςέννης of Ptolemy, i.e. the difference between the ρηδοςέννης of Ptolemy, i.e. the difference between the ρηδοςέ

2. The fact that Thabit wrote a tractate to maintain that the solar apogee does move is of no importance, since it is probably incorrect.
3. Cf. also L. Gauthier, ‘Une Réforme du système astronomique de Ptolémée tentée par les Arabes du dixième siècle’, Temps et Saisons, Paris, 1902, xiv. 438-420; but this article is insufficient from a mathematical-astronomical point of view.
5. Omas, De Cartes, op. cit. (Aristotelis Opera omnia quae Averroes Compendium continebat, Venice, 1635, v. fol. 118v.-119r.)
7. Thus the Latin translator in the commentary on the Metaphysic renders the Arabic adjective λανθάλινos, spiral, in the form of a spirale, or of a spiral, if you prefer.
8. And, in fact, this was the hypothesis of Eudoxus.
9. I.e. the mere recognition of the circulation of the sphere in the hypothesis of the Spaniard az-Zarqali (see above, § 5 (A)).
be a lemmatice described on a spherical superificies instead of on a plane. There naturally occur in the hypothesis of Eudoxus so-called special axioms, of which Aristarchus, as not seem to have thought; one does not understand, then, how the Arabian philosopher thought to save himself from the greatest objection with respect to the rotation of all the superificies, viz.
that by making the distance of the celestial bodies from the earth annual to the Sun, is not permitted the explanation of the variation of the diameters of the sun and moon.

Another friend and disciple of Ibn Tufal, al-Birjī, (a native of the Punic city of Carthage, Africa) made a complete system as a substitute for the geometrical hypothesis of Ptolemy. He accepted the nine superificies of the Aristotelian scheme in agreement with the peripatetic philosopher. He says that, moved by discourses of Ibn Tufal to meditate on this question, he began to apply the new theory for a kind of divine revelation. He admits with Ptolemy the nine spheres concentric with the earth; of these below the mind should have a motion of their own in an opposite direction. In order to remove this contradiction, he conceives a whimsical theory which betrays the inexperience of the author in the field of practical astronomy.

According to him, the movements of the planets and of the fixed stars in longitude take place in reality from east to west, like the diurnal motion of the rotation of the heaves; these movements which astronomers have judged to be from west to east are simply illusory consequences of the progressive diminution of the angular velocity of the spheres, according as a gradual approach is made from the sphere below to the earth. The same thing he explains by the famous 27° of difference in 24 hours and communicates this motion to the spheres below; but then, of course, the planets would also be in motion. Thus, he justifies the admissibility of the nine superificies, which is immediately under the tenth, in accordance with the hypothesis of Ptolemy. The ninth superfcie is the sphere of the fixed stars, which is situated in the space of about 30°; this little retardation brings it after 5,000 years; it has accomplished a whole circuit less than the ninth sphere and appears to be moving more eastwards than the other planets. Under the sphere of the fixed stars comes that of Saturn, considerably slower; it accomplishes in the space of about 30 years a whole circuit less than the ninth sphere. The next sphere makes a whole circuit in 12 years; Mars in two; Venus, the sun, and Mercury in the same time. This, then, is the reason why all the spheres under the ninth appear to move in a direction contrary to it.

For these reasons, therefore, al-Birjī believes that the sphere of Venus is to be placed above the sun and that of the other planets retains the same relative positions of the motions of the sun, moon, and planets. He says that he drew inspiration for this from conceptions analogous to that by which az-Zarqalī had imagined the motion of the libration of the fixed stars. While az-Zarqalī made the poles of the ecliptic to rotate with the planet of the equator, al-Birjī, in the case of the planets, made the poles of the planetary spheres move on inclined planes round the poles of the equator or of the ecliptic; from this it results that the planets describe lines latitudinal, i.e. spiral, on a spherical superfcie. Thus, he succeeded, in the sense of the ancients, in the reproduction and regraduals of the planets. For this part, therefore, we have the partial restoration of the hypothesis of Eudoxus. The ideas of al-Birjī were accepted by a few Arab astronomers, and Jews in Spain and Provence; and they had also an echo in Italy from the 10th to the 13th century.

7. Celestial physics. — As is said above, celestial physics, according to Muhammadan and Greek writers, lies outside the field of astronomy; its problems are discussed in books of metaphysics, of physics in an Aristotelian sense, and of theology, or at least in special works, of which the greater part are now either lost or untranslated.

Like Ptolemy, the most ancient Arabic astronomers neglected to define the idea of the celestial spheres and limit themselves to considering them in the mathematical aspect of ideal circles representing the movements of the heavenly bodies.

1 Alpernus of our medieval writers.
2 Al-Birjī there had been published only an obscure Latin tr. (Venice, 1531) made from a Hebrew version.
3 The same ideas are found also in the hypothesis of Ibn al-Haytham.
4 For the text, see C. and E. (the first number of the 11th cent., see their (Isidore L. (London, 1605-6. a. xii. 22-29) and by Fajr al-dīn ar-Rāsi, Marifat al-ahdab, 1612 (15th cent., see the Arab tr. of this work) and Vi. 1171 (on Qur. xxi. 54). But they admit Ptolemy's eccentricities and epicycles.
5 The period of the time in which, according to Ptolemy the fixed stars accomplish the circumference, proceeding to the north of the east.
6 The duration of the heliocentric sidereal rotation of Saturn is a little less than 29 years; it is in the Ptolemaic hypothesis, the rotation of the centre of the epicycle of Saturn in the zodiac.

The Aristotelian conception of solid spheres was introduced for the first time into a purely astronomical treatise by Ibn al-Haytham; and he, in his unedited compendium of astronomy, gives a definition which was accepted afterwards by all the other Arabian treatises. A celestial sphere (fīdak, plur. athfāk) is a body completely spherical, bounded by two parallel spherical superificies having the same centre. In this, as in the Greek hypothesis, in which he himself made use of the Aristarchian conception, the celestial sphere (fīdak, plur. athfāk) is a body completely spherical, bounded by two parallel spherical superificies having the same centre.

1 For the text, see C. and E. (the first number of the 11th cent., see their (Isidore L. (London, 1605-6. a. xii. 22-29) and by Fajr al-dīn ar-Rāsi, Marifat al-ahdab, 1612 (15th cent., see the Arab tr. of this work) and Vi. 1171 (on Qur. xxi. 54). But they admit Ptolemy's eccentricities and epicycles.

al-Jauziyyah († 1330), and many others absolutely deny life and intelligence to the heavenly bodies. The Platonists, however, held that the movers of the celestial souls and consequently of the spheres are pure intelligences. Concerning their origin, Poria, Avicenna, and their followers maintain a Neo-Platonic enunciatory theory: from the first principle emanates the first intelligence, and from this are derived all the nine spheres by means of successive triads always composed of intelligence, soul, and body; until one arrives at the final or active intelligence from which is derived all the material of the sublunar world. This theory is vigorously opposed by al-Ghazalli and the other theologians.

The question of the marks on the moon is either neglected or only hinted at in the works hitherto published. The idea that the moon had valleys and mountains like the earth—an idea set forth by several Syriac writers—did not harmonize with the Aristotelian conception of the nature of the heavenly bodies and so could not be accepted by Muhammadan writers. Observation of the solar spots is almost impossible to the naked eye; Fahr ad-din ar-Razi, however, explicitly affirms: 'There are those who believe that there exist on the surface of the sun spots, but in the normal phases there are marks on the surface of the moon.' These spots were actually seen on some occasions, but were erroneously believed to be transits of Mercury and Venus across the sun.

The comets and the other meteors (in an Aristotelian sense) were the subjects of observations and of numerous monographs. But, judging from the little that we know of their treatment by Muhammadan writers, it seems evident that the matter is set forth by Aristotle in his books on meteorology.

8. Conclusion. The importance of Muhammadan astronomy in the history of science has been variously judged; sometimes Muhammadan astronomers have received excessive praise, sometimes unjust criticism, as if they had done nothing but preserve and transmit to Europe Greek science, improving it only in minor details. This harsh verdict is due not only to very imperfect knowledge of the Arabic writings on astronomy (of which the greater part is still unedited), but also to the fact that none of the medieval astronomical works has been translated into any modern tongue. But the special conditions of astronomy in the glorious period of Muhammadan culture. The system invented by the Greek geometricians, and completed by Ptolemy, for representing all the celestial movements had mathematically all the precision that could be desired or attained by the use of the best instruments; it produced no sensible discrepancy between theory and the result of observation. The elliptic orbits of Kepler would not have given the theory greater perfection than it received from the complicated system of eccentrics and epicycles; the latter indeed had the advantage of preserving the Pythagorean and Aristotelian principle, which denied any but circular movement in the heavens. One must not forget that even in the heliocentric system of Copernicus the motions of the planets were still explained by means of combinations of epicycles—combinations which were in several cases less perfect than those employed by the Ptolemaic astronomers. To change the method of geometrical explanation would therefore have been whimsical—a mathematical trick, which no datum of observation would have justified; and, in fact, those Arabs who wished to eliminate the eccentrics and the epicycles 1 were philosophers rather than astronomers, and their proposals were based only on Aristotelian physics.

It is thus easy to understand how it was that, e.g., the astronomers of the khalif al-Maʾmun and his successors saw no necessity for drawing from their observations of the movement of Venus 2 the final conclusion that Venus revolved round the sun. From the point of view of such phenomena as could be observed with the telescopes, this new hypothesis had no higher value than that which made Venus revolve round the earth. In a word, celestial appearances gave no cause to shake the foundations of the geocentric system, which agreed very well with every religious notion, and which was supported by the authority of both Aristotle and Ptolemy, reinforced by a very potent element in Hellenistic and medieval culture, viz. astrology. Giovanni Schiaparelli, in one of his monographs on Greek astronomy, 3 has set forth clearly the decisive influence which astrology, brought into Greece by the Chaldean Berosus (3rd cent. B.C.) and consequently received with great favour by the Stoics and Neo-Platonists, had in the abandonment of the heliocentric system of Aristarchus.

Astrophysical doctrine, based on the immobility of the earth in the centre of the world, was reconcilable with any system which made the earth revolve round the sun or round any other body; astrology was thus a very powerful additional obstacle to the abandonment of the geocentric idea. Further, we must not forget that it was only in the 17th cent. that European physics reached clear proofs of the diurnal rotation of the earth and justified elliptic orbits and the heliocentric system, and that the whole question was really irrelevan for the revolution of the earth round the sun was furnished only in 1728 by the discovery of the aberration of the fixed stars.

An essential condition of all astronomical progress is to have at disposal a long series of methodical observations; and in this matter Muhammadan astronomers were obliged to begin, so to say, from the foundation. Ptolemy was the last Greek observer; but not even all the observations which he says he made are true. In several cases of capital importance—e.g., regarding the obliquity of the ecliptic and the longitude of the solar apogee—he gave such reasoning with his own observations and with the few data found about 270 years before his time by Hipparchus, thus causing certain elements to be believed constant which are really variable. In other cases—e.g., regarding the precession of the equinoxes—his observations are very rough.

Thom of Alexandria (4th cent. A.D.) and Proclos (6th cent.) do no more than accept Ptolemy's elements, in some ways aggravating his errors; accordingly, during the seven centuries from Ptolemy to the first flourishing of Arabo-Muhammadan astronomy, we have not even one observation which is of use to the science. The first task, therefore, of the Arabo-Muhammadan astronomers was to revise all the Ptolemaic elements of the celestial motions; it was a time not to form new theories but to collect the indispensable elements of fact by means of continuous observations more accurate than those of the Greeks. This task was accomplished by the Muhammadan astronomers in a marvellous manner;

1 See above, § 6.

2 They found (contrary to Ptolemy) that Venus has the same longitude of centre as the sun, and the same latitude of centre; and so the true longitude of the centre of the epicycle of Venus is always equal to the true longitude of the sun. This was the same as to suppose that the orbit of Venus is an epicycle whose centre is always the true place of the sun, and whose radius is always the mean radius; it was equivalent to making Venus a satellite of the sun.

3 Origine del sistema planetario eliocentrico presso i Greco, Milan, 1839, § 55.
indeed, we must come down to the time of Tycho Brahe (1546-1601) to find observers and observers comparable to those of the Muhammadan Mohammed and Ptolemy. Furthermore, by founding trigonometry in a modern sense and doing it with thorough degree and precision, they furnished astronomical science with an excellent instrument for its work.

The influence of Muhammadan astronomy in Europe is shown in the treatises that are afraid of it. The length would be to give the history of some centuries of European astronomy. From the 12th. cent. to the end of the 15th the treatises used in the mediaeval universities were transmitted from Arabic or were based on Arabic writings; the astronomical tables and the processes of calculation were derived from Arabic works, among which must be classed (from the point of view not of their language but of their contents) the celebrated tables of Alwaro which were still used by many in the 16th century. Spherical trigonometry in Europe started from Arabic treatises; the famous Regiomontanus himself (1436-70) borrowed heavily from the surface from al-Battani. Through the influence of these Arabic sources the ancient Latin technical terminology was greatly modified, and not only Arabic but also Greek and Persian languages, the Latin words acquire new significations by imitation of corresponding Arabic words. The words 'degree', 'minute', 'equation' (in celestial mechanics), 'object', 'figure', 'argument' (of a table), and some others, owe their technical significance to ridiculously literal translations of Arabic writings. We cannot enumerate all that European astronomy owes to Muhammadan observers; it will be enough to recall that they rendered inestimable services even to writers of the 17th cent. — e.g., Halley—precisely because they offered the only certain means of checking elements determinable only by a comparison with observations separated by long intervals of time. The books of Regiomontanus, Purbachius, Copernicus, Tycho Brahe, Riccioli, etc., cite the observations which were known to them of their Oriental predecessors. The theory and practice of instruments in Europe has also Arabic sources. Finally, we must not forget the influence exercised by the Arabs in the way of example. They infused into the Christian and Jewish Jews of Spain that spirit which is still for continued observations and an idea of the perfectibility of astronomical science; from Spain this passion and idea spread through the rest of Europe, preparing the way for modern astronomy.

The conditions of the Byzantine medieval world were not favourable to the development of the sciences. Nevertheless, Muhammadan culture, which left many traces in Byzantine astrology, had also its part in astronomical studies. In 1258 an anonymous Greek introduced the Persian astronomical tables of Shams al-din al-Buthari (2464 Meevasqes), which were at once widely used; in 1312 George Chrysococces made a new reduction of them, preserving at the same time many Arabic-Persian technical terms; and finally, about 1361, Theodore Molloniotes reproduced these methods and the main tables in the third and last book of his Άστρωνομιχ Εκδήλωσ, after having set forth in the first and second books the methods and the tables according to Ptolemy and Theon of Alexandria. Thus there was created in Byzantium also a new astronomical terminology different from that of the classic Greek; and sometimes even Greek proper names appeared transformed by their passage through Arabic-Persian sources, as Ἡεοσάρ in place of Ὠρα.

LITERATURE.—There is no satisfactory exposition of the astronomy of the Muhammadan peoples in the Middle Ages; the general account of astronomy, e.g., those of Schiaparelli, J. H. von Mädler, R. Wolf (the best of all), and Arthur Berry are inadequate, antiquated, and often erroneous. J. B. J.

SUN, MOON, AND STARS (Teutonic and Balto-Slavic) 101

Delambre, Histoire de l'astronomie du moyen âge, Paris, 1819, pp. 1-511, and 512-530, is not a history but an analysis (of very unequal value) of the works of Muhammadan astronomers. The part devoted to the unedited book of Ibn Yûnis (pp. 70-156) is especially noteworthy, but it has the usual defect of Delambre—instead of their logical order the works are arranged in chronological order. The book contains a series of formulas found by Delambre himself. Useful, but to be used with caution, is L. A. Sédillot, Instruments pour servir à l'état, comparaison des sciences mathématiques chez les Océans et les Orientaux, 5 vols., Paris, 1845-48; see also le Ménor in Les instruments d'astronomie des antiquités et de l'Europe, 1822-29 (MAIBL, Stettinsch. Arch., 1). The present writer's Arabic book quoted above, p. 509, n. 1, concerns only the earliest period (summary of H. Suter, Die Mathematiker und Astronomen der Araber und ihrer Werke, Leipzig, 1890, and Nachträge und Berichtigungen zu Die Math. und Astron., in Abh. d. Gesch. der mathem. Wissenschaften, xiv. 1902 157-185. For edd. and tr. of original see above, n. 5.
SUN, MOON, AND STARS (Teutonic and Balto-Slavic)

Hrosvitha lies in front of her, and he will catch the moon, and so it seems to me—a wolf, who pursues the gleaming goddess to I wrought. Another called Hla, son of Hrosvitha goes before the fair bride of heaven.

Sun and moon will be involved in the final world- catastrophe.

Then said Ganelor: “Of what race are these wolves [i.e. Nicol and Halli?]” He said: “...The old glances rays the son of many Jottas and all in the form of wolves, and it is said that of the son of these wolves, there shall come one nightier than all, called Moon-Swallowar and Sun-Swallowar’s form shall seize the moon... He shall slay himself with the bodies of hunter, he shall slay himself with the ghost’s shade with red blood; the sunshine shall be black, and all the weather treacherous during the following summer.”

Whose comes sun, in the smooth sky,
When Fenir [i.e. a monstrous wolf] has overtaken this one,
One daughter alone, shall the Bl-rain [i.e. the sun] fear,
Before Fenrir overtakes her.

The maiden shall ride on the mother’s path
After the Fowers have perished.

3. Sun-worship.—Our knowledge of the religious practices of the Teutons is very meagre, and it is difficult to say how far the stories told in the two Eddas formed part of a living religion, even among the Scandinavians. We have, however, various references to the sun-cult from other sources. Preconia describes how in the island of Thule (i.e. Scandoia) the sun does not appear for 40 days at the winter solstice. At the end of this period messengers are sent up into the mountains to watch for the rising sun. They send word to the people below that the sun will shine upon them in five days: thenceon begins the greatest feast of the inhabitants of Thule.

The positive side of Cesar’s well-known description of Teutonic religion is probably true. The Teutons may well have acknowledged their sun as gods, such things as arc “objects of sight and by whose power they are apparently benefited, the sun, moon, fire,” although these were not their only deities. Observances in connexion with the sun and moon are forbidden in Christian sermons and penitentials. St. Eligius (588-659) tells his hearers that no Christian person “calls sun or moon lord.” In the 11th. the Decree of Barchurms of Worms mention pagan traditions: “Id est ut elementa coloris, id est human aut solis, aut solis erat existenta cum, aut detecta luna, ut sit cunctans et nihil superius Juni et superius valere.”

From Clunie’s Anglo-Saxon Laws we learn that “heathenism is to honour heathen gods, and sun or moon...” We have perhaps a trace of sun-worship in vendar: “Thorcliff Moon, the law speaker, was of the best conversation of any heathen man in England. He had himself carried out into the land of the sun to his mother and commended himself to that god which had made the sun.”

We know little of Anglo-Saxon paganism. Bede, however, mentions a goddess Eostur, in whose honour April was called “Eosturnonath.” The word “Eostur” is identical with the Latin, Greek, Sanskrit, and Lithuanian names for the goddess of the dawn, or Marzorōbōc, probably the same being who is referred to in the Lithuanian and Teutish folk-songs as the daughter of the sun.

Throughout Teutonic territory the first and second days of the week are named after the sun and moon. Sunna is mentioned with Wotan and Trna in the Merseburg charm. Sol is counted as one of the asagyni.

It is noteworthy that Snorri (see above) distinguishes between the physical sun and moon and the beings who rule over them and guide their movements. This distinction has been partly preserved in the Old Norse language, where the word “sol” is used for U.S. “sung,” and “man” is a star.”

Iaf. xii. 15. 2 Gr. xiv. 88.

11. Lettish, Lithuanian, and Old Prussian. — i. Mythology.—Our chief knowledge of the solar mythology of the Baltic peoples is derived from Lettish and Lithuanian folk-songs, the most significant of which have been translated and analyzed by W. Mannhardt. In these poems the changes with the course of the sky, especially at dawn and sunset, are viewed as a drama, the chief actors being sun, moon, the daughter of the sun, the son of God, Purlkin, the thunder deity, “God” and “dear Maria”—the last two being as frankly pagan as the rest. Often, of course, the poems are confused and inconsistent, and it must be remembered that the terms “sun,” “moon,” etc., sometimes stand for the presiding deity, sometimes for the actual sun, etc., personified:

“The Sun, in the apple garden,
Worshiped bitterly.
The golden apple hath fallen
From the apple tree.”

(Here there is a clear distinction between the deity and the physical sun.)

“The Sun dances over the silver mountain,
Silver footsteps she hath on her feet.
(In this case sun and goddess appear to be one and the same.)

God,” who was at war with the sun for three nights and three days, is evidently a sky-deity. The sky itself is described as a “great water” or a mountain:

“The Sun with two gold horses
Rides up the rocky mountain.
Never gotten, never weary,
Never resting on the way.”

(In this and in other songs we get the widespread myth of the horses of the sun.)

2. The Sun.—The sun is called in many of the songs “daughter of God,” in Lettish sources “valenstar,” mother of the sun. She is married to the moon, who is, however, an unfaithful husband.

“It happened in the spring-time
That sun and moon did wed.
But the sun rose early
And from her the moon fled.
The morning star was loved then
By the lone wandering moon.
Who with a sword was smitten
In deep wrath by Purlkin.”

The children of the sun and moon are the stars, who are called orphans, because they appear only at night after their mother, the sun, has abandoned them.

3. The sons of God.—The morning and the evening stars play an important part in the folk-songs, sometimes as a single being, sometimes in dual form. In Lithuanian sources they are called Ausrinė and Wakarėi and are described as the handmaids of the sun.

“Dear son, daughter of God.
Who kindles your fire in the morning?
Who spreads your bed in the evening?”

“Ausrinė kindles the fire.
Wakarėi spreads the bed.”

In Lettish songs the morning and the evening stars are called the “sons of God”—an epithet exactly equivalent to the Greek Dioskouroi. Like the Dioskouroi and the Apšinas of Indian mythology, the Lettish sons of God are connected with horses:

“Neither ride the dear sons of God
With steeds dripping with sweat.”

“Folk says the moon has no steeds of his own.
The morning star and the evening star
They are the steeds of the moon.”
4. The daughter of the sun.—A favourite theme of the Letheh folk-songs is the wooing of the daughter of the sun by the son of God, the sun providing the dowry, often most unwillingly.

Why are grey steeds standing
Near the deity of the sun?
They are the grey steeds of the sun
Who weds the daughter of the sun.
The son of God stretches out his hand
Over the great water.
To the 6rst steed: the sun.
The sun cries bitterly
Standing on the mountain.
Why should she not weep?
She sorrow for the little maiden,
She sorrow for the dowry.
For the chest which is laden
With gold and silver gifts.

This is a good example of a sunrise or sunset myth. The daughter of the sun is the red glow which is in the sky when the planet Venus appears, but soon afterwards melts into darkness or the full light of day. The 'dowry' seems to be the rays of the sun which light up the edges of the clouds and the tops of trees and mountains.

The sun prepar'd the dowry herself, gilding the edge of the forest of planets.

The daughter of the sun is almost certainly identical with the goddess mentioned by Lasciuius.

According to Preistorz, the Naedzrians worshipped a star-god, Sveigisuluktta, who is evidently the Suasitx worshipped by the Sudavians in Samiland and equated with Sol in the Constit. Synod. Evangel. of 1350. Lucas David calls Sveigisuluktta, a god of light and mentions him as one of the four deities who were invoked at agricultural festivals. This deity seems to have been worshipped in both male and female form: 'They more commonly called this goddess Sveigisulukta, a star-goddess, whom they consider the bride of the sky and through whose power the morning and evening stars are guided.' It is perhaps 'the maiden who weaves star-coverings,' mentioned in one of the folk-songs, and also the goddess whose place has been taken by dear Maria, and who was also known as the aunt of the thunder-god? The underlying idea may be that she is a goddess of fire, light, and heat.

5. Dear Maria.—Manhauldt considers that the name Maria has been substituted for that of various pagan deities, but it is also possible that she stands for a particular goddess, perhaps the Perkuna tete (i.e. the aunt of Perkun) mentioned by Lasciuius: 'Perkuna tete is the mother of thunder and lightning; who receives into a bath the weary, dusty sun, and sends her out again next day washed and shining.' Maria also presides over a bath-chamber:

'Behind the mountains smoke is rising.
Who is it that kindles fire?'

Dear Maria heats the bathroom
Where baleful little orphans dwell (i.e. stars).

'1 ran down into the valley, into the bath-chamber of dear Maria.'

According to Preistorz, the Naedzrians worshipped a star-god Sveigisulukta, who is evidently the Suasitx worshipped by the Sudavians in Samiland and equated with Sol in the Constit. Synod. Evangel. of 1350. Lucas David calls Sveigisuluktta, a god of light and mentions him as one of the four deities who were invoked at agricultural festivals. This deity seems to have been worshipped in both male and female form: 'They more commonly called this goddess Sveigisulukta, a star-goddess, whom they consider the bride of the sky and through whose power the morning and evening stars are guided.' It is perhaps 'the maiden who weaves star-coverings,' mentioned in one of the folk-songs, and also the goddess whose place has been taken by dear Maria, and who was also known as the aunt of the thunder-god? The underlying idea may be that she is a goddess of fire, light, and heat.

6. Cult.—We know little of the sun-cult of the Baltic peoples, although we know from Peter von Dusburg and Erasmus Stella that sun, moon, and stars were worshipped as important deities.

recent times. The ancient Greeks, at any rate, knew nothing of the sooner Sunday, which was observed not only among all other peoples but even among the Romans, who already regarded it as more or less a national tradition.

In the middle of the 2nd cent. Justin Martyr, writing for heathen readers, speaks of Saturday and Sunday (τον Κυριακον, την Κυριακη) as if they were familiar names to all. Near the end of the 1st cent. Josephus boasts:

‘Nor is there any city of the Greeks, nor any barbarian city, nor any nation, where our custom of resting on the seventh day has not reached.’

That, no doubt, is an exaggeration; but it would have been meaningless unless division of time into weeks had been so general that any one might know which day was a Saturday. The belief that such was the case in the 1st cent. is supported by a picture which was found at Herculaneum, and therefore painted before A.D. 79. It contains the heads of the seven planetary deities in the order of their days—Saturn, Apollo, Diana, Mars, Mercury, Jupiter, Venus. Numerous references in Latin literature assure us that the Jewish Sabbath was well known as early as the Christian era. But only those are to our purpose which imply familiarity with the week. Such are the passages in Tibullus, 4, Ovid, 5, and Martial, 6 which mention the observance of Sunday by the Romans. But more remarkable is the fact that Horace, writing about 35 B.C., could represent an ordinary superstitious mother as making a vow for the next Thursday (Iovis dies) and could describe how he himself attempted to escape from a bore by pleading that it was a special Saturday. 8 Neither the vow nor the plea would be intelligible without the week as a familiar background.

Sabbath in the primitive Church.—It was therefore not only the Jewish proselytes among St. Paul's converts, but all his Greek and Roman disciples, who reckoned their time by weeks and therefore found a weekly day of worship natural. To such, again, as were Jews by race it seemed actually part of the order of nature. That is why, we may well suppose, St. Paul's protests against the observance of the Sabbath or of any fixed days 9 were but partially successful. The Sabbath, indeed, was given up by the churches which he founded. But, as a concession to his converts' habit of mind, another day of the week was chosen for worship, where there could be no question what the choice should be, for the Lord's resurrection had given the first day of the week an unquestionable pre-eminence.

The name of this day which was current in the Roman Empire was 'the day of the sun' (την Ηλιωτην, dies solis). The Jews, who avoided all use of heathen terms for either days or months, called it the first day of the week (μνα Σαββατου), and the earliest Christians followed their example. But a mere number was felt to lack distinction, and very soon an appropriate name was found, which contrasted alike with Sabbath and Sunday. The first day of the month, at least in Asia Minor, was usually called 'the Emperor's Day' (Σαββατης). 10 Now the early Christians, partly by way of challenge, applied to their Lord many of the official terms which were consecrated to the emperor, the lord of the earth. So it was probably not without reference to the term Σαββατης that they entitled the first day of the week Κυριακη, 'the Lord's Day.' So apt a name was rapidly established. The author of the Apocalypse, writing about A.D. 90, uses it without explanation. To Ignatius 11 (c. A.D. 110) it was a matter of course and a basis for argument. When the empire became Christian it was entirely displaced 'the day of the sun' for all who spoke Greek or Latin. Κυριακη remains to this day in Greek; and in the Romance languages we find derivatives of the same name—Domingo, Domenica, and so on. But the Northern peoples, who in accepting the week from the heathen Romans had named the days after the corresponding Northern divinities, were more conservative. In England Sunday (A.S. Sundayegige), in Germany Sonntag, in Sweden Sondag, have resisted all attempts to substitute either Lord's Day or Sabbath.

3. Observance in the Church before A.D. 321.—

The records tell us very little about the manner in which Sunday was observed during the first three centuries, except that it was the day on which Christians assembled for worship. After St. Paul, who is quoted above, our first witness is the younger Pliny. His famous letter, written to the emperor Trajan in A.D. 104, tells how the Christians in his province of Bithynia held a service early in the morning on a fixed day, perhaps long a Jewish common meal late in the evening. 12 Ignatius (A.D. 110) insists upon the contrast between the Lord's Day and the Sabbath. 13 A little later the Teaching of the Apostles 14 remarks:

Κατα κυριακαν ιη κυριακων συνανθηνες ελαστα ορνοι και εχαροτημοντες προπαλαγηθηκαν τα παραπομπα υμιν, δεπε τινα και ου ρητω τον ουρανον.

A simple service, before or after the day's work, was the only observance possible for a community most of whose members occupied very humble stations, while many were slaves. As the Christians advanced in number and in wealth, they were able to command the time for a long service. Justin Martyr, writing about A.D. 170, describes one which must have occupied at least two hours; for it includes readings from the Bible, sermon, prayers, and Eucharist. 14 And, since Melito, bishop of Sardis, just about the same time published a treatise On the Lord's Day, we may conclude that the services were being systematized.

How important they were considered is partly shown by Tertullian's attack upon cowardly bishops, who excused themselves for fleeing from persecution on the ground that in such times they could not assemble the Church.
years more. The Apostolic Constitutions, 1 e.g., recognized a parallel observance of the Sabbath and Sunday. And the Councils of Laodicea, which permitted observance of the Sabbath, marked it as a festival and a day of worship. Different as was the East from the West, in spirit and in name; and the maintenance of the Sabbath in the East was a reason for keeping Sunday clear of Sabbatarianism, as the primitive Jews of Egypt, Interna, who distinguished between East and West, was Western in its observance of Sunday. Accordingly Clement of Alexandria (c. 160), \( \text{\textit{which makes use of the} \text{\textit{Doxologia}}} \) as a festival day is celebrated by putting away evil thoughts and acquiring true knowledge; and Origen (c. 240) apologizes for the common observance of the Sabbath and Sunday on the ground of the weaker brethren. They, 'being either unable or unwilling to keep even one day of rest in some memory, in order to prevent spiritual things from passing altogether away from their minds.' 2

A hundred years later Athanasius wrote to much the same effect: 'We keep no Sabbath day but we keep the Lord's Day as a memorial of the beginning of the second new creation.' 3 St. Jerome follows in the same line. He tells how his party of recluses at Bethlehem attended Church services on Sunday, but otherwise pursued their usual occupations. 4 St. Augustine, while insisting upon the festal character of Sunday—'Dies tamen Dominicus non Judaeus sed Christianus restoratione Domini declaratur est, et ex illo habere coepit festivitatem sanum'—praises that the Fourth Commandment is in no literal sense binding upon Christians. His words seem framed to exclude the idea of any transference of obligation from the Sabbath to Sunday. 5

4. Movement in favour of a day of rest.—While the leaders of the Church gave no sanction to the idea that Sunday was the heir of the Sabbath, that idea was all the time gaining power among the laity of the various peoples of the empire. Several causes combined to favour its growth. As the passage quoted above from Tertullian indicates, the numerous heathen festivals constantly suggested that a holy day should be a day of rest. Familiarity with the OT, whose authority was unchallenged, insensibly turned men's thoughts in the direction of Sabbatarianism. Increasing leisure and power enabled many Christians to command a day of rest. Greater stress was laid, as time went on, upon the duty of attendance at the Church services, which in many cases involved the abandonment of regular work. How steadily popular opinion was moving in the direction of a Sunday holiday may be inferred from a resolution passed in 305 by the Council of Iliiberis in Spain, making the observance of the Lord's Day compulsory and ordaining that failure to attend the services shall be punished with excommunication. The Sabbatarian movement, therefore, like that for the worship of the saints, came from below. Theologians long resisted it, but at last yielded, and sought to harmonize the two issues which the people had adopted. Among these we do not usually find either the duty of observing the Fourth Commandment in the spirit or the social need (recognized in Deuteronomy) of a day for rest and recreation. The reasons alleged are of a mystical and symbolical character, such as would naturally suggest themselves to theologians in difficulties. And yet the very contrasts which they draw between the Sabbath and the Lord's Day show the influence of the popular pressure, and prepare the way for the identification of the two which was to come in the 4th century.

S. Ambrose, e.g., describes how the first day has succeeded to the dignity which formerly belonged to the seventh: 'Ut colui Dominus sit feste perpetrae, et primum festum resurreci; Sabbatum, quod primum erat, secundum habuere coepit a primo. Prima enim regula casavit, secunda sucessit.' 6 St. Chrysostom, who was bishop of Constantinople in 347—'1 Cor 16'- he says that the first day of the week was well chosen for acts of charity, especially to the poor, and that the Sunday then thus actually carries back the Sunday rest into the year 67. And when he writes about Ro 14, he asserts that 'sustentare every day alike' has reference only to fasting. The attempt to strain a misapprehension is doubtless that he regards the observance of Sunday as not altogether a duty, although it be generally contrasted Sunday and Sabbath in the manner of his time, it is not surprising to find him once coming very near to the later Sabbatarian view. In the 10th Hymn on Gn 1 he writes: 'God from the first teaches us symbolically to set apart one whole day in the week for his worship.' The following day of worship was therefore now established, and the influence of popular opinion which was steadily moving towards it.

5. Constantine's decree of A.D. 321.—Parallel to the Christian movement in favour of a Sunday rest there seems to have been another, which was quite independent. The matter is obscure, and we must rely in part upon conjecture. As the social and industrial organization of the empire advanced under the Pax Romana, the spurious festivals of the ancient calendar became more and more inconvenient. The efficiency of labour depends largely upon recreation; but holidays at irregular intervals are not effeclual for recreation, and interfere sadly with organization. We can imagine that the heathen often reflected upon the contrast, to which Tertullian points, between the regular weekly festival of the Christians and their own uncertain celebrations; and that they wished that they could exchange their inconvenient holidays for a regular rest on 'the day of the sun.' Some such movement towards the popular mind is required to explain the readiness with which the whole world, heathen as well as Christian, accepted Constantine's famous decree. Though he was doubtless influenced mainly by the wishes of his Christian supporters, it was not as 'the Lord's Day' but as 'the venerable day of the sun' that he described the new public holiday: \( \text{"Omnis judices urbanusque plebes et eum sanctum dixit, day solemnizes the day of Redemption."} \)

There has been much speculation about Constantine's motives. Eusebius would persuade us that they were wholly religious, 6 others that social and political considerations determined his action; but we have not sufficient evidence to decide the question. One thing is certain. The edict of A.D. 321 marks an epoch in the history of Sunday. It was the parent of a double series of legal enactments and conciliar decrees which exercised a profound influence both for the increasing efficiency of the Empire, and for the life of all Europe during many centuries.

6. Later imperial decrees.—With regard to the imperial decrees, it is important to remember that they affected an ever-decreasing area. The laws of Theodosius the Great, which forbade all litigation and the spectacles of the theatre and the circus on the 'dies Solis quem Dominum rite dixere majores' (350), affected mankind from Spain to Mesopotamia. But its reiteration by Leo and Anthemius (400) was addressed only to Turkey, Greece, Asia Minor, Syria, and Egypt. The chief importance of those later decrees is that, enshrined in Justinian's Code, they set up a standard for the new nations which gradually rose out of the flood of barbarian invasion.

7. Decrees of Church Councils (300-600).—On the other hand, the decrees of Church Councils had an immediate influence not only in the areas which they represented but also to some extent throughout the former Roman Empire, for the Church maintained a large degree of unity. It is not always possible to say how the Council of Laodicea (363), ordering men to work on the Sabbath, bade them \( \text{\text{"Thecra puserotere}\), e\text{\text{\text{" της θεοσιας, χρπδεωτικών ή χριστιανων, but also how the Council of Orleans (558), while prohibiting}

---

against an excessive Sabbatarianism, forbode all for the upbuilding of religion: and the Council of Maccon (580) laid down that the Lord's Day 'is the day of perpetual rest, which is suggested to us by the type of the seventh day in the law and the prophets,' and ordains a complete cessation of all kind of business. How far the fourth commandment has been gone by the end of the 6th cent. is shown by a letter of Gregory the Great, 1 (poppo 590-604) protesting against the prohibition of baths on Sunday. 2

And on Saturday 3 (Sabbatum septimum) it was a right instinct which led the people to demand, and emperors and councils to grant, that Sunday should be a day of rest as well as of worship. Up to the end of the 7th and 8th centuries, the changes in law and custom, in spite of some extravagances, were on the whole beneficial. But in the darkness of the next two centuries other influences came into play, causing wars, plagues and disorders which lowered the standard of civilization both in the Eastern Empire and in Western Europe threw all initiative into the hands of military or ecclesiastic rules. Changes were no longer made in response to the people's demands, but were imposed upon them by rulers who were guided not by a sense of practical need but by monkish theory. Thus an edict of Colotar (c. 600) forbid work on Sunday.

"Quod lex hanc prohibet et sacra scriptura in omnibus contra,

3.
The Christian Sabbath from 800 to 950.— (a) Decrees of rulers and councils.—Though the decrees of the 7th and 8th centuries were obviously of a Sabbatarian movement, the term 'Sabbath' was not applied to Sunday until Alcuin had written:

"Cujus observatione nos Christianos ad diem dominicum competetim transustatit."

Under his inspiration the new feeling, long fluid in society, was crystallized in Charlemagne's decree of 816 (387) forbidding ordination on Sunday for a breach of the Fourth Commandment. In particular it forbade agricultural labour, which Constantine had expressly permitted, and the opening of markets, which Constantine had appointed on market-days to encourage country people to attend the church services: 'Proviso pietatis suae munda die sanci perpetui anno constisvit.'

From that time onwards the identification of Sunday with the Sabbath was taken for granted, and from this that principle deductions of increasing severity were drawn by princes and ecclesiastics.

Among the decrees which were issued by princes for the benefit of their own dominions we may mention that of the emperor Leo (c. 830) which forbade agricultural work in the Eastern Empire, and that of Egbert the Peaceable (A.D. 903) which extended the Lord's Day from 3 p.m. on Saturday to Monday's dawn. More interesting, because of wider influence, are the pronouncements of leading churchmen. In the 12th cent. Bernard of Clairvaux maintained that the Fourth Commandment required the Sabbath to be observed on any Sunday as well as on holy days. In the 13th cent. Thomas Aquinas lent his immense authority to the same principle: 'Sabbatum est, quia in die dominico ... Similiter ait solennitates veteris et lege novae solennitates succuntur.' In the 14th cent. Tostatus, bishop of Avila, a learned learned prelate, laid down by the Council his Christian Sabbath with a fullness of detail which rivals that of the

Pharisees. And the precepts of the learned were enforced and illustrated for the multitude by a host of miraculous judgments—ranging from toothache to sudden death—which had fallen upon those who profaned Sunday or St. Day's by labour. 1

For five hundred years after Charlemagne Church Councils were much occupied with questions of Sunday observance. The following examples may perhaps be sufficient for the purpose of illustration:

1 A.D. 829.—The Council of Paris re-enacts the prohibition of ploughing, marketing, and law business on Sunday.

2 833.—A Synod at Rome forbids markets and field labour.

3 1000.—A Council at Hexham (Kingetham) forbids markets, fairs, burning, and ordinary labour.

4 1063.—The Council of Bourges forbids travelling, except in cases of necessity or charity.

5 1069.—The Council of Covent (in Spain) forbids all 'service work' and all travelling.

6 1212.—The Council of Pamiers condemns all parishioners to hear Mass on the same day and preaching.

7 1244.—The Synod of Lyons found it necessary to limit the number of holy days, whose increase was causing various abuses.

8 1228.—The Synod of Valladolid ordained 'quod nullus in diebus Dominicus et Festivis alio loco adthe, an manusin articulis exercere pracentum, nil urgenti necessitatis, vel evidenti pietatis causa.'

The Council of Mafum (1573) decrees that:

'Nemo labiit et coehor det operam. Vendissent quorum semper notum, et tenuisse quae ad divinam cultum et victum necessarium pertinent, nunntiis publicis, superbus et vultibus, quos non ducti festas. Ludos etiam theatricos, id est paste, praecipue constatantem, praeterea profanat.'

The Council of Narbonne (1690) protests against the prohibition of Sunday by dancing, singing:

1 Council PARISIENS, c. 59; H. Spelman, Concilia, London, 1729-84; L. 125c, 1525. See also: Churchill, Synodologia (747), which is sometimes quoted, applies only to monasteries.

Sunday

107

lusting, hawkling, markets, public feasts, and romping, and allows none but travellers to be served in the inns.

These quotations prove that the Counter-Reformation led the authorities of the countries which remained Roman Catholic to recognize a duty with regard not only to Sunday labour but also to Sunday recreations. They seriously endeavoured to check the licence which had been allowed for many ages and had doubtless increased with the advances of the commercial prosperity in the 14th and 15th centuries. It is difficult to estimate how far they succeeded in reforming the manners of the people. Peter Heylin, sub-dean of Westminster, whose History of the Sabbath is the most valuable book on the subject, is an important witness, for he travelled on the Continent very soon after the close of the 16th century. He sums up his impressions in these words:

"Nor is their discipline so severe as their Canons neither, so that the Lord's Day there, for ought I could observe, when I was there, was observed in so strait a manner as we in England: repairing to the Church, both at Mass and Vespers, riding abroad or walking forth to take the air, or otherwise to refresh themselves, and following their honest pleasures, at such leisure times as are notdestinated to the Church, there were no returning from the Church by travelling of their lawful business, as occasion is, so they reserve sometime for their devotions in the publick."

But Heylin was an advocate, obviously on the fair side; and undoubtedly (as the decrees of the Councils imply) there were many regions in which Sunday was spoiled both by needless labours and by the most ostentatious amusement.

11. The Protestant Sunday in the 16th century.

The Reformers of the 16th century were in a difficult position, for, although they regarded both Gn 2 and Ex 20 as historical, they could not reject the institution of Sunday on either of the traditional grounds. They could not identify it with the Jewish Sabbath; nor could they admit that an ecclesiastical rule of observance, however venerable, was of unchangeable validity. Yet both feeling and reason urged them to maintain its obligation. Luther, Calvin, and the various catechisms and confessions put forward much the same view—save this effect:

The Fourth Commandment was abrogated by the New Testament; and ideally there should be no distinction between days. But human nature requires a day of rest from labour: the soul demands leisure for joint worship: therefore a day must be fixed for all. We cannot do better than follow the tradition which has been preserved from the first day of the creation.

Sound as that argument was, it had an unfortunate effect upon the minds of a generation who had been trained to rest upon absolute law and were not ready to accept reason in its place. To a vast number of Protestants Sunday appeared to have lost its authority; and there was a decided slackening of its observance. Heylin thus describes the state of things in the latter part of the century:

"There was no restraint on Sundays in the afternoon, from any kind of servile work, or daylabours; but that men might and did apply themselves to several businesses, as on other days. As for the greater towns, there is scarce any of them, wherein there are not Fairs and Markets (Stirk Masses, as they used to call them) upon the Sunday; and those as much frequented in the afternoon as were the Churches in the morning. So that in general every day is no otherwise observed with them... then so half holiday is with them, even of all those questions to be made, but that where working is permitted, and most kind of business, a man may lawfully enjoy himself and his housewife, as if he were the Emperor of Rome."

This is true, he says, of Holland, Belgium, Switzerland, France, and Germany, and part of Poland.

In England, where religious changes were far more violent, the observance of Sunday in the reigns of Henry VIII. and Elizabeth was considerably stricter.

Both The Institution of a Christian Man (1557) and the queen's Injunctions suppressed the Sunday walk, as recorded by Heylin, and yet one of the Homilies, published in 1563, sorrowfully confesued, "The Lord was more dishonourable and the Devil better served on Sunday; we were afterwards upon all the days of the week, as by a token and sign forebode." King James's proclamation of 5th May 1562 is a significant proof of this complaint. In his complaint of 5th May 1562 he thereon forth 

Q. 68. How is the Sabbath to be sanctified? — A. The Sabbath is to be sanctified by a holy resting all that day from such worldly employments and recreations as are lawful on other days; and spending the whole time in the public and private exercises of God's worship, except so much as is to be taken up in the works of necessity and mercy.

By successive enactments (1644, 1650, 1656) the same Parliament inquired every kind of Sunday recreation, even "vainly and profanely" walking for pleasure. At the Restoration the pendulum swung the other way. The court, the cavaliers, and the House of Lords all thought that the clergy led a life of idleness and profaneness; and the return of the Prayer-book service on Sunday morning was accompanied by trading, open theatres, and ostentatious frivolity.

The full title of this work is The Solemn Declaration to His Majesty Against Laws to Be Used, London, 1618.
in the afternoon and evening. To what lengths the court went may be learned from Macaulay's description of the day. It's last night.

There were many protests; and the battle of the books continued, Bishop Pearson, John Owen, and Richard Baxter being among the combatants. In 1677 a celebrated Act of Parliament was passed. The Sunday Observance Act regulated trade, labour, and travelling in a reasonable way, making ample allowance for ' works of necessity.' At the same time the Act of 1652 was revived and came to be recognized as the standard by which amusements were to be regulated. Both acts were observed with varying degrees of strictness at different times and in different places. But it is no little tribute to their reasonableness that both remained in force until the year 1871, though they were modified in some details; e.g., in 1099 forty watermen were allowed to ply on the Thames, in 1710 coaches and chairs received permission to stand for hire, and in 1794 bakers to sell bread at certain hours. From the Revolution to the death of Queen Anne a higher standard prevailed, and there was a marked and of obedience to the law. Under the Georges, though no change was made in the law, and though the same literary controversy continued, there was a steady decline in both respects. About 1780 the Evangelical churches, which were used by the Wesleys, produced a considerable change in opinion and observance. How much need there was for improvement may be inferred from three actions of Bishop Potton, who was a leader of the new school. He supported the institution of Sunday Schools, which began in 1780 and soon spread over the country. He persuaded the Prince of Wales to transfer his rowdy 'Sunday Club' to a week day. And he drew up the Sunday Observance Act of 1781, which enacts that any place of public entertainment or debate where a charge is made for admission may be deemed a disorderly house. Passed in order to check bear-baiting and infidel propaganda, this act has been used of late to impede Sunday concerts and lectures to working-men. For many years it was undoubtedly of great value, helping to restore the credit of Sunday in the public eye. But, when the rapid growth of large towns, due to the industrial revolution, presented new problems, this law with its restrictions of travelling to cause mischief. The increase of the industrial population, crowded up in towns which were almost destitute of churches, had no meeting place but the street or the public-house. This evil became serious in the latter part of the 18th cent., but its full development was not seen till the 19th.

(b) Scotland-The early history of the 'Christian Sabbath' and applied it to social life with the ruthless logic which is characteristic of Calvinism. The Westminster Confession was adopted by the General Assembly of the Kirk of Scotland in 1647, before Parliament had passed it; and it has remained the formal standard of faith to the present day. So long as it was enforced by public opinion—i.e. till about 1770—the Scottish Sunday was observed with amazing rigour. Not only were ordinary recreations disallowed; a ban was put even on books and music, except such as were recognized as religious in the narrow sense. No recreation was permitted, even to the kings of the drunkenness which is still common in Scotland may be traced to an unwise Sabbatarianism. In parts of the Highlands and the Islands the old rigour remains; but in the greater part of the country, as will be explained below, the last fifty years have witnessed a great change.

(c) America-The American night. The New England States, founded by Puritans, was based on the Scottish standard; but their coast towns were influenced by English practice, and their Western border by the practical necessities imposed by the frontier. There was danger from Indian raids, and the freedom of the Yankee and the Scotch-Irish was more absolute.

(d) Protestant Europe.—Nicholas Bownd's book was translated into several Continental languages and exercised a considerable influence. In Holland and Switzerland a strong Sabbatarian party grew up; and in Protestant Germany his doctrine found rigorous advocates. But on the whole the Sabbatarians failed; and the observance of Sunday, especially in Germany, fell much below the standard in England. Sunday labour was very common, and Sunday amusements were very coarse.

(e) Roman Catholic Europe.—In Roman Catholic countries, during the same period, as much as was practicable was done to keep the country from the Sunday. Sunday observance was not made a law in any of these countries, but there was a very strong movement for Sunday rest. In France, especially, there was a great struggle to win for Sunday the same freedom that was allowed to Sunday in England. In Spain Sunday was a day of rest only by law, and this was because it was the set day apart for bull-fights.

13. From the French Revolution to 1848.—The French Revolution marks an epoch in the history of Sunday observance. Its new calendar, with a week of ten days, though ephemeral and rather absurd, was a practical challenge to tradition, whose effects were permanent. The questions which it raised frightened some men into reaction, but excited others to free speculation. And it gave prominence to one fact, which no Government could afford to ignore for long. In every country there was an increasing number of citizens who did not acknowledge the Christian sanctions for Sunday, for whom, therefore, any rules for Sunday observance must rest on social rather than religious grounds. The recognition of this fact gradually altered the attitude of the Government towards Sunday laws; and perhaps it may account for the complete absence of legislation between 1789 and 1850. In England the repulsion caused by the Revolution combined with the Evangelical Revival to render Sunday observance much stricter. The laws of 1677 and 1781 were rather rigidly enforced, and public opinion (among the minority who had no votes for Parliament) was on the whole Sabbatarian. For the middle class and for all the people in country districts the movement was largely beneficial. The churches were filled; the sense of duty was strengthened; and habits of relection were induced. On the other hand, for the growing multitudes in the great towns the restrictions imposed by law became ever more cruel. Neglected by the Church, they had few places of worship and little will to enter them. They wanted means of getting into the country and opportunities of reasonable recreation in the town; but these were denied them, and nothing was left but the public-house. It was not until that change was recognized. The active controversy which was carried on about Sunday concerned only the reasons for observing it. Several distinguished writers took part in the discussion, but they did little more than repeat the well-worn arguments of the 17th cent. on either side.
In France, though Napoleon re-established the Church, the hold of Sunday upon the public mind could not be restored. It remained to a large extent a day of trade and of labour, as well as of social and religious enjoyment. In Spain it had been more striking. In Germany, which had been penetrated with Protestant influence, there was a marked decrease of Sunday observance. As a judge by the books which were published there between 1750 and 1845, public opinion was avowed to be strikingly based on religious propriety and Sunday was not yet safe to the social reason in favour of a day of rest. Sunday observance therefore, resting mainly upon tradition, naturally failed to maintain its hold.

The United States continued the division of opinion which had been characteristic of the years of the Great Revolution. New England and the Western States, which were gradually peopled by emigrants from New England, remained Sabbatarian, while the Southern States, occupied by the Quakers of Pennsylvania, generally adopted the more liberal view. Between 1830 and 1850 many books were published on both sides, but no legislation resulted.

14. From 1848 to 1914.—From 1848, the ‘year of revolution,’ we may date a new phase of the Sunday controversy. Suddenly the masses of the people, especially in manufacturing towns, acquired a new consciousness and began to be regarded with a new interest. The consequences were not long in making themselves felt. Hitherto it may be said that the churches and the legislatures had, on the whole, worked in harmony. Since 1848 there has been a gradual divergence. For, while the churches were slow to admit the possibility of change, the legislatures, more and more, as if in anticipation of the growing demand, sought to define regulations which were supposed to be required by new social conditions. At the same time an agitation began in some countries in favour of limiting the Sunday labour which vast numbers of people found so oppressive. These two elements were mixed in very different proportions in different countries.

(a) England.—In England, where Sunday labour was already several centuries old, the main question was that of relaxation. In 1851 a lively controversy arose about two points. Should railway travelling be allowed on Sunday? And should the new Crystal Palace be open to the public on Sunday afternoon? The instances could not have been better chosen, for their discussion involved all the main principles which were at stake. Twenty years passed before any legislative result came of the debate. In 1871 an Act was passed requiring the consent in writing of the chief officer of a police district, or of two magistrates, before a prosecution for Sunday trading could be instituted under the Act. In 1875 the Sunday Opening Act has been a dead letter. And an Act of 1875 has very much limited the application of the Act of 1781. That did not end the debate. In 1875 the Sunday Tramway was almost abandoned, and the opening of museums and picture galleries and other means of rational recreation on Sundays. In spite of several societies started in opposition, the Sunday League has gradually effected a great and beneficial change.

But the real crux of the situation is connected with travelling. Nothing has done so much to alter the habits of the people as the rapid increase in means of communication. The railway, the steamer, the tramcar, and the motor-car have successively helped to empty the towns on Sunday. They have answered a real need; for the strain of modern life has created a new craving for fresh air and change of scene, which finds satisfaction in the week-end habit of the rich folk and in the excursion train for the poor. The desire for such recreation is natural and wholesome. At the same time, it is in itself a cause of evils. (1) Those who spend Sunday away from home rarely derive any part of it to worship, and those who remain at home feel themselves thereby excused from attending at church. Consequently the number of those who enter any place of worship on Sunday forms an increasingly small percentage of the population. (2) Every added facility for travel on Sunday involves additional labour on the part of a large class of workers. The railways, the tramways, the restaurants, the bands, and the news agencies are so heavily tasked on Sunday that few of their employees enjoy anything like a day of rest.

Intent upon claiming what they considered their right to recreation and convenience, the mass of the people did not see what was involved in its satisfaction. The railways and the Continental trains ran in ever-increasing numbers, and a large number of subsidiary industries were obliged to join the movement. Then contractors who were in a hurry to do Sunday work; and there was a real danger that the industrial population might lose their day of rest. About the beginning of the 20th cent the trade unions and other bodies began to realize the danger; shop-assistants began to protest; and so a check was imposed upon the movement.

In the first year (1914-15) of the Great War it seemed as if the national necessity might obliterate Sunday rest. Munition factories and many others were opened on Sunday, and double pay was offered for work on that day. But the result was uniformly a diminished output. Many of those who worked on Sunday for double pay spent the extra money on Monday and Tuesday; and such as conscientiously toiled all seven days did so with rapidly falling energy. After two years Sunday work was generally abandoned; and it may be hoped that the nation has taken the lesson to heart.

(b) The Continent.—On the Continent during the latter half of the 19th cent. the same causes produced even more marked effects. In the eighties and nineties there was a struggle mainly along the aspect of the towns whether the day was Sunday or not. But at last even the ‘anti-clerical’ Governments, which had looked on complacently at a change which would increase the religious observance, became aware that it was causing immense social mischief; and while on behalf of the overstrained workers urgent claims were made for a legal day of rest. Between the years 1880 and 1910 laws were passed, in almost every country of Europe, which were intended to secure a weekly holiday for every working-man.1 Even in France, where the secularist influences were strongest, it was found impossible to judge necessarily one side of the case. The Act of 1781 had been a dead letter. An Act of 1875 has very much limited the application of the Act of 1781. That did not end the debate. In 1875 the Sunday Tramway was almost abandoned, and the opening of museums and picture galleries and other means of rational recreation on Sundays. In spite of several societies started in opposition, the Sunday League has gradually effected a great and beneficial change.

But the real crux of the situation is connected with travelling. Nothing has done so much to alter the habits of the people as the rapid increase in means of communication. The railway, the steamer, the tramcar, and the motor-car have successively helped to empty the towns on Sunday. They have answered a real need; for the strain of modern life has created a new craving for fresh air and change of scene, which finds satisfaction in the week-end habit of the rich folk and in the excursion train for the poor. The desire for such recreation is natural and wholesome. At the same time, it is in itself a cause of evils. (1) Those who spend Sunday away from home rarely derive any part of it to worship, and those who remain at home feel themselves thereby excused from attending at church. Consequently the number of those who enter any place of worship on Sunday forms an increasingly small percentage of the population. (2) Every added facility for travel on Sunday involves additional labour on the part of a large class of workers. The railways, the tramways, the restaurants, the bands, and the news agencies are so heavily tasked on Sunday that few of their employees enjoy anything like a day of rest.

1 See the return made to the House of Lords on the subject in 1911.
OTT has removed a difficulty which the church
never need have feared. Speaking as the story of the
creation in Gen 1 and 2 and the account of the
giving of the Law on Mt. Sinai were regarded as
historical, the question had to be faced: How can a
divine prescription, directly given, be abro-
gated? The answer for us is plain: No such
commands were ever given, and the stories which
record them are legends. The Sabbath was made for
man; and, under the guidance of Providence, it
was made by man. Sunday, in its turn, was made
by man and for man. Man, therefore, is
lord both of the Sabbath and of Sunday. It is
from the experience of men, both as individuals
and in societies, that the reasons must be drawn
which determine the manner in which Sunday is
to be observed.

(a) The new reasons for observing Sunday.—
These reasons are evidently of two kinds, answer-
ing to the conditions required for bodily vigour and
spiritual health. While the former may be re-
spected as especially the concern of the State and
the latter of the Church, the mutual influences of both
and mind are so considerable as to make it
impossible that in practice it is hard to draw a line
between the sphere of politics and that of religion. It is
all the harder because to ancient thought the dis-
tinction was not so clear. It was even in Turn times
is largely artificial. For the Church cannot ignore
the body, nor can the State disregard the interests
of the spirit. But happily no sharp division is
necessary. The reasons given by the Reformers are
of general application and may satisfy both
the Churchman and the statesman. Since three
hundred years of controversy have added nothing
substantially to them, we may be content with re-
statement of them and their detailed form.

The need of bodily rest at short intervals is a
fact of human nature which all civilized nations
have recognized by instituting public holidays.
The more complex the social and industrial
organization, the more important it becomes that
such holidays should recur at regular intervals.
The sporadic festivals of the ancient Roman
calendar and the Saints' Day system of modern Italy
could not be tolerated in an industrial
country; for production depends upon regularity
of labour and the efficiency of labour upon regu-
larity of recreation. Constantine's decree of A.D.
321 was, in fact, only confirmed in 1883 upon the
individual and satisfied a requirement of the
Church, but also solved economic and social
problems which were growing very difficult. Its
wisdom is proved by the fact that, in spite of
occasional protests and experiments, the Sunday
holiday has remained the rule of civilized countries
ever since.

The well-being of the people, which is the proper
object of government, demands more than mere
cessation of work at sufficient intervals. The life
of the citizen is incomplete, and his value to the
State is small, unless he cultivates his mind,
develops family affection, and enjoys social in-
tercourse. All these functions require leisure—not
merely the tired hours after a day's work, but
whole days when the time can be disposed of at
will. It is in days of leisure, also, that person-
nality and development develop. The State, there-
fore, has a responsibility, not only for appointing
holidays, but also for preventing such misuse of them as may diminish their value to
the citizen. The organization of recreation, on the other
hand, experience proves such responsibility to be
of a negative rather than a positive character.
The State can remove obstacles to a right course of acting
and prevent the individual from being physically
for the weekly holiday, they must issue from a
religious authority, where the moral sanctions, and affects only those who acknowledge
its right. The Christian Church is such an
authority, and has strong reasons, besides those
just mentioned, for requiring its members to
observe Sunday. Pitti says the mistaken
claims for Sunday, which originated in the dark
ages and were so hotly urged in the 17th cent.,
there remain some which are undeniable. The
spiritual life of the individual requires leisure
time, in which he may read or meditate, may
do acts of charity, and commune with his
friends, with nature, or art. It requires, also,
regular opportunities of joining in common wor-
ship, without which his membership of a Church
becomes unreal. The former demand might be
satisfied by times of leisure peculiar to himself.
But the latter involves regular holidays which are
common to all. Nor can it be a matter of indul-
gence whether these holidays fall on Sundays. The
power of association and tradition is enormous: no
man can escape from it, and no Church can ignore
it. To substitute another day would be to waste the
accumulated associations and traditions of nearly
2000 years which are concentrated on Sunday.
For on the Lord's Day Jesus rose from the dead;
and, on that day and times, the whole of
worship and mutual comfort; on that day they
have joined in the feast of His love. Luther did
not state the whole case when he wrote: 'Because
Sunday has been appointed from the earliest
times, we ought to keep to this arrangement, that
all things may be done in harmony and order,
and no confusion be caused by unnecessary novel-
ties'; 1 for he ignored one of the strongest impulses
in human nature, the desire for change.

(b) The mode of observance. — Assuming the
above reasons for the observance of Sunday, we
have to consider, from the point of view of Church
and State, what ought to be the manner of its
observance. The action of the State in such
matters, as we have indicated already, is mainly
negative. It has to protect the worker against
the oppression of unbroken labour, to secure for
him a regular period of recreation, and to prevent
other persons from interfering, whether by force
or by bribery, with his reasonable use of his leisure
time. That task is not so simple as might appear.
To enforce it, in every right, means to interfere
with some one else. The right to food involves the
Sunday labour of the milkman; the right of
the public to enjoy works of art encroaches upon
the leisure of the custodians; the right to fresh air
and green fields compels the toil of the railway-
man. These classes also have their rights, which
must somehow be safeguarded. To adjust conflicting
claims in the interest of the people as a whole
is a work of much insight and patience; nor can it
be accomplished once for all, since every enlarge-
ment in the tastes and interests of the many
involves a fresh tax upon the ministrations of a
few. In Britain, happily, men seem to be approach-
ing a general agreement about the main principles
of such accommodations. No man should be
required or encouraged to work on Sunday except
for the benefit of a large number. For the day-
man, the engineer of a picture gallery, or the
musician who plays in a band, is engaged in a
work of charity, if he is not adding a seventh
working day to his week for the sake of profit.
No such plea can be made on behalf of the man
who makes profit by the performances of others, or
of a tradesman who opens his shops on Sunday.
A partial exception is rightly made in the case of
those who supply the public with necessary refresh-
ments. But even that requires careful watching;

1 See above, § 11.

SUNDAY SCHOOLS.

and the Government has long recognized the duty of limiting the sale of intoxicants to certain hours of the day.

The action of the Church, on the other hand, is to protect the interests and the community, and must use compulsion. Every breach of positive law can be measured and punished by fine or imprisonment. Yet the main influence is really that of public opinion; for the magistrates and police, who administer the law, will not always be strict or lax according to the general feeling of public opinion. The best means therefore of securing a proper observance of Sunday is to educate public opinion.

In Robert Cox, The Literature of the Sabbath Question, 2 vols., Edinburgh, 1865. A few of them are historical, but the mass are arguments set out against the obligation of the State in which the same ideas (very few) recur over and over again. The following short list gives specimens of the writings of different countries and religions to which reference will be made. England has produced far more books than all the other countries put together.

(ii.) 19th century.—Martin Luther, Larger Catechism and other books; John Calvin, Institutes, bk. II., ch. vii.; Philip Melanchthon, On the True Obscurity of the Christian Conception; A Confutation of Unwritten Versions; Richard Hooker, Polycarpiano Institutionis. London, 1558, 1560;

Hendin and his followers. The question historically and with much ability. Parts of the history are well treated in articles and special chapters: Smith’s Histoire; D. Lord’s Day; Biddle, s.v. ‘Sabbath’ (ed. chiefly with legislation); D.F.S., s.v. ‘Sunday’ (ed. chiefly with legislation); D.F.S., s.v. ‘Sunday’ (ed. chiefly with legislation); D.F.S., s.v. ‘Sunday’ (ed. chiefly with legislation); D.F.S., s.v. ‘Sunday’ (ed. chiefly with legislation); D.F.S., s.v. ‘Sunday’ (ed. chiefly with legislation).

SUNDAY SCHOOLS.—1. Origin.—The history of the Sunday school is not the history of religious education. The Sunday school is the latter; the former is a modern institution. The Sunday school is a voluntary lay organization conducting religious instruction in classes on Sunday, generally attended by children, who are included but not always as part of a church organization. The informal instruction that was probably given by teachers in the early Christian communities was somewhat akin to the activity of the Sunday school teacher. But the catechetical schools which flourished in the post-apostolic Church were entirely different. Moreover, the regular catechizing of children, which was always the duty of the minister, albeit a duty very much neglected for many centuries, was not a precursor of the Sunday school. Indeed, if it had been thoroughly effective and well developed, there might never have been a Sunday school. The failure of the church through the centuries to systematize and to develop the religious education of the children made the Sunday school necessary. Thus the Scottish clergy, who were more successful in the catechizing of children, regarded the new institution at first as altogether superfluous. The origin of the Sunday school is to be sought in the sporadic efforts of earnest men and women to supply some elementary instruction to children who were neglected by the Church. The most notable instance of such effort was that of Robert Raitkes at Gloucester; the name ‘Sunday school’ seems first to have been attached to his name.

LITERATURE.—Many hundreds of volumes have been written on this subject. A very good account of some 200 will be found

In Robert Cox, The Literature of the Sabbath Question, 2 vols., Edinburgh, 1865. A few of them are historical, but the mass are arguments set out against the obligation of the State in which the same ideas (very few) recur over and over again. The following short list gives specimens of the writings of different countries and religions to which reference will be made. institution; and there was genetic connexion between Raikes's enterprise and the whole Sunday school movement, which was necessarily to be approved.

2. The period of beginnings.—(a) Robert Raikes and the first Sunday schools.—The national duty of universal education was not fully recognized in England until the 19th century. In the 18th century, education was the privilege of the well-to-do. Even the many benefactions which had been provided from time to time for the education of the poor had been more or less restricted to the children of the middle classes. Moreover, with the development of the factory system, the children had been forced into labour at a very early age, with the result that they grew up in hopeless illiteracy. Among a number of efforts to remedy this intolerable condition the most significant was that of Robert Raikes, editor of the Gloucester Journal. He was a man of generous sympathies, interested in various efforts to ameliorate the lot of the unfortunate. His attention was attracted to the vicious conduct of the 'young pagans' who were employed in the factories during the week, but who were at large on Sunday, and who naturally employed their single Sunday afternoon in the recreation which they understood. Believing that their ignorance was responsible for their depravity, he gathered a number of them into a school and set himself to training them to make them understand in 'reading and the Church Catechism.' The date of this simple enterprise, which was soon copied in numerous towns, is usually set at 1780. Sunday schools became so popular that attention was soon addressed to them in the Gentleman's Magazine, and the various letters in that once influential periodical still remain our most important source of information regarding the beginning of the movement. Wesley, in his Itinerary, soon came upon Sunday schools in various places, and with live insight immediately saw their possibilities.

(b) The Sunday schools in America.—The American churches were accustomed to hold services in the morning and afternoon. There was an 'intermission' of an hour or more, during which a simple lunch was eaten. Naturally this period was often used for the catechetical instruction of the children, for whom the somewhat solemn services provided little that was appropriate. There is no evidence that any such practice was at all common previous to the Revolution. The catechizing of children was usually left to the faculty, and in connexion with the pastoral visits of the minister. A large proportion of the children were of course altogether neglected. The period of the Revolutionary War was not favourable to religious education, and the strong influence of France tended decidedly away from religion. In the general desire of the churches to meet this condition, they turned with interest to the new institution of the Sunday school, which had been introduced into the United States from England. It was not in America primarily (though it was to some extent) a school held on Sunday for illiterate children who could not be instructed on week-days, but rather a school conducted by the Church for religious instruction on the day set apart for that purpose. Thus from the beginning the Sunday school in America was more closely related to the Church than it was for a long time in England. This is not to say that there was not considerable opposition in the one country as in the other from clerical quarters, nor did the danger of the intrusion of inexpert laymen.

(c) Sunday school organizations.—Within a few years of the establishment of the Raikes schools organizations for propagating the institution came into existence.

William Fox, a London merchant, had had in contemplation a large plan for the gratuitous instruction of the poor. When he learned of the Philadelphia enterprise, it seemed to him more educational than his own more ambitious project; and he took the lead in forming, in 1787, the Society for the Establishment and Support of Sunday Schools. In 1796 it organized the Edinburgh Gratitude Sabbath School Society. Others were formed in other Scottish cities. In 1810 the Hilberry or Stockport School Society was organized. These societies collected funds for the establishment of new schools, and the payment of teachers, for the purchase of Bibles, spelling-books, etc. The practice of paying teachers, although continued in a few places for many years, did not pave the way to the organization of the new institutions, with the spread of the new institution. A number of young men who were ministering their services in the English districts of London felt the necessity of mutual help and conference, and organized in 1808 the Sunday School Society for this purpose. This organization became the most significant means of developing the Sunday school in Great Britain.

Organization began in America with the First-Day or Sunday School Society at Philadelphia, in 1791. It was denominational in character and philanthropic in purpose. The visit of Albert May of London in 1811 greatly stimulated interest in Sunday school organizations. Many of them were formed in American cities. After a number of federations of these had been made, the desire for a national denominational union resulted in the organization in 1834 of the American Sunday School Union, which has continued to do effective work to the present time.

(d) Lessons and methods of teaching.—The earliest Sunday school teaching was of the most primitive sort. There were no books, and they consisted of the Bible, and simply listening to the recitation. Soon some simple plans of lessons were prepared, with some practical appreciation of child religion. Helps to the teacher were the Sunday School Society's Teachers' Magazine, which began in London in 1818, and the American Sunday School Magazine, started in 1824.

3. Development of the Sunday school in America.—(a) Denominational organizations.—The definite adoption of the Sunday school by the Church in America is seen in the steps taken by almost all the denominations subsequent to the organization of the American Sunday School Union to supervise and extend the work within their own churches. For example, in 1827 the Sunday School Union of the Methodist Episcopal Church was organized in New York City; Baptist and Congregational denominations, which had been organized in 1825, developed into the American Baptist Publication Society in 1846, and into the Congregational Sabbath School and Publishing Society in 1858. The supervision which has been more especially undertaken by the denominations.

(b) The Sunday School as a pioneer religious agency.—It is easy in the light of our modern educational science to criticize the poor endeavours of early religious education, but no history of the wonderful development of the Mississippi valley would be adequate which failed to recognize the social significance of the little Sunday schools that went far ahead of the organized Church into the pioneer communities.

In 1829 the American Sunday School Union established its first western headquarters at Cincinnati, and in the following year resolved at its annual convention to undertake the organization of a Sunday school in every destitute place in the Mississippi valley. Funds were raised, lay and clerical missionaries were appointed, and a notable advance was made. A single missionary in the 'midst of the wilds' was able to work with the quickest of success. By 1829 he was able to report the organization of 1300 new schools. As it was said of old that where ten Hebrews lived there should be a synagogue, so it came to be the expectation in America that, wherever three or four Christian families were neighbours, a Sunday school should be started. That was the practice, and that was the result. At first, in the country districts, the schools were held in the church or in the court-house. Very many churches of the West had their origin in the activities of a few of the faithful who had begun religious work by the organization of a little Sunday school.

(c) The International Sunday School Association.—The conversion-system has been characteristic of the American movement. Neighborhood conversions were held before the annual meeting of the American
SUNDAY SCHOOLS

Sunday School Union, a national convention of Sunday school workers was called in 1822. After a long series of meetings it was continued to meet the following year. Numerous state and county conventions met in the succeeding years, until in 1859 a third annual convention was called. The first of these denominational conventions for the Civil War, was in 1869, and by that time the noted Illinois leaders, B. F. Jacobs, Edward Eggleston, J. H. Vincent, and D. L. Moody were prominent. While this convention ended definitely Chicago, there were delegates from Canada and from the British Isles. The same was true of the fifth convention of 1872, at which the uniform lessons were adopted. The movement then became definitely organized as international, with delegates from all the states and provinces of North America. An official body was gradually developed, which supervised the extension of the system to state, county, and township conventions, meeting annually and leading up to the great triennial gathering. At the eleventh convention in 1905 it was resolved to incorporate under the name ‘International Sunday School Association.’ This was done in 1907, headquarters being established at Chicago. A completely articulated organization exists under an executive committee, with a general secretary and a corps of superintendents over the various divisions and departments.

(d) The development of the lesson system.—As an improvement on mere memorizing, the ‘limited lesson’ system came into vogue about 1825. Two years later Albert Judson published a question-book, which supplied some notes and explanations of the selected lessons. In the same year the American Sunday School Union issued the Union Quarterly, which was followed annually by others covering a considerable portion of the Bible. Various schemes followed, the result partly of private enterprise, partly of denominational zeal. There was no adequate division of subjects, and Sunday school leaders felt the need of some unity of effort. After much discussion the convention of 1872 voted to issue a uniform system of lessons for all Sunday school pupils. A lesson committee was appointed, and great enthusiasm was developed in the scheme. The co-operation of the British Sunday School Union was secured, and the lessons became practically universal. Noted writers prepared text-books and commentaries. Great teachers’ meetings were held for the exposition of the lesson of the forthcoming Sunday, and the public press frequently devoted a column on Saturday to this purpose.

After twenty years of great external success the educational value of the uniform lesson was seriously called in question. The subject was warmly debated in conventions. At last, in 1908, the convention decided, while continuing the uniform lesson, to authorize its lesson committee to prepare a thoroughly graded course, to be used by such schools as desired it. This has since been done, and a series of text-books has been prepared by the various denominations upon the lessons thus outlined.

(e) Teacher training.—It has been recognized that most Sunday school teaching has been very unsatisfactory. Efforts have been made almost from the beginning to effect improvement. The institutes held since 1837 for public school teachers were a challenge to the Sunday school, which was answered by the development of conferences and institutes. The normal class of J. H. Vincent in Illinois in 1837 was a model which many followed. Courses for normal training of increasing scope have been established, and they are attended by the various denominational societies and prepared by educational experts are of very high grade. A summer school has been established at Lake Geneva, Wisconsin, where instruction for professional and lay workers is carried on during the vacation season.

(f) The Sunday School Council of Evangelical Denominations.—The activity of the various Sunday school boards of the Evangelical denominations has been very markedly developed during the last thirty years, until there has grown up a professional body of editors and secretaries representing the more important denominations. These leaders, feeling the need of a common expression of the denominational responsibility for religious education, organized in 1910 the Sunday School Council of Evangelical Denominations. Annual meetings are held, at which important problems of educational policy and administration are discussed. The existence of such a representative body naturally raised the question of future responsibility for the making of the lessons for the Sunday school world. The lesson committee has therefore been reconstituted, and now consists of eight members selected from the international association, eight members selected by the council, and one member selected by each denomination having a lesson committee.

(g) The emphasis on religious education.—The last quarter of the century has been marked by a growing emphasis upon the more serious educational responsibility of the Church. This was seen in the demand for the graded curriculum. In addition to the international lesson, several very significant commentaries and schemes have been produced, notably the Constructive Studies of the University of Chicago Press, the Completey Graded Series of Schulmer, and several series of various denominations. In 1898 the International Sunday School Association was organized by the Religious Education Association to promote the educational ideal in religion and the religious ideal in education. The Association holds annual conventions or conferences, conducts studies and surveys, publishes a magazine, gathers in its offices in Chicago all significant material on religious education, and conducts an extensive correspondence of advice and stimulus on problems in this field. Several denominations have established Boards of Religious Education, which are undertaking the supervision of the entire educational work of the Church.

Leaders of great ability are being selected as church secretaries. In some cases these boards are preparing new and specialized grades curricula.

The numerous agencies of religious education are being co-ordinated in the more progressive churches under a professional director of religious education. He is becoming the educational minister of the Church. Some colleges and universities and most theological seminaries have established chairs of religious education, by means of which a trained professional force is being developed and scientific work in religious education is being undertaken. An extensive literature has already been produced, both technical and popular.

4. British developments.—(a) The Sunday School Union.—The parent society in London developed into a nation-wide enterprise. In 1821 there were four metropolitan auxiliaries and sixty provincial unions, besides the Sunday School Society of Ireland and the Sabbath School Union of Scotland. The reports of that year show 4000 schools with 36,000 teachers, and 500,000 scholars. In 1823 infant schools were added for children below the ordinary school age, as in 1811 Thomas Charles of Bala, the Welsh Methodist leader, had already established infant schools. The latter subsequently became known as senior classes, and in the north infant and senior branches became part of a completely organized school. The Union celebrated its jubilee in 1853 by inaugurating a fund for the erection of
a permanent building. In 1862, at the time of the International Exhibition in London, a general Sunday school convention was held, attended by delegates over the British Isles, as well as from the Continent, the United States, and the Colonies. British Sunday schools were accustomed to meet in the morning and in the afternoon, and the Union had a very wide series of lessons. Beginning with 1874, the British Lessons Committee co-operated with the American Committee in the production of the international series of lessons.

In 1880 was celebrated the centenary of Sunday schools throughout the United Kingdom, and a great convention was held in London to which delegates came from all over the world. As a result of this enlarged interest, the Union modified its constitution so as to become thoroughly national in character, representation to the counties being extended in 1890.

During the last thirty years the Union has developed a very significant philanthropic work, including country homes for poor scholars, a home of rest for lady teachers, a children's convalescent home.

5. Educational progress.—In the second quarter of the 19th century, a forward movement in the science and art of pedagogy began in Scotland. David Stow organized the Glasgow Normal School for the training of teachers. Believing that the same principles could be applied to religious education, he published in 1826 a training system. The Union published in 1837 Popular Education, or a Normal School Manual. In 1836 a training class was organized at Pilimico. An attempt was made in 1861 to establish a college for Sunday school teachers, but it was found more feasible to develop a system of standardizing examinations. The college was finally established in 1899, and the examination system adapted to this organization. In addition to the publication of lessons and the encouragement of teacher training, the Union has developed a considerable literature for teachers and scholars, a separate building being required for this phase of its work.

6. World Sunday school work.—The Sunday schools spread naturally through the English-speaking world. Various efforts were made, beginning as early as 1815, to establish it on the Continent, but with slight success. The convention in London in 1862, at the earnest solicitation of Albert Woolf, raised the whole question of Sunday schools. Sunday schools were established in all European countries. This movement was promoted by the world's conventions which met in London in 1889, in St. Louis in 1893, in London in 1898, in Jerusalem in 1904, in Rome in 1907, in Washington in 1910, in Zürich in 1913. At Rome the World Sunday School Association was organized, with American and British sections. Missionary work in China, India, S. Africa, and Europe was assigned to the British section; in Japan, Korea, the Philippines, S. America, and in the Muslim fields to the American section. The Association reported at Zürich the world Sunday school membership as 20,015,057, with 310,057 schools, and 2,669,630 officers and teachers.

6. Non-Protestant Sundayschools.—The Roman Catholic Church has adapted the Sunday school to its system, though without relinquishing the control to lay leadership. In the Hebrew Reformed Synagogue the Sunday school, generally under parochial control, is of longer standing. Among others the Latter-Day Saints an excellent system of religious education has been developed, including the Sunday school. The Christian Science churches have established Sunday schools especially for children.

SUNNITES

THEODORE GERALD SOARES.

SUNNITES.—I. Distribution.—Islam is at present divided into two great unevenly divided sections. The Shi'ahs (q.v.) are found in Persia and among the many people in India; they are also to be found in the Turkish empire as it was prior to the Great War, in N. Africa, Egypt, other parts of Africa, Central Asia, Afghanistan, India, China, and the East Indies. In India, the ruling class is of Sunnite faith; in the Turkish empire there are numbers of Shi'ahs of the better class who make a point of concealing their religious convictions. The Muhammadan population of the world is estimated to be about 221,000,000, and of this total it is reckoned that about 15,000,000 are Shi'ahs; the rest are Sunnite. The Indo-Persian (q.v.) of E. Arabia and N. and E. Africa are not relatively numerous and are neither Shi'ah nor Sunnite inasmuch as they claim descent from the Khurjite schism of the early Umayyad period. The Zaidites (q.v.) of Yemen, though of Shi'ah origin, are on terms of fellowship with the Sunnites of Arabia.

2. The term 'Sunnite' and the early attitude towards the sunnah.—The Sunnite is the follower of the sunnah ("form," "outline," "mode," "usage"). To the view and usage of the Prophet. The issue implied in the use of the term is as to how new demands of thought are to be satisfied and new situations are to be met. The party of the sunnah contendcd that, where the Qur'an did not fully define and clearly outline details, the sunnah was to seek trustworthy information as to what Muhammad had said on the subject, what his action had been with relation to it, or what he had approved in others. The sunnah of the Prophet would be found embodied in a tradition (hadith), and it was of the highest importance that the trustworthiness of traditions should be certified. They were tested, not by their intrinsic probability or by their consistency with other reports, but solely by the reputed reliability of the succession of persons through whom they had been handed down. If the 'hadith, or chain of guarantee, had no un-
even greater degree was probably the notoriously untrustworthy manner in which traditions were produced. He preferred to resort directly to the Qur'an and, where it was not explicit, to decide according to its spirit, not by what he felt to be fairly be inferred from its teaching as bearing on the question in hand. This method of obtaining direction involved two principles which the party of the sunnah employed for a long time, viz., the trust, or qiyas, or independent personal judgment, and qiyas, argument from the analogy of known cases to secure direction for new cases. Both of these were thought to imply disrespect for, or even independence of authority. Aba Hanifah went farther than this in the readiness which he showed to depart from the written authority of the Qur'an and the direction given by the sunnah. Even when these gave a clear decision, or where the principle of qiyas gave a definite instruction, the situation might suggest a better view or a wiser course of action. To follow such a suggestion was a duty. The principle here implied is termed istislah, preference or asking for the better thing. It involves personal independent judgment (ra'y) to a greater degree than the employment of qiyas does and is still more inconsistent with the established law of the party of the sunnah (Aba-Sunni). Malik ibn Anas († 179 A.H.) lived in the atmosphere of tradition at Medina, and his work had more weight with him than with Aba Hanifah. Still, where traditions were being forged at the rate he knew and for the purposes of which he was aware, there was room for a principle of decision in legal and doctrinal questions which would protect Islam against in- volution through capricious or irrational judgments. Malik, therefore, admitted the rule of istislah, the seeking of the public welfare, which might over- ride the dictation of the Sacred Book and the sunnah. The strict party of the sunnah opposed this rule, as it had the liberal practice of Aba Hanifah; both allowed too much room to ra'y. To men accustomed to earlier conditions, when the absence of a sunnah which might cover all cases left room for decision on other grounds, the mere multiplying of traditions did not afford a sufficient reason for surrendering methods of obtaining guidance which had been followed when traditions were not available. Meanwhile the uninformed masses of Islam were strongly inclined to the simpler method of appeal to external authority. Qiyas, istislahan, istislah, and ra'y were too human, and hence to feel that there might be circumstances in which it was proper to decide on free scholarship (ra'y) or authority (sunnah) became the ruling factor in the community, whether the need of the Muslims was to be conceived according to the view of intelligent leaders or to that of the great body of the people with its clinging to old-established ways.

3. The Mu'tazilite rection.—The traditional and rationalistic tendencies both went on developing, and the mutual antagonism between them was intensified. The rationalistic party became recognized as a party which favoured ra'y, that is, the interpretation of Islam by free and philosophical and Christian reason, and regularly employed the Aristotelian method of arriving at truth. The earlier khilafahs of the Abbasi dynasty had been interested in these things, but they became so absorbed in the official approval under the khilafahs al-Ma'mun († 218 A.H.) that the last year of his reign he instituted an inquisition against the traditionalists. This inquisition (al-Mihnah) went on for sixteen years, in which He debate was allowed, and only officially approved under the khilafah al-Ma'mun. The sunnah party with its argument from the analogy of known cases to secure direction for new cases. Both of these were thought to imply disrespect for, or even independence of authority. Aba Hanifah went farther than this in the readiness which he showed to depart from the written authority of the Qur'an and the direction given by the sunnah. Even when these gave a clear decision, or where the principle of qiyas gave a definite instruction, the situation might suggest a better view or a wiser course of action. To follow such a suggestion was a duty. The principle here implied is termed istislah, preference or asking for the better thing. It involves personal independent judgment (ra'y) to a greater degree than the employment of qiyas does and is still more inconsistent with the established law of the party of the sunnah (Aba-Sunni). Malik ibn Anas († 179 A.H.) lived in the atmosphere of tradition at Medina, and his work had more weight with him than with Aba Hanifah. Still, where traditions were being forged at the rate he knew and for the purposes of which he was aware, there was room for a principle of decision in legal and doctrinal questions which would protect Islam against in- volution through capricious or irrational judgments. Malik, therefore, admitted the rule of istislah, the seeking of the public welfare, which might over- ride the dictation of the Sacred Book and the sunnah. The strict party of the sunnah opposed this rule, as it had the liberal practice of Aba Hanifah; both allowed too much room to ra'y. To men accustomed to earlier conditions, when the absence of a sunnah which might cover all cases left room for decision on other grounds, the mere multiplying of traditions did not afford a sufficient reason for surrendering methods of obtaining guidance which had been followed when traditions were not available. Meanwhile the uninformed masses of Islam were strongly inclined to the simpler method of appeal to external authority. Qiyas, istislahan, istislah, and ra'y were too human, and hence to feel that there might be circumstances in which it was proper to decide on free scholarship (ra'y) or authority (sunnah) became the ruling factor in the community, whether the need of the Muslims was to be conceived according to the view of intelligent leaders or to that of the great body of the people with its clinging to old-established ways.

3. The Mu'tazilite rection.—The traditional and rationalistic tendencies both went on developing, and the mutual antagonism between them was intensified. The rationalistic party became recognized as a party which favoured ra'y, that is, the interpretation of Islam by free and philosophical and Christian reason, and regularly employed the Aristotelian method of arriving at truth. The earlier khilafahs of the Abbasi dynasty had been interested in these things, but they became so absorbed in the official approval under the khilafahs al-Ma'mun († 218 A.H.) that the last year of his reign he instituted an inquisition against the traditionalists. This inquisition (al-Mihnah) went on for sixteen years, in which He debate was allowed, and only officially approved under the khilafah al-Ma'mun. The sunnah party with its argument from the analogy of known cases to secure direction for new cases. Both of these were thought to imply disrespect for, or even independence of authority. Aba Hanifah went farther than this in the readiness which he showed to depart from the written authority of the Qur'an and the direction given by the sunnah. Even when these gave a clear decision, or where the principle of qiyas gave a definite instruction, the situation might suggest a better view or a wiser course of action. To follow such a suggestion was a duty. The principle here implied is termed istislah, preference or asking for the better thing. It involves personal independent judgment (ra'y) to a greater degree than the employment of qiyas does and is still more inconsistent with the established law of the party of the sunnah (Aba-Sunni). Malik ibn Anas († 179 A.H.) lived in the atmosphere of tradition at Medina, and his work had more weight with him than with Aba Hanifah. Still, where traditions were being forged at the rate he knew and for the purposes of which he was aware, there was room for a principle of decision in legal and doctrinal questions which would protect Islam against in- volution through capricious or irrational judgments. Malik, therefore, admitted the rule of istislah, the seeking of the public welfare, which might over- ride the dictation of the Sacred Book and the sunnah. The strict party of the sunnah opposed this rule, as it had the liberal practice of Aba Hanifah; both allowed too much room to ra'y. To men accustomed to earlier conditions, when the absence of a sunnah which might cover all cases left room for decision on other grounds, the mere multiplying of traditions did not afford a sufficient reason for surrendering methods of obtaining guidance which had been followed when traditions were not available. Meanwhile the uninformed masses of Islam were strongly inclined to the simpler method of appeal to external authority. Qiyas, istislahan, istislah, and ra'y were too human, and hence to feel that there might be circumstances in which it was proper to decide on free scholarship (ra'y) or authority (sunnah) became the ruling factor in the community, whether the need of the Muslims was to be conceived according to the view of intelligent leaders or to that of the great body of the people with its clinging to old-established ways.

3. The Mu'tazilite rection.—The traditional and rationalistic tendencies both went on developing, and the mutual antagonism between them was intensified. The rationalistic party became recognized as a party which favoured ra'y, that is, the interpretation of Islam by free and philosophical and Christian reason, and regularly employed the Aristotelian method of arriving at truth. The earlier khilafahs of the Abbasi dynasty had been interested in these things, but they became so absorbed in the official approval under the khilafahs al-Ma'mun († 218 A.H.) that the last year of his reign he instituted an inquisition against the traditionalists. This inquisition (al-Mihnah) went on for sixteen years, in which He debate was allowed, and only officially approved under the khilafah al-Ma'mun. The sunnah party with its argument from the analogy of known cases to secure direction for new cases. Both of these were thought to imply disrespect for, or even independence of authority. Aba Hanifah went farther than this in the readiness which he showed to depart from the written authority of the Qur'an and the direction given by the sunnah. Even when these gave a clear decision, or where the principle of qiyas gave a definite instruction, the situation might suggest a better view or a wiser course of action. To follow such a suggestion was a duty. The principle here implied is termed istislah, preference or asking for the better thing. It involves personal independent judgment (ra'y) to a greater degree than the employment of qiyas does and is still more inconsistent with the established law of the party of the sunnah (Aba-Sunni). Malik ibn Anas († 179 A.H.) lived in the atmosphere of tradition at Medina, and his work had more weight with him than with Aba Hanifah. Still, where traditions were being forged at the rate he knew and for the purposes of which he was aware, there was room for a principle of decision in legal and doctrinal questions which would protect Islam against in- volution through capricious or irrational judgments. Malik, therefore, admitted the rule of istislah, the seeking of the public welfare, which might over- ride the dictation of the Sacred Book and the sunnah. The strict party of the sunnah opposed this rule, as it had the liberal practice of Aba Hanifah; both allowed too much room to ra'y. To men accustomed to earlier conditions, when the absence of a sunnah which might cover all cases left room for decision on other grounds, the mere multiplying of traditions did not afford a sufficient reason for surrendering methods of obtaining guidance which had been followed when traditions were not available. Meanwhile the uninformed masses of Islam were strongly inclined to the simpler method of appeal to external authority. Qiyas, istislahan, istislah, and ra'y were too human, and hence to feel that there might be circumstances in which it was proper to decide on free scholarship (ra'y) or authority (sunnah) became the ruling factor in the community, whether the need of the Muslims was to be conceived according to the view of intelligent leaders or to that of the great body of the people with its clinging to old-established ways.

One more element in the Mu'tazilite controversy
remains to be noticed. The party of the sunnah held the characteristic Arab view that the will of Allah is revealed in the Qur'an and should not be changed or altered. The 'party of agile' allowed no capacity to initiate action and to accept responsibility for it. Because of that, the Mu'tazilah, for this reason, the Mu'tazilah are classed as Qararites (believers in free will). Their arguments attacked the orthodox, particularly the ground that they held man responsible for his acts and, notwithstanding the Qur'an and Sunnah, it was said to be forced upon them. Their arguments were not, but it was only illusory; in reality his acts were created by God, without whom nothing happened. This orthodox contentions the Mu'tazilah repudiated as involving injustice to man and also as implying an insulting impeachment of God's justice.

4. Re-establishment of orthodoxy.—The Mu'tazilite controversy was summarily terminated by the kalifah al-Mutawakkil in 324 A.H. He reversed the liberal policy of his predecessors, declared the doctrines that they had championed to be offences against the State, and proclaimed the orthodox views to represent the official opinions which alone would be tolerated in Islam. This official endorsement of the 'Ahlu-'s-Sunnah has been maintained in Islam down to the present. That the orthodox and of the orthodox were held by both Sunnites and Shi'ahs, and the Sunni khalifate has regularly stood for them. There is no doubt that the Mu'tazilite kalifah of the Ilmān period represented a relatively small minority in the Muslim world of their time and that al-Mutawakkil was wise not to continue his support of their views in the face of an adverse tide. Tradition and Qur'an retained their hold upon the masses, to whom their directness and their clear mandatory accent appealed as more reflective opinion could hardly hope to do. The great body of Islam ranged itself behind the orthodox kalifahs, and the Mu'tazilah tend to disappear little by little. The free-thinking teachers notwithstanding give the traditional theologians a great deal of trouble, in spite of the smallness of their numbers. It was easy to make a system based on literal interpretations appear ridiculous when attacked by means of keen dialectic, and the orthodox tenacity and inflexibility would probably prevent them from feeling an awkward comfort when they were forced to evade rather than answer the attacks made upon them. It will be readily understood that the man who enabled them to inflict genuine defeat upon their opponents, Abū'l-'Iṣṣān al-'Ash'ārī (q.v.), would seem to the orthodox to be almost a prophet when he arrived.

5. Abūl-'Iṣṣān al-'Ash'ārī.—Al-'Ash'ārī had been long trained in the views and arguments of the Mutakallims, and there is some plausibility in the legend which represents him as using their method against his own teacher al-Jub'ālī to the discredit of the latter. He had apparently come to see that the Aristotelian logic was valuable, not for the discovery of truth, but for making explicit the significance of propositions which were taken for granted and for the confutation of false arguments. It became clear to him that religion could not be built securely upon kalām, a formal science. The foundation must be in revelation through inspired men and media, through prophets and the Qur'an and Sunnah. The teaching of their predecessor's poor logic, the party of the sunnah had founded Islam upon the true basis, that tradition was a genuinely trustworthy means of communicating religious truth, that the consensus of the Muslim community (ijāda) expressed through its leaders was more reliable than the judgment of the individual Mutakallim, al-'Ash'ārī returned to the orthodox faith which he seems to have inherited from his forbears in the first instance. He came back converted through his own employment of kalām against itself, and naturally he made use of the weapon from that. He is remembered as the first of the Mu'tazilah and to develop into a system the orthodox doctrine.

6. The principle of consensus.—The principle of consensus operated more largely from the days of al-'Ash'ārī onwards. He was the first person who first made extensive use of it in his teaching and was prepared to accept it as a guide where the Qur'an and sunnah failed to afford direction. His preference for ijāda was approved only with reserve by the rigid Hanbalite orthodoxy of the 3rd century. Al-Bukhārī's strictness in the criticism of hadiths and his refusal to give an opinion on his authority made his system of ijāda very closely akin based upon an employment of the ijāda. The principle has a bearing upon the division of Islam into Sunnites and Shi'ahs. In the days of the early Ash'arite school this division, which is based, not upon a religious character, but upon a divergent view of the kalifate, had not yet taken place, and the ijāda embraced the whole Muslim community. When the division came, it is possible that the 'Ahlu-'s-Sunnah lay beyond the boundaries of the Persian empire as organized under the Safawids (A.D. 1502), and that ijāda had a sense and a binding force in the Sunnite parts of the Muslim world, but not in Persia. The Persian Muslims readily accord the name Sunnis to their rivals and accept Shi'ah as a proper term by which to describe themselves. Ijāda is especially a Sunnite principle and has guided the leading movements and changes of Sunnite Islam during many centuries. There is no need of its use among the Shi'ahs, where appeal is made to the inspired authority of the imāms as it is voiced through their mujtahids.

In spite of the fact that the Hanbali school, so powerful in the 3rd cent. of Islam, is now almost a negligible quantity, al-'Ash'ārī, the founder of the Sunnite theological system, was an ardent Hanbali after his conversion and died in that faith (329 A.H.). It is necessary to say, however, that the views which are now held by all the Sunnite schools are the founder's views as somewhat liberalized by the Ash'arite school after his death. There is no reason to suppose that the boundaries of the kalifate, into which the great teacher came back at the time of his conversion from Mu'tazilism was modified through the very kalām influences which he had combatted with his own. al-'Ash'ārī's thought to employ kalām for purely apologetic purposes, but that this did not give much substance to the principle of the consensus than he seems to have thought of. The 'Six Correct Books' of traditions (Kutub al-Sittah), of which the two most respected of all the Hanbalites and Sunnites are the most essential authorities, contain the only generally accepted evidence as to the sunnah, but in the application of the sunnah the principle the ijāda, used in accordance with the scholastic method introduced by al-'Ash'ārī, has made it possible to leave far behind the strict views of law held by the triumphant Hanbalite school of the 3rd Muslim century. That kind of unchanging orthodoxy would not have preserved the unity of Islam as it has been preserved among the Sunnites. Modern Hanbalites are the consistent successors of the early Hanbali school before al-'Ash'ārī, but they exert little influence. Sunnite Islam is an Islam to which the liberal views of the Hanbalites and the moderate views of the Mālikīs and Shāfi'is have less and less difficulty in adjusting themselves as time has passed, so that in opinion, at least in unity and even in use of uniformity have come to prevail. The Hanbalite domination of the Sunn sect became at once impossible with the admission of the kalām method and the broader understanding of the ijāda. The schools differ, as they have always differed, in the extent to which they accept the certain liberal and rational attitudes of mind. Analogia (ijāda) and judgment according to personal opinion (wāy) and, in special relations, talaqin, or preference for a view as a matter of choice, have undermined the conception of Hanbali law, a less important part among the N. African Mālikis, and even smaller part in the Shi'ite community of Islam, but the difference is within the region of wāy and not within that of dogmatic opinion.

7. Triumph of Ash'arī theology.—The process of liberalizing the orthodox system of al-'Ash'ārī must have been somewhat rapid in the century
following his death. Towards the end of the 4th century A.H. the Sunnites have the disposition to allow kālām to run riot in Baghdad, where we read of theologians who were willing to argue questions without reference to the traditional authorities of Islam. Even in the West the great thinkers, excluding Ibn Hazm (g.v.) as almost a sole exception, gave themselves more and more to a philosophical account of religion and at the same time realized painfully that they had parted company with the rest of the world. Men like Ibn Tufail and Avemero (g.v.) in the late 6th C. A.H. have one system for the masses and another teaching for the instructed few. Nevertheless one may say that, in spite of all excesses, the Ash'arite school had definitely imposed its views and method upon the Muslim world before the end of the 11th C. of our Christian era. The liberty of thought which al-Ash'ari had secured for Islam had developed by that time a controversial intellectualism which left no place for intuition or mysticism in religion, and orthodoxy was in serious danger of losing the sympathy of the masses. A new emphasis was called for in order to supply a corrective to the general rationalism which prevailed.

Al-Ghazālī—Al-Ghazālī (505-556 A.H.) was by nature a religious mystic, an interest which to whom the truth was the greatest of all possessions. It was for him life's supreme concern to solve the problem of Ultimate Reality in such a way as to be satisfied that he enjoyed contact, response, and fellowship with it. He was convinced that what he sought could not be given by an acceptance of truth on mere external authority, a point to which, in spite of his inmost conviction, al-Kalām al-Ash'ari still held. He saw that the Mutakallims could proceed to their conclusions only as they took for granted certain propositions which they did not prove, and that, when they had said all, the seeker had in possession only a system of logical inferences and not at all an experience of the ultimately real. Not because it was a last resort or because he was in despair of finding anything better, al-Ghazālī turned to Sufism. He made a full and sympathetic trial of the Sūfī discipline, after having tried other ways, and was convinced that the Sūfis (g.v.) had solved the problem of the soul's quest. Man created in the image and likeness of God to enjoy fellowship with God; he received both through faithful conformity to the Sūfī ideal and persistent openness to receive higher communications. Al-Ghazālī was a moderate Sūfī who was ready to give due weight to reason within its own limits, and who recognized the ethical and religious duties of the common life. His pre-eminent gifts and virtues—for he was one of the finest characters as well as one of the greatest minds which Islam has produced—have made his solution of the religious problem exceedingly influenceful down to our own day. Sūfism became a power far beyond the borders of the derish organizations; the extreme dependence upon rationalism was checked; the emotional factors in human nature were provided for with due regard to ethical and religious con-
duct. Probably no teacher since the days of the Prophet has afforded to Muslims a better illustration of the possibilities of their own faith.

Sunnites and Shi'as.—The distinction be-

tween Shi'as and Sunnīs has its roots in the dispute between the 'Aliids and the Sunnīs in the year 465 A.H. (the year of the Muharram in which Muḥam-mad ibn al-‘Abbas ibn al-‘Abbas, who will recall the assassination (33 A.H.). In its origin it has nothing to do with the religion founded by Muhammad,

but rather is occupied with the political succession to the leadership of the Muslim community. At first the 'Aliids on their side claimed that they were the legitimate khālidfsih because they were descended from the Prophet's daughter Fatimah and his closest companion, 'Ali. The Unayyids on their part claimed a nomination by the choice of the Muslims themselves and as a further title claimed kinship with the Prophet as being of the Hashimite family. Later the 'Aliids founded another claim, the establishment of a judge.sm against all claims of right to office because of the popular choice. This difference still marks off the Shi'ah political theory from that held among the Sunnīs.

(a) Theory of the khālidfsih.—There is, moreover, an old standing difference between the Sunnīs and Shi'as as to the functions of the khālidfsih. Among the Sunnīs the khālidfsih is a political ruler essentially, while from the first the 'Aliid party regarded the Prophet's successor as a religious guide and therefore preferred to designate him as the iimām. Since the iimām was assumed to have physical descent from the Prophet secured to him not merely divine rights, but also a divine endowment of grace and wisdom. No such assumption was held by the Sunnīs with relation to their khālidfsih. They were chosen from among the believers and could claim no supernatural qualifications. Their authority was conferred by the Muslim community and carried with it no implication of pre-eminent sanctity or infallibility. The Sunnī attitude towards the khālidfsih differs greatly from that of the Shi'as towards the iimām. The personal qualities and public influence of the khālidfsih have been largely deterministic of the respect shown to them. Among the Shi'as the office hallows the occupant, and the iimāms are regarded with the deepest religious veneration. The Sunnīs khālidfsih by law are required to be the Prophet's tribe, the Quraysh; the iimāms were chosen from the still more narrow circle of the Prophet's immediate family.

Since the twelfth iimām, Muhammad ibn al-Iṣḥāq, disappeared in the year 929 A.H., they have not had a title Fraimām has been suspended, but there has never been a legal reason why the Sunni khālidfsih should be interrupted, as it has always been possible for the legal descendants to forward a candidate and to nominate him, provided circumstances did not interfere with his fulfillment of his role of khālidfsih. The iimāms have been assumed to have been the khālidfsih of the Prophet and have taken to themselves the exclusive title pertaining to this honor. In the past, the Shi'as of the Ummah, the descendants of the Prophet, have been the custodians of the Faithful; since the time of the Ottoman conquest of Egypt in A.H. 1052. As they are not of Arab race, but always of Turco-European lineages, there is to be no basis for the Ottoman claim. The first sufiijin (Sulaymān) to assume the title justified his act on the ground of a surrender of his rights on the part of the last Abū'īhadīdīkhālidfsih, al-Mutawakkil II, who at the time of the conquest of Egypt was attached to the court of the Mamluk sultān and was recognized by them as the spiritual head of Islam. The Ottoman sultānis have returned in their persons the dual authority temporal and spiritual which the Mamluks had divided, and the principle of the consensus seems to have permitted the 'ilah to legalize the departure from the law of the khālidfsih as settled by the sultān. They have accepted the transfer of the 'Abī'īhadīdī's rights to Sulaymān Sulaymān, giving a title, and have regarded it as authenticated by other considerations, viz. the Ottoman conquest of Muslim domain, the control of the sacred cities, and the possession of relics of the Prophet. The sultānis have felt an exaction to traditional sentiment in constituting the chief mujtahid as shāhīd al-İlah, or highest spiritual authority over all believers. This functioning, nevertheless, derives his power from the sultān who appoints him, though it is to be admitted that the choice of the 'ilah politically settles the appointment. All questions affecting Islam are considered by the sultān, and are authenticated by his title as promulgated by a future issuing from him. The other condi-
tions required to possess a recognition of authority as mujtahid or representative of a claim of a khalifah are that he shall be of adult years, of sane mind, of free condition, a man versed in the learning of Islam, and a capable of administration, with considerable influence over the 'ilahs, the Sunni doctors have always recognized Abī-'Ibn Umar, 'Umar, as the first successes of the sultānis, as genuine khālidfsih (al-Khālidfsih ar-rāshidun) together with the fourth khālidfsih 'Ali, who of course is allowed to be a legiti-
SUNNITES

...

The intense hatred between Sunnis and Shi'ahs as distinct sects dates from the time when the Shi'ahs were constituted a separate political organization by the erection of the caliphate of Persia in A.D. 1502. The fault in this mutual bitter feeling is greater on the Shi'ah side than on that of the Sunnis, but the treatment of Persian pilgrims to Mecca has been an enduring irritation, and in earlier times the military aggression of the Turkish sultans gave occasion for resentment in Persia. As has been pointed out above, there are many individual Muslims of Shi'ah connexion in the Turkish empire, and, either because of an acquired indifference or oftener because of their practice of taqiyyah (concealment of faith), they suffer no personal inconvenience at the hands of their Sunnite fellow subjects. The proposal of Nadir Shah in the 18th cent., that a reunion of Islam be brought about by admitting the Shi'ahs to fellowship with the Sunnis as a fifth orthodox school, was promptly by the world-ambition of that ruler and was met by the refusal of the Shi'ahs in the case in the old Persian mullahs and mujtahids.

(c) Position as to the sunnah.—The difference between the Sunnis and the Shi'ahs does not consist in the acknowledgment of the sunnah of the Prophet by the former and its denial by the latter. The title of the Sunnis to have the oldest and the most thoroughly tested body of traditions is not questioned, but the Shi'ahs also have their sunnah, whose authorities are the acknowledged hadith collections of the sect. Resting upon these recognized standards, the Shi'ah teachers claim that they alone maintain the true sunnah, while the Sunnite version, they allege, has been perverted so as to furnish arguments against the claims of 'Ali and his sons to the succession of the Prophet. The corruption of the sunnah for any such purpose by the Sunnis is exceedingly unlikely, while the evidence of the manipulation of traditions by the Shi'ahs to support their own side is considered to be fairly clear. In the interpretation and adaptation of the sunnah to new relations the Sunnis are guided by the consensus (ijma') and analogy (qiya'), while the Shi'ahs claim to be alone rightly guided in their following of the sunnah, inasmuch as they have enjoyed the infallibility of the imams either in person or since the line has been suspended by the inerrant communication of their word and will through the mujtahids. According to the sunnah view, there can be no mujtahids in Islam since the death of the last great orthodox founder in the 3rd cent. A.D. The term as employed in Sunni circles is limited to the great imams of the earlier centuries who founded the four orthodox schools and laid on indisputable foundations the theology and law of Islam. Since their day no teacher's opinions have justified themselves as a permanent basis for faith and life.

10. Changes in Sunni Islam.—In the theory Sunni Islam is tied up to the Ash'arite system, and because of that it is thought to be fated to intellectual stagnation. The facts show that from the days of the Prophet there was some modification of the founder's positions, and with the contribution made by al-Qazzaz one may say that the modification amounts to a materially altered view-point and the introduction of a new and revolutionary emphasis which takes up the intuitive and emotional factors in religious experience. The necessities of the historical situation have repeatedly rendered nugatory the theoretical requirements of Sunnite orthodoxy. Where Muslims live under Christian governments, as in India, the law of the khilafate has to yield place to the obligations of political loyalty, the duty imposed by the jildal is in most cases unfulfilled, and the zakah and the prayer times have become meaningless to the authority to whom it is to be turned over and the mode and purpose of its distribution. With the universal recognition of saint-worship and the cult of relics, the apostolic or dogmatic of the latter days, the law against idolatry (shirk) is violated, and the sufficiency of the canonical authorities, the Qur'an and sunnah, is called in question. It may be recalled that one fruit of the modern liberal movement in Iran is the rise of the Qadisiyya school, which, its founder, Mirza Ghulam Ahmad (†1908), recognized the logic of facts in the position of the Indian Muslims and declared that the duty of the jildal was to admit of the Sunnite majority until such time as the effect of the Shi'i teaching when fully developed is a pantheism which is in contradiction with the hard, clear-cut monotheism of the Ash'arite theology. It is a pantheism, sworn strongly to a hobnail of the positive bonds of conduct which the orthodoxy touching imposes. The righteousness of the Shi'i may become extravagantly mechanical and violently anti-social, so much so that public regulation may be called for to prevent wrong in the one in the case in the old Persian mullahs and mujtahids.

11. Detailed differences between Sunnis and Shi'ahs.—A fair point of detail the Sunnis and Shi'ahs differ require to be mentioned. (a) The Sunnis do not accord to 'Ali and his sons the degree of veneration which the feast of Muhammad implies. This holds true even if the Sunnis be the Shi'ahs in the sense of those who actually participate in the ceremonies of the feast along with their Shi'ah neighbours. (b) There is some confusion of the orthodox feast of the 'Ashura, which falls on the tenth day of Muharram, with the Shi'ah feast, which extends from the first to the tenth day of that month. The motive of the respective feasts is, however, entirely different. The 'Ashura commemorates the completion of creation by the creating of Adam and Eve on the tenth day of Muharram, while the tenth day of the Shi'ah ceremonies is simply the crowning day of the whole Muharram feast, pointing in particular to the killing of Husain without the permission of time has taken place on that day. (c) Generally speaking, the ritual of ordinary worship differs only in the non-essential points. The mode of purification is the same both in the Shi'ah and Sunnite, the washing of the arm upwards to the elbow, while with the Shi'ahs the process is reversed. In the washing of the Sunnite ritual literally washes, the Shi'ah merely rubs or wets the feet. (d) To perform the hajj by proxy is not permitted by the Sunnites, while it is in common among their Shi'ah neighbours. This permission, if granted, would violate the cardinal Sunni requirement that a Muslim must perform the hajj at least once during his lifetime. (e) More far-reaching in its social effects is the permission given by the Shi'ah law to contract mahr marriages. These temporary unions, for a price agreed upon and under conditions of legal contract, are forbidden by the Sunni codes. (f) The Sunni recognition of the principle of taqiyyah is limited to times of extreme personal danger when it is at most permitted to disguise one's religious convictions in order to preserve one's life. The Shi'ahs do not view taqiyyah as limited to situations of personal risk, and, where it applies, they do not merely permit a resort to deceit but depend strongly upon the employment of it. Especially where the interests of religion may be supposed to be in jeopardy, the Muhallal of Shi'ah faith will feel the use of taqiyyah to be a moral obligation.

In all that has been said in the foregoing description of the Sunni position and practices regard has been had to only those matters which fall within the scope of the present work. It must be kept in mind that in all Muslim countries, whether Sunni or Shi'ite, there is another authority which has its constituted rights and its organized administration, viz., the customary law ('urf or wa'ad). This differs according to the degree of its development in the various provinces of different places. It is not a distinctive feature of the Sunnites and need not be more fully treated in this article.

The power of the 'u'lamah among the Sunnis is...
SUPER自然ALISM

very great, though as a class they are not viewed with the superstitious veneration or even fear which the Persian Shí'shá shows to many of the mundhí, to all the muthakás, and to the large class of ayáda who are to be found in Shí'í regions.4 The influence of the 'ulámid has been conserved by their learning, which, though narrowly restricted to Muslim theology and law, is often comprehensive within its limits. This learning is constantly on call in the service of the Muslim community. Their influence, moreover, has been greater since it might have been owing to a certain measure of accommodation which has made large room for such a phenomenon as the Saíd movement—a movement whose elements of wonder and esotericism have proved to the satisfaction of the naaœs that Ilám was still a medium of supernatural power and divine life. Along with this they have admitted to the curriculum of theological studies in all the leading schools the works of the great mystics, particularly those of the master, al-Ghazãlí. The fact or explication of the cult of saints, endowed as it is by public funds, may be an anomaly, but for the orthodox leaders it also is an instrument of power. More potent than the personal factor is the fact that the consensus ('ijmá) is realized only around the 'ulámid and that no cause has been so effective in bringing about change of policy and the initiation of new lines of action as the voice of the 'ulámid declaring the will of the Creator to be the universal Muslim community. The 'ijmá is being prepared by the training which the candidates for the learned calling receive, whether be in the Azhar University at Cairo, in the schools of the West African, or in the ancient seats of learning like Ekkára. It is a long mechanical process aiming at fixing rigidly the positions of traditional orthodoxy in the thoughts and sympathies of the masses and cultivating in him a fanatical devotion to the authority of the past, especially of the primitive age of the faith. It is natural that, when his opportunity to lead comes, he should adjust himself as an obedient part of the whole traditional system.

W. M. PATTON.

SUPERNATURALISM.—Supernaturalism is the mental attitude that has the supernatural for its object. The term is used by anthropologists to express the fact that primitive magic and primitive religion alike rest on a belief in supernatural power. Of course, in this learning it is convenient to have a word such as 'supernatural' that may be equated now with 'magical' and now with 'divine.' For the savage respects the human magician 'on account of his supernatural interests, his capacity to shape the supernatural world,' and, on the other hand, must be allowed to possess a rudimentary notion of certain supernatural beings who may be fittingly called gods, though not in the full sense in which we use the word.1 Frazer, indeed, assumes a general tendency among savages to claim 'powers which we should not himself believe, as opposed to that of a savage who 'will say that 'a savage hardly conceives the distinction commonly drawn by more advanced peoples between the natural and the supernatural.'2 F. B. Jevons, on the other hand, warns us against the error of imagining that there was a time when man did not distinguish between the natural and the supernatural.3 This error may take the form of saying either that to primitive man nothing was supernatural or that everything was supernatural.4 He goes on to say:

1 Primitive man took to himself the credit of his successful attempts to work the mechan of nature for his advantage, but when the machinery did not work he ascribed the fault to some overriding supernatural power.

The objection of E. Durkheim, that to recognize breaches in a habitual order does not amount to the recognition of breaches in an order conceived as necessary after the manner of modern science, is surely something hypercritical in such a context. An objection of another kind, since it does not dispute the facts, but merely regards convenience of terminology, is that of J. H. Leuba,5 who in naming the belief in supernatural power would call attention to the power rather than to the supernatural quality attaching to it, and hence would substitute for 'supernaturalism' the term 'dynamism,' originally used by A. van Gennep,6 to describe the term 'primalist' theory of society contrasted with the 'personalist' theory of animism. Now there is much to be said for the view that the positive content of supernaturalism receives its fullest conciseness of expression in terms of the monas type.7 But the mental attitude in question has its negative side as well as the positive side connoted by monas, since it is called forth by the frustration of reasonable expectation; so that, as Jevons says, 'where the natural ended, the supernatural began.'8 Again, this mental attitude is not so predominantly intellectual that it can be suitably designated by means of any more concept that it generates. For the rest, anthropological terminology is, happily, in a somewhat fluid condition, and may be varied without impropriety in response to the needs of different theoretical purposes. It will suffice here, however, to give a brief account of the chief aspects of the mental attitude under consideration.

1. Emotional aspect.—The emotional constituents of the magico-religious sentiment have been subjected to psychological analysis with results that show how it is, even in its simplest forms, exceedingly complex. Ave 'is perhaps the word in our language that expresses its many-sided nature most fully, and awe is defined by W. McDougall as a 'tactilely compounded fear of wonder, and negative self-feeling.'9 Round the object provided by the supernatural, fear, admiration, and submission in varying degrees are organized into a mood, whether, in addition, that object be on the whole hated or loved, and consequently take rank as a manifestation of evil or of good supernatural power. Thus the sentiment is excited equally by lore and religion, the one the more, the other the less, according to the god, being 'surrounded by a cloud of mystery and an atmosphere of awe.'10 To appreciate the

SUPERNATURALISM

emotional attitude of primitive man towards a universe which, beyond the narrow circle of the daily routine, is almost wholly unknown, yet felt to be pregnant with immeasurable possibilities of weal or woe. Such one should take stock of by one of the more baffling and startling elements in his experience, as is done, e.g., by W. D. Wallis in his paper 'The Element of Fear [better 'Awe'] in Religion.' Confined by his ignorance to the immediate here and now, he is unable, therefore, to see or apperceive events alike to the stranger at a distance and to those of his own race that are dead and gone. Nor does the familiar present remain unvisited by portents. The sky above him is disturbed by thunderstorm, eclipse, shooting stars, the aurora; earth and sea about him have their haunted pools, their fantastic rocks. Then living nature teems with wonders—trees and herbs, reptiles and fishes, birds and quadrupeds, that look strange or behave unaccountably. Moreover, man is mysterious to himself, with his visions, his seizures, the power of his eye and gesture, his sheer impressiveness, ranging from the majesty of kings to the gruesomeness of witches. For the rest, life is full of accidents and coincidences. Altogether, the savage world provides plenty of scope for that interplay of primary emotions of which a wise outcome is the result. But, however, that the essence of supernaturalism does not consist in bare feeling, but attains to expression through every aspect of the mental life at once.  

2. Intellectual aspect. — Since supernaturalism has a negative as well as a positive side, embodying a cautious doubt of the unknown combined with an effort to read a meaning into it, primitive thought divides its attention between two sets of concepts. Negatively the supernatural is tabu, positively it is mana. Among savages, of course, such notions have not been built up into any systematic theory; nor is it possible to say at what stage of mental evolution they first came into use, though perhaps it would be hard to point to any primitive people that lacks them entirely. Moreover, since the supernatural implies evil power as well as good, ministering to the purposes of the sorcerer no less than to those of the priest, it is to be expected that mana will sometimes split up into two notions that stand antithetically for the good and evil kind of supernatural power. Finally, it cannot be said that rudimentary thought is altogether without an idea corresponding to that of the natural or normal. It seems highly doubtful whether we can credit the savage with a belief in one and all the uniformity of nature, as some have sought to do; 4 indeed, historically, the modern concept of nature would seem to have descended from mana, its wonder-working quality having been shed by the way. 5 But in the Polynesian nora, the non-sacred, common, or permitted, 6 we have the counterpart, as in the Latin profanus, of nature so far as it stands not for mechanism but for routine. We must not, however, look for definiteness in primitive categories, since they are never subjected abstractly and as ideas to reflective examination, but merely embody such more or less arbitrary associations as custom suggests and sanctions.  

3. Practical aspect. — Seeing then, that the savage may be said to live out his ideas rather than to think them out, it is in the sphere of his actual practice as regulated by social use and wont that we are likely to meet with the clearest indications of his mental tendencies. Primitive supernaturalism will declare itself primarily in a group of traditional activities through which human emotions, feelings and thoughts find their satisfaction. The question, then, is how far there is a distinctive province of behaviour corresponding to the interest in supernatural things. Nowhowever, there can be little doubt that among some peoples of low culture the cleavage between the secular and the magico-religious sides of the social life is made 'as with a hatchet.' Thus we are no longer of the Central Australian during initiation, or a woman at child-birth, enters a condition of tabu and passes out again into ordinary life — need not be pressed too hard, seeing that sacredness is not to the same extent relative, so that, e.g., a nun may be tabu to strangers without being so to his friends. 8 All that need be assumed here is that certain activities tend to be organized about the interest in the supernatural as embodied in a specific tissue of feelings and beliefs. The magico-religious life is unhinged in its claim on human endeavour, and in its ulterior effects on human welfare may be well-nigh all-pervasive. But the mental attitude which demands continuous maintenance. Whenever the tension is relaxed, 'nature,' in the shape of the effortless rule of habit, is busy making good the strain.

R. K. MARETT.

SUPERSTITION. — 1. Signification and use of the term. — The word 'superstition' is used both in a concrete and in an abstract sense. We group together as superstitions a number of beliefs, habits, and fancies, tribal and individual, which we regard as not being founded on reasonable conceptions of the world and of human life, necessities, and obligations. The magico-religious term 'superstition' signifies the disposition to attribute occurrences to preternatural or occult influences, and to direct conduct with a view to avoiding misbelief or obtaining advantage from such influences are supposed to produce. The precise connexion between the etymology of the word and its ordinary signification is not easy to trace. The term 'superstition' seems to imply some excess, and this excess may generally be regarded as an exaggeration of a reasonable belief in some supernatural agents or agencies, with a readiness...
SUPERSTITION

to accept unverified statements as to spiritual or magical interference in the material world. The origin of the most potent and widely diffused of superstitious beliefs has already been discussed under various headings. 1 It seems therefore more suitable here to consider superstition as an abstract quality, and to regard it in its psychological and historical aspects.

Two points may be noted for the purpose of clearing the ground: (1) the intensely subjective way in which the word is used in popular language. No man is ready to define himself as superstitious, but almost every one is ready to recognize superstition in the beliefs and acts of others. Thus superstition, like natural phenomena, is the less the more its causes are obscure, and there is nothing the cause, the reason, and the explanation of which are obscure; (2) superstition need not be in any way connected with mysticism (q.v.). True, the mystic who regards all things and persons as owing what reality they have to a divine and supernatural life or nature, may pass from a desire to find traces of the spiritual and eternal manifested in or through the form of the material and temporal. But the reasonable mystic, by properly recognizing the belief in the spiritual nature of ultimate reality, is the less liable to give credence to fanciful and grotesque utterances from a supposed source. For the true mystic, and especially the greatest of mystics, was eminently sane and reasonable. If the same cannot be said of all the Neo-Platonists, the reason must be that they did not have so many less mystical causes of material than he. 2 Some confusion, however, may arise from the circumscription of the term in popular minds (especially in those who employ it in an official or of a poetic order) attach a symbolic meaning to certain material phenomena or ceremonial acts without any real or supposed connection with their material and temporal causes. Hence we have the interesting fact that, in the higher religions of an advanced race, we may have what seems to be a mystical connection with the material, but with far-reaching differences in fundamental religious conceptions. Hence the warnings of religious teachers, on the one hand, against the abuse and demotion of 'superstitions' which have, for the uneducated, been valuable in association with religions thoughts and feelings, and on the other, against the confusion of symbol and reality, which tends to materialize and crystallize popular religion.

The superstition, then, is one that is not educated to discern the character of evidence, or that has not patience to suspend judgment in the presence of unfamiliar phenomena. If it is objected that some powerful, and (in some directions) well trained intellects have coincided with a superstitious bias, these exceptions would seem due to a want of mental balance.

2. Historical aspects. — Turning from the individual to society and to historical progress, we may say that, roughly speaking, superstition declines as the view of the universe becomes more scientific. True, the basic element of many of the more elaborate forms of all early natural religions, and of crude hypotheses which lend themselves to strange vagaries of thought. This is specially evident in the pseudoscientific basis of theology, whence emerged the science of chemistry, was the subject of the art of Eutyches of Ionia, thought were not without such vagaries, yet the Greek philosophers had in them the root of the matter — a whole-hearted desire after truth. Therefore they progressed, and their progress belonged to the Western world.

When, in May, 553 A.D., in the midst of a battle between Lydians and Medes, there occurred 'the first eclipse of which European records witness when it should be rated,' the date to which this passage refers as to the eclipse of 407 B.C., ascribed to the Lydians and Medes, the eclipse of 242 B.C., ascribed to the Persians, and the eclipse of 159 B.C., ascribed to a comet, was not, or even could not tell the day or the hour — the sun would be darkened. 1

This does not, of course, imply that the Greeks had altogether lost the desire ever to become, what we should call a scientific people. But to bring so uncanny an occurrence as a darkening of the sun within the range of calculable events was to cast the Shadow of Morius into the pale of superstition. It was indeed a sufficient reason for supposing that the gods were now affected with disease, and that they might be induced to withdraw their beneficent influence. 2

1 See esp. astro. Magic, charms and amulets, dreams and sleep, evil eye, etymology, propitiators and propitiations.

Greeks religion and Greek life abounded with superstitions. The religion of the Olympians was bound up with the superstitions which Plato would have excluded from his ideal city, and the old-world ritual which survived in popular ceremonies was yet more favourable to unreasonable fancies and stories. The Athenians, less the most intellectual of the Greeks, yet their prosecutions for impiety showed both a low standard of religious liberty and a high standard (if the expression may be used) of respect for ancestral religion. Auxagoras, a man of honest and useful character, suffered at the hands of his countrymen. True, their cause prevailed in so far that in the next century speculation was more free and scepticism had scope; and, after all, the moderation centred in the maxim μηδε ζησαν seems to have checked any tendency to persecution like that of the Middle Ages and later. Nicias was, in spite of his popularity, blinded by posterity for delaying the retreat of the Athenians before Syracuse on account of an eclipse of the moon. But the point against him, most probably, was that he was too ill-educated to know the cause of such an eclipse (though he and the advance of Iano meant, to many individuals in many places, a remarkable development and enlightenment of the religious consciousness; but it also meant a recreation of Oriental and barbarous superstition. This was found even among the late philosophical sects, notably the Neo-Platonist.

As might naturally be expected, in societies comprising men of culture considerably above the rank and file of their contemporaries, we have, from the ancient pagan world, unanswerable protests against superstitions as a form of worship. Thus among those is the great poem of Lucan, which holds in superstition, or in popular religion, the most potent and most neglected source of human ill. The same view is taken by the Roman reformers of Plutarch and Justinian, in which he holds up to contempt the figure of those who, under the guise of their religious superstitious, commit such acts of corruption of the soul. And such examples are not uncommon in the religious literature of all ages. The same point is illustrated by the case of the Empress Julia, who was so much taken with the theory of the sun's having four moons, and of her own figure resembling one of these moons, that she caused a coin to be struck with a figure of herself, on which a moon was engraved, and thus was made part of the sun's heavenly train.

Yet, by a kind of paradox, scepticism seems to have overshot the mark, and, by denying the possibility of all certainty, to have opened the way for popular superstitions, to which they applied in all manner of superstitions and practices.

The interchange of religious ideas, the foundation and migration of religious societies, and the general disintegration which followed the fall of the most advanced and the advance of Rome, meant, to many individuals in many places, a remarkable development and enlightenment of the religious consciousness; but it also meant a recreation of Oriental and barbarous superstition. This was found even among the late philosophical sects, notably the Neo-Platonist.

1 This 'overshooting of the mark' by the sceptics is suggested by E. Fries, Neo-Platonism, London, 1912.

2 See art. Neo-Platonism.
SUPERSTITION

conspicuously from its original form, and on the other hand may bring it within the reach of minds unaccustomed to deal with abstract ideas. These accretions are sometimes, in order to avoid the unpleasant connotation of 'superstition,' called by the German name of Ängstlichee. They consist both of ritual and of dogma, and are hardly ever entirely to be distinguished from the necessary appurtenances of the religion with which they are associated.

The Middle Ages are generally regarded as pre-eminently a time of superstition. The judgment is probably justifiable, though there were as many hard-headed and constructive thinkers at most epochs of the Middle Ages as there have been earlier or later. But apart from the mixture of races and consequent multiplication of superstitions in the declining Empire, with the deficiency of mental culture in the leaders of the barbarian races, there was a great force arising to control speculation—that of ecclesiastical authority. This, however, must be considered on two sides. The worst kinds of superstitions, or at least the most conspicuous kinds, especially in Eastern Europe, were distinctly discouraged by the Church—soothsaying, necromancy, charms, and the like. And there can be little doubt that many of the most pressing, and at times, Church were accompanied by superstitions vagues.

Still, the fact is patent that the suppression of free thought, especially as directed to Church doctrine and ritual, must have tended to the growth of superstitious in Plutarch's sense. Of course, when we speak of the suppression of free thought, we do not necessarily mean that a very large number of persons suffered from not being allowed to think freely. Probably the number who thus suffered was comparatively very small. But many more must have lived in perpetual fear of the unce.

The terrors of the Judgment Day and of the world to come are very familiar objects of medieval art, and it is difficult for us to see how far they were practically mitigated by the harmonious setting forth of the more comforting and spiritual elements in Christianity, with which they were, perhaps, not quite consistently, associated.

The Renaissance and the Reformation are common regarded as having given the death-blow to superstition in at least, and in much extended. It is certain, however, that the indiscriminate cult of antiquity, which in some sections of society accompanied the Renaissance, contained or encouraged superstitions fancies and observances of a novel kind. And as to the Reformation even in Protestant countries, practically a good deal of Aberghlaubia formed part of the newly established doctrines and usages, and the sway of spiritual authority was by no means removed. The great movement towards mental and spiritual emancipation is generally taken as beginning in the 18th century. It is to be noted that the battle waged on behalf of human reason was not confined to the world of thought and opinion. Political institutions, social divisions, industrial methods, and moral conventions were to be submitted to the test of right reason, and, if they failed, to be extirpated forthwith. The bitterness with which the contest was carried on, and which reached its culminating point in the excesses of the French Revolution, was partly due to the belief that superstitions gave rise to revolutions like those carried on by those who profited by them—from the medicine-men of a savage tribe to the officers of an established church or a hereditary monarchy. Although there is, of course, a great deal of evil for such oppositions, as a partial explanation of the evil in question, its whole acceptance shows a very delicate con-

prehension of human nature. Without intelligible reasons, man is always desirous of knowing more than he can know about the spiritual world, and he will more readily submit to authority which has a traditional, if not actually a divine, sanction.

And the exact nature of the government and institutions which right reason would condemn, of course, been very differently conceived by socialists or revolutionists of various types. Still, the general recognition that all belief not from some rational justification was a great point gradually gained. It does not, of course, imply that nothing should be believed without strict logical proof, or that no institution should be maintained that does not evidently serve some useful object. But it does embody the Stoic principle that life should be according to nature and according to reason, and thus it tends to eliminate most of what is injurious either in superstitions with regard to religion or in tame acquiescence in existing governments.

4. Influence of education.—The great agency looking for the reduction of superstition during this century and the last is popular education. True, our elementary education can hardly as yet be called scientific, and what passes for scientific education may, after all, be superficial and narrow. But all sound thinking—good thinking, and even wise thought—must be said to product something like a scientific view of man and his environment—a view perfectly compatible with belief in the spiritual significance of life and even in a possible communion with non-material beings, but inconsistent with fanciful and trivial interpretations of natural phenomena as determined by preternatural agency.

If there should ever be a remission of superstition in this generation or the next, it would probably be due, not to a defect in the scientific faculty, but to the expectations lately raised within the bounds of scientific investigation. Experts in psychology, especially those who have devoted themselves to what is technically called psychological research (q.v.), have, to many sane and scientific minds, proved the possibility of telepathy, thought-transference, and other processes which, fifty years ago, would certainly have been set down as superstitions. More than this, some persons of scientific mind and education believe that they have actually, at least, a means of communication between living and dead. When the persons engaged in these investigations are careful and scientific, we are inclined to accept their evidence, as we should on any other point of expert investigation. But in this field the 'media' used are of such uncertain character, the conditions and possibilities of communication so deeply veiled in obscurity, the desire to attain to fellowship with the departed so intense, that it is as well to approach all such problems with the most suspicious caution. There may be, as has often been said, a 'superstitions fear of superstition.' But, while suspending judgment on the result of the inquiries of experts, the non-expert may be in danger of falling into a superstitions habit of mind such as tends to upset entirely the mental balance.

LITERATURE.—For primitive superstitions are the works mentioned in the art. cited, esp. J. G. Frazer, (EF), London, E. Yole, 1912-15, E. B. Taylor, Plutarch, 1862. For historical and history of the question see the various histories of philosophy and W. H. Lecky, Hist. of Rationalism, which is of great service. For the state of modern knowledge, see E. A. Freeman, Essays on the History of the English Revolution, 1875; H. H. Plutarch, Moralia, incl. de Superstitions, tr. into very vigorous English by Philemon Holland, do. 1608; Matthew Arnold, Life and Leisure, 1896; and, on 'Aberghlaubie invading' and 'Aberghlaubie re-invading,' Alice Gardner.
SUPRALAPSIANISM—SVETAMBARAS

SUPRALAPSIANISM.—The term supralapsarianism is used in Calvinistic theology, in contrast with sub- or infralapsarianism, to denote a view of the divine decrees in which, for the manifestation of His glory, God is held to destine a certain portion of mankind to eternal life, and another portion to destruction, regarding both simply as creatures, and antecedently to any consideration of the Fall and sin. It is not meant that this purpose is actually carried out without regard to a tidation of the order of decrees, it is first determined who are to be embraced in the one class, and who in the other; then the means are appointed—including creation, the Fall, and redemption—by which each case is to be attained. So harsh a view of the divine procedure has always been in the highest degree repellent to Christian minds; accordingly, the great majority of Calvinists have shrank from it, and contended themselves with the milder sublapsarian view, which affirms an election of God from the mass of mankind, regarded as already fallen.

On the historical side, the question is raised whether Calvin himself is to be classed as a supralapsarian or a sublapsarian. Some scholars hold that the former, and supralapsarian, view was the one intended by Calvin, when he wrote, the question had not distinctly emerged, and the emphasis which he continually lays on election as a ground assigned from a sin-dominant representation as grounded on the sinner's own evil, fairly warrants the more usual opinion that his doctrine inclined more to sublapsarianism.4

On the other hand, even Calvin's successor, Gomar, the colleague and opponent of Arminius in Holland, Trisse, the professor of the Westminster Assembly, and a few others were conspicuous for their advocacy of sublapsarianism; and the Remonstrants, in the Arminian controversy, naturally sought to fasten this view on all Calvinists. It is really, however, an extreme opinion, and the bulk of Calvinists, as already said, have reasoned for themselves along different lines, generally states and defends the sublapsarian position in his Institutio.5 The Synod of Dort, in its decision, traced its causes on sublapsarian lines.6 The Westminster Confession teams, in certain of its clauses, to the stronger view of Archbishop Ussher, of the Irish Academy, and of a few members of the Assembly, but the tone of the debates in that body sufficiently shows that the prevailing opinion was sublapsarian, and the Confessional statement, taken as a whole, is of this character. The stronger view has, indeed, no symbolical sanction.

Cunningham, in his discussion of the subject,7 claims that the controversy is one of 'no great intrinsic importance,' but this can hardly be allowed.

'A doctrine of this kind, which bids as think of beings not yet actually existing, to that which is even created (therefore pointless)—not to say as sinful—separated from eternal blessedness or misery, and by means of which means for effecting that purpose, is one which no plea of logical consistency will ever get the human mind to accept, and which is bound to provoke revolt against the whole system with which it is associated.'

It cannot even be conceded, though it has often been conceded, that this is the most logical form of the presbyterian doctrine. The end, it is argued, comes necessarily first in order of thought: then the means are devised which are to accomplish it. In the case of moral destiny, we are disposed to say, this is the precise inversion of the fact. There can be no legitimate consigning of a moral being to wrath, save as he is in some way viewed as deserving of that wrath: even in order of thought, therefore, the consideration of moral state must precede the sentence of rejection. If the reply is made that the sin itself is viewed in Calvinism as foreordained, this is doubtless true, but it is not the consideration of moral state which in life is foreordained, viz., by God's decreeing to admit it into His providential plan and to overrule it for the ends of His wisdom. It is a totally different

8 See also, Cunningham, The Reformers and the Theology of the Reformation, p. 366f.
the following legend to account for the actual cleavage: 

A monk named Śivabhūti had been given a most beautiful blanket by the king in whose service he had been at the time of his initiation. He died in the universal spiritual perception and gave it to a friend; this friend disposed of it by offering it in public to Śivabhūti, who was a devoted following of Mahāvīra. 

His successor, who realized the extreme strength of the sect, obtained it through the advice of Śivabhūti, when he discovered what had happened, was so angry that he destroyed the great blanket and threw it among the devotees, which went beyond his value, he would keep nothing at all, but would wander in entire nakedness like the Lord Mahāvīra himself; and he then and there started a new sect, that of the naked Digambaras.

This very human legend which the Śvetāmbara, the ‘White-clothed’) tell of their unclothed rivals not only accounts for their nakedness, but also goes on to explain the whole difference between the two sects; for, when Śivabhūti’s sister wanted to join his order, seeing that it was impracticable for a woman to go about nude, he roundly told her that it was impossible for a woman to become a nun, or to obtain mokṣa (q.v.) without rebirth as a man, and thus laid down for all time a distinctive tenet of the Digambara. Important as these legends are, it must be remembered that the stories are quoted only as illustrative of the Jain point of view, for their confirmation is sadly to seek, and the legends connecting Chandragupta with the faith are essentially open to suspicion.

**Diand practices.**—We are on firmer ground when we notice the main differences between the two sects at the present day. We are already prepared for the fact that the Śvetāmbara list of sacred books is not accepted by the Digambara, and that, since they hold that no woman can attain mokṣa, the Digambara will not admit the Śvetāmbara tradition that Mahīśāśana (the ninth century) was a woman. But the two sects differ very considerably on the life-story of Mahāvīra.

The Śvetāmbara say that their great saint married and enjoyed the bliss of the full before entering the ascetic life and that, even when he at last decided to do so, he waited till his parents died, and until he had gained his brother’s consent, lest he should grieve any one before receiving initiation, which he obtained in his thirtieth year. The more austere Digambara tradition, however, is that their founder never married; and, having no hesitation about hurting any one’s feelings, pronounced the world at the noetic age of eight. Even the prevalent stories differ, for the Śvetāmbara believe that Mahāvīra’s mother had fourteen wonderful dreams; the Digambara say that she had only seven; while the later removal of the embryo of Mahāvīra from Devanandā to Trishālā is a Śvetāmbara only.

The lists of the heads of the community since Śivabhūti of course differ also. The Śvetāmbara generally arrange their philosophy in nine categories; the Digambara arrange very much the same philosophy under seven heads. One point of divergence on which they lay great stress is that, according to the Śvetāmbara, a tirthāṅkara needs food to support him until he dies; while the Digambara believe that, once a tirthāṅkara has attained omniscience, he has no further need of meals.

There are also differences in actual practice. A Śvetāmbara ascetic may keep a loin-cloth, a shoulder-cloth, and a blanket, but he wears nothing else. Indeed, including these and his brush, mouth-cloth, and wooden vessels, he is allowed to retain fourteen possessions in this world, whereas a Digambara is absolutely naked, though he is provided with a brush and peacock’s feathers, to live entirely in the jungle. The Śvetāmbara laymen complain that their ascetics interpose too much in their conferences; this complaint is, of course, never heard from the Digambara, but the latter are, on the other hand, famed for their skill in the art of clothing themselves for life in the wilderness.

There are also different rules about bodying for the ascetics of the two orders, and the Digambara ascetics have no upāsikās. Again, the Śvetāmbara idols have glass eyes inserted in the marble, wear a loin-cloth, and are bedecked with jewels, whereas the austere Digambara idols are simply represented as having been dead to the world, with eyes cast down. There is naturally therefore a difference in the installation ceremonies of their idols.

The ordinary worship differs also. The Śvetāmbara, when performing the eightfold worship, offer flowers and fresh fruit to their idols, and so on great festivals do the Visāpani Digambara; but the Terapani Digambara never offer flowers or fresh fruit, but instead they use cloves, dry coco-cot-nut, sugar, and rice.

There is another very interesting difference. A Digambara Jain has no private idol in his own house, but, if a Śvetāmbara is a wealthy man and lives far from a temple, he may have his own private chapel. This chapel is separate from the house and can be entered only by persons in a state of ceremonial purity. In the chapel, if he can afford it, he may have a pratimā (an image of any one of the twenty-four tirthāṅkaras that an astrologer selects for him), or he may have a siddha chakra (a tray on which are depicted the leading points of the Jain faith).

The householder offers the eightfold worship to the pratimā, but only washes and wipes the siddha chakra and marks it with sandal-wood paste. An instructed Śvetāmbara would never ask a guest of the idol in the chapel to be only sit himself up to future efforts by meditating on it. But, if, as often happens, an uninstructed Śvetāmbara does ask a guest, he would be answered not by the tirthāṅkara (who as a matter of fact does not even bear it) but by the yakṣa in attendance on the tirthāṅkara.

**Śvetāmbara sects.**—The main division of Śvetāmbara Jains is into Śāstānakavāsi and Deraṅgī. The Śāstānakavāsi are the idol-worshiping sect, which arose about A.D. 1472. Excepting on the crucial point of idol-worship, they do not differ much from other Śvetāmbara Jains.

At the present time the chief sects among idol-worshiping Digambara Śvetāmbara are the Tapagachchha (whose ascetics use red alms-bowls, and whose laymen in their devotions first confess their sins of walking and later their sins of trading), the Kharatragachchha (whose ascetics use black alms-bowls, and whose laymen first confess their sins of trading and later their sins of walking), and the Acheśagachchha and the Phayagachchha, whose divergences are very slight.

It must be remembered that these are only spiritual distinctions and do not interfere with the freedom of marriage between different sects. The chief castes among the Jains are Osavāla, Poravāla, Srimati and Srimālā, which are each divided into two sections, Dāsā and Vīsā. It is impossible for members of different castes to intermarry: thus an Osavāla Kharatara could marry an Osavāla Śāhānakavāsi, for, though the sect differs, the caste is the same, but a Dāsā Osavāla could never marry a Vīsā Osavāla, and still less could any Poravāla marry any Osavāla.

It is interesting to notice, however, that any Jain could dine with any other Jain, Śvetāmbara or Digambara, whether Osavāla or Srimālā; but they would not interdine with any Brahman convert to Jainism.

**Later critics.**—Through the kindness of Jain friends the writer was given an opportunity of translating this text, the leading Tapagachchha Śvetāmbara Sahā in Patna, in his upāsikas, who, perhaps with but little knowledge of English, freely consented to the task.

1. Cf. art. Worship (Jain).  
SWAN-MAIDENS.—See ZANZIBAR.

SWAN-MAIDENS.—The beautiful and poetical myth of swan-maidens is of early origin and, in varying forms, of very wide diffusion. The central idea of the myths is that certain beings, half-mortal, half-supernatural, have the power of metamorphosis into bird-form; connected with this are two secondary ideas: (1) that this power is dependent on the possession of a magic attribute, which was generally a bodily covering, such as a feather coat, robe, or veil; but sometimes merely a ring or chain; (2) that either this being, when in human form, or her captor is subject to a tabu of some kind. There are so many variations on these themes that it is impossible to do more than refer briefly to some of the most significant versions.

1. Oriental folk-lore.—Oriental folk-lore furnishes many instances of bird-maiden stories. In Indian tradition we find the very early myth of Urvasi embedded like a jewel in the durl ritual of the Samavedhikarana.

The apsara, or nymph, Urvasi loves one of the lunar race of kings, Pururavas; in wedding him she stipulates that she must never be shorn or unclad, and that her naked body is to be protected by a shield. To this Parvati played by the pandita-aras, supernatural beings who desire the return of their former playmate, the promise is broken, and Urvasi vanishes. Pururavas seeks her in every direction, finds her and her body in a lullaby on a lotus-lake in the shape of water-birds. They appear to him as birds, as a swan-maiden, but in reality he is pleasing Urvasi replies: 'I have passed away like the first of dawns... I am like the wind, difficult to catch.' Finally, however, she rejects him, and the couple are reunited.

In the Vikranuvasai of the poet Kâlidâsa, a drama based upon this story, the bird-myth has almost disappeared, except for Urvasi's power of flying and for the rejection of Pururavas by Urvasi in its present form. The subject of the play is the Lila of the very ancient dâng of the Aryan race, and theotton act iv. Her change into human form depends merely upon the laying aside of a veil, in itself probably a stage convention for invisibility; the marital tabu, which Lang characterizes as a relic of 'a traditional Aryan law of nuptial etiquette,' assumes a quite different form.

The myth re-appears in one of the finest tales of the Thousand and One Nights, that of Hassan of Bassorah.

Hassan is enjoying the hospitality of a family of princes, when obliged to leave them, they enjoin him not to expose a certain door. He disobeys, and finds a fair pavilion and a bathing-pool, to which come flying from the desert ten birds, one of which is the pre-eminent for beauty. Each bird, as it alighted, rent open its neck-skin with its claws, and issued out of it a feather, and at a later year, a golden ring. After their departure Hassan, who has become deeply enamoured of the fairest bird-maiden, confesses his adherence to his hostess, and in her power is at last made to marry the maiden. She was a swan-maiden.*

The story of Jishafi is a slighter tale that begins similarly; but the bird-maidens are only three in number, and are 'as doves, eagle-sized.' The husband's device to secure the feather coat is to place it in a chest, laden-bound, which is built into the foundations of the palace; but in vain, for the lady traces it by scent and digs it out.

2. Greek folk-lore.—The names of the bird-forms of the latter story have been identified with various Melanesian islands; it is not surprising, therefore, to find the tale of Hassan re-appearing in the Colchis in a modern form, which Tylor quotes in connexion with the heaven-born maidens.

1 This formula, 'difficult to catch,' recurs in the Welsh tale of the Van Pool, quoted by Hartland, Science of Fairy Tales, p. 52, note c.
2 Late 13th century.
4 Cf. F. Burton, A Plain and Literal Translation of the Arabian Nights, Benares, 1885, vili. 7-143.
5 Ibid. 1887.
6 Cf. With this Hartland's idea (p. 309) that the swan-maiden must always employ an intermediary to obtain her reply.

plant myth. 1 Tatar versions of the myth are said to equalize as being the only ones to represent the bird-maiden as a malignant being, half-vampire, half-fairy; 2 in the Tatar poem quoted by C. Preuss, Gandìz, tr. O. Franzer, 1885, the external being, the hero wrestles with the evil swan-woman for 'moons and years.'

2. In classical tradition.—Classical tradition does not seem to have preserved any swan-maiden tale in a complete form, but that the main idea was a familiar one is evident from the Cynic myths, the bird-transformation of the comoruses of Diomedes, the story of Oenomaus, and the symbolic connexion of swans with Apollo, with the Muses, and with Aphrodite. Modern Greek folk-lore represents the Nereids as flying maidens, similar in many points to swan-maidens.

3. Slavic.—Slav folk-lore bears frequent testimony to the myth. The South Slavs were naturally more influenced by late Greek and by Oriental tradition, and the Bulgarian armoures, and the Serbian vila, like the Greek Nereids, resemble the swan-maidens; e.g., the vila are associated with water and have the power of flying.

The Polish fairy-tale of the prince and the twelve gesso-princesses shows that the myth in its simplest form was known to the Western Slavs. The most important Russian example is the tale of 'Sveta Lot' by I. I. Ivkivich that describes the passion of a young hero for the white swan; this begins in fairly conventional style, although without the feather dress, but later it diverges considerably, for the hero is magically re-animated, and finally forsakes her husband for another love.

4. Celtic.—Old Celtic tradition has two beautiful and elaborate swan-maiden tales, as well as an episode in the story of Edain, wife of Eochaidh, who is carried off by the hero-god Midir in the form of a swan.*

The story of the 'Children of Lir,' one of the three most sorrowful tales in Ireland, is an example, with Christian over-lay, of that variant of the myth in which the swan shape is enforced by malignant magic. The four royal children, metamorphosed for 900 years, retain their powers of human reasoning and speech, and have the gift of singing 'plaintive music at which the men and women would sleep, and there shall be no music of the world its equal. 10

This power of song is turned to account in the Christian-tale which concludes the tale. 'The Dream of Oengus' conveys more closely to the regular swan-maiden type, so much so that J. A. MacCulloch 12 dismisses it as of no mythological or religious value; its artistic value, however, is very great.

The god Oengus is smitten with love for a dream-maiden, the original of whom proves to be Caer, a princess who spends every night flying to her lover in the form of a swan. After some time, however, she comes to the decision to become mortal, and, in the form of a swan, she woos and wins the hero. Finally the hero, with his swan lovers, is turned into a golden cup arranged as the actual sovereign of the Jans. He has an army of women, smithers with swords, and his power is that of a lull, and the planned skins wherever they fly are the handiwork of enchanters. Hassan is advised to steal the feather dress and never again to let it into the owner's hands; he does so, but after three years the wife by a rare securing the dress, bastes it on, and flies away. Hassan tracks his wife to the islands of Wai-Wak, inhabited by the warrior women, and rescues her.

The story of Jishafi is a slighter tale that begins similarly; but the bird-maidens are only three in number, and are 'as doves, eagle-sized.' The husband's device to secure the feather coat is to place it in a chest, laden-bound, which is built into the foundations of the palace; but in vain, for the lady traces it by scent and digs it out.

3. German folk-lore.—The names of the bird-forms of the former story have been identified with various Melanesian islands; it is not surprising, therefore, to find the tale of Hassan re-appearing in the Colchis in a modern form, which Tylor quotes in connexion with the heaven-born maidens.
both of the world and of individuals; thus the two swans, the progenitors of all the swan-kind, that float on the Urtharbrunnr of the old Norse cosmogony, may be contrasted with the swan that lived, according to Finnish myth, on the river of Tuoni or the dead. In the later folk-tales we find a swan living on a hidden lake, which maintains the world in equipoise by carrying a ring in its beak; when it drops it, the end of the world will come.\footnote{Snorr. Edda, ed. C. Wilken, Paderborn, 1877, p. 24.} Popular saying expresses the birth of the daughter of the woman and augury;\footnote{Latenius, rune 14.} in Rügen, swans, not storks, are the bringers of new-born children,\footnote{F. Gottschalk, Sagen und Volkswihrer der Deutschen, Halbe, 1831, p. 227.} while, on the other hand, the sight of a swan in flight may betoken death.\footnote{Cf. Grimm, i. 437, note 1.} and swans are often leaders of the spirit-host.\footnote{K. E. M. Arndt, Schriften für und an seine lieben Deutschen, Leipzig, 1845, II. 547; cf. in Lenz's account of the frog's journey into the world above. Cf. F. J. Furnivall, The Book of Celtic Ballads, London, 1893, p. 385 f.}
The ideas of animal shape-changing and of the external soul favoured the development of the swan-maiden myth in folk-lore. The Scandinavian North, as one of the chief haunts in the world of the bird-people, the birds of sleep, and dreams, was the home of the swan-knight, was the home of the swans, and is thus possessed of the swan-knight, who is subject to mysterious prohibitions and who in the end is almost always lost to her captor, and the swan-knight, who must not reveal his name of origin, as denizens of the world of the dead or of that world of the dead.

7. Interpretations.—The interpretations of the swan-myths have been various; the earlier class of mythologists saw in them nature-myths, the swan-maiden being the white cloud, her captor the storm-spirit.\footnote{F. J. Furnivall, The Book of Celtic Ballads, London, 1893, p. 385 f.} Others have explained the swan-maiden, who is subject to mysterious prohibitions and who in the end is almost always lost to her captor, and the swan-knight, who must not reveal his name of origin, as denizens of the world of the dead or of that world of the dead of the dead.

A more prosaic view takes into account merely the totemistic aspect which the myth shows in common with all animal shape-changing tales, points to the swan-maidens and swan-knights as founders of clans, and compares them with such figures as Mélusine of Lusignan. The most modern theory brings the tabu into prominence, to the overshadowing of other aspects, and advances the wide evidence now forthcoming of marital tabus among primitive peoples;\footnote{F. J. Furnivall, The Book of Celtic Ballads, London, 1893, p. 385 f.} but a curious piece of corroborative evidence on the symbolic connexion between swans and women has been found in the forehead of an early American Indian tribe.\footnote{W. Müller, Die Sage vom Schwarmritter, in Germania, ed. F. Pieper, i. (1866) 410–449.} Fortunately for the appeal of the myth, none of these theories has power to detract from, but all serve only to enhance, its charm and its popularity.

---

SWAT OR UDYANA. This is a famous principality in Independent Eastern Afghanistan, between the latter country and Kashmir, to the south of Chitral and Baluchistan. It derives its name of Swat from the river of that name (the Swat, in Sanskrit), which joins the Kabul branch of the Indus above Peshawar. Its literary name of Udhina (Udyana) is supposed to be derived from the Sanskrit meaning 'garden' or 'park-like' appearance; for it is an exceptionally richly cultivated and well-watered beautiful Alpine valley. Through this Indo-Skythian country Alexander descended for his invasion of India, crossing, it is generally supposed, the Malakand Pass, which is on the main route to the Indian plains; but Swat is best known for its fame as an ancient centre of Buddhism. It is still thickly covered with the ruins of Buddhist monuments and temples, richly decorated with some of the finest sculptures of the Greco-Buddhist or so-called Gandhāra (g.e.) type of art. These sculptured friezes and terra-cottas are particularly numerous between the 2nd and 5th centuries A.D. and a collection of several hundreds was made by the present writer during the Chitral expedition of 1895 and is now preserved in the Calcutta and Peshawar museums. The Chinese Buddhist pilgrim Fa Hian, who visited the country, ed. A.D.

---

\footnote{i. 305–370.}
SWEAT, SWEAT-HOUSE

400, says: 'The religion of Buddha is very flourishing... in all there are 500 monasteries, they belong to the Little Vehicle (Hinayana) without exception.' But, when Huen Tsang visited the lands of A.D. 639, he found that nearly all the convents, some 1400 in number with formerly 15,000 priests, were 'waste and desolate.' It is a striking commentary on Fa Hian's reference to the ten thousand prevalence of the 'Little Vehicle' form of Buddhism—of course the sculptural remains of are the 'Great Vehicle' (Mahayana). It was regarded by Fa Hian as the most northerly province of India, and the food and clothing of the people were the same as in India, and this is still the case—the people dress in white. The dimensions of the Swat country, as described by Huen Tsang at 5000 li (about 833 miles) in circuit, show that in those days evidently included, in addition to the valley of Swat, also the Chitral and Darji adjoining countries and the mountains on the right bank of the Indus, even beyond the great bend of the river to the south. It was the native country of Padma-sambhava (q.v.), the founder of Lamain in Tibet; and the notorious prevalence of Savitri magical rites in the mountains that surround the Tibetans is somewhat in keeping with the old reputation of this country for sorcery. Huen Tsang, in his visit to this land about a century before Padmasambhava's period, writes: 'The science of magical formulas becomes a regular professional business with them (the men of Swat or Udyan's). The belief in serpent-dragons of rivers and springs was especially prevalent here. It was at the source of the Swat river that was located the legendary water-dragon or serpent Apalâśa, whose conversion by Buddha is a favourite motive in Buddhist art, both north and south. Huen Tsang refers especially to the 'white water' issuing from this spring, as also does al-Biruni about the 11th cent. A.D., which would doubtless be snow-water rather than glacial, yet it suggests that the river-name Svasini may have originally been derived from Svatas or Swat-s, 'white,' which approximates the modern name of that river, 'Swat.' Confirmation of this ancient water-serpent worship was found by the present writer in a Kharoṣṭh inscription upon a great boulder at a spring of which the record reads from a rubbing taken by the present writer: 'By the son of Dat, the Thera (Buddhist monk) Norn, a tank was placed to be north of the Worship of All Serpents (in) the year 113.' This date, from the palaeographic details, is placed about 65 B.C.

SWERING.—See OATH, PROFANITY.

SWEAT, SWEAT-HOUSE.—Sweat, a colourless fluid containing about 2 per cent of solid matter, is a secretion of the sudoriferous glands. Its chief function is to regulate the heat discharge of the human body. It is connected like some curious and interesting religious and magical customs in various parts of the world.

1. Sweat in magic.—Primitive man regards sweat, like blood, saliva, hair, and nail-parings, as a medium both for setting sorcery in motion against an enemy and for working the more harmless forms of magic. Codrington says that among the Melanesians the belief prevails that a leaf with which a man has wiped the perspiration from his face may be employed to work mischief against his enemy. A like belief is found among the Natives of N. America. Some of the natives of N.E. New Guinea take elaborate precautions to prevent a drop of their sweat from being made use of by a sorcerer; on leaving a camping-place, they stab the ground with their spears, and all the persons of the most curious uses to which this exudation of the human body has been put are illustrated by a group of customs connected with love magic.

2. A cake, an apple, or a sweetmeat impregnated with the sweat of the giver is a powerful philtre throughout the greater part of northern Europe, from Cæn Garm to the Carpathians. A Hungarian girl steals meal and honey at Christmas-time, takes a cake, takes it to bed with her for one night, and then bestows it on a youth whom she wishes to fall in love with her. W. R. Paton says that in three Native races (confessor, proverbial, which means, they believe, less than three centuries old, 'women are accused of rubbing dough on their bodies, and giving it to eat to men in whom they wish there was love.' The victim of such love magic can, however, have recourse to a counter-charm of the same character. It was narrated that if a man who, under the influence of a philtre was forced to love against his will, would put on a new pair of shoes, and wear them only for a month, breaking in them, and then throw them out of the right shoe, where it could mingle with the perspiration already there, his character would promptly be cured of his love, and hate take its place. A similar idea underlies the superstition prevalent among the Negroes and Indians of N. America, and they in Belgium. The owner of a dog wishes to make the animal faithful to him, he should give it some bread which has been soaked in his sweat. In the island of Tuta, in the Torres Straits, a man could not wear the sweat of renowned warriors to acquire courage.

3. The mythology of ancient Egypt seems to have ascribed a sacramental virtue to the sweat of Osiris. In the pyramid inscriptions—the life-formulae the life-formulae appear to be his sweat; and in the ritual of Anion the incense appears to be crystalized drops of it. A song quoted by A. Erman speaks of the Nile as the sweat of Osiris' hands.

4. The Negroes of what is now the Congo have a man's luck with the perspiration of his hands, and believe that, if the latter were wiped away, the former would disappear.

2. The sweat-house.—The ceremonial use of vapour baths is a custom of great antiquity and wide geographical distribution, being found both in N. America and in N. Europe. In the former continent it was probably known to every tribe of Indians and is likely, along the north-west coast it has been superseded by sea-bathing. 'The type of the ordinary sweat-house seems to have been everywhere the same. Willow rods or other plant stems were stuck into the ground and bent or fastened with wires into a hemispherical or oblong frame-work, which generally was large enough to accommodate several persons. A hole was dug conveniently near the door into which stones, usually heated outside, were dropped by means of forked sticks. These were sprinkled with water to generate steam. A temporary cover of blankets or skins made the enclosure tight. In each tribe there were certain prescribed rules for the construction of the sweat-house. In some cases, however, the communal ceremonial chamber was used for this purpose. Sometimes it was used as a kind of men's club with a pool or bath, as for

women being permitted to enter it for certain ceremonial purposes, but not for sweating. Among these, the chief ceremonial uses were not even permitted to gather wood for the holy fire to be kindled in the sweat-house. In California, where sweating always had a religious significance, some tribes used the sweat-house as a sleeping-place for adult males. Half-an-hour was usually spent in the sweat-house, and then the bather plunged into a stream, if there was one at hand.

Among the Eskimos, hot air was used in place of steam and in Zuni, and probably in the Pueblos generally, hot stones near the body of the bather were used. Some tribes lit the fire in the sweat-house in autumn and kept it alive till spring. Bancroft says of the Northern Californians:

"A fire is kept burning in every one of these sweat-houses in the year, and even during the rainy season, as the dry air is never very humid and the people are, as a rule, fond of taking refreshments in a warm room."

Sweating in N. America was practised for three purposes: (1) religious—such as purification and the propitiation of spirits, preparation for war, and on arrival at puberty, when it was usually attended by secrification and mutilation; (2) therapeutically—usually prescribed by a shaman, who stood outside and invoked the spirits believed to cause the disease (among the Plains Indians shamans who officiated at these ceremonies had usually to pass through the sweat-houses themselves for purposes of purification); (3) social and hygienic — a number of persons would enter a sweat-house for the purpose of enjoying the luxury of a bath (among some tribes this became an almost daily practice, and was perhaps a degeneration).

The sweat-bath is also used by the Eskimos of Bering Strait, among whom the men and boys indulge in it about once a week, or once in every two or three weeks, but with this people it does not appear to possess a religious significance. Among many tribes the sweat-house had its own guardian spirit or manitu (q.v.). A Fox Indian, relating his experiences during a sweat-bath, once said:

"Often one will eat one's self only through the skin. It is done to get away from the places of the manitu to pass into the body. The manitu comes from the place of its abode in the north and the north by the heat of the fire, and proceeds out of the stone when the water is sprinkled on it. It comes out in the steam, and in the steam it penetrates the body wherever it finds entrance. It moves up and down, and all over and inside the body, driving out everything that inflicts pain. Before the manitu returns to the stone, it imparts some of its nature to the body. That is why one feels so well after having been in the sweat-lodge." 1

Among the Thompson Indians of British Columbia, when a boy reached the age of puberty, he went through certain ceremonies to obtain a guardian spirit.

In the sweat-bath 'be prayed to the spirit of sweat-bathing under the title of 'Sweat-bathing Grandfather Chief,' begging that he might be strong, brave and agile, lucky, rich, a good hunter, a skillful fisherman, and so forth.' 2

The Ojibwa (q.v.), an Algonquin tribe, had a secret society called the 'Midwi wiwin,' or society of the four days, into which a candidate would purify himself in the sweat-bath.

1 In all ceremonies, prophetic or medico-magical, great reliance is placed on the sweat-bath. It is entered with sacred feelings, and is deemed a great means of purification. Secret arts are here often disclosed betweenekab (shaman) of high power, which could not be imparted in other places; positions, however, are to be lost subject to the influence of sanctifying power.

2 When we turn to the Old World, we find a striking resemblance to the American customs in Herodotus's account of the sweat-bath among the Scythians as a means of purification, after mourning. The construction of the sweat-house was, however, simpler than in America. Three sticks were stuck in the ground, leaning towards each other, and around them pieces of felt were tightly stretched. A dish containing red-hot stones was placed inside. Hemp seed was then thrown on to the stones. A close parallel to this custom was found among the Delaware Indians, and is described by Tytler:

"At their festival in honour of the Fire-god with his twelve attendant manitises, inside of the house a small open-bath was set up, consisting of twelve poles tied together at the top and covered with blankets, high enough for a man to stand neatly upright within it. After the feast this oven was heated with twelve red-hot stones, and twelve men crept inside. An old man threw twelve handfuls of tobacco on these stones, and when the patients had borne to the utmost the heat and suffocating smoke, they were taken out, generally falling in a sweat to the floor." 3

The sweat-bath, as used among the peasantry of Great Russia, possesses the nature of a ceremonial purification even at the present day. It is taken weekly on Saturday evenings, and all kinds of pollution must be avoided till after the service on Sunday morning. 4

Among the northern Finns, for the sauna, or sweat-bath, a log-lut is used. The bath is frequently taken en famille. With this people, however, and also with the Lapps, who make use of the sweat-bath on Saturdays before putting on their clean clothes, it appears to be an entirely secular institution. 5

Vapour baths were in use among the Celtic tribes, and the sweat-house was in general use in Europe, down to the 13th, and even survived into the 19th century. It was of beeche shape and was covered with clay. It was especially resorted to as a cure for rheumatism. 6

Vapour baths were used by the Greeks and Romans; details for their construction are given by Vitruvius. 7

The sweat-bath, which in England has been named the 'Turkish bath,' being an imitation of the Ottoman baths, is of Russian origin, and was introduced into this country by David Urquhart, M.P. (1805-77).

3. Origin and distribution. The presence of the sweat-bath both in N. Europe and in N. America at once raised the question of its origin. It has been attributed independently in each of these continents, or whether it has reached them from a common centre of distribution. It is essentially a northern institution, and one belonging to the Mongoloid branch of the human family. M. A. Czaplicka suggests that the Slavs of Great Russia probably borrowed it from the Finns of the Middle Volga.

There are many unsolved problems connected with the ethnology of the Scythians, but there appears to have existed among them a Finn-Ugric element from which most likely the sweat-hut was derived. It should naturally be looked for in the sweat-hut in N. Asia, where its habitants form an ethnological bridge uniting the Mongoloid peoples of Europe and N. America. We are, 8

8 De Architeutica, v. 10, 11.
however, disappointed in this expectation, since among the aborigines of N. Siberia it is not in- digenous, but is in use only among those tribes which, like the Yakuts, have derived many customs and ideas from the Russians. We seem, then, to be led to the conclusion that the sweat-bath originated independently in both Europe and America, or else that it originated in a more southerly latitude than N. Siberia. The names by which those institutions were originally called in for hygienic purposes, but afterwards, owing to their beneficial results, came to be connected in the mind of primitive man with mysterious unseen powers, and hence were used in connexion with religious rites. Now, however, the sweat-bath seems to be regaining its former secular character.

SWEATING.—See ECONOMICS.

SWEDENBORG.—I. Life and works.

Emanuel Swedenborg was born in Stockholm on 29th Jan. 1688. He was the second son of Jesper Swedenborg, Bishop of Skara and previously professor in Hebrew and Latin. Swedenborg's father was, apparently, the first to be en- tailed by Queen Ulrica Eleonora in 1719, when the patronymic of Swedenborg was changed into the name of Swedenborg.

Little is known of Swedenborg's childhood. After completing his studies at the University of Upsal, he went on a celebrated foreign tour, and he was in England in 1711, 'studying Newton and dabbling in alchemy,' he seems to have been particularly drawn to alchemy. He took a ship south to see and hear the great man, and, so far from one of his letters to his brother-in-law, Dr. Erius Benzolin, that he could have been a member of the Royal Academy of Sciences, Stockholm, and that he repub- lished some of its publications, and was also a member of the Royal Society of Edinburgh. Swedenborg, however, turned his attention to the study of science, and the work of the Philosophical Transactions of the Royal Society, and the British Museum, Swedenborg's scientific work was published in 1745, London, and in 1764, London, and in 1764, London.

Another of his inventions was a machine air-gun to discharge 00 or 70 shots in succession without reloading. He also devised a flying machine, but the great Swedish engineer, Christopher Polhem, expressed the opinion that, with respect to flying by artificial means, it was about the same thing as trying to make a perpetuum mobile or to make gold!

In 1716 Swedenborg was appointed by King Charles XII, extraordinary preacher, at the Royal Board of Mines, an appointment which caused him to decline the offer of a professorship of astronomy at the University of Upsal. He was also a son of his family, Swedenborg had a seat in the House of Nobles of the Swedish Parliament, but his interest in science, always greater than his in politics, led him to continue his studies in the mines and manufactures of other lands. It was during this journey that he published a treatise on physics and chemistry, at Amsterdam, a second edition of his New Method of finding the Longitude, at Leipzig, and Miscellaneous Observations on Geology and Mining. But the work which won for Swedenborg a European reputation was his Opera Philosophica et Mineralia in 3 vols., with numerous copperplates, published at Dresden and Leipzig in 1734 at the expense of his patron, the Duke of Brunswick. In the first volume of that work, the Principia, Swedenborg gives an elaborate theory of the origin of the visible universe and propounds his nebular hypothesis. This theory has been often attributed to Kant and Laplace as the original authors, but Swedenborg's theory appeared in the Principia of 1724, while Kant's Natural History of the Heavens was published in 1755, and Laplace's Systeme du Monde in 1796, as has been shown by Arhenius in his Introduction to the Latin republication of Swedenborg's work, which appeared the Economy of the Animal Kingdom (1740-41) and The Animal Kingdom (1748), the latter of which are given in English by Sweden-

129

borg's extensive labours in anatomy and physiology. In 1745, his Worship and Love of God was published. This work marks the step from the mind, which is the foundation of all scientific and philosophical reasoning to what is generally considered a form of mysticism, but a form of mysticism, but in which the author himself would have described as spiritual perception. A great change had come over him. His mind, as he himself says, had been opened to the contemplation of the mind of God, and the things of the Spirit.

Swedenborg gives the year 1743 as the date of the opening of his spiritual sight, but it was in April 1746, according to his own statement, that he was fully admitted to intercourse with angels and spirits, not by any process analogous to what is usually termed spiritualism (p.r.), but by speaking with them directly, while assuming normally conscious of everything about him on earth. He was quite aware of the scepticism with which such a man would be received, when known to the world, and he anticipated it in his first theological work in these words: 'I am well aware that many persons will insist that it is impossible for any one to converse with angels and spirits during his life-time in the body; many will say that such intercourse must be a forgery; some will pretend such relations in order to gain credit; whilst others will make other objections according to their sense of things, but I care not, since I have seen, heard and felt.'1

1 In 1747 Swedenborg resigned his position on the Royal Board of Mines and devoted himself to the new study. But he believed himself to have been divinely called. His last work, the Arcana Coelestia, was completed in a volume in 1736. Then followed, among others, The Earths in the Universe (1755), The New Jerusalem and its Heavenly Doctrine (1758), Heaven and Hell (1758), perhaps the best known of all his books, On the Intercourse between the Soul and the Body (1760), Divine Love and Wisdom (1770), Divine Providence (1780). The Apo-

type Revealed (1760), Conjectural Love (1760), the first theological work to which Swedenborg's name is attached, and lastly The True Christian Religion (1773).

It is interesting, and in a sense very significant, to find that, while Swedenborg was fully occupied with the publication of so many theological works, he yet found time and freedom of mind to attend to mundane affairs. In 1703 he wrote several papers on scientific subjects in the Transactions of the Royal Academy of Sciences of Stockholm, and in 1706 he republi- cated some of its publications, and was also a member of the Royal Society of Edinburgh. Swedenborg, however, turned his attention to the study of science, and the work of the Philosophical Transactions of the Royal Society, and the British Museum, Swedenborg's new Method of finding the Longitude, at Leipzig, and Miscellaneous Observations on Geology and Mining. But the work which won for Swedenborg a European reputation was his Opera Philosophica et Mineralia in 3 vols., with numerous copperplates, published at Dresden and Leipzig in 1734 at the expense of his patron, the Duke of Brunswick. In the first volume of that work, the Principia, Swedenborg gives an elaborate theory of the origin of the visible universe and propounds his nebular hypothesis. This theory has been often attributed to Kant and Laplace as the original authors, but Swedenborg's theory appeared in the Principia of 1724, while Kant's Natural History of the Heavens was published in 1755, and Laplace's Systeme du Monde in 1796, as has been shown by Arhenius in his Introduction to the Latin republication of Swedenborg's work, which appeared the Economy of the Animal Kingdom (1740-41) and The Animal Kingdom (1748), the latter of which are given in English by Sweden-
mean that God is a man in a physical sense. His real meaning is simply that, if we think at all abstractly of God, by means of symbols derived from our highest human experience. But, if these symbols do not correspond, in an infinite Reality, to what they represent, as finite symbols, to us, then they are not merely imperfect and inadequate, but actually false. We are then obliged to conclude that there is a fundamental antinomy in the constitution of the human mind, so that the Power from whom it proceeds has not made it possible that it should think about that Power, and think about it falsely. Surely, Swedenborg considers, that the human mind must think should be, at least, an approximate symbol or representation of a fact. If we doubt this, the grounds upon which we believe any philosophical, ethical, or spiritual truth are undermined.

Thus, to think of God as a divine man would simply mean, for Swedenborg, to think of Him as being infinite love and wisdom, as He is apprehended by us by means of symbols derived from the highest of human faculties, the intellect and the will—those faculties by which we are made "in his image." But Swedenborg seems also to have discerned some profound connexion between this conception of God as a divine man in His essential nature and the rational interpretation of a possibility discerned in reading Swedenborg it must always be remembered that there is an idealism, quite his own, at the basis of his philosophical views and consequently of his theology. This enables one to understand much that lies hidden behind his realistic language when he deals with spiritual matters for which our human vocabularies have only weak and inadequate expressions.

(b) The world.—This should be particularly remembered in his treatment of the creation of the world. Swedenborg has attempted to correlate two apparently irreconcilable ideas—the idea of a personal God distinct from the universe, and the idea of an immanent Creator. He has done it by means of his doctrine of 'discrete degrees.' He holds that there are substances of many orders composing the universe. The primary, self-existent substance is the infinite God from whom all finite substances originate. But those substances are related to each other in an order constituted by degrees of human 'discrete degrees' in distinction from continuous degrees because there is no possibility of existence entirely separate from each other and incapable of being resolved one into another. A continuous degree is merely a variation of being or quality on its own plane, as from heavier to lighter, or from denser to rarer. It is only a question of more or less. Discrete degrees, on the other hand, are never of the same forms or qualities of being, and, moreover, they involve the relation of cause and effect. Hence Swedenborg says: 'Nothing, so far as I am aware, has hitherto been known of discrete degrees but only of continuous degrees; yet without a knowledge of both kinds of degrees nothing of cause can be truly known.' For 'seeing from effects alone is seeing from fallacies.' He means that fallacies arise, not from a failure to distinguish between cause and effect, as, e.g., between matter and spirit, but from the fact of regarding them as differing by continuous degrees only and not by discrete degrees. For thus cause is never lifted above the plane of effect, nor spirit above the plane of matter.

It is maintained therefore that in everything of which anything can be predicated there are what are called end, cause, and effect, and these three are to each other according to discrete degrees. In creation the natural or material world is the effect, of which the spiritual world is the cause, and God is the end. The first act of creation, not in time but prior to time, was the Divine of a finite emanation of love and wisdom from Himself. This is conceived as a spiritual sun of incomparable splendour, a manifestation so intense that it could not be contained by any mind or heart, were it not tempered by intermediate stages. Thus, successive discrete degrees, separated not in space but in the quality of their spiritual constitution, produce the higher and the lower heavens; other discrete degrees exist in angelic forms according to their receptability of love and wisdom.

Similarly, the affections and thoughts which constitute the life of men are not, as it seems to us, self-generated, but pass into their minds out of the spiritual world, in a clearer or more obscure manner, always according to discrete degrees and in the order of cause and effect. In the world of matter a different law operates. Matter is derived not directly from spirit, but from the natural sun, which, according to Swedenborg, is not only the centre and support of our solar system, but also the proximate source of the material activity of this prismatic sun are ultimately produced, by discrete degrees, the atmospheres and matter itself out of which the physical world is formed.

The materials themselves, as inert and as potential, are nevertheless capable of being acted upon by spiritual forces. But there is nothing of God in them as the ultimate of creation, since their life has ended in no-life, and love and wisdom have ended in forms of motion. Of course, this does not mean that God is not present in this ultimate of creation.

This doctrine is intended to exclude the incomprehensible idea of a creation ex nihilo, whilst it is meant also to provide against a pantheistic interpretation of the universe. It inevitably presents the difficulties which are inseparable from any theory of emanation.

(c) Man.—The theology of Swedenborg, as it deals with man, his nature, and his destiny, cannot be understood apart from his view (or, as he would insist, apart from the doctrine that he was divinely commissioned to make known to the modern world) of the real meaning of God's Word as we have it in the letter of Holy Scripture. More than 150 years ago Swedenborg had foreseen the difficulties which would arise in the future in interpreting the revealed word, and he was bringing forward as an argument against a belief in a divine revelation, 'It is in the month of all,' he says, 'that the Word is from God, is divinely inspired and therefore holy. But yet it has been unknown hitherto where within it its Divinity resides. The man who worships Nature instead of God may easily fall into error concerning the Word, and say within himself when he is reading it: "What is this? Is this divine? Can God who has infinite wisdom speak thus?" Yet Swedenborg never lost his faith in a divine revelation, and one of the principal objects of his theology is to show that the difficulties which create so serious a stumbling-block in many minds are due to the fact that they are looking in the Bible for what its letter does not and cannot explicitly manifest. He affirms that the Word contains throughout a spiritual meaning which alone gives the true and full sense of God's revelation to man. Philo, Origen, Clement of Alexandria, and others have attempted to discover this spiritual meaning in the Bible, but Swedenborg's conception proceeds on entirely different lines. For him the Word is the divine truth itself as it exists in God. It is the very form of God, and the medium of communication and conjunction with Him for.
angels in the heavens and for men upon earth. But truth in this divine form is utterly incomprehensible to any but the few. To render it at least partly intelligible, it must descend through the discrete degrees already described, and assume successively lower and lower forms of expression adapted to the comprehension of the various grades of finite minds. Thus, to us as the letter of our Bible, or rather as the original texts from which that letter has come to us.

Now then are these texts written? They are written in pure 'correspondences,' i.e. in symbols derived from nature. Every natural object is conceived to be the effect, and therefore the expression, of spiritual causes. Those effects 'correspond' to those causes; hence their capacity, when properly understood, to reveal the spiritual meaning contained in them.

The first result of this principle is that man is thus enabled to know the true canon of the sacred Scriptures. Those books which are so written as to present a correspondent spiritual meaning are really 'the Word.' The other books possess devotional, and not a spiritual, value; they are not 'the Word.' Guided by this fact, Swedenborg declares that the only books of the Word in the Bible are, in the OT, the Pentateuch, Joshua, Judges, 1 and 2 Samuel, the Psalms, 1 and 2 Kings, the Proverbs, Job, and the Psalms to Isaiah to Malachi; in the NT, the four Gospels and Revelation. The Epistles form therefore no part of what Swedenborg strictly calls 'the Word.' But he valued them highly, and he frequently quotes them.

In the letter, as we have it, Swedenborg recognizes a human element manifested in the language and feelings of the writers of the various books of the Bible; it is only the spiritual sense that is entirely and solely divine. Hence many of the difficulties raised by the higher criticism would be no difficulties for him; e.g. instead of a creation in six days in the book of Genesis, he reads there the earliest condition of man and the gradual development of his psychological constitution; his growth in a knowledge of good and truth, of love and faith, and of divine things; and finally his introduction to a celestial perception of divine truth itself. It is a conception of the regeneration of man, called to reach his spiritual destiny through knowledge, trial, faith, and love, and Swedenborg assigns a sublime meaning to it which he could not have had for the men who lived when the letter was written. It would have been an unintelligible revelation for most of them. Therefore the full meaning of the letter as contained in the spiritual sense was not given to them. There is, according to Swedenborg, a grave spiritual danger in the premature disclosure to any mind of divine Truth.

But what is man? He is, says Swedenborg, made to be at the same time in the spiritual world and in the natural world. He is not life, but a recipient of life from God. And God grants man a sense that the life which he feels within himself is his own, in order that he may live as of himself. In every man's soul there is an utmost or supreme degree into which the divine of the Lord proportionately flows; hence it is that man can receive intelligence and wisdom and speak from reason, and from this also comes the fact that his soul is capable of voluntary and intelligent action.

The will rather than the understanding constitutes the man. Swedenborg rejects the idea of angels having been created as such to people the heavens. All spirits, he believes, whether in heaven or in hell, are from the human race. He also holds that there is no personal Devil or Satan, but that that name signifies the whole society of evil spirits.

The life of man cannot be changed after death, for the spirit of man is such as his love is, and inferior love cannot be changed into heavenly love, 'because they are opposite.'

The problem of evil, as interpreted by Swedenborg, is explained by the freedom with which God has endowed man, and it is because God 'who changeth not' will not withdraw that gift that man's love remains what it was even after death. If he has deliberately made evil his good and good his evil, then he is his own hell, and does not desire heaven. He could find no ease there, and would long for his congenial surroundings and associates. He is not sent to hell; he goes there of himself, and would be happy there, if an evil soul could find permanent happiness anywhere. But he inevitably meets with sufferings and punishments, inflicted not by God or His agents, but chiefly by the evil spirits his associates. What happens under our eyes here upon earth continues in hell. For evil breeds evil always and everywhere. The conception is sad, but certainly drawn from life.

Are then those sufferings eternal? It is difficult to interpret definitely the teaching of Swedenborg on that point; he says so much that he must be mitigated,' says Howard Spalding, 'we are not told, but a careful study of all that Swedenborg has said on the subject suggests that they may be so greatly modified as to cease to be heinous.'

It is remarkable that, according to Swedenborg, there is no absolute destruction of evil even in heaven, for nothing has formed part of the spiritual nature of man can ever be annihilated. Spirits therefore—yes, angelic spirits—carry with them into heaven the perverted organic forms in which their evils resided. They are even permitted to experience from time to time a sense of their evils, but not uselessly, for by those alternations of state spirits are kept in continual spiritual progress. Thus the regeneration of man, begun on earth, continues to eternity.

Of heaven we are told that God Himself is heaven, and that His presence to each human spirit brings heaven into him, but always in a degree which depends on a certain faculty of reception acquired on earth by man's conscientious endeavour to make what he truly believes the rule of his life.

There has been a tendency, more or less defined, to class Swedenborg among the mystics, but this seems to be due to an imperfect understanding of his system. His conception of life in heaven should suffice to show how little he has in common with mysticism past or present.

The fulfillment of God's purpose in creating the world is a fundamental doctrine in Swedenborg's theology. That purpose, we are told, was, by making man in His own image and endowing him with the faculties of freedom and rationality, to prepare him for that conjunction with God which constitutes the angelic heaven. In this sense, the creation means infinite love seeking by love to cause love to arise freely between the Creator and His rational creature. But the misuse of rationality and freedom has led to evil being chosen and loved instead of good; hence sin, whose effect is the weakening of true freedom, and the obscuring of that inner light within us which is the possibility of heavenly life. Then it is that the love which had created man has also come to save him. By His incarnation the Lord did not come to reconcile His Father

---

3 For full details see especially Swedenborg's Heaven and Hell.
to man, for God in Christ, as Swedenborg says, is the one only God who is love itself and does not need to be reconciled. His Man, or who needs to be reconciled to God. The Lord came and, as to His human nature, was born, lived, suffered, and died ‘for us,’ not ‘instead of us.’ He came to enable man to do that which, through the fall, man had almost lost all power of doing, namely, to shun evil and to do the Lord’s will in a life of righteousness and true holiness. Moreover, God ‘became flesh,’ not only to effect this work of redemption, but also to show thereby that He is capable of manifesting His infinite love for man, and thereby give to Him for ever a definite object of intelligent faith, worship, and love. Man is said to be saved by the blood of Christ, in this sense, that His blood is the symbol of divine truth, and the shedding of His blood is the symbol of the imparting of His spirit of truth, the Holy Spirit. The Atonement, for Swedenborg, is thus really an at-one-ment, the reconciliation of man to God by love and power of God. It was accomplished by the Lord taking upon Himself man’s nature, enslaved by sin, from the blessed Virgin Mary, sustaining in His own body and soul the assaults of the powers of darkness, and gradually subduing them. For this work the Lord laid down His life, i.e. the life in Him of all that was not in perfect agreement with the infinite perfection of His in divine dwelling. When this was done, ‘consummated,’ the Lord Jesus Christ was no longer, even as to His human nature, the Son of Mary. He was the ‘only begotten Son of God,’ the perfect manifestation of the infinite, invisible Father. This process, called glorification, was completed after His resurrection, when the Lord ‘put off’ from the infirm human nature all its hereditary tendencies to evil and sin, and ‘put on’ from the Father the divine humanity subsisting in the essential divinity within Him. This is the supreme type of man’s own regeneration by which, having put off hereditary tendencies to evil and its actual sins, he puts on from the Lord, in the degree that he has thus put off evil, a new regenerated and spiritual humanity, a spiritual mind. No real regeneration can be attained except in accordance with the principle that the ‘saving faith’ is ‘a faith which worketh by love.’ Salvation by ‘faith alone’ is rejected and condemned by Swedenborg in innumerable passages in his works.

It is important in connexion with this subject to understand his idea of ‘the Church.’ The essential Church for him is constituted by a genuine love of goodness and truth and by the spiritual relation established with the Lord in the minds of men. The true Church is therefore invisible, but, so far as it is a true Church, it can never pass away. This, however, does not exclude the possibility of the disclosure by the Lord of further truths called for by new conditions in the world of human thought and experience, and needed to establish a higher level of spiritual life. Nor does it exclude the possibility of the loss or the corruption of truths previously held, rendering necessary the institution of a specific ‘New Church’ in order to restore what has been lost, and to incorporate new truths which the Church in the past was not ready to receive. The new Church, therefore, made by the disciples of Swedenborg that a ‘New Church’ has been instituted, involves, as they would insist, no disparagement of the former Christian Church ‘so far as was possible,’ but only the addition of the members of the ‘New Church’ at the present time consider it an entire misconception to imagine that Swedenborg is the founder of a ‘New Church.’ He himself always regarded the Holy Swedenborgian. He considered himself merely an instrument through whom new truths needed in the Church were communicated to the world. His chief point always was, however, that the Church and religion is another. The Church is called a Church from doctrine; religion is called religion from a life according to doctrine. Hence his well-known saying: ‘All religion is related to life, and the life of religion is to do Good.’

SWINE.—The swine plays a prominent part in many ancient and modern religions. The word ‘pig’ is unlucky to the Scottish fisherman, and when bearing it he will feel ill for the mists in his boots and mutter ‘Caubir iron.’ The inhabitants of certain villages on the north-east coast of Scotland consider the words ‘sow,’ ‘pig,’ and ‘swine’ very unlucky; should one be so unwise as to utter these words while the line is being baited, the line will surely be lost. The Galatærens, having noticed that, whilst men suffer from it, caused by troubles, in the fallen fruit of the fruit palm-tree, the wild boar, which is fed of the fruit and runs freely among it, is not liable to such a disease, argue that the fruit treats the pig as a real friend, and, if one by granting can impress the fruit that he is a pig, he must obtain that treat him in a certain way. The pig was offered by the Romans and Greeks as an expiatory sacrifice. Cato advises that, before thinning a grove, the Roman farmer should offer a pig to the god or goddess of the place. The grain distributed as præxis in the Eleusinian games in Greece was grown on the Rarian plain near Eleusis; this plain was so sacred that no dead body was allowed to touch it, and, whenever a death occurred, a pig was offered as a sacrifice. The Caribs abstained from pig’s flesh because, like most primitive races, they believed that the physical and mental qualities of the human being depend largely upon what he eats, which he eats. If they were to eat the flesh of pigs, they would have small eyes like those of a pig. Similarly Zulu girls abstain from eating pig’s flesh because they fear that by eating it they might gradually come to resemble the ugly pig in appearance. But there are other reasons why primitive man abstained from pork. The Kai of N.E. New Guinea find that pigs are the worst enemies of the crops; therefore, if a field-labourer were to eat pork, the dead pig in his stomach would attract the living pig into the field. Swine’s flesh was forbidden to all the Semites except the Babylonians, but it is an abomination whether this was because the animal was holy or because it was unclean. As early as the time of Hammurabi pork was a highly valued food among the Babylonians and frequently used to settle differences. By

6. A. Brinkman, Frieslandsc Comitesg Sterren, Groningen, 1895-97, ill. 60."
the inspection of pigs various omens were derived, and in the official lists special provision is even made for the temple pigs. The heathen Harranians sacrificed swine's flesh once a year and ate the flesh of pigs that had been regarded as sacred, and it was especially sacred to Aphrodite. To the Greeks the attitude of the Jews towards swine was difficult to understand. In 627 B.C., when Nebuchadnezzar was about to meet secretly to eat swine's flesh, it has been suggested therefore that the swine was revered rather than abhorred by the Israelites, and that it was not eaten because it was divine. To the Egyptians the pig was very loathsome. Swine-hens were forbidden to enter a temple and even had to marry among themselves. If a man even touched a pig, he immediately stepped into a river to wash off the taint. Pig's milk caused leprosy. These prohibitions prove that the Egyptians originally regarded the pig as sacred, for the belief that the eating of a sacred animal produces leprosy and that the effect caused by touching a sacred object is removed by washing was current among many ancient tribes and religions. Later, however, the pig began to be looked upon with horror and was regarded as the Egyptian devil and the embodiment of all evil. Typhon and Serapis are often mentioned as the boar-god. Typhon, in the form of a pig, injured the eye of Horus, who burned him and ordained that a pig was to be sacrificed, seeing that Ra, the sun-god, had declared the pig to be an abominable beast. We find in various religions that the animal sacrificed to a god because he is the god's enemy was originally the god himself. Now, we read that Typhon was hunting a boar when he discovered and mangled the body of Osiris, and that for this reason pigs were sacrificed once a year. It has therefore been suggested that originally the pig was a god, and that he was no other than Osiris. 

We have already seen that the pig of New Guinea abstain from pork because they regard the pig as the enemy of the crops, so that we can understand why the Egyptians should have identified their corn-god Osiris or his enemy Typhon with a wild boar. It might also be noted that pigs were sacrificed to Osiris on the very day on which he is recorded by tradition to have been killed. Further, the pig was sacred to the corn-godess Demeter and was often associated with her. In art she is represented as accompanied by a pig. At the Thesmophoria it was customary to throw pigs into some sacred vaults, which are looked upon as the 'caves of the Athenians' and the 'caves of Persephone.' It seems that the pigs were intended to represent Persephone and her descent into the lower world. An ancient legend tells that, when Pluto carried off Persephone, Eubulus, a swineherd, was herding his swine near the spot, and his herd were engulfed in the cave into which Pluto and Persephone had vanished. The Thesmophoria has analogies in the folklore of the Corland of the pig, the cosmic power of which

10 The inspection of pigs various omens were derived, and in the official lists special provision is even made for the temple pigs. The heathen Harranians sacrificed swine's flesh once a year and ate the flesh of pigs that had been regarded as sacred, and it was especially sacred to Aphrodite. To the Greeks the attitude of the Jews towards swine was difficult to understand. In 627 B.C., when Nebuchadnezzar was about to meet secretly to eat swine's flesh, it has been suggested therefore that the swine was revered rather than abhorred by the Israelites, and that it was not eaten because it was divine. To the Egyptians the pig was very loathsome. Swine-hens were forbidden to enter a temple and even had to marry among themselves. If a man even touched a pig, he immediately stepped into a river to wash off the taint. Pig's milk caused leprosy. These prohibitions prove that the Egyptians originally regarded the pig as sacred, for the belief that the eating of a sacred animal produces leprosy and that the effect caused by touching a sacred object is removed by washing was current among many ancient tribes and religions. Later, however, the pig began to be looked upon with horror and was regarded as the Egyptian devil and the embodiment of all evil. Typhon and Serapis are often mentioned as the boar-god. Typhon, in the form of a pig, injured the eye of Horus, who burned him and ordained that a pig was to be sacrificed, seeing that Ra, the sun-god, had declared the pig to be an abominable beast. We find in various religions that the animal sacrificed to a god because he is the god's enemy was originally the god himself. Now, we read that Typhon was hunting a boar when he discovered and mangled the body of Osiris, and that for this reason pigs were sacrificed once a year. It has therefore been suggested that originally the pig was a god, and that he was no other than Osiris. We have already seen that the pig of New Guinea abstain from pork because they regard the pig as the enemy of the crops, so that we can understand why the Egyptians should have identified their corn-god Osiris or his enemy Typhon with a wild boar. It might also be noted that pigs were sacrificed to Osiris on the very day on which he is recorded by tradition to have been killed. Further, the pig was sacred to the corn-goddess Demeter and was often associated with her. In art she is represented as accompanied by a pig. At the Thesmophoria it was customary to throw pigs into some sacred vaults, which are looked upon as the 'caves of the Athenians' and the 'caves of Persephone.' It seems that the pigs were intended to represent Persephone and her descent into the lower world. An ancient legend tells that, when Pluto carried off Persephone, Eubulus, a swineherd, was herding his swine near the spot, and his herd were engulfed in the cave into which Pluto and Persephone had vanished. The Thesmophoria has analogies in the folklore of the Corland of the pig, the cosmic power of which fertility lies in his tail; therefore, when barrow is sown for the first time in the year, the year sticks a pig's tail into the field, believing that the ears of corn will grow as long as the tail. The idea that the pig is an embodiment of the corn-spirit can further be seen from the Scandinavian custom of 'Yule boar.' This is a long Prepared from the last sheaf in the form of a pig. It is usually prepared at Christmas and kept to the coming year, when it is given to the plough-horse in the hope that it will be the means of securing a good harvest. In this connexion it is of interest to note that Ball finds a philological connexion between Tamuss, the Assyrian god of the under world and of vegetation, and the Chinese and Turkish words for pig. He also cites the evidence of classical writers that the Jews did not use swine's flesh because it was sacred inasmuch as by turning up the earth with its snout it taught men the art of ploughing. In some parts of White Russia it is believed that the bones of a pig preserve the corn from hail, whilst in other parts they are turned into the seed-bag among the flax-seed because they cause the flax to grow well and tall. The Alfoors of Minahassa in N. Celebes believe that a pig's blood causes inflammation of the body; in Minangkabau there is a sacrifice to the pig through which the priest drinks a pig's blood and thereupon is able to prophesy as to how the rice-crop will turn out. The inhabitants of Car Nicobar rub themselves over with pig's blood in order to cleanse themselves of any devil of which they were accused. In the same way the Greeks cleansed a homicide by sprinkling him with pig's blood and beating him with a laurel bough. The Karens of Burma believe that a bad harvest is caused by adultery, and, in order to atone for this, those detected in adultery must buy a pig, scrape out furrows in the ground with each foot, and then fill them with the pig's blood. Some Yabims believe that after death their souls will be turned into swine, and they therefore abstain from swine-flesh lest they should be eating the souls of their relatives. The people of Tamara (off the coast of New Guinea) also abstain from pork because the souls of the dead transmigrate into the bodies of pigs. The worshippers of Adonis did not eat pork because their god had been killed by a boar. It has been suggested that the cry 'Hyia Attis!', raised by the worshippers of Attis, meant 'pig Attis!' In Fiji a huge pig is presented to those who are initiated into manhood. At Mauwo, in Aurora, one of the New Hebrides, pigs are killed for the death of a wealthy man pigs are killed, and the point of the liver of each pig is cut off. The brother of the deceased goes to the forest and calls out the dead man's name, saying, 'This is for thee to eat,' the idea being that, if pigs are not killed for the benefit of the dead man, his ghost has not proper existence. It should be noted also that the pig is very often represented by a cowry-shell. Malinowski, in an
SYMBOLISM (Christian)

SYMBOLISM (Christian).—It is proposed in this article to indicate the more important of the emblems and personifications in which Christian belief has found spontaneous expression. The literary images which deserve to be called symbolical, but which have not embodied themselves in pictorial or material shapes, remain invisible from view. An attempt will be made, however, to connect the emblems which call for notice with the language of the New Testament.

When the subject is thus defined, the field to be surveyed is at once seen to admit of a clear division. The first four or five Christian centuries separate themselves for our purpose markedly from the centuries which follow. For the symbolism of the earlier period we have the definite and varied testimony offered by the sepulchral paintings and inscriptions of the Roman catacombs. With the light thus obtainable we are able to see the hopes with which the Christians of Rome during this formative period followed their dead into the unseen world and connected the life that now is with that to which they believed it to be the portal.

Burial in the catacombs and the symbolism to which it gave rise practically ceased before the middle of the 5th century. From that time onwards new images and ideas crowd in upon us, created by the popular imagination in response to the Church's teaching and worship, to legends of the saints, animal fables, and spiritual plays and morbidities. Many of these images do not succeed in finding an emblematic expression, but those which do create a symbolism far exceeding that of the previous period in amplitude. We shall give our chief attention to the earlier period, and briefly indicate the later emblems which, either from their permanence or from their inherent significance, seem especially to claim notice.

A review of the entire field brings one decisive feature of the symbolism into prominence. The emblems will all be found to point onwards to a life beyond the tomb. The symbolism is created by a hope or, it may be, a fear whose fulfilment is not expected within the limits of our present existence. The justification of this 'other-worldliness' may readily be found in our records of the life of Christ. His ministry began with the announcement, 'The kingdom of God is at hand,' and was throughout a prophecy of good things to come (Mt 1). Some of His disciples may at first have believed that they would see these good things before they 'tasted' death (9). The mere lapse of time was enough to stamp such expectation with the mark of illusion. Every year it became more clear that the realization of the promised kingdom must needs be a slow and gradual process. In another respect also the de-irred consummation underwent a change. The earth ceased to be regarded, as perhaps it had at first been, as the

SYMBOLISM (Christian)

account of the natives of Malu Island, off the coast of New Guinea, 1 says that at one of their feasts the natives erect a gallows and ornament it with a white shell called moto (the so-called white cowry, *Ovisula ovata*). This shows that they are about to sacrifice a dog, and that the number of pigs to be sacrificed is always the same as the number of shells. The association of this shell with pigs is important when it is remembered that cowries are widely known as pig-shells. This fact, and also the passionate tendencies of swine, would be the most plausible explanation of the abhorrence with which they have always been, and still are, regarded in certain circles.

The scene of fruition. The liveliest hope cannot resist the accumulating contradictions of continuous experience. Year by year it became less likely that the kingdom could ever be localized or assume any material shape. The Crucifixion and its sequel had lifted the thoughts of the disciples from the earth and carried them into that heaven which had now become the Master's home. To this heaven they transferred their 'treasure' (Mt 6*), less perhaps from deliberate apostasy than from the reluctant acceptance of undeniable experience, and to it their hearts ascended. Death thus resumed its normal character, and what lay beyond it became an object of anxious thought or fervent longing. These thoughts and longings form the central motives of Christian symbolism. The blessedness hoped for after death, the means by which it may be reached, and the character of Him who procured and guarantees it—these will be found to be the subjects round which the Christian emblems of all periods gather. From the beginning hope has been the dominant Christian characteristic. The scene of fulfilment and the mode of realization may have shifted. Hope itself has remained.

The symbolism of the catacombs embodies the hopes of future blessedness entertained by those who used these burying-places up to the time when such subterranean burial ceased. Thus the roses, or flowery meadows and shrubs, which appear on so many tombs represent paradise. Its entrance is sometimes indicated by a curtain which is in process of being drawn aside. For instance, a figure who appears on tomb after tomb may with greatest probability be here regarded as the Lord and Protector of the dead. It is they whom He gathers together round Him in the beginning of the future world. One of their number is the sheep He carries on His shoulders. The fish, one of the two articles of food with which the thousands were fed (Jn 6*), represents the mystical union with Christ, and its fruit incorruptibility (αὐθανάσιος). The vine points to the heavenly feast, or to its earthly pledge—the Eucharist. The dove, sipping water from the basin or jar, is the soul refreshing itself from the water of life (Rev 22*). The palms symbolize either the palms borne by the blessed (7) or the wreaths or crowns of those who have been victorious in the race of life (1 Co 9*; 2 Ti 4*). The anchor indicates the hope of Hb 6* which enters 'within the veil.' The ship and lighthouse typify the dangerous voyage across the ocean of life to the haven of safety. The stag is that of Ps 42*, and represents the soul's thirst for God.

The paintings of the catacombs have been fully described by two recent writers. Wippern, in his *Moderne der Katakomben*, has classified the paintings, reproducing all that are important and giving his interpretations of their symbolism. Von Sybel, in his *Christliches Antike*, has reviewed the subject on the ground provided by his predecessor's labours. He also reproduces many of the paintings and states his own conclusions in a lucid style and with much wealth of learning.

The symbolism of the later centuries has the
His ministry has been heralded by many previous displays of God's saving power. He has actually shown Himself to be the raiser of the dead, the restorer of the blind, and the healer of the sick. He waits in the church of his disciples and leads them into the heavenly pastures. Such are the subjects and implications of the symbolism.

(a) OT types.—Scenes from the OT which were especially held to typify this divine man often occur with great frequency on the tombs. These are the salvation of Isaac, when he was about to be slain in sacrifice by Abraham; the salvation of Noah in the Ark, the restoration of Job to his former prosperity (Job 42:12), the rescue of damsel from the jaws of the sea-monster, and the preservation of the three Hebrew youths in the flaming furnace. Some features in the symbolism of these paintings deserve particularly to be noted. In the representations of Abraham's contemplated sacrifice it is the rescue of Isaac from death that the painter desires to symbolize. This is plain from the attitude in which Isaac is represented when the design of the picture permits. He appears with extended arms—a posture of prayer or adoration of which more is said below. This is also the attitude of Noah as he stands in the Ark, and of the three children in the furnace. There is an observation in the paintings of the theological meanings afterwards found in Abraham's projected sacrifice. It may also be observed that the Deity is represented here, as generally or often in the earliest Christian art, by an outstretched hand. No attempt is made to delineate His features. There are no representations of the Trinity such as we find afterwards. Of all Biblical types Joseph has been the most frequently chosen by those painters. He forms the subject of 129 separate pictures which have come to light. It is to be observed that he does not here appear as a type of the resurrection of Christ, as he does in Mt 27:5. Nor is it the repentance of the Ninives at his preaching (Mt 11:29) that the painters wish to symbolize. He is represented as an example of God's saving power. Sometimes he forms the subject of three or four connected pictures. We first see him standing on the deck of the vessel and about to be cast into the sea. We then see the monster vomiting him out towards the land. The next panel shows him on the shore, which takes the form of an arbour like those in paradise. There may be a fourth picture where he reclines in an attitude of dejection, his head resting on his hand.

(b) The sacred infancy.—The divine childhood is depicted on a number of tombs. One of the most beautiful paintings in the catacombs3 is the picture in the Priscilla cemetery of the Christ-child on His mother's breast. The mother bends slightly forward as if to suckle the child. The child's hand is spread out over the mother's breast, but the face, with wonderful eyes, is half turned towards the spectator. Above the heads of mother and child two stars are indicated in an oblique direction. To the left stands a man in mantle and sandals who has in his left hand a written roll and with his right points to the stars, and next appears resting under a canopy, presents, not Joseph (who, as far as is known, does not appear in early Christian art), but a prophet, either Isaiah, who pointed to the light of the Messianic age (60:1), or Elkam (Nu 24:17, Rev 22:16), who told of the start to arise out of Jacob. If this identification be correct, it is, as von Sybel says,4 one more evidence that at least the earlier Catacomb painting was in no sense historical, but entirely symbolic. The picture belongs to the beginning of the 2nd century.

3 See art. 'Mary,' in HDB. Schulze art. 'Synthetiker,' in PREP xviii. 392.

4 Von Sybel, p. 216 fl. 2 Th. p. 247.
SYMBOLISM (Christian)

depicted is the visit of the Magi. They are generally represented as three in number, although the painters often depict these by four, or even five, to increase them to four or reduce them to two. The definite determination of their number as three, their designation as the Magi, and the ascription to the proper names (Kaspar, Melchior, Balthazar), the differentiation of their ages to this legendary web antiquity only. It is connected the first designation was the work of the Middle Ages. 1

The Annunciation (Lk 1:26) forms the subject of two paintings, one belonging to the end of the 2nd and the other of the 3rd century. It is seated. The angel, in the form of a man, makes the announcement standing, as a visitor who has just entered the house. The relative postures of the two figures can be explained without the supposition of an intention to claim for Mary a higher dignity than for the angel. The two paintings may presuppose, but cannot be held to go beyond, the Gospel narratives.

On the other hand, Mary's perpetual virginity finds constant expression in medieval art. The OT provides many images of inviolability which are applied to Mary. She is the 'fons signatorum,' the 'house of consecration' and a 'curse' of the Song of Solomon (4:12 4:14). The christianized Physiologus—a medieval bestiary or book of animals, real and fabulous, with allegorical explanations—supplied the legend of the unicorn, a fabulous animal which is said to have been caught in the lap of a pure virgin. Ezek 17 provided the symbol of the barred door, Jg 6:17 that of Gideon's fleece wadded from the dew from heaven. The number and variety of these symbols show the value assigned to the doctrine of Mary's perpetual virginity by the medieval Church. 2

c) The Divine Healer.—The Gospel miracles, of which there are numerous representations in the catacombs, are evidences of God's desire to release humanity from its plagues. In the heavenly city of the Apocalypse there was to be neither sorrow nor death (Rev 21:4). To this divine purpose the healings of Christ bore emphatic witness. His ministry was a short-lived anticipation of the Messianic Age (Mt 11:5). The beneficent power, then displayed in a few instances, would hereafter be seen in the fullness of its strength. It is an evidence of the authority rapidly acquired by the Fourth Gospel that the miracle most frequently represented in the catacombs is the raising of Lazarus (50 examples have been discovered). 3 We remember how Jesus greeted the Saviour with the words, 'If thou hadst been here, my brother had not died' (Jn 11:21-25). We are intended to regard the presence of Christ as incompatible with death, or at least with its bearnessing power. Other healings which may with certainty be identified are that of the paralytic (Mk 2:3-11), in which the man appears walking with his bed on his shoulder, and that of the blind man, where we see Christ touching with His linger the man's closed eyes. Another unmistakable scene is the cure of the issue of blood (Mk 5:21 and 25). The woman comes behind the Saviour as He walks with two disciples, and kneels that she might touch Him with her handkerchief. Other paintings have no distinctive features which would justify certain identification.

d) The Cross.—The absence from the earlier catacombs of what has now become the distinctive Christian emblem is full of significance. The use of the cross as a separate symbol appears to date from the campaign of Constantine against Maxentius in the year 312, when Constantine put the cross upon the shields of his soldiers. Previous to this date we find the cross mentioned in one inscription

in the catacombs, and appearing doubtfully in two ceiling-paintings. Both inscription and paintings belong to the 3rd-4th centuries. The monogram of Christ 

appears in inscriptions of which some may possibly be anterior to Constantine, but its general use dates from the reign of this emperor. It has accordingly become customary to regard both the cross and the monogram as institutions not formed before the 4th century. It should also be observed that the only known reference to the Passion in the catacombs previous to the 4th cent. is what is believed to be a representation of the crowning of thorns in the Praetextatus cemetery. 4 The absence of any symbol of the Passion from the earlier tombs may readily be accounted for by the fact that their paintings were intended to display, not death, but the victory over death. Even when the cross does begin to appear, it seems to be introduced, not for its own sake, but as a support for the rose-leaves which gather round it. It thus becomes a beauteous or symbolic cross. We are reminded of the symbolism of the Passion-narrative in the Fourth Gospel, where we see Christ reigning with sovereign authority from the Cross, and the majesty of the Divine Sufferer shining through the insignities of His Passion. It is not possible to say whether the foliage-crosses of the catacombs—concealed or 'dissimulated' crosses—have indeed been traced to the supposed desire of the Christians to avoid observation. Apart, however, from the fact that such crosses do not begin to appear until the 4th cent., it is difficult to believe that the other emblems which do appear would not have clearly indicated these various Christian burials, if more natural to suppose that the transfiguration of the Cross effected by St. Paul's theology required much reflexion before it could find emblematic expression. The Cross was at first a stumbling-block (Gal 5:11) and only slowly became a symbol of glory (6:14).

It will thus have been observed that the earliest representations of the Passion were avowed symbols, suggesting, but not depicting, the sacrifice of the God-man. Realism becomes more pronounced as we travel down the centuries. The crucifix—an inevitable development of the cross—does not appear in churches till after the 14th century. 5 The implements of the Passion (hammer, claws, etc.) become independent emblems towards the end of the Middle Ages, when indulgences began to be attached to their veneration. The lamb with blood streaming from its breast, and carrying the cross or a banner upon which the cross was depicted, became a favourite symbol on the portals of Latin churches. The pelican (taken from the Physiologus), who teats open its breast to feed its young, was used to represent the sacrificial death of Christ. 6

e) The Good Shepherd.—The favourite symbol of Christ among those who constructed and used the catacombs is that of the Good Shepherd. This image takes here the place of the crucifix in later art. It appears in two different forms in the catacombs. In Lk 15:2-10 the shepherd is seen bringing home on his shoulders, 'reducing,' a sheep that has been lost. In Jn 10:17 the shepherd leads his sheep to and from the pastures and protects them

1 Wilpert, p. 293; von Sybel, p. 322.

5 Scholle, FPK xviii. 322.
6 See DCA, s.v. 'Crucifix.'
8 Schulze, PEFQ, xviii. 592.
from the wolf, even at the price of his own life. It is added by Christ in a subsequent verse (v. 257): 'My sheep hear my voice, and I know them, and they follow me; and I give unto them eternal life; and they shall never perish, and no one shall snatch them out of my hand.' Both representations are of frequent occurrence on the tombs. We see the shepherd pasturing his flock, and carrying upon his shoulders a sheep, whose legs he holds. Two, three, or even more are seen thus sometimes with both hands. There seems to be little doubt that this favourite symbol, like the others in the catacombs, is intended to transport the mind beyond death. The painters wished to indicate the power of Christ: it is seen as a natural instinct, of those who lived, were under His protection, 'the shepherd of his pasture.' Thus, where a landscape is indicated in the paintings it is invariably that of the garden or park which typifies paradise. The image, so understood, would appear to have passed into the early burial prayers of both the Greek and the Latin liturgies.1 Thus, when A. P. Stanley2 points to the frequent image of the Good Shepherd as an evidence of the joyousness of early Christian feeling, we must remember that the sheep in these pictures are in all probability those who have passed from the vicissitudes of the world into the safe and restful presence of eternal rest.

A brief reference may here be made to the emblems which early Christian art adopted from Greek and Roman mythology. We cannot measure, however, the precise significance which these emblems possessed for the Christians who used or looked at them. There is a remarkable contrast between the current decorations of the period; or they may have had a distinct didactic purpose, and been intended to suggest that Christ was the reality to which the heathen mythologies pointed in unconsolating and hesitating prophecy. So Eros and Psyche appear in many of the catacomb pictures; or we may be reminded of five different pictures where we should have expected the Good Shepherd we find Orpheus with his lyre.

(f) The Judge of the dead.—In some paintings Christ is seen seated upon a raised platform, plainly in the character of Judge. In one of these we see a male figure in the posture of an orans between two taller forms, who point to him as if they were his introducers or sponsors. In the background upon a raised pedestal is Christ, who stretches His open right hand over the head of the middle figure, while in his left He holds a roll. In Wilpert’s topographical figures representing one of the deities who has already stood before the judgment-seat of Christ, while the two other figures represent his advocates. These representations of judgment convey some important impressions. The face of Christ in the picture described above is grave without being stern. It must be remembered that no authentic likeness of Christ appears to have been preserved by His disciples. The varieties given to His face and figure from the earliest times put this beyond reasonable doubt. Irenæus4 shows that no trusty trustworthy portrait existed in his day. To the same effect are the words of Augustine.5 The disciples were thus left to their own insight and skill to depict His likeness. The painters of the catacombs seem to have given Him the typical male head of their time. This type was during the first two centuries continually bearded. He had the long hair, coloured locks. If the painters were guided by the prevalent fashions of wearing the hair and beard, it is obvious that we cannot infer much from the apparently increasing seriousness of the countenance.6 The growth of asceticism in subsequent ages had a marked influence upon art. The representation of the Christ after beauty was abandoned. Manly beauty was associated in the mind of the monastic Church only with barbarian soldiers. The words of 1557, 'There is no beauty that we would desire him,' shaped the artist’s conceptions. The figure of Christ in the Church of Gallus Placidia in Ravenna (c. A.D. 450), when compared with the portrait to be seen in the Church of Apollinaris in the same city, painted about a century later, shows the transition from the earlier ideal, shaped by the love of beauty, to the ascetic or melancholy conceptions of later art.

These representations seem also to make it plain that the judgment symbolized was individual and thought of as taking place immediately after death. The departed appears at once before the judgment-seat of Christ (2 Co 5:10). The appropriate sentence of the Judge is the signal for his immediate entrance into paradise. Thus in one painting7 we see two figures, one on either side, drawing back a curtain to admit into paradise one of the departed, who stands in the centre in the posture of an orans. In another painting two of the blessed move eagerly forward to welcome a new arrival, who advances in the same attitude of devotion. We find no representation in the catacombs of a general judgment of mankind. Nor do the paintings, as archaeologists of all schools agree, give any indication of belief in an ‘intermediate state’ or a period between death and judgment. All those who die in Christ are conceived as passing at once from their death-beds into heaven.8

When we pass into the subsequent centuries, death and judgment assume terrifying shapes. The destructive power of death is symbolized by a man who weeds the garden of life or fells its trees, or (after Rev 6) as a rider with drawn bow, above all as an emaciated old man who finally reaches the form of a skeleton with scythe and hour-glass. ‘The dance of death’ appears to have originated in the plague known as ‘the Black Death.’ It quickly gained a wide popularity, which it retained far beyond the close of the Middle Ages. Of course, the body, was regularly represented as a little human figure, naked and sexless, emerging from the mouth. In pictures of the Last Judgment popular imaginations often took the place of the earlier representations of paradise. Hell was symbolized by the open throat of a monster (after the levitans of Job 41), into which men and women, masters and servants, priests and people, were thrust. Devils in every shape did their work of derision and torture under the supervision of the prince of hell. To him the popular imagination transferred everything it knew of monsters, and thus arose the being of many shapes and names with goat’s horns, cloven hoof, bat’s wings, and a tail. He even took the form of a blackbird, and, as such, flew into the mouth of Judas at the Last Supper, and whispered into the ear of Pilate as he sat in judgment. Popular humour may well have had its share in shaping these fancies.9

2. The heavenly state. — St. Paul represents Christ as the second Adam, who unites the consecutiveness of man. For Adam’s transgression (Ro 5). By the early Christians heaven was pictured as a restored Eden. The word ‘paradise’ appears to

SYMBOLISM (Christian)

have been originally Persian and have been introduced to the Greek East during the 4th century by Eusebius. The Greek Fathers seem to have passed it on to the Hebrews. It appears in the OT only in writings subsequent to the Greek period (Ec 2:2, Ca 4:2, Neh 2:19) and the meaning of a park with trees, shrubs, and vines was later extended by wild animals, such as surrounded the residences of eastern potentates. Such parks were commonly enclosed by a wall or trellis-shaped fence. Trees, shrubs, flowers, and the trellis building in the catacomb paintings are invariably symbols of paradise.2

On the threshold we meet with the figures known as orantes. These are females, male or female - the latter are much more numerous than the former. Stands with arms either fully extended or bent at the elbows, and with opened hands. The orantes give rise to questions which are still in debate. Where, in the first place, are these figures intended to represent? Against the assumption that they are either lilies of the valley or intended to represent their souls3 we have to place the fact that a female orans often appears painted on the tomb of a nun, and also to remember that the paintings appear to have been sometimes executed before the tombs were filled. It seems, therefore, most natural to regard these as ideal figures, poetic representations of the blessed dead. Again, what is the meaning of the outstretched arms and open hands? Are we to understand by the attitude of prayer that it is one of adoration? And, if it be prayer that is symbolized, for what end? The Church Fathers or the scribes do not give a clear answer. Unquestionably, the attitude has remained in some cases where it unquestionably symbolizes adoration, or at least the prayer in which essentially exists itself in submission. Thus far, the deliverance from the prison of the resurrected Christ and His orantes, appear often in the attitude of orantes. So Noah stands in the ark, and David among the lions, and the three children appear in the furnace. Yet in each of these cases the deliverance has already been granted. If anything is asked for, it can only be to divine grace and so the deliverance of the inmates of paradise seem to stand in an attitude of wondering reverence.4 On the other hand, the三百th Psalm signifies a song of fortitude, as the three children in the furnace. The lifting up of the hands was a Jewish as well as a Christian practice (Ps 119, 143, 149).

3. The heavenly feast. - The Christians who buried their dead in the catacombs had two sacraments, both of which are frequently symbolized in the paintings. In baptism the believer was admitted among the number of the elect. He became a 'saint' in the original sense of that word. On the tombs we find representations both of the baptism and His foreordination in the Church's baptism. There are also three pictures of a fisherman, seated on the bank and drawing a fish out of the water with his hook. The figure may point to baptism and to the fish of Jesus, and to the words: 'Come ye after me, and I will make you fishers of men' (Mt 4:19). If this be so, it would supply an additional reason for the adoption of the fish as a Christian symbol. In the Eucharist the believer partakes of the bread which came down from heaven, and of which he ate and would not die (Jn 6:50). In it he has partaken of the heavenly feast. When Jesus took leave of His disciples, He told them of the new wine which He would drink with them in the Kingdom of God (Lk 22:19). The Christians cherished for a brief interval the hope raised by the prophetic words. Despondency gave way to renewed confidence when it became apparent that God had seen 'allowed His Holy One to see corruption.' So 'day by day, continuing stedfastly with one accord in the temple, and breaking bread, and singing psalms, and prayer, adoring the Lord, and showing miracle among them' (Acts 2:46). It is no longer possible to make the step of faith, which is breaking of bread, pass into the Church's Eucharist. It is enough to recognize that what afterwards became the ecclesiastical rite on the part of the community of the Christian East is still preserved by the West. If the presence of the heavenly Christ was, as we can well believe, most literally realized during certain occasions than as an inward reality, the disciples would naturally associate themselves with the peace and joy which awaited them hereafter. The formation of the Church would tend to confirm the people in their anticipations of future happiness. They might recall the

Biblical assurance: 'Blessed is he that shall eat bread in the kingdom of God' (Lk 14:15), 'Blessed are those who are bidden to the marriage supper of the Lamb' (Rev 19), 'To him that overcometh, I will grant to sit with me upon my throne, even as I also overcame, and am set down with my Father in his throne' (Rev 3:21). It is profuse to dwell upon the inconsistency of such a heavenly banquet, which allows only men of bodily appetites. For in 'the new world' which, whether it be peopled by corporeal or incorporeal beings, is in any case to be the seat of truth and love, the most attenuated equally with the most material, becomes obsolete. An instance intended for a recompense of a body by an atmosphere is useless when the atmosphere is transcended. Thus the most spiritually-minded Christians, restricted by limitations from the material world, cannot exercise them as they do, to associate heaven with the 'abode of them that their souls.'5 In the catacomb paintings heavenly happiness is represented by the image of a floral joy. The scene of the feast is marked by the customary paraphernalia of paradise. The guests are to be seen, generally if not always, behind the roll which is the recognized symbol for the curtains used at feasts. Often attendants appear carrying a dish or holding a flagon or wine-cup. In one series of pictures these attendants take the form of two female figures who are designated by inscriptions as 'Irene' and 'Agape.' They are appealed to by the guests to supply warm water or to mix the wine ('Irene, da cauda'; 'Agape, mine noble'). One of the figures seems thus to symbolize the peace of heaven, and the other the avenue which the Christian love-feast derived its name, and which was one of St. Paul's three almsgiving things.6 The food indicated in these pictures consists in bread and fish. Sometimes, in catacomb paintings, small round leaves, appear either in front of the cushion-roll or on either side of the food. These additional emblems were plainly intended to model in the painter's mind. This miracle, connected by St. John (20) with the 'bread of life,' was an anticipation of the heavenly Eucharist, which, in the Catacomb, is the Church's Eucharist, which in some of the paintings seems to be expressly depicted and made a symbol of its heavenly antecedents. This is only added that the fish, from its presence in the miracle, as well perhaps for the reason given above, appears to have established itself as one of the most popular symbols. The common acrostic was discovered: ἑκάστης ἑκατέρου ἡμέρας δόθη σώζεται.7

It will appear from the foregoing summary that, while Christian symbolism points persistently on- wards towards the spiritual world, conceived as lying beyond death, the hope thus expressed is sustained by experiences which are prized for their own sake, and also as earnest of things yet to come. Eternal life, the ultimate object of the consummating of life and death, is there represented as both present and future. So the Messianic kingdom of the earlier evangelists was yet to come, while it was also 'within' or 'among' the disciples who walked with Jesus and saw God in Him. The Church which continued His ministry in the ages that followed was likewise a prophet of what was yet to be, and also a teacher of mysteries by His foreordination of the Church's baptism. Thus in the Middle Ages, while the three theological virtues (faith, hope, charity) appear repeatedly on church porches, pulpits, and monuments, the cardinal virtues (prudence, fortitude, temperance) also naturally took their symbolic shapes. The Church is a teacher of common-place morality, while at the same time she must bear witness to truths whose validity cannot be demonstrated by everyday experience. The Christians who built the catacombs tell us in many inscriptions of the central hope with which they consigned their dead to the tomb. Their desire was that 'the departed might see God' (Vivat in Dom, 'Vives in internunium, 1 Deum videre cujusvis vitis!). Such is the hope, vague and yet real, changing but steadfast, which has created the Christian symbols of the past, and may perhaps the most universal symbol becomes more proficient in the interpretation of its own language.

SYMBOLISM (Greek and Roman).—A symbol is a visible or audible sign or emblem of some thought, emotion, or experience, interpreting what can be really grasped only by the mind and imagination by something which enters into the field of observation. So far as Greek and Roman religion are concerned, we need speak only of two kinds of symbolization: by the means of actions or words and symbolic representation in art.

Religion, taking its rise in experience and belief, tends, as it becomes less literal and less consistent, to give rise to symbolism; and this is true also of that lower kind of religion which is called magic. When primitive men thought that by certain actions and words they could compel spiritual powers to do their bidding, or when they thought that the painting of animal forms on the walls of their caves gave them power over the animals depicted, they had not yet reached the stage of symbolism, but had taken the first steps towards it; when they poured water on the ground to produce rain, they thought that there was an actual causal connexion between the ritual act and the desired result, when religious belief decays, the feelings which gave rise to it often find scope in the field of poetry, so, when actual belief in the power of sympathetic magic grows less, the actions and ceremonies to which it led are often continued in symbolism.

I. GREEK.—1. In local cults.—The local cults of Greece, which went on at a lower level, and in a more conservative key, than the religion of poetry and of philosophy, preserved a great deal of symbolism. Even in Athens the great festivals embodied such traces of primitive religion. At the Brauronian festival young girls, impersonating bears, danced a bear-dance in honour of Artemis. At the Diania the priest who struck down the sacrificial ox was accused of murder and in turn accused his instrument, the axe, which was condemned and solemnly cast into the sea. In the worship of the dead flowers and fruits gradually took the place of the more serious offerings of an earlier time. With the dead were buried, not, as in primitive times, real armour and ornaments, but only symbolic offerings, such as gold-leaved axes, deer or gold-leaved animals of terra-cotta, and the like. Sometimes these objects were only depicted in relief on the tombstone. The terrible human sacrifices once brought to the inner deities were conned into such images of animals as sometimes symbolized the dead, or were mere images of human beings. Naturally it was in the mysteries, where the survivals of primitive religion were most rife, that symbolism was most prominent. Mere ceremonial ablutions took the place of actual immersions as a ceremony of purification. The sacred meal which the deity shared with his votaries became a mere ceremonial tasting of some special food. At Eleusis, in the great mysteries, the votaries emptied two vessels filled with water, turning to east and west and repeating the sacred formula οὐκ αἰτεῖται ('Sky pour rain, earth yield grain'), which was directed to earth and sky, and was evidently a survival of an ancient magical formula for the production of rain.

The suppliant who visited the cave and oracle of Trophonius at Lebedia, before he went into the presence of the hero, drank from two springs, that of oblivion and that of memory, to signify that he was to forget the past and to remember the revelations to him. Finally, in all probability, the water of those springs was supposed to have some actual effect on the votary, as had the spring in the cave of the clariss Apollo at Colophon on the priest who drank of it before soilswaying. But in the time of Pausanias the action had become merely ritual and symbolical.

The sacred marriage was common to several cults in Greece. When the motion of the deity was somewhat indecisive, women went into the temple, to stand in the same sexual relation to him in which, according to tradition, Cassandra stood to Apollo. But, as time went on, such designation became only symbolical, the piece of the victim being sometimes taken by the wife of the priest.

As the mystery religions spread and their outlines hardened, a new element came in, which was destined to take further development in Christianity—the element of authority. Symbolic rites were practiced, not on the ground of mere tradition, but by ordination of the recognized hierophants of each cult, who claimed a divine communication. This element, however, scarcely belonged to the earlier religions view of either Greeks or Romans, among whom authority in religion was scarcely recognized apart from tradition. Cults had an open field and freely competed one with another, except those with which the safety of the State was supposed to be connected.

It seems that almost the whole which does not appeal to the intelligence is in character symbolic. And the notable feature in symbolic ritual is that, since it appeals mainly to the emotions, it may be interpreted or understood in a great variety of ways. At the mysteries of Eleusis, e.g., some of the votaries might regard the whole proceedings as a sort of spell to cause fertility; some might be genuine worshippers of the great goddesses of earth and vegetation, as Demeter and Persephone; some might, like Cecrops, find in the ritual a promise and pledge of a life beyond the grave. Everything depended on the religious outlook, the exalted or materialist beliefs of the votary himself.

' Aristotle,' says Syme (2) is of opinion 'that the initiate learned nothing precisely; but that they received impressions, were put into a suitable frame of mind.' Thus symbolic ritual has a great attraction for persons of emotional temperament, while it is distasteful to those of strongly developed intelligence, who like definite views. Compared with clear doctrine, it is like music compared with reading: it can be enjoyed by many means well suited to the minds of the more cultivated Greeks.

2. In art.—In early Greek art symbolism appears in two forms: in representing by some simple figure an idea such as a quality or attribute of one of the deities and in choosing images or symbols of anything by depicting some characteristic part of it.

A few symbols of the deities seem to have been taken over by the Greeks from the prehistoric peoples whom they displaced in Crete and Hellas. Such is the double-edged axe, which is found in the palace of Chossas in Crete in the third millennium B.C. in scenes of cultus, and which belongs to a male or female deity of the people. This axe became among the Greeks a symbol of Dionysos. The snake also appears as an attribute of a goddess or of the squamated hero, and later was identified by the Greek Brineyes. But most of the symbols of the gods of the Greek pantheon seem to be more immediately derived from the art of the nations of Syria and Mesopotamia. Most of these symbols were displaced by growing anthropomorphism. This statement requires some explanation. On early bronze and terra-cottas found on Greek sites, dating from the 7th or 6th centuries B.C., we find lions, horses, bulls, or winged figures, as winged and holding in her two hands lions, panthers, or swans. On the chest of Cypselus, a
SYMBOLISM (Greek and Roman)

7th cent. work preserved at Olympia, Pausanias¹ saw such a figure, which surprised him by its strikingly artistic feeling; its wings were not for flight, but only to typify swiftness, the lions were added to show the power of the goddess over animals, whose mistresses (τοίχωμα) she rules. We may trace this transformation step by step through Greek art and see how in mature times the swiftness of the deity was indicated by her stature and slimness of build, her power over animals by the stag or dog who accompanied her. A similar transformation takes place in the case of Zeus. On early coins of Elis an eagle appears as a substitute for the god; later he bears the eagle in his hand. Later still, as in the great statue of Phoebus, a golden eagle was an adornment of the sceptre of Zeus. Thus, as time went on, merely outward symbols tended to disappear or at all events to become unimportant; and the meaning which they had conveyed was expressed in the type of the deity. Certain symbols, however, held their ground. The thunderbolt of Zeus, indicating him as the lord of storms (Zeus bēros), is usual in the 5th century. The meaning of the thunderbolt in this type of the deity could not be easy. The bow, as symbol of the rays of the sun-god,² is usual in the hand of Apollo in archaic representations; later the lyre is far more usual. Even when the transformation takes place they mostly lose their merely symbolic character and are used for flight, as in the case of Victory and Eros, an innovation ascribed to the sculptor Archermus of Cnidos (c. 570 B.C.). The god Hercules, even in later art, carries wings on his cap or his heels—a survival of archaic symbolism.

Coins furnish us with many examples of symbols belonging to the deities. In the 7th and 6th centuries we have the reverse of electrum silver coins usually presents some very simple symbolical device—a griffin at Teos and Abdera, a thunderbolt at Olympia, a wolf at Argos, an owl at Athens; and then, after the archaic period, this type is usually banished to the reverse of the coin, and in its place we have the head of the deity to whom the type belongs. It must, however, be observed that, when numismatists speak of a symbol on a coin, they use the word in a technical sense, to indicate not a symbolical type, but one of those small and subsidiary devices often placed in the field of a coin by magistrates who, when they attempted to trace the life of all kinds of animals—lion, bull, jackal, hawk, and so on. And Indian figures of deities represent them with several heads, many arms (each holding some attribute), necklaces of skulls, and the like. Oriental art and sculpture to represent in this way qualities and attributes which sculpture or painting could not otherwise portray—elements of mysticism, mythological tales, or sometimes the ideas of pantheistic religion. Greek art avoids monstrous forms as a rule, though it inherits a few specially suitable for artistic development, such as the Centaur. And it does not attempt to portray, in sculpture or in painting, anything which lies outside the scope of those arts. Exquisite in form and clear in meaning, its creations do not carry us beyond sense and intellect, do not appeal to the mystical tendencies of men. Thus Greek symbolism has no wild elements.

II. ROMAN.—I. In cult and law.—In Roman religious ceremonies the symbol held a large place. This was natural, as in quite the early times of the republic there was an invasion of Greek and Greek deities, which caused the old rustic religion of the Roman people to survive only in the form of ritual, the meaning of which was in a large degree lost. The city of Rome was divorced alike from belief and from morality, and, so long as the magistrates performed

---

2. JHS, vi. 196.
exactly the ceremonies handed down by their ancestors, it matterless what meaning they attached to those ceremonies or what beliefs they held in religion. The emperor, whether he were Trajan or a Nero, was always pontifex maximus and represented to the gods the State in its religious capacity. Hence the Romans were extremely careful as to the way in which they wore the toga or the cap called aegos, as to their exact position in relation to the points of the compass, and as to the attitude in which they stood when they were sacrificing. All these details had no doubt some meaning in their origin; but not only are we unable usually to discover what it was, but even the Romans did not know: they blindly followed the tradition, with an uneasy feeling that, unless they did so, some great calamity would overtake the State. Most of these ritual customs were probably derived from the Etruscans, a people at a low level of culture, but exact in all matters of a religion which seems scarcely to have risen above the level of magic.

When an official conducted a sacrifice, he sprinkled the victim with wine and threw over it salt meal; then he made a ritual motion symbolical of the wiping off of physical blemishes was done by attendants.1 Like the Greeks, the Romans contrived to put in the place of human sacrifices the mere offering of substitutes and symbols.2 In the ancient cults, they took with them their recognized symbols; and the native gods, who were largely identified with the immigrants, also adopted these outward signs of inward powers. Thus in art Greek customs went on, as in fact the artists were usually Greek. So we have on Roman monuments the symbolism of Ephesus and Alexandria. Allegorical and symbolical figures, such as Pudicitia, Ubertas, Armona, appear abundantly on the Roman coins; but they can have had but little serious worship. In short, while symbolism is of importance in relation to Roman cultus, it is unimportant in earlier Roman art, reflecting perhaps a concrete poetical imagination of which the Romans were destitute.

There was a good deal of symbolism or symbolic ritual in the customs of Roman law; e.g., if a man purchased a slave, he laid hands on him (manus patris) in the presence of witnesses, and weighed out at the same time to the seller a piece of money which was accepted as a symbol of the price, quasi pretio loco, as Gaius says.3 We need not be surprised that so much symbolism made its way into Christianity in Rome, since it had become a recognized part of the routine of daily life.

2. In art.—In the time of the Roman dominion, as the religion of Mithras and other mystery cults spread from east to west through Europe, the range and power of symbolism increased. We may especially trace on tombs of the period of the empire, alike in Italy, Gaul, and other regions, a growth of religious symbols mainly having reference to the life beyond the tomb, which was taking an ever larger place in men's thoughts and hopes. Some of the mythological scenes which the Greeks had depicted on tombs, from the stories and decorative motives, seem to have been re-interpreted in a more mythic fashion. Such were the rapes of women and the combats of men; and more especially seen from the lives of Heracles and Orpheus and other heroic persons who had won immortality by great deeds, or had descended into Hades and returned. Some ordinary figures of earlier art—the griffin, the lion, the cock, and the eagle—became connected with the hope of immortality.4

The Mithraic shrines of northern Europe contain

2 Cf. 112.

SYMBOLISM (Hindu).—Of all religions of the East, the home of type and imagery, Hinduism makes the most use of symbols. It has formally declared the ultimate truth to be unknowable and indescribable. In all its schemes of mythology and teaching it seeks to make definite approach to the reality by suggestive type or symbol—an approach that can never find its goal, but can only draw nearer and more nearly, as it points and moves on, like the ancient Greek philosophers, to the symbol or likeness which most fully and faithfully reflects the true, and embodies the largest part of a reality which in its entirety is inconceivable by the human mind and inexpressible in the language of men. The symbol is the necessary and helpful intermediary between the inadequate capacity of the mind of the would-be worshipper and the incomunicable nature and fulness of the Unknown whom he adores. A complete and adequate description therefore of the Hindu use of type and symbol would require an almost complete exposition of Hindu belief in its many varieties and ramifications. Whether in creed or in practice, the symbolic in Hinduism is not far from being co-extensive with the religion itself. Of the literature of Hinduism and its systems of doctrine and ramifications, whether in creed or in practice, the symbolic in Hinduism is not far from being co-extensive with the religion itself. Of the literature of Hinduism and its systems of doctrine and ramifications, whether in creed or in practice, the symbolic in Hinduism is not far from being co-extensive with the religion itself. Of the literature of Hinduism and its systems of doctrine and ramifications, whether in creed or in practice, the symbolic in Hinduism is not far from being co-extensive with the religion itself. Of the literature of Hinduism and its systems of doctrine and ramifications, whether in creed or in practice, the symbolic in Hinduism is not far from being co-extensive with the religion itself. Of the literature of Hinduism and its systems of doctrine and ramifications, whether in creed or in practice, the symbolic in Hinduism is.
SYMBOLISM (Hindu)

manner its historical relations in the religious scheme and cult, to define its necessary limits, and to select for illustration and comment a few of the more important types which have occupied a considerable place in the belief and profession of the adherents of the full range of the conception of the symbols employed would be a large and probably impossible task.

1. Use and purpose of symbols.—The use and purpose of the symbol is twofold: (1) to set forth in visible or audible likeness whatever cannot be really or fully expressed to the physical eye or ear, or even clearly conceived by the limited faculties of the human mind. All language is in the last resort symbolic, and religious language in an especial degree, for it endeavours to present a mystery, a reality too deep for words. The Hindu faith had at its service a language of the utmost delicacy and flexibility, with a vigorous and fertile growth and an almost unlimited vocabulary, and found itself in a world of tropical luxuriance, with a tropical wealth of beauty and suggestiveness. It was not to be wondered at that it became profuse in symbolic and legendary illustration of all the facts and phenomena of nature to serve its religious and priestly ends. All the great gods had their resemblances, animal or material, to which they might represent themselves as embodied to human sight, which served to recall to the worshipper the deity, whose mind and character they more or less inadequately reflected. Other more rare and refined symbols were representative of qualities or attributes, as the lotus, the emblem of spotless purity preserved under the most unfriendly conditions. All idols, totems, fetishes are symbols. The wise man does not worship the symbol, since it has no form to which his reverence and fear may attach themselves, will wander in a maze of doubt, disquiet, and unbelief. It is better that they should worship erroneously, worshiping them because they symbolize the worship that the gods do, and not at all. There is much that might be urged in favour of the Hindu view that regards the worship of the external symbol as a stepping-stone to higher, clearer forms of belief; it is a view unacknowledged perhaps but not unknown to other faiths. And in Hinduism, whatever may be said of or claimed by the wise and instructed thinker, the pujâ of the multitude to the image of the god is reverent and sincere. In some respects also and within definite limits the Indian contention has justified itself that the symbol has proved a sign-post and a guide to better, higher thoughts and to a better worship of Him whom no form can express or language describe.

2. The most important types.—(a) The most important symbols are those of the Brahman, the undelineable and unknowable origin and source of all. Of the Brahman only signs and types can be employed, for the primordial source and sustainer of the universe is beyond and above thought or word. His names or titles are symbolic: Āghora, the godless man; Āgni, the beginning; svayambhû, the self-existent one; vīva-karman, the artificer of all things; and many others. The authors of the Upanisads especially attempt to set forth the highest and the most mysterious character of the which in the last resort they are obliged to confess is beyond knowledge. Prâya, the breath, or āyî, the wind, is a frequently recurring symbol; and it seems to have been felt that by its mystical and elusive character the prâya was peculiarly fitted to represent that which in its essence eludes comprehension. The breath, prâya, is Brahman, and it is significant of the all-pervading and all-surrounding, omni-present and unchanging in the heart. 2 Manus also, the mind or will, is with the ākâsha a symbolic form or type under which the Brahman is to be meditated on or worshipped. 3 The mystical syllable Om, the most widely venerated syllable in the world, is the highest Brahman, and its utterance with understanding of its significance secures the accomplishment of every wish. 4 Om is also a symbol of the Hindu triad, Brahmâ, Visû, and Siva, and each of the three sounds of which the word is composed represents one of these deities. To the Buddhists also the word is a symbol of much significance, forming part of the sacred six-syllabled formula which every Buddhist cherishes in his memory and makes a constant part of his invocation and prayer.

A more comprehensive and suggestive symbol of the Brahman is given in the compound sâvâkhi-dvânda, a kind of triple representation in three several modes or aspects, as sat, being, chit, thought, dharma, right conduct, and in the heavens (aditya), 5 the material/adhisthâna, the golden puruṣa in the eye, 6 or even more than manus, or the significant name dhum itself. In its further course, moreover, speculative thought denied that even in sâvâkhi-dvânda any positive implication concerning the Brahman did or could reside. The Brahman transcended all symbols and assertions, comprehended both being and non-being (sat, asat), thought and non-thought (chit, achit), bliss and its contrary (ananda, anānanda), or rather he was above and beyond all, the unsearchable and unknown.

(b) Each of the great gods has an animal or material form or object which represents him to the eyes of men, by which he is symbolically known. The more popular gods have many symbols. The 'vehicles' of the gods are practically all the symbols of the pantheon. There are Brahmâ: Garûda, the monstrous eagle of Visû; the bull (Nandi) of Siva; the fabulous sea-monster (makara) of Varuna, who is then depicted as a white man and is described as makaradwaj, i.e. whose steed is the makaraw, 7 riding, with the head and fore-legs of an antelope and the body and tail of a fish; the peacock of Kârttikeya, the god of war; the monkey of Hanumâna; the deer of Vârû; the elephant AYâvâta of Indra, produced with other sacred and marvellous objects at the churning of the ocean; the buffalo and dogs of Yama; and many others. Of the well-known Hindu triad Brahmâ himself possesses any emblem or type, except his sacred goose—an indication of how little the first member of the triad attracted to himself the thought and worship of the Hindu. Of the popular Vishnu there were many symbols, some of which are always represented on the images or pictures of the god. The most frequent and characteristic is perhaps the chakra, or discus; 1

7 Tâltt. v. viii. 5; Chând. vi. v.
SYMBOLISM (Jewish)—The club and conch-shell also which he carries are indicative of his authority and power. The auspicious mark (āraṇēvar) usually represented on the breast of the god, in form like a curl of hair, and the trident-like mark made with white or coloured earths on the foreheads of his worshippers are symbolic, the latter of devotion to the service of the deity. The sacred tulasi plant in the courtyard of a temple is the mark of the deity's presence and protection, and in it connotes the worship especially of the women of the household. The ilāyāvai amī also, the sacred annamite-stone, is similarly used. The moon also is a well-known symbol.

The symbolic types or presentations of the rival deity, Siva, who in almost equal degree with Viṣṇu holds the affection and regard of the Indian peasantry, were equally numerous. The most important are the bull Nandi, on which he rides, and the śhūna or phallus. Every Śāivite temple has its sacred bull, which roams the courts and streets un molested and receives practically divine honours. The śhūna is the commonest emblem of the god, and the stones, great or small, which represent him have this form or are roughly shaped to it. Two of these stones are said to bear a pre-eminent holy character; that at Bénarças is Siva in the shape of Śivēvar, the lord of all; and the idol in the temple at Somnath, destroyed by Mahāmut of Ghūzni in his iconoclastic rage. The śhūna is borne by Śiva, a type of government and authority; and the crescent moon depicted on his forehead has a special significance, recalling the sovereignty which was assigned to him when the moon was recovered from the depths of the ocean.

Similarly the wives of the great gods have each their symbols—the trident and skull of Kāli, the lotus of Sarvēṣvati, wife of Brahmā, and also of Laks̄mi, wife of Viṣṇu.

In a late writing the Gāyatrī is said to represent the trident of gods, Brahmā, Viṣṇu, and Siva, and also the three Vedas.

(c) Under sacred trees in the vicinity of Indian villages often will be found the images or symbols of the grānawedōṭā, the village deities who watch over its interests and care for the inhabitants; and in the village fields the clay or pottery steds of Ayār (q.v.), the sacred deity of the fields, on which he rides by night to pursue and rout the demoniac powers.

(d) There are symbols also of a more general import, which are not always so easy to classify. The piyōt, or bull of cooked rice, used at the commemorative services for deceased relatives and offered to the pāřs, represents symbolically the share which the departed still have in the family life. The most important and widely recognized symbol of this character is probably the sacred footprint, which typifies both the presence and the authority of the god. In the courtyard or vicinity of many, perhaps most, Hindu temples there is the print of a foot on the ground, often of large size, with sacred symbols engraved on the sole, which differ according to the deity commemorated. To these there are sometimes a legend attached, which gives its supposed history and describes the occasion on which it was impressed. The well-known footprint on Adam's Peak in Ceylon is believed by Siyūtis to be that of Nūr. By Buddhists also the numerous footprints of the Buddha are regarded with reverence.

(e) In many parts of India the symbols of the sun and moon and the planets may be seen. The two former are represented by a crescent, respectively, made of metal. The signs of the planets in their order are as follows: of Ḫuda, or Mercury, a bow; of Soṣna, or Venus, a square; of Manūla, or Mars, a triangle; of Vīṇaspatī, or Jupiter, a lotus; of Soṣna, or Saturn, an iron seimitar or sword; of Ḫavana, a makhara; and of Kētna, a snake. The last two symbols are usually of iron; the sphere of Soṣna is silver or silvered, and the bow of Ḫavana a crescent made with white or coloured earths on the foreheads of his worshippers are symbolic, the latter of devotion to the service of the deity. The sacred tulasi plant in the courtyard of a temple is the mark of the deity's presence and protection, and in it connotes the worship especially of the women of the household. The ilāyāvai amī also, the sacred annamite-stone, is similarly used. The moon also is a well-known symbol.

SYMBOLISM (Jewish).—Symbolic actions as well as symbolic ideas occur in the later Jewish and Christian literature. The propensities often made use of symbolic ideas—e.g., the basket of fruit in Am 8:5; the vineyard in Is 5:1-5; the almond-trees in Jer 14:5; the dry bones in Ezck 37:1-14, and the sticks in Zechariah 6; the lotus indicated in the former, and the闪电 in the latter, are the outstanding examples in Zechariah. Equally frequent are symbolic actions—e.g., the rending of mantles (1 S 15:27, 1 K 11:12), the discharge of arrows from a bow (2 K 13:20), the casting of shoes (Ps 60:9, Jos 5:4, Rx 4:8). The crescent moon is a type easily understood to the parallel, the latter into charms; possibly we should say that they emerge from these literary and magical arts. Symbols, in any case, have frequent historical connotations which with primitive cultures, though they tend to transcend their origin under the transforming influence of higher conceptions. Most important, therefore, for the present article is the association of symbolic ideas with religious ceremonials. Prominently the Sabbath is described as a symbol, 6th, similarly with the rite of circumcision (Gen 17), the phylacteries (Dt 6), the Passover (Ex 12), natural phenomena such as the rainbow (Gen 9; cf. Gen 39 in the Rabbinical commentary).

It was accordingly easy for later Judaism to apply symbolic meanings to many of the Biblical institutions. Thus, throughout his writings Philo illustrates such interpretations, but the method is much older. Thus in the Letter of Aristōc (which can scarcely be later than the 2nd cent. B.C. and may well belong to a century earlier) the enactment as to the animals lawful for food are explained symbolically. But by Philo's age symbolical interpretation had so fully developed that the Alexandrian allegorist felt impelled to rebuke those of his brethren who neglected the ceremonial acts because they regarded them merely as symbols of ideal things. Though this is a real danger to a ceremonial religion, on the other side it can gain appreciably by idealizing institutions the original significance of which is outworn or unknown. Ancient rites may have been derived from primitive tabus, and yet they have retained permanent reverence on the ground of symbolic significance. Thus a remarkable letter Maimonides (11th) dealt with certain acts of worship, such as prostration (practised by Muhammadans in the 12th century). Probably such notes were derived from certain customs of exposing parts of the body, but, contends Maimonides, they no longer mean anything but
SYMBOLISM (Jewish)

of the kind and have become symbols of humility. Present values do not entirely depend on past origins. A similar principle might undoubtedly be very widely applied to the history of religious conventions, and this is reflected by the newer ideas read into it by progressive ages. And, conversely, when an institution is lost (as with the Biblical sacrifices), the whole system may be retrospectively and symbolically reinterpreted.

When, after the destruction of the Temple, prayer and charity and fasting perfere displaced sacrifice, the latter shared in the moralizing process. But the allusions were deeper. Fasting seas sacrificed: the loss of bodily tissue (in the Rabbinic conception) to the offering of a sacrificial animal on the altar. The table at which the ordinary meals were eaten became a sacrilegious altar; and the partaking of food was in the Jewish home associated with a variety of customs, derived in large part from the same range of symbolism. It has often been claimed, moreover, that the dietary laws, besides being included in the law of holiness, or rather because of that inclusion, were a training in control of the appetites and restraint of desires. Maimonides also offers a utilitarian viewpoint, so picturesque a feature of a Jewish wedding, was originally the marriage chamber. Then the Scriptural application of the marital state to the relation of God to Israel led to symbolic results, among them the appointment of a bridegroom of the Law on the Feast of Rejoicing at the end of Tabernacles.

It is not quite clear why a glass is broken at Jewish weddings; it is probably a memento mori. Funeral customs are also marked by symbolic survivals. Some of these are Kabbalistic in origin, and it is not always easy to discriminate the symbolic from the superstitious.

So, too, with such ceremonies as tashlikh. Many symbolic customs arose in memory of the destruction of the Temple. Historical associations are also responsible for many a symbolic rite. Drapping the synagogues in black on the fast of the 9th of Ab is an instance in point. The shofar, or the ram's horn, is associated with its early use and anticipations, with Sinai in the past and the Messianic age in the future. According to Seidali, the shofar symbolized ten ideas: (1) creation, (2) remembrance, (3) revelation, (4) prophecy, (5) destruction of the Temple, (6) the binding of Isaac, (7) immunity from danger, (8) day of judgment, (9) restoration of Israel, and (10) resurrection. In this manner many rites were saved from becoming obsolete. The phylacteries worn on the head typify service of the mind; on the hand, service of the body. The former represents the

8 The best collection of the customs connected with illness and disease is found in M. Moses, Mo‘adim Ye‘ledot, Mantua, 1676 (often reprinted).
9 J.E., s.v.
10 The recognition of the Godhead, the latter restraint of lust.
11 Jewish symbolism is also illustrated in ecclesiastical art, and in colours. Thus the blue thread on the fringes of the Nazim, a sign of piety, became the sky, the divine throne of glory. The symbolism of art was more thoroughgoing. The Crown of the Law is a frequent ornament on mantles of the scrolls, and of the Talmud. Of the Jewish coins, too, symbols were employed; so also with tombs.

The prevalent custom now is to avoid sepulchral emblems. But the custom is in accordance with the symbolism of the yggyn of the Talmud was only a mark warning wayfarers against incurring ritual impurity by contact with the tomb. Yet the action of Simon, who carved panoplies and (possibly) ships on the pyramidal tombs at Modin (1 Mac 15:32), can scarcely have been isolated. Outside Palestine the Jews of the first centuries of the Christian era certainly adopted the Greek habit of inscriptions and introduced symbols, such as an oil vessel, the seven-branched candlestick (symbolical of the soul [Pr 20:28]), the ram's horn (Messianic), and an ear of corn (type of the resurrection). These emblems are parallel to those on the Maccabean coins and to those favoured by Jews in the late medieval period. At that late date symbols appear descriptive of the dead, as out-stretched palms as in act of benediction (for priest), ever as in act of blessing (Levite), a harp for a musician, a crown for a goldsmith, and so forth. In the 18th century, Jews, like their Christian neighbours, used symbolic signs for houses and businesses. Thus the Rothschild family still exemplifies the custom in its name ("Red Shield"). Ornamental coats-of-arms are found on tombs in the oldest Jewish burial-ground of the Sephardic Jews in London. Such customs are no longer in vogue. There has been a growth, however, of symbolism in synagogue decoration in the form of glass windows mostly without human or animal figures.

In the Talmud a good deal of legal symbolism was taken over from ancient Biblical as well as from Roman law. Some of this is still retained.

Returning to the more religious aspect of the subject, we may say in general that in the Mishnah symbolism is the soul of Jewish ceremonial. Many particulars of the sacrificial system, the ritual of the Temple, synagogue, and home, are treated in this manner. Take, e.g., the rites of Tabernacles—the hearse, the palm branches, citron, citron, and willows of the ban (Lv 23:40). The palm is the spine, the citron the heart, the myrtle the eye, the willow the mouth, so that, in the synagogue liturgy, the citron atones for heart sins, the palm for stiff-necked pride, the willow for foul speech, the myrtle for lust of the eye. In another version the old homilists explain the 'four kinds' as symbolizing four types of character. The citron has both scent and taste, so there are men who study and perform; the palm-date has taste but no scent, so there are men who study but do not perform; the myrtle has scent but no taste, so there are men who perform but not on the basis of study; the willow has neither scent nor taste, so there are men who neither study the law nor perform good deeds. The Holy One did not destroy these, but bade all be united into one bundle, the better elements stoning for the base.

2 Cf. Sife on the text.
3 On this see J. H. M. 1951, and Jewish Opinion, London, Jan. 1919. The Tree of Life (on the basis of Pr 39) was also a symbol of the life-giving power of the Law, and the Tree accordingly appears in rabbinic and non-rabbinic decoration.

5 P. Friedmann, Der Meister, Vienna, 1850, p. 178.
good. In this manner symbolism is turned to the cause of humanism.

I. ABRAMHS.

SYMBOLISM (Muslim).—The Islamic languages appear to have no exact equivalent for "symbol." When it signifies a badge indicative of office, party, or community, the nearest would be šabk, or in certain cases ghīrāt; where what is meant by it is a veiled expression for an idea, the Arabic rendering would be kinyāyah. Islam as a religious system has nothing corresponding to the Christian cross. Muhammad seems to have adopted the Roman eagle as the standard for his armies, but the flag of the later (Abasid) khalifahs was "like any other, only black in colour with the legend in white, "Muhammad is the Apostle of God," 23 24. Those borne by various factions and regiments differed in colour and at times in the wording of the legend; thus the Abasid colour was black, the 'Alawid green, the Ummayyid white; the latter was 3 feet to the year 255 A.H. was a strip of silk with a Qur'anic legend in red and green; 25 in the processions of the sultans of Tunis white, red, yellow, and green flags were carried; these of the Ottoman tribes differed in legend; 26 the flags of the different divisions of the Ottoman army were red, yellow, green, white, red and white, green and white. The Mamluk symbols vary in India and are 27 which by an ordinance of the Mamluk Sultan Shahān of 773 A.H. on the turban indicates descent from the Prophet.

There is no more common error than the supposition that the crescent (or rather crescent and star) is an Islamic symbol, and even approved writers on Oriental subjects are apt to fall into it. 28 It was certainly in pre-Turkish times sometimes used as an ornament on the minarets of mosques 29 and on flags—e.g., that of the Fātimids of Egypt, accompanied by a lion of red and yellow satin, 30 and that of the Almohads (A.D. 1150) 31 —and on the standard of a Zanjid princes 32 such the crescent had been employed on the Roman senatorial shoe—a practice for which Plutarch 33 offers a variety of reasons. The current view of its adoption by the Turks is well presented by F. T. Elworthy: 34

"...Hera, under her old moon-name, 16, had a celebrated temple on the site of Byzantium, said to have been founded by her daughter Keroceus, "the horned." The crescent, which was in all antiquity and throughout the Middle Ages symbol of Byzantium, and which is now the symbol of the Turkish Empire, is a direct inheritance from Byzantium's mythical

SYMBOLISM (Muslim) 145

fondress Keroceus, the daughter of the moon goddess In-I-era." 1

Keroceus, supposed to have been not the foundress, but the mother of the founder, of Byzantium, seems to have been an inference from the Golden Horn and no place to place in this history. Further, it seems correct to say that the crescent and star figure, though rarely, on coins of Byzantium, but as one of numerous ornaments, 2 and that no ancient author mentions any connexion between this emblem and the city. The sigla Constantinopoleos, according to A. Geofreas, 3 who asserts that the Turks' 'neque insignis utuntur neque corones,' were quite different. The earliest mention of it in English literature is said to be in the Arte of English Poesie by G. Puttenham (1589), 4 who ascribes its introduction to the sultan Selim I. (1512-20), with the notion of increased brightness, though it has been observed 5 that the crescent is not that of the new but that of the waning moon, while rising in its wake is the morning star of hope; from Puttenham's time the antithesis between it and the cross has been common in English and French literature. F. Sanovino, 6 however, supposes it to have been the ancient emblem of Bosnia, adopted by Muhammad when that country was conquered by the Turks in 1403. This is declared to be an error by Zinkeisen, 7 who speaks of a golden crescent inherited from the Seljuk, and displayed on all the flags and standards of viziers and sultan's horse, appearing on the earliest flags of the Janissaries. With von Hammer Purgstall 8 it is a silver crescent which, with the two-pointed sword of 'Umar, gleamed on the blood-red flag of the earliest Janissaries; in the authority to which he refers 9 the hands' flag displays the sword without the crescent; what appears on the flag of the cavalry is evidently a horseshoe rather than a crescent, with no star.

It is worth noticing that the Seljuk chronicler Ibn Bibi 10 compares the shoe of the sultan 'Ala-addin's horse to a crescent and its nails to stars; whence the symbol may originally belong to cavalry regiments. Its occurrence, however, on certain Byzantine coins is remarkable, and seems to have some connexion with its later employment by the Turks, who have not often introduced it on coins.

The symbols of royalty used by the Moslem Empire were courts were certainly not those found elsewhere. In Unmayad times the kalifah on accession received a rod, a signet, and a scroll. 11 The rod was doubtless the Prophet's; in 'Abasid times a new kalifah received not only the rod but a crescent, which was a silver ring with a bezel of Chinese iron with the legend 'Muhammad is the Prophet of God,' but that of his predecessor, with a ruby inscribed with the kalifah's name. 12 The 'Abasid kalifah also wore a crown, 13 against Arab usage; 14 and indeed the etiquette of their court was closely modelled on that of the Sassanians, as appears from the recently published handbook of it by Jahiz of Basrah. 15 A crown was worn by the Fatimids of

SYMBOLISM (Semitic)

Egypt also. In their processions there were borne a rod, a special sword (said to have been made of meteorite), an inkpot, a lance, a target (said to have belonged to the prophet Solomon), a cushion, a horse, the shoe-shaped ruby, and a canopy or umbrella. The last of these was a common emblem of royalty, and figures, e.g., at Indian courts, where the sovereign is traditionally attired in a white gaza, made like a shirt tied with strings on the one side, and a little cloth on his head coloured oftentimes with red or yellow. The gaza appears in the attire of the Daulah (10th century), and, with a black robe, a belt, and a sword, it formed the distinguishing dress of a vizier. Apparently the belt symbolized some sort of subordination, as an Indian prince to whom Yamin ad-Daulah gave a robe of honour had to be compelled to put on this portion of it.7

Homage to a newly-appointed sovereign was (at any rate in early times) indicated by a shake of the hand, the meaning of which is shown by the term employed to be agreement over a bargain. In later times homage was indicated by kissing the ground before the ruler; this practice, originally alien to Islamic ideas, has been familial, or rather, the end of the 4th Islamic century. To a newly-appointed vizier (or emir) food was sent in the 4th cent. from the khilafah's table, probably signifying that he had become a member of the royal household. The practice of offering such a person fragrant herbs is said to have been a purely Persian or Dailenite rite, the sense of which is not clear.

Owing to Islamic objection to the linnen's art, symbolism is very scanty in its architecture, and where found appears to be borrowed. The great mosque of Cordova exhibited in the carvings of its lattices the peculiar form of the Indian cross, the meaning of which is unknown, whereas the creating of the walls, originally painted scarlet, is typical of flame, and, brought from Persia, symbolized the faith of the Ghebers, worshippilers of fire.71 Probably in such cases the Muslim worshippers and spectators were quite ignorant of the significance. The same is likely to be true of the ornaments to be found on other works of art, such as pottery and textiles. Christian emblems are indeed habitually associated with particular ideas, chiefly on etymological grounds—e.g., the raven with parting—but there is little scope for their employment in art. The symbolism of manuscript illuminations into some communities (e.g., the figures representing; either a double hand or the spath of the male palm, indicative of fertility, painted in Tunis on the walls of the house where there is to be a wedding)12 is probably not Islamic.

The practices of Islamic ritual are tralititious, though taken from many different communities; their symbolic interpretation is therefore conjected, and is the subject of considerable speculation. Several pages are devoted by the mystic Ibn 'Arabi to the meaning of the postures of prayer (qisla): 'The raising of the hands implies that whatever was therein has fallen away; it is as though the Almighty, when He commanded this, said, "When thou standest before Me, stand as a poor mendicant, who owns nothing; fling away everything that lines possess, and empty-handed lift up thy hands and put thy head behind thee; for I am in front of thee."' Moreover since the hands are the seat of power, by raising his hands the warrior shows that the power is God's alone; when the brave man, with the sword held to the chest, is bidding that God is in front of him: he who raises them to his ears is thinking that God is above him, with the attitude of the slave before his master, an attitude which he may not adopt without the master's leave, etc.72

Similar speculations on the results of the ceremonies of the pilgrimages are to be found in the work of Ghaziil; the special garments worn by the pilgrim, e.g., are to remind him of the grave-clothes wherein he placed the body of His Maker.

Besides explaining much of the Qur'an as elaborate symbolism the Sufis (q.e.v.) developed a system of their own, or rather a number of systems; and there are numerous collections of odes in Arabic and Persian which, ostensibly dealing with love and wine, are traditionally interpreted as dealing with the doctrines of pantheism. Illustrations of the style will be found in the commentary of H. Wilberforce Clarke on his translation of the Diwán of Hâfiz, where we are told that 'breece' signifies the means whereby union with the Desired One is attained, 'bell' signifies the angel of death, 'dark night' the three, eternal and divine knowledge, etc., whereas in some cases the same term is variously explained; thus 'narcissus' may signify the growth of the world, the pure existence of God, the vision of God, or inward results of joy in respect of deities. These interpretations are not always very convincing; but in some works of the kind the symbolism is either interpreted by the author himself or is sufficiently clear or conventional to leave no doubt of the meaning; an example is to be found in the Masnavi of Jalâl ad-Din Rûmî.5

The employment of symbolic acts, either to emphasize language or in lieu of it, is common with Oriental peoples, but not specially Islamic. The same parable has a tendency to be duty through many centuries. Ibn ad-Thir records (A.H. 442) how, when an Arab tribe proposed to take Kairawan, they selected as their commander a man who offered to pursue the following plan: taking a carpet, he unfolded it, and then said to the others, 'Which of you can get to the middle of this carpet without treading upon it?' They declared it to be impossible. He showed them that the carpet had to be rolled up from the edge, meaning that the land had gradually to be conquered and secured. According to W. G. Palgrave, Ibrahim Pasha obtained the command of an expedition against Nejil eight centuries after by solving the problem of the carpet.6

LITERATURE.—See the works quoted in the footnotes.

SYMBOLISM (Semitic).—The extent to which symbolism exists in OT literature is very doubtful. In the case of the Babylonians and Assyrians, however, our knowledge is much more definite and it is obtained chiefly from a study of cylinder-seals, the Babylonian boundary-stones, and the monoliths of Assyrian kings. On the Babylonian kalârrus, or boundary-stones, the emblems of the gods are grouped together, and in one case the name of the god with whom the emblem is associated is inscribed by the side, thus giving us definite data on which to base our investigations.

The Hebrew word for symbol, šem, is most probably connected with the root šám, to describe with a mark, and with Assyr. šimtu. Some scholars have suggested a connection between Assyr. šim and Heb. šém.
SYMBOLISM (Somitic)

1. The symbolism of religious life. — The Temple as the centre of the religious life of ancient Israel symbolized the ark, which was the symbol of the deity. The Temple was specifically built in order that it might contain the ark, the symbol of the presence of the deity. In the second Temple, the adytum being empty, the presence of the deity was symbolized by the continuous burning of the sacred fire, the Delphic movement ritual, and the shewbread. Among the Semites the god was symbolically represented as a nobleman dwelling in his palace, and W. M. Flinders Petrie has pointed out that the mode of life of large households, the routine of Egyptian temples were similar to those of large households. First came the small chamber symbolizing the mysterious dwelling of the deity himself. The larger hall in front of this could be compared to the audience-chamber where human kings receive their subjects, whilst the larger space in front of the building was probably a meeting-place for the people. The division of the Temple into a Holy Place and Holy of Holies was also symbolic and corresponded to the heavens and the highest heaven (םֵי and פָּרָשׁ [I K 6:2]), whilst the entrance may have symbolized the earth, heaven, boats (I. 66). Why was the Temple built on a mountain? This really brings us to another question. Was there any connexion between the idea which represented Jahweh's home on earth and the mountain to which he ascended? Is this a historical question? From the standpoint of the Dendermonistic historian, the high places were legitimate places of worship until the building of the Temple at Jerusalem. It is to be noted also that the high places are said to have been built on hills, and it has therefore been suggested that they were artificial mounds taking the place of natural high places such as the summits of hills and mountains. This must be learned from Babylon. One of the most noticeable characteristics of the Babylonian temples was their enormous size. In Genesis 11 we read that the people met together in the land of Shinar and decide to build a city and a tower that shall reach up to heaven. To the Babylonians a temple was above all a 'high place,' and there is a symbolic reason to account for this conception. Jensen has shown that the Babylonians regarded a mountain or hill as a huge mountain. In fact the earth was actually called K Kur, 'mountain house.' Later they began to identify one particular part of the earth — the temple — with the dwelling of the god, so that the temples which were built later were known as 'mountain houses.' The height of the temple thus symbolized the mountain which had formed the original home of the deity. The same idea can be seen by sketching the history of Mt. Zion. The sanctuary on the mountain existed before the settlement of the Hebrews. Just as His people dispossesses the early settlers of Canaan, so Jahweh dispossesses the god of Zion. Mt. Zion is now regarded as His home and He therefore reveals Himself to His people from the mountain (Ex 19). We can thus see the symbolic idea which suggested the zigurats in Babylonia, the high places in Canaan, and the sacred temple mount in Israel. The very name 'ark of Jahweh,' 'ark of God,' suggests that the ark contained an object which in some manner symbolized the God of Israel. In the Assyrian temples a statue of the god took the place of the ark in the Holy of Holies, and

it has therefore been suggested that the ark with the cherubim over it was a symbol of Jahweh. The custom of carrying about an ark as a symbol of the deity has its parallels in other Semitic religions. In Babylonia the gods were carried about in ships in solemn procession, and in Egypt the arks with their images were placed in boats. Remember the actual design of the Hebrew ark from the Egyptian ark-bont, but there is not sufficient evidence to warrant such a suggestion.

Cheyne suggests that the symbolic meaning of the brazen serpent was derived from the brazen image of Moloch in Babylonia. He thinks that the brazen oxen in 1 K 7 were copies of the oxen which stood in Babylonian temples as symbols of Marduk. Benzinger has suggested that there was a serpent-clan among the Israelite tribes and that Nehelems may have been its sacred symbol (Gn 49). The two pillars Jachin and Boaz which stood in front of the porch of the Temple were probably symbolical. The temple of Melkarth at Tyre and also the temple at Hierapolis had two similar pillars in front of them, and, as these were symbols of the deity and Solomon's temple was constructed on the same plan, it is probable that Jachin and Boaz were symbols of Jahweh. It is possible that the brazen lavers and the sea of the Temple symbolized the clouds. To the sea and oxen, as the oxen were the symbol of the Babylonian myth of the struggle of Marduk and Tiamat — the sea representing Tiamat and the oxen Marduk. Seeing that the Babylonian creation-myth determined the form of the Israelite cosmogony, this view has received general support, although there is no direct reference to it in the OT. H. P. Smith suggests that the twelve oxen were symbols of the twelve constellations and that the sea was symbolical of the celestial reservoir from which the earth is watered. The ornamental figures on the smaller lavers he also regards as symbolic. The bull was sacred to Jahweh, the lion was sacred to Ashtar, whilst the palm-tree is represented with a symbolic meaning in Phoenician art. The ornamentation therefore suggested a syncretistic purpose in building the Temple.

Although there is not the slightest reference in the OT to the symbolic meaning of the temple scholars, both ancient and modern, have suggested that both in its structure and in its appurtenances it symbolized various religious truths. The Hebrews, as early as 1895, 'developed a symbolic dwelling of the god, so that the temples which were built later were known as 'mountain houses.' The height of the temple thus symbolized the mountain which had formed the original home of the deity. The same idea can be seen by sketching the history of Mt. Zion. The sanctuary on the mountain existed before the settlement of the Hebrews. Just as His people dispossesses the early settlers of Canaan, so Jahweh dispossesses the god of Zion. Mt. Zion is now regarded as His home and He therefore reveals Himself to His people from the mountain (Ex 19). We can thus see the symbolic idea which suggested the zigurats in Babylonia, the high places in Canaan, and the sacred temple mount in Israel. The very name 'ark of Jahweh,' 'ark of God,' suggests that the ark contained an object which in some manner symbolized the God of Israel. In the Assyrian temples a statue of the god took the place of the ark in the Holy of Holies, and

SYMBOLISM (Semitic)

only brass. The covering for the Holy of Holies was made of costly materials with figured chro-
nib; the curtain at the door of the Holy Place was woven of wool, and that of the court was
simply made of white linen. We can thus see
how the costliness of the adornments of the dif-
ferent apartments symbolized their sacredness; the
more sacred chamber was, the more sumptuously
it was adorned.

Together the curtains are designed to form the earthly, and,
with the aid of the attendant chasubles, to symbolize the heav-
eness and holiness of the God of the Tabernacle.

The sacrificial system of the Hebrews symbolized
self-surrender and devotion to the will of God,
the need of forgiveness, and the blessing of divine
fellowship. The peace-offering with its com-
munion-feast showed the idea of fellowship between
God and man; the ‘tomid, or continual offering,
symbolized Israel’s pledge of unbroken service to
Jehovah; whilst the sin-offering with its sprinkling of
blood, loved the sins of the children of Israel, or
of cleansing oneself from sin was to place oneself
submissively before God. The care taken in
the preparation of the aromatic compounds of the
incense suggests a symbolic meaning. From I’s
141* it is actually described how the sheen of
the golden altar, and the altar of incense, the
symbol of prayer. Bahr regards the
shewbread as a symbol of the fact that Jehovah was
ever present with His people and was the
giver of their daily bread. Circumcision was a
tribal badge and showed that the patient had been
admitted a member of the tribe, whilst the Sabbath
symbolized the completion of the work of creation.
In Ex 21* it is actually described how the
breathing symbol (nu) between Jehovah and Israel.
The long hair worn by the Nazirite symbolized his con-
secration for some special service. In ancient
religions the offering of one’s hair, like the offer-
ing of one’s blood, symbolized the making of
a covenant between the worshipper and his god.
The frontlets, or têqêqêth (Ex 13*), were badges
worn upon the forehead and arm to show that the
worshipper belonged to a certain religious com-
nunity, and as a worshipper of the national deity
was subject to His help and protection. Fire
occurs as a symbol of the divine presence (Ex 20*>
23* etc.). It was also regarded as a purifying
agent (Is 48*), and to pass through fire was there-
fore a symbol of purification. Would not this
explain why sacrifices were burnt before they
might be accepted by God? Water was another
symbol of purification and was so common among the Hebrews that it is difficult
to distinguish washings performed for the sake of
the body and those with a symbolical significance.
Anointing* denoted the consecration of a person
or even of an inanimate object (such as the taber-
nacle and its appurtenances or the stone at Bethel).
In Ps 23* it is referred to as a symbol of prosper-
ity and joy, and the cessation of the practice was therefore a symbol of mourning of (Ps 8* 129*).
The word anêkhâr, which appears very often as a name
for Astarite (1 K 18* 2 K 21* etc.), came to be
used as a name for the symbol of the goddess
(DT* 31* 34* etc.). Ex has shown that the horns were
most probably symbols of the sun-god, who is called
in Punic inscriptions zn 754 whilst the mesqêkên
breasts were expressing gratitude for a
divine revelation (Gn 28* 31* etc.). As to bull
symbolism, it most probably originated among the
Hebrews themselves (and was not borrowed from the Phoenicians like the cow), for when the
Hebrews being an agricultural race, it was natural
that they should look upon the bull as a symbol of
strength and power. The bulls on the lavers of
Solomon’s temple may have been due to the influ-
cence of Phoenician workmen, for among the
Phoenicians Baal was represented as a bull.
The horns of the altar are regarded by some scholars
as symbols of ancient bull-worship. The ‘sigqêrets,
or temple towers, of Babylonia consisted usually
of three, four, or seven stones, no doubt on account
of the symbolic sacredness attached to these
numbers. The quadrilateral shape of the sig-
quêrets, with the four corners towards the four
cardinal points, symbolized the four quarters over
which the Babylonian kings held dominion. The
lions (symbols of Nergal) and the bulls (symbols of
En-lil) which adorned the entrance of Assyrian
temples probably symbolized the means which the
gods had at their disposal for punishing man.
The names of the temples symbolized the character
of the gods by whom they were dedicated. Nabu’s
temple was called ‘the house of joy,’ and that of Shamash
was known as ‘the house of the universal judge.’
The basin of the temple known as apawu represented
the domain of Ea, the water-god. The ‘sigqêrets
and the basin thus symbolizing symbols of
current cosmological conceptions.

We may now turn to the symbols of the gods themselves. A symbol of Hamman, the storm-
and thunder-god, was a lightning fork, whilst an
axe represented the destruction which storm and
thunder bring in their wake. His nature as a
solar deity was also symbolized by a bull. Sin
had a crescent, either by itself or with a disk. Since the moon at certain phases suggested the
appearance of a horn, he was represented as an
old man with a flowing beard, and wearing a cap
on which were the horns of the moon. The horn
was thus regarded as his crown and came to symbolize his power. This explains why the
Assyrian kings adorned themselves with a foamed
crown as a symbol of divinity. Aunu symbolized
the abstract principle of which heaven and earth
are emanations. Thunder and lightning were
to them as the voice of heaven and earth, by which Ninib was known, symbolized his beneficent character as a solar
deity. But the fiery rays of the sun might also
de destructive, and he was therefore symbolized also under the form of a lion. Ea’s symbol con-
sisted of a ram’s head which projected from a
frame. This symbol occurs on the Bavian relief
and the Esarhaddon stele. But on boundary-
stones his symbol is usually an animal with the
head of an antelope and the lower part of a fish.
As the water-god of Babylonia, fountains were
called to him, and he was regarded as the giver
of fertility. Thus is explained why the
name of Bar last as a fish. Niban, ascribe of the
gods, was symbolically represented as carrying the tablets of fate and recording the
decisions of the gods upon them.
SYMBOLISM (Semitic)

The staff by which he is represented symbolizes either the stylus of a writer or a ruler's sceptre. The solar god Marduk symbolized the sun of spring which brings about the growth of vegetation and therefore the sowing season. His warrior-god, his symbol is a spear, and as a storm-god he is represented by a horned dragon. Sometimes he is represented by the symbol of a dog, and in a later Mesopotamian tablet there is a reference to four dogs of Marduk. His symbol of love and the symbol of creation ishtar was represented by a female figure with her breasts exposed and a child on her left arm sucking her breast. She symbolized every feminine phenomenon of the Babylonian pantheon. She was the mother of the gods and the mother-goddess, and was therefore prayed to in hymns as 'helper and heavenly midwife.' As goddess of the passions she was represented on seal-cylinders as nude, with the distinctively feminine parts particularly emphasized. In the astrological system she was identified with Venus and regarded as a symbol of light. Sometimes her symbol is a star of various shapes.

Nergal, who symbolized the hot sun of midsummer, was represented by a lion; Nusku, the fire-god, by a lamp; and Nergina by an eagle. He is sometimes personified as a naked man with ending of Gn 1, and suggests that the goddess was a symbol of the watery depths of the universe. On one of the inscriptions of Nabon-al-lihim Shamash is represented as seated in his shrine; before him is a table resting on a wheel, and attached to the wheel are cords held by two male figures which direct its course. These figures represent the messengers of Shamash, Malik and Eannes, who occupy the position of chariot-drivers. The sun's movement across the heavens, which is here symbolized by the wheel, was thought of as a drive (cf. Ps 19). On seal-cylinders his beneficent character is symbolized by the manner in which he pours forth streams of water from jars placed on his shoulders. But the most common symbol of Shamash is a sun-disk.

The chief symbol of Ashur was a standard which consisted of a pole surrounded by a disk enclosed within two wings. Above the disk was the figure of a warrior shooting an arrow. The term-cotta images of Bel found at Nimrud represent him as an old man with a flowing beard, a real 'father' of the gods. He personified the various forces of nature whose seat and sphere of action is the inhabited world. Together with Assu and Ez, therefore, he symbolized the eternal laws of the universe.

2. The symbolism of common life.—A Hebrew slave who refused to take advantage of the liberty open to him after seven years' service had one of his ears bored with an awl and pinned to the door to show that he was in future to be devoted to the service of that house (Ex 21:6). Elevation to a position of superiority was symbolized by placing a crown on the head (2 S 19:2, 2 K 11:25 etc.). The worshipper spread out his hands in prayer to show that he desired to obtain divine mercy and help (Ex 32:1, 1 K 8:6 etc.). Wishing the hands was a symbol of the wish that one's prayers be acceptable (Ps 104:16). The neck was broken to show that the murderer deserved the punishment, whilst the elders of the city by washing their hands showed that they were free from the guilt. Hostility towards a person is shown by gapping with the mouth (Ps 25:8, Job 16:5 etc.); ill-feeling by clapping the hands (Ezk 6:11, 21:17, 22:2), by sitting in the face (Nah 1:1, 25); and anger by gruscling the teeth (Ps 35:16, Job 16, La 2:6 etc.). The key of the door was probably looked upon as a symbol of authority, and to place it upon a man's shoulder showed that he was appointed as a steward. A woman with one's mantle signified the intention of acting as her protector (Ezk 16). The father of a new-born child acknowledged it as his offspring by placing it upon his knees (Job 39). In a Babylonian poem describing the wickedness wrought by the evil spirits they are said to snatch the child from the knees of a man. The use of salt as a condiment and the pignincy which it gives to insipid articles of diet caused it to be regarded as a symbol of life. An abundance of salt has the effect of preventing the growth of vegetation, and therefore the plunging of a city with salt denoted that it was condemned to eternal destruction (Jg 9:26). It was a mark of reverence to cast off the shoes on approaching a sacred person or place (Ex 3:8, Jos 5:13). To appear bare-footed was a sign of great humility (2 S 15:20, Is 65:20 etc.), and to draw off the shoes meant to give up a legal right (Ru 4:3). The taking of an oath was symbolized by placing the hand under the thigh of the adjurer (Gn 24:27, 47:7), or by lifting up the hand towards heaven (Gn 14:23). As kissing was a means by which parts of the body of different persons came into contact, it was naturally a symbol of attraction and commerce (Gn 27:25, Ex 18, Ru 1:7 etc.). Various symbolisms were used in mourning. A sackcloth was worn to show that the mourner's grief for the departed was so great that he was ready to give up all the pleasures and conveniences of life (Gn 50:7, 2 S 8:9). The tearing of one's garment denoted that the mourner's dearest friend had been torn from him (Gn 57:4, 49:3 etc.). The mourner went about barefoot and bareheaded (2 S 15:24, Ec 24:3), sat in ashes and sprinkled ashes upon his head (Jer 6:26, La 3:23), and practised various mutilations of the body (Jer 16:6 etc.). Shaving the head (as among the Arabs at a battle) presented a sign of mourning. The making of a covenant was symbolized by the person who gave the pledge passing between the parts of an animal cut into pieces, and thus showing that he was ready to be similarly treated if he failed to keep his promise (Gn 17:10, etc.).

Light represented to the Orientals the highest human good. The most joyful emotions and pleasing sensations are described under imagery derived from light (1 K 11:16, Ps 97:11 etc.). It was only natural that there should follow a transition from corporeal to spiritual things, so that light came to typify true religion and the happiness which it brings. Sin, wickedness, chaos, were represented by darkness. The lion was a symbol of strength (Jl 1:5). Kneading was a mark of homage to a superior, and is therefore transferred to an attitude of worship (2 Ch 6:4, 1 K 5:4).

In Babylonia it was customary for the eunuch to present the gifts to the girls' parents. According to some scholars, this symbolized the purchase of the bride—a practice which existed in our times. Various symbolisms were connected with the marriage ceremony, but their meaning is obscure. The officiating ministers bound sandals on the feet of the newly married pair, and then put them on the right foot of each of the male guests. A new wedding dress was provided for each girl, and the bride was given a garland of flowers. The marriage ceremony is described in detail by the famous scholar, "Jesus is born," JASO 9:139-140.

2 T. G. Furness, Notes on some Recent Discoveries in the Realm of Assyriology, London, 1892-93.
SYMBOLISM (Semitic)

girdle, and fastened it to a pouch of silver and gold. The first of these ceremonies has already been symbolized by the marriage-contract between them.

We are told in the Code that, if a maid behaves insolently towards her mistress, the latter may put an abbatu on her and reduce her to slavery. The same custom appear to have been observed in Babylonia, and the ancient writers have preserved an example of a woman's execution for this crime, and the form of mutilation was symbolical of the offence itself. For striking a father the hand was cut off; for ingratitude expressed by speech the tongue was cut out; as a punishment for unlawful curiosity the eye was torn out; and as a mark of disobedience the ear was often cut off. The cutting short of the hair was a mark of degradation. The city walls were regarded as a symbol of shelter. Swearing by the gods and the king was a means of sanctioning an agreement. When a contract was made, both parties and witnesses added their names to it. And this was authenticated by impressing their seals or making a nail mark. Thaddeus of Babylon states explicitly that a woman was not a wife without bonds. This was a marriage-contract which symbolized an official acknowledgment of the union. An artisan symbolized his adoption of a child by tattooing a man's trade. The penalty of breaking a contract was the payment of two or more white horses to the god. The exact meaning of this symbolism is unknown, but it was suggested purification and innocence. In Babylonian magic there was a symbolical tying and loosening of knots according as the sorcerer wished to strangle his victim or to release him from any demon by which he was possessed. If a magician wished to rid himself of an object, he would burn or torture an image of it, believing that the victim would meet with the same fate as his image. By 'seizing the hands of Bel,' the Assyrian kings legitimized their claim to the Babylonian throne.

3. THE SYMBOLISM OF NUMBERS AND COLOURS.—It is doubtful whether the Hebrews used numerical symbolism. muster by the Twelve Stones and the Siloam inscription the numbers given are invariably in words. But this does not exclude the possibility that numerical symbols, which were employed by the Babylonians and Egyptians, were also used by the Israelites. In S. Arabian and Phoenician inscriptions also the numbers are partly written and partly indicated by figures. The numbers most commonly used with a symbolical meaning are three, four, and seven. This symbolism of purity and innocence. It represented light, which impressed the Hebrew mind not only by its brilliance and beauty, but by its divine symbolism and profound moral connotation (Lv 16:16-22, Dn 7:2, Ps 104:2). As black absorbs all colours and thus buries the light, it symbolized death, humiliation, mourning (Mal 3:4, La 4 etc.). Blue, representing the colour of an unclouded sky, symbolized revelation (Ex 24:14). It was the first of the colours used for the curtains of the sanctuary, and the Israelites were commanded to have a ribbon of blue fringe on the edge of their garments (Ex 28:34). The tunic of David was of blue wool (Nu 15:38). Red, as the colour of blood, represented bloodshed, war, guilt (Zec 6:11). Purple was the distinguishing hue of royalty, representing dignity and honour (Est 8:8, Jg 5:5), whilst green, as the colour of plants—growth—to which people look forward in winter—symbolized hope and resurrection. 1 It was also the symbolical colour of the moon. 2

4. SPECIAL SYMBOLICS IN OT.—Ahiah tore his garments into twelve pieces in order to show that the kingdom of Israel would be similarly divided (1 K 11:25-30). One of the sons of the prophets asked his comrade to smite him, and by his wound thus showed the punishment that Ahab had deserved (2 K 8). Ezekiel, a false prophet, put on horns in order to show that Ahaz would push the Syrians as with horns of iron (22:12). In considering the special symbolical actions of the prophetic books, we are confronted with very great difficulty. For scholars are divided in their views as to whether these actions were actually performed in their literal sense or were merely conceived as symbolic visions in the minds of the prophets. It seems almost certain that there are a number of such actions which could not have been performed literally. It is impossible, however, for the present writer to discuss in this brief article the category to which each of these many prophetic symbolisms belongs. But a brief mention of some of these from the books of Jeremiah and Ezekiel may give some indication as to the difficulties in arriving at a definite decision. In Jer 13:10-11 Jahweh tells the prophet to go to the Euphrates and hide his linen girdle in a rock. After a while he is told to remove the girdle, and he then finds it to be marred. The lesson is that, just as a girdle from its nature clings to a person, so Israel is closely united to Jahweh. Now, on the one hand, it may seem unlikely that Jeremiah should have undertaken a journey from Jerusalem to Babylon—a distance of about 200 miles—in order to bring out this point to the people. But it is possible that the journey was actually performed. (1) We know that the prophet was absent from Jerusalem during part of Jehoiakim's reign, and, as we have no account of his whereabouts during this period, it is possible that he made the journey to Babylon then. (2) In Jer 25:18 we are told that Nebuchadrezzar behaved in a most friendly way towards him on the capture of Jerusalem. This suggests that king and prophet had met previously, and that it was on the occasion of the prophet's visit to Babylon. In Ezk 4:7 we are told that the prophet lay upon his side for 390 days. How can this be taken literally? Did any person actually count the number of days? In 4:12 we are told that Ezekiel used human excrement for fuel in baking some barley cakes. Surely it cannot reasonably be suggested that the prophet would have inconvenienced himself by going to such extremes merely in order to bring home to the people some divine message which he could very well have preached in a much more ordinary manner. There are some scholars, chief of whom is A. Klostermann, who argue that these symbolical actions were performed. The dummy of Ezekiel (3:22), they suggest, was due to discipline of speech, and the repetition of metaphorical language in Ezekiel, the fact that the prophet had to remain at home, in order to carry out the divine command, suggests 1 Hammurabi says that he 'bedecked the grave of Malikat with green,' the colour of resurrection (introduction to his Code of Laws).

2 Jeremiah, 1:11. 1
that it was not loss of speech but an injunction to refrain from reprouving his co-religionists any more. The present writer is therefore inclined to agree with W. S. Kuechler and E. Hübner in regarding many of the symbolisms of Ezekiel as being merely symbolical visions in the mind of the prophet and as not having been performed externally.

SYMBOLO-FIDEISME. — Symbolo-fideism 1 is the name given to the theology taught in the second half of the 19th cent. at the Protestant Faculty of Paris by Professors Auguste Sabatier and Charles Weiss at the École Évangélique. It is based since by a large number of their pupils and disciples. It has also been called the theology of the Paris school.

As its name indicates, this theology has two aspects: (a) symbolism, which deals with religious forms more particularly from the point of view of its form, and (b) fideism, which deals with it from the point of view of its content. Sabatier devoted himself specially to the former and Ménagoz to the latter aspect. But the two conceptions are inseparable and interdependent. Together they form a theology with a distinct character of its own.

The basis of symbolism is the psychological observation that the essence of things escapes us, and that we know only their manifestations in the form of images, figures, and symbols. We cannot, e.g., know what God is in Himself. We know Him only by the more or less anthropomorphized representation which we form of Him in our thought. This we express by the terms 'Father,' 'Lord,' 'Master,' 'Captain,' 'Sovereign,' 'King,' or by emblems bringing our attention on man, heaven, the world — earth, Rock, Banner, Fire. These symbols are without doubt the expression of a living reality, but the conformation of our brain is such that it cannot grasp that reality naked; our mind can apprehend it only when it presents itself in the garment of a more or less sensuous representation. This observation holds good in regard to all religious data, and is borne out in the most subtle dogmatic systems. The task of the theologian is to lay bare the eternal truth from under its contingent manifestations and its historical formulé; moreover, these formulé are subject to the laws of historical evolution.

As regards the Deity, it is the name 'Father,' habitually used by Jesus Christ, that best suits the religions man's conception of the Supreme Being—perfect, just, merciful, eternal, all-embracing. This name then is in regard to the Deity, and who man feels himself absolutely dependent, while at the same time conscious of liberty and responsibility before Him. On the ideas of liberty and forgiveness and those of atonement and penalty, which in turn suggest those of pardon and salvation. A lively conviction that we are created for life and not for death, for happiness and not for suffering, consues us as aspirations after salvation. We desire life, happy life, eternal life. The whole idea of salvation is summed up in these words.

How are we to attain this? Conscience replies: By the pardon of our sins. But how is pardon to be obtained? It is with this vital question that fideism is concerned. The term 'fideism' (Latin, 'faith') was coined by the religious society for the first time by Ménagoz in his Réflexions sur l'Évangile du salut. 1 Its meaning is most concisely indicated in the phrase: 'We are saved by faith, independently of belief.' The distinction between faith and belief is one of the fundamental premises of fideism. By faith is meant the movement of the self towards God—a movement which implies forsaking sin, repentance. The man who repents and gives his heart to God is saved, whatever his beliefs may be. This statement is opposed to the old orthodox, which made adherence to certain official dogmas a condition of salvation. Fideism declares that a man is saved by faith alone ('sola fide'). At the same time, it recognizes the value of doctrines. Doctrines are dynamic ideas which make for good when true, and for evil when false. Fideists regard them therefore as pedagogic instruments of the first order. It is for this reason that they attach so much importance to the pursuit of truth and oppose so resolutely doctrines which they consider erroneous. It is only through a great and regrettable misunderstanding that their opponents reproach them with indifference to doctrine; and it is also false to assert, as has been done, that fideists fail to appreciate the intellectual factor in religious faith. Faith, according to their teaching, is an activity of the self in its unity, and therefore must comprise all the elements of the soul's faculties—thought, will, and emotion.

But the essential factor in salvation is the inward movement towards God, not intellectual adherence to some doctrinal tenet. Fideists reject the doctrine of salvation by beliefs without thereby denying the spiritual influence of beliefs, as the Reformers rejected the doctrine of salvation by works, while maintaining that good works are obligatory on Christians.

In a general way, and as a result of historical, critical, exegetical, and philosophical studies fideists have departed from orthodox theology and returned to the simple doctrine of salvation as taught by Jesus Christ, according to their interpretation, the multiplication of the gospel; hence their emphasis on repentance and on consecration of the soul to God as conditions of salvation.

As regards the idea of salvation, they find it in the symbolic interpretation of the primitive Christian conception of the Kingdom of God. This idea has for them two aspects: (1) the entrance of believers at death into celestial happiness, and (2) the gradual establishment of the Kingdom of Justice and Peace on the earth. These two ideas combined constitute in their eyes the Kingship of Heaven.

The name 'Symbolo-fideism,' which expresses the union of symbolism and fideism, gained currency from two articles by Eugène Ménagoz, signed T. V. ('Théologien protestant') in the Église Libre (1894, nos. 31 and 32). Auguste Sabatier accepted this title (Exégèse, p. 556). It passed into Holland with the thesis by J. Riemens entitled Het Symbolo-fideisme: Beschrijving en kritische Beschouwing (Rotterdam, 1900), and into Germany with Gustav Lasch's Die symbolo-fideistische Pariser Schule: Charakteristik und Kritik des Symbolo-Fideismus (Berlin, 1901).

Symbolo-fideism has given rise to numerous controversies, an example of which is found in current

---

1 In recent years the word 'fideism' has frequently been used alone.

SYMPATHY

religious journals and theological reviews. Its adversaries have also published a number of polemical pamphlets. These are referred to in the writings mentioned below.

EUGÈNE MÉNÉGOZ.

SYMPATHY.—Sympathy, as the etymology denotes, is 'feeling with others.' Two persons feeling alike do not, however, make a true sympathetic couple unless the feeling of one has partly caused or is reinforcing the feeling of the other. The phenomenon may appear when similar feelings originate spontaneously in the two and reinforce each other. Any relation, however, in which there is a mutual reinforcement of feeling, however originated, is one of mutual sympathy.

1. Emotional contagion.—The primary fact in sympathy is that the feeling of one person can, on occasion, produce a similar feeling in another. In its primitive manifestations this occurs without reflective consciousness of the feeling, and certainly without distinction of persons in respect of its origin. This is shown in the contagion of popular excitement, or 'public spirit,' the unreasoned enthusiasm of public meetings, the wild joy, the furious hatred, the boundless affection, that mark the excited crowd. The emotion, or its manifestation in some, excited similar emotions latent in the others, and, with the sympathetie reinforcement of the emotional disturbance in each is abnormally increased. Probably it is only those who, from the beginning, have some sort against the prevalent emotion that maintain a normal level throughout. Such sympathetic outbursts must be themselves short-lived and, as the cause of excitement is withdrawn, the persons affected are no longer in need of the fresh return to their ordinary emotional level. This may even be one of indifference to the popular frenzy in which they took part. It may, indeed, be one of revulsion if they have been drawn, as sometimes happens, into a condition of which in their normal moods they disapprove. Such revulsion would happen, e.g., if an advocate of peace found that he had been drawn by fellow-feeling into a demonstration of war enthusiasm.

The hot fit is followed by a cold fit. Hence the instability of popular acclamation, the apparent superficiality of feeling which appears when people liable to sympathy of this primitive unreflective kind are mingled together. The most suitable material for the typical 'fickle mob' is a town population sympathetically sensitive and intellectually immature.

The not-lived character of the feeling thus contiguously aroused follows in the nature of the case, because there is no settled identification of self-conscious personality with it. I feel in a sense, but do not feel as if feeling myself as if feeling. I do not take the feeling into myself as mine. It is on me and moves me, but it does not enter into any relation to that total of ideas, impulses, feelings, and desires which is me. It may be a mere motive excitement, moving me blindly to action, or it may take possession of me completely with fixed idea and over-mastering mood, acting instead of me and overpowering me. In either case I come out of it, and in the latter case as one recovered from a madness. Something like this, no doubt, befell Parisians in the brief violence of the Terror.

2. Self-conscious sympathy.—When self is identified with the feeling which is developing, as is ascribed to another person as origin, we have sympathy proper. The development of self-consciousness goes hand in hand indeed with the exercise of sympathy. We learn to know ourselves, and to become all that we are capable of becoming as self-conscious persons, by our dealings with our fellows, and *puri passu* with our consciousness of them as other selves. In so far, however, as we are clearly conscious of self, we are prepared to set bounds to the operation of primitive sympathy. A new condition of feeling, discontinuous with my previous state so as to preclude its origin, happens, is roused in me by sympathetic contagion. It is to self an invasion from without. As a feeling, moving me but not mine, it must be referred to a neighbouring conscious self, who is manifesting it independently. Perfect isolation, however, the isolation of the self which is invaded. Feelings that harmonize with the total state of this self enter into it as elements in its development: the sympathy of children with parents and other elders plays a large part in the building up of their personality. Confidence in the elders who give the lead to sympathy predisposes to acceptance of their guidance. The emotional behaviour of the child is educated in this way. If of average docility, it takes the form suggested to it by its society. On the other hand, the suggested feeling may be out of harmony with the character as already formed: thus the brave man may feel the horror communicated to him by the panic-stricken multitude, but he overcomes it as no possible part of himself. When the feeling thus communicated to us takes strong hold, the repulse by a strong character is correspondingly emphatic.

In sensitive natures this gives rise to a peculiar sense of revulsion, as towards something put into us against our will; and the transference of this revulsion to the source of contagion is probably the chief cause of violent personal antipathy. Between this attitude of abhorrence towards the induced emotion and willing receptiveness of it, as extremes, lie all degrees of repulsion by a feeling from which, as outside the disposition of our own personality, we nevertheless withhold ourselves. Whether we admit the feeling to influence over us, or harden our will against it in a sort of self-defence, it appears to us essentially, and throughout its action, as the feeling of another person with which in a measure we feel. This definite ascription of the feeling to another is the second characteristic feature in sympathy, and gains prominence with the developing consciousness of self and of other selves.

3. Control of sympathy.—In passing it may be noted how large a part in life is played by the partial hardening of the heart against the contagion of social feeling. This control of sympathetic distraction in general belongs to the preservation of self as maintenance of character. It is not only that undesirable emotions—e.g., of hatred, fear, envy—should be suppressed, as they are by the self-possessed though sensitive members of the excited crowd. Experience soon reveals that the preservation of self, even in the ordinary physical

1 Common self-possession, as in the man who is not liable to the contagion of fear, is to be distinguished from the excellence of sympathy under control. Probably this is one of the qualities of the born leader.
sense, requires much systematic control of emotion, whether initiated sympathetically or otherwise. An emotional nature loosely controlled is morally unstable and makes for a nervous break-down in course of time. The habit is of the hypochondriac type, so far as it depends as it needs on moral character. It is a main principle of moral health that the emotional life as it increases should be kept more and more strictly in subordination to the higher ends which it subserves. The precise definition of those ends belongs to the subject of ethics: the average man conceives them simply as the happiness of personal health for himself and his associates, together with some service in furtherance of the common weal. It may be that the rank and file of modern humanity suffer from lack of vitality and variety in the emotional life, but for the moment we are not concerned with them. Persons of the sympathetic cast are,—under modern conditions more especially,—liable to so much emotional invasion as must result in nervous exhaustion if not systematically kept in check. It is interesting to note how the habit of control over sympathy develops with experience from youth to maturity: the first great sympathetic grief overwhelms us as if it were our own; but we learn to throw ourselves outside of the emotion into the action required to assuage the sufferings of our friend; later still, to those who are overtired, callousness may come, with the exhaustion of other physical or moral. But this applies to all feelings however initiated. Sympathetic feeling differs from other feeling as being specially liable to increase of control by development of the element of otherness in it. This is a piece with another useful psychological truth, namely that the tension of any violent feeling may be relieved by treating it as an object of imagination or thought. Tennyson's lines bear on this point:

"Like wise the imaginative woos, That loved to handle spiritual strife, Diffused the shock thro' all my life, But in the present broke the blow."

In constructing a story, an essay, or a poem which depicts the emotion as affecting imaginary persons, the sense of its personal attachment is obscured: it is projected more or less, i.e. thrown out of self-consciousness into the non ego. Similarly, but as of course and instinctively, we project our sympathetic feelings back into the other self and, although still feeling them, are as a rule much relieved. This relief is no doubt partly due to the stop that is placed on the disturbance of the emotional personality in general by the sharp dissociation of the new feeling from those immediately pertaining to the self; it is the other person's feeling, and, though it disturbs me, I limit that disturbance by knowing it as something which has not its origin, and is therefore not necessarily permanent, in me. This control of the sympathetic disturbance furthers and is furthered by practical activity in relief of the other's distress.

4. Identification with the 'other.'—The exceptions indeed in this case explain the rule. When the sympathetic feeling is real, as to an object much beloved, it may affect us more than if it were of our own originati. This, no doubt, is what is meant when it is said that another person is dearer to us than ourselves. The consciousness of the beloved person's consciousness is in this case so established as part of our own that the projection of the feeling into it does not in the least dissociate the self from the feeling. So far as we know what the beloved person feels, we go on feeling it and being further disturbed by it all the time. Indeed there appear to be, in cases of intense affection when the self identifies itself passionately with the other, two ways in which the sympathetic feeling may become more disturbing than the equivalent primary feeling would be. (1) In projecting it on the beloved other, imagination, moved by the habit of affection, may greatly exaggerate its force and significance: the finger-prick which, in spite of instinctive tears, is a trifle to the baby may bulk large in the distressed imagination of the heartily anxious mother. This kind of thing happens in a thousand hidden ways when love prevails, and it happens for pleasure as well as for pain. (2) Each person has an intimate sense of the powers and resources within himself by means of which he bears his troubles and controls his emotional being generally. About the beloved other, however intimately known, he is never quite so sure, and thus, no matter how equal things may otherwise be, the sense of mystery breeds, as it were, a germ of fear that heights pain and, by release from it, also heightens joy. This goes, moreover, with the essential fact that love at its strongest exceeds self-love in desiring the welfare of its object. The heightening in this way of feeling sympathetically experienced may perhaps be discriminated introspectively as an additional element of anxious concern about subjective consequences. Such concern is a great deal to their own emotions by none but mobbed people. And indeed even in the lover-like relation to which this tender anxiety naturally belongs it may be so exaggerated as to be morbid concern of self for the other. For this reason it is often well that persons who get too much on one another's mind—as we say—should be sometimes separated.

5. Absence of this intimate affection in the case of ordinary associates makes it possible to limit the sympathetic disturbance by instinctively projecting it back into the other mind, consciousness of which is only now and then associated with the consciousness of self. There are, of course, all degrees of dependence on one another in this respect. A man may go through life without one associate in whose welfare he has any genuine lasting interest, capable of sympathy but never in danger of being shaken by it. Most persons, however, have friends sympathy with whom does penetrate into them, as well as move them out of themselves. Some men are, in the absence of contrary cause, friendly to all their associates: these are universally sympathetic also, in proportion to their primary sympathetic sensiveness. Friendliness, however, as the title implies, to identify oneself with another, must be carefully distinguished from the primary capacity to feel as others feel.1 When they are combined, we have the sympathetic nature as popularly understood. But an unfriended man may be sensitive to another's feelings, in which case he not only projects on the other but sharply dissociates himself from all interest in him. It is as if he said, "I know what you feel; I feel you feeling it; but it is nothing to me."

1. Friendship is in its degree the affectionate interest in another's consciousness of which the extreme has been described, and friendliness is the disposition to so interested.
tions and imaginings into which all sorts of error may creep. If he abounds in self-confidence, he is a dangerous guide: but, if he treats his gift humbly as a useful auxiliary, it will serve him in good stead and improve with such exercise.

A sympathetic bent may have experiences of cool insight, but with this difference that, since in such case he does not identify himself with the other, he is moved to change the state of the other into identification with himself. Thus theorist, orator feels that his audience is puzzled or hostile: they do not convert him, but he is not indifferent, so he puts out his strength to express himself and make them feel his feeling. The mere lecturer, on the other hand, only tries to show and make them see his meaning. The orator is the speaker whom the Americans call 'magnetic': he makes his hearers feel as he does, at least for the time. But the beginning which he makes is at the other end of the coil, by insight into the feeling which is theirs but not his. This is the getting into sympathetic touch. By showing this sympathy on neutral ground or even in respectful dissent, he fixes the attention of his hearers. His interest in them interests them in him: then the position is reversed, the mind of the speaker shown, and the original attitude of the audience merged in the new effort to identify with him. This kind of thing happens every day on a small scale in the experience of sympathetic people. To understand, to be interested though in disagreement to persuade—these are the means, and in this order, by which one person transforms the mental attitude of another. The more instinctive the process is, the better, sympathy operating in the pair by its natural impulse to mutual identification of mental content.

6. Affinity of character.—In so far as the sympathetic bent in the full sense turns upon friendliness of disposition, persons may be characterized as sympathetic generally, i.e. in relation to all sorts of other persons. In so far, however, as it depends on primary contagiousness of feeling, affinities of character must profoundly affect the relation between any pair. Racial type, e.g., is a basis of such affinity, and the mutual intelligibility of two compatriots, while partly arising from like habits of expression and community of associations, turns also on functional capacity to feel alike. In what ever way we explain the prime fact of emotional contagion, it is evident that no one can communicate to another a feeling of which the latter is constitutionally incapable. The fearless man cannot feel like the coward, nor the liberal man like the mean. Each can only see that the other acts in a manner directly opposite to himself and recognize the corresponding state of mind as a mystery. To sympathize with another, we must be able to feel like him. Some would say, further, that we must have felt on our own originations as he now feels; but that is not so certain, though perhaps it generally happens so. Our capacity to sympathize, therefore, is at least limited by the possibilities of our character. How far these are limited, or how far they may be extended beyond our present experience of them, we never know. Certain it is that in human society we run up now and then against mysteries, persons with whom after much acquaintance we never get in touch, who always seem to us as if they were feeling things the same way with us, though we feel that they are of another kind. Rubbish! and the other side of a high wall over which we cannot see, through which we cannot hear, them. At the same time, we meet others with whom, in trifling things and large affairs, an agreement in taste in time that diversities of aim and opinion, though standing out the more clearly, do not mar the general harmony. But mental conditions are so complex that likeness of condition between two minds must generally be of a very partial kind.

7. Similarity and association.—Another influence to the same effect which enters into these cases is natural similarity in habit of expression. A common stock of experiences, habits, and even feelings is formed by association in life, and the result is similar to that of congenital affinity, though lacking the charm of its ever-recurring unexpectedness. Congenital affinity, it should be noted, is not a matter of this type. It is a happy accident of human development which may be encountered at any turn.

8. Sympathy in education.—The value of sympathy as an element in the development of moral life is too large a subject to be treated here. A few words, however, may be devoted to (1) the teacher's use of sympathy in education, and (2) the training of sympathy in the child.

(1) The teacher's use of sympathy, like that of the orator described above, begins in his own sympathy with the learner's state of mind and ends in the achievement of the learner's sympathy with his. The teacher's sympathy requires as a starting-point, therefore, some demonstration on the child's part, and to evoke this in as good a form as possible for his purpose—but in any form rather than none—must be his first care. By entering into the child's mind thus shown to him he establishes the contact of sympathy, and by maintaining this contact he leads where he will, provided he can, in the child's case. This method is a small matter compared with an error in the procedure of moral discipline. It is quite possible to keep in touch with the child's sympathies, even when punishment seems to estrange him for a time.

(2) In the training of sympathy the first requisite is to encourage its manifestations when they occur spontaneously, and to suggest conduct which is the natural expression of interest in others. The tendency to sympathize with joy as well as with sorrow—M. Freud as well as Nietzsche—should be called out. All this belongs to the development of the sympathetic nature, which, as we have shown, also stands in need of disciplinary training. This, for the most part, life supplies, and the educator should be wary lest he interfere unwisely and too much. The delicate process of control and moderation by which certain effects of the opposite kind are had better be left to itself; and, as a rule, it is dangerous to train the young to repress, otherwise than by more fully expressing, their nature. Wise both the teacher and the parent. It is a part of one function for the sake of fulfilling another more perfectly. Thus, emotion is in general controlled by using it to subserve the voluntary and intellectual life.
SYNCRETISM

Thought and conduct are the antitheses to hysteria and emotional riot. As regards sympathy in particular, we should be chiefly concerned to develop first its voluntary and, second to that, its interior side. "The true syncretist, who contended with suffering, e.g., which does not go on to some comforting act is morbid because it ends in useless emotional disturbance. Doing in accordance with the occasion is the habit to which sympathy should be most carefully trained. Its other requisite is that it should be intelligent, and this is often a much-needed lesson. A useful sympathy with others requires imagination and reflexion sufficient to construct a true idea of what they want. This intelligent apprehension of another's case is of inestimable value in making the fellow-feeling, as well as the friendly action, fit.

Persons who are 'too sympathetic to be of any use in trouble' are persons who, by neglecting to help their fellows as need arise, have let themselves get into a habit of being overwhelmed by painful fellow-feeling. The remedy is to do something for the prime sufferer. This is the natural course in the case of an unsolved pit.

SYNAGOGUE.—See Worship (Hebrew) and (Jewish).

SYNCRETISM.—1. Untechnical use of term. The term 'syncretism' has a very extensive record. It is as old as Plutarch, who seems to have coined it, or at any rate to have made it current. In his essay on brotherly love he observes that even brothers and friends who have quarrelled prefer to associate with one another, in face of a common danger, rather than to commune with the foe; which is a Cretan precedent and principle, 'for, although the Cretans were frequently at faction and feud, yet when their city was in common danger, they became reconciled and united whenever a foreign foe attacked them. They called this syncretism ('synkretismoi').

By 'syncretism' in this political sense, therefore, we are to understand the instinct of self-defence which sinks private differences before a threatening peril on the outside. The 'syncretists' close their ranks; they like quarrelling among themselves, but they would rather exist than indulge in fatal internecine strife at home.

After Plutarch the term became submerged. Fourteen centuries later it re-appears in the pages of Erasmus, who was in his own way, especially when the way ran through the Adagia, a 'syncretist' of the reconciling order, averse to feuds. Erasmus sets down the reference to Plutarch and his work to reconcile and unify. Thus we find him writing from Louvain (22nd April and 23rd May 1529) to Melanchthon, hoping that scholars of all parties will close their ranks and bring a close the quarrels occasioned by the different standards of true and false heretics. Acquiesce not, quoique synkretismoi. Ingrates praiseworthy are concordia. 2

During the next century and a half the term is forgotten. It is recovered by means of the Reformed and of the Roman Church, sometimes as an appeal, more often as a taunt; theologians who endeavoured to reconcile extremists were dubbed 'syncretists,' and their system was indifferently and meretriciously applied to all irreligious proposals, whether these were the product of a Laodicean indifference or of a genuine love for moderation. In passing from the humanists to the theologians, the term upon the whole acquired disparaging associations, which continued to follow syncretism until it came almost a synonym for 'hybrid.' It was derived from συνκρήτημα, and the supposed etymology corroborated the connexion of the term with all that was insincere and heterogeneous.

This is the predominant meaning of the term in ordinary French. In untechnical English it also denotes 'fusion' of a more or less illogical or artificial kind. Thus Hallam 3 says of Giordano Bruno: 'What seems most his own... is the syncretization of the tenets of a pervading spirit, an Animism Mystical, which in itself is an imperfect thing, with the more pernicious hypothesis of an universal Mundus.'

2. Philosophical and ecclesiastical applications.

—in the history of philosophy 'syncretistic' has been applied to the harmonizing efforts of those who, like Cardinal Bessarion in the 15th century, refused to allow their love of Plato to be identified with any depreciation of Aristotle. The controversy between the Aristotelians and the Platonists had been sharpened by the impetus given to Platonic studies after the fall of Constantinople. Partisanship ran strong, and the more moderate men failed to draw the rival schools together.

Throughout all the tangents of this complicated controversy, a thread of gold is interwoven by the serene and imperturbable temper of Plutarch. What happened in 15th century, philosophy was repeated on a larger scale in the theology of the 17th century. The 'syncretistic controversy' of that age rose out of the efforts made by G. Calixtus (1586-1656), a distinguished scholar at Helmsdale, to draw the Lutheran and the Reformed Churches together. 'A plague? What a plague! His will, he cried, like Mercutio's dying cry of indignant protest. Calixtus lived and worked to check the plague. He was acutely sensible of the harm and danger to Christianity which the sharp internal divisions within the Church produced. But his broad, catholic temper met with little response among his contemporaries. The controversy lasted even after his death, assuming political as well as theological forms. The 'syncretistic' party in the Church failed, however, to carry its principles into effect. Even well-meaning and wise attempts to emphasize the fundamental Christian principles held by various Reformed, especially, and the Catholic Churches in common with the Roman Church, were suspect in that age of hardening division and widening cleavage. Men were told that in view of the Roman Church they would have to subordinate their private idiosyncrasies in the Reformed Church; or Christians in both Churches were reminded that the menace of outside heathenism should make them close their ranks. But 'syncretism' of this kind was generally branded as a betrayal of principles or as an attempt to secure unity at the expense of truth. The 'syncretistic controversy' was quelled over and over, and such quarrels are not the least bitter upon earth. What the 'syncretists,' in Plutarch's sense of the term, called a 'harmony,' their opponents called a 'hybrid.'

The Roman Church had a 'syncretistic' controversy of its own, an oddity in the turbulent dispute over the relations between grace and free will, which pressed from the last quarter of the 16th century. 'Syncretistic' is the term applied to the system of belief which endeavours to harmonize the conflicting views of the 'two universes' of the Nominalists, to the two sorts of efficacious grace, which are held together by prayer.

3. In comparative religion.—'Syncretism,' as men like Hume and Zwingli and Erasmus and Luther came to be called nothing of the practical sense which

1 De Pratento amore, 10.
3 Ibid., 2nd. ed., 1898, ii. 175.
4 Cf. CH. R. 2011, vi. 714.
Plutarch had originally attached to the expression. But this is lost in the technical, modern application of the term to a phenomenon in the history of religion, i.e. to the fusion of various religions in doctrine or in cult. Here 'syncretism' denotes generally an unconscious, wide-spread tendency, due to or fostered by some re-arrangement of political relationships or by some clash of civilizations. There is a blending of religious ideas and practices, which by either itself or external impetus are more or less thoroughly the principles of another or both are amalgamated in a more cosmopolitan and less polytheistic shape. Such movements in the religions world are often preceded and accelerated by a new philosophical synthesis as well as by a political re-arrangement, but the outcome invariably is a unification of deities, which, as J. Tounias has pointed out, proceeds on one or other of two lines: either two deities of different religions are assimilated by comparison or several deities are grouped together in a fresh synthesis. The motives for this re-statement are drawn from the dawnling consciousness that any particular form of religion is no longer adequate by itself, that others possess like features, possibly of superior efficacy and appeal, and that such features can be incorporated without detriment to the essential points of the religion.

The study of comparative religion exhibits this phenomenon in a variety of shapes and stages, but it is specially prominent during the first four centuries of the Christian era. The tendency to this syncretism or amalgamation of deities and cults had been in operation long before the rise of Christianity. When one tribe conquered another, or when two tribes or nations formed a political alliance, there was a strong movement towards fusing their gods. The foreign power, especially if it were dominant, fascinated many of its subject or weaker neighbours. An exchange of deities might be made, out of courtesy. Similarities in ritual were developed, and stress was laid on what was common to the two religions. Now and then the gods were identified, and this was specially easy in the primitive days when certain gods were still nameless powers; men were invited to recognize their own gods under the names of foreign deities or to welcome the latter as allies. The connexion between Israel and Canaan is a manifestation in point. The equally familiar one is the influence of Assyrian rites upon the religion of Israel under kings like Manasseh and Amon, when syncretistic influences were specially powerful in consequence of the political situation. The phenomenon is by no means confined to the history of Israel's religion in the ancient world. For different reasons syncretism, or, as some prefer to term it, 'theocracy' (κοιναλία), was rife at one period in Greek religion owing to Oriental influences, and as late as the 8th

8 Cf. HEB vi. 150 L., and HEB vi. 421 f.

cent. of our era a similar blending took place in Japan. But it is in the history of Judaism, particularly during the two centuries preceding the Christian era, that the elements and issues of syncretism are most clearly marked.

1 The main impetus to this rise of syncretism came from the political re-adjustment after Alexander the Great. The Seleucid period witnessed a contact between the East and the West, round the Mediterranean basin, which led not only to a fusion of Babylonian with Greek and Syrian deities and to a ferment of Oriental religions feeling throughout the Greco-Roman world, but also to movements which, in spite of the vigorous resistance of the Maccabees and their supporters, affected some circles in Judaism itself. The Hellenizing tendency was fostered by Jewish writers like Eupolemus and Aratus. It went hand in hand with the allegorizing of Homer and of the OT and with the Stoic philosophy of the Logos. As the tendency to syncretism was innate in Egyptian religion—the spread of the Serapis-cult is only a later instance of it—and as Alexander formed the centre of activity for the amalgamation of Egyptian and Greek or Syrian cults but also for speculative Judaism under the spell of the new ideas of cosmopolitanism, it is not surprising to see a movement set in the direction of a syncretistic Judaism, which should assimilate and employ current Greek ideas of a cosmopolitan, cosmic character. The exponent of this syncretism is Philo.

1 Un syncretisme dans lequel sont admis tous les éléments, en particulier persépiacites et platoniciens, qui s'accordent avec l'idéologie fondamentale de la sympathie des parties du monde, telle que la définition la plus exacte des vues cosmologiques de Platon.'

2 Philo's aim was not to blend Judaism with Hellenism. He adhered to his religious inheritance. But he was flavoured to experimentalise to regard it by re-stating it in terms of the current religions philosophies of his day.

As Judaism on the whole resisted this Philonic speculative tendency, so did Christianity in the main resist the later Gnostic movement with its syncretistic impetus during the 2nd and 3rd centuries. Syncretism was partly an evidence of strength and partly an indication of weakness at that period. So far as it meant a readiness to set the new faith in a positive relation to the elements of truth in contemporary cults and mysteries, so far as it breathed a spirit strong enough to assimilate vital data from its new soil and conserve its distinctive characteristics, it was healthy. In this respect it carried on the work of the best apologists, linking the Christian tradition to the new situation and proving that the faith was too vital to remain a Semitic cult. But there was another side to syncretism, and to this the Church was keenly, if not always wisely, alert. The fascination of the movement lay in its cosmopolitan appeal—an appeal which was the more seductive that already, within paganism itself, the movement had made headway, as we see from the tone of men like Plutarch, Maximus of Tyre, and Numenius, and from the specific phenomenon like the transformation which had come over a deity such as Isis in the popular pieties of the age. The
SYNDERESIS

157

passion of the time was for a vague monotheism, which should be direct and unmediated by the authority of the Church. A cosmopolitan syncretism, in the 3rd cent., began to overlay the earlier national religions and to embrace the Syro-Hellenic and the Western cults in a synthesis which regarded all deities as so many varied expressions of the One, and all rites as more or less acceptable forms of approach to this central, all-pervasive Deity. The individual features of the separate gods and goddesses became less and less distinct and were obliterated, and stress was laid, from the religious as well as from the philosophical and the political points of view, upon the all-embracing unity—generally conceived as a solar pantheon. A man like Macrobius voices this in the 4th cent. It underlay the pagan reaction of Julian, which was its last serious challenge to a recalcitrant Christianity. For, although the Church admitted elements which were of semi-polytheistic character, in the worship of the saints, the adoration of miracles, and even the adoration of the emperor, nevertheless formally the sense of Christianity decided against syncretism of the Gnostic and later of the Neo-Platonic type. This is the paradox of the situation. Christianity proved by its exclusiveness that it was not, and was not to be, a merely 'syncretistic' faith, in the sense of so-called eclectic or derivative conceptions. At the same time, it not only assimilated bravely and wisely many elements organic to its growth, but also admitted, as we see, e.g., in its later Egyptian popular developments, some pagan features which were a handicap ultimately to its successful advance.

The syncretistic situation was at once an opportunity and a risk for Christianity. The opportunity was often seized, and the risk was sometimes too much for the faith. Still, the environment did not mould Christianity as it moulded movements like Mithraism and Neo-Platonism. The catholicism of that age suffered from the desire to conciliate the natural man, but it had more in it than an indiscriminate selection or an anxious imitation, such as syncretism usually exhibited.

The tendency of syncretism, when broadly viewed, was to henotheism or pantheism rather than to monotheism. It is true that syncretistic movements made a break away from polytheism.

The first corollary of a truly pantheistic religion is not so much toleration of all forms of worship, as a tendency to conciliate even the gods of other religions. The one god is the same for all. What, then, does the name give him matter?

Such is the theme of a book like the Saturnalia of Macrobius, and it is the principle of the religions synthesis underlaying Plutarch's philosophies of things. But, as the arguments of a Neo-Platonist like Iamblichus show, this severe indifference was not incompatible with ideas which were henotheistic rather than monotheistic, and the popular cravings proved too much for even a monotheistic principle in Christianity. Pope's opening lines in 'The Universal Prayer':

'The expansion of the imperial organization, the mixture of nationalities in the capital, and the flooding of them by Oriental elements, the heightened intercourse, the prolonged residence of the legates, and of legates and their provinces and their dependents and by foreigners, finally, since the 3rd cent., the advent of emperors who were converted and unfamiliar with the national spirit of Rome—all these produced the syncretism of religions' (P. Wendland, Die hellen.-rom. Kultur in ihren Beziehungen zu Judaistik und Christentum, Berlin, 1895, p. 152.)

See G. Wissowa, Religion und Kultur der Römer, Munich, 1892, p. 301.

The recorded East and West met in Rome to exchange compliments and gods (J. Martineau, Essays, Recites, and Addresses, London, 1850-91, B. 315).

'Father of All in ev'ry Age,' In ev'ry Clime adored,
By Saint, by Savage, and by Sago,
In every clime, in every land,
From Zoroaster to Death's domain.

ancient echo the syncretistic aspiration in its exalted and abstract form. But syncretism, like Catholicism, appealed to lower as well as higher cravings. The adoration of the Deity like this left the heavens strangely bare for those who had been accustomed to a richer variety of worship, and thus the syncretistic tendency was welcomed as it allowed those heavens to be inhabited by many of the saints and deities. Syncretism, in practice, almost invariably fostered mythology. Sages and saints, no less than savages, yielded to its spell in this direction. It was found quite compatible, in pagan syncretism, to unite a reverence for the One with some special adoration of one or more favourite, traditional deities. And it is a question how far even the Christian Church of the 4th cent., e.g., which had rejected in earlier days the hospital syncretism of a monarch like Alexander Severus, tolerated, for the sake of their associations and popular appeal, forms of adoration which were, strictly speaking, out of line of Christian essential monotheism.

The first example is in Jerome:

'Quartusque ponunt quae super hanc et extra haec tris est, quam Graeci vocant syncretos, quae sectilata conscientiae in Cain queque verborum... non extergeter, et quae... non pecore sentinent.'

Bonaventura couples syncretism with intelligenz, as intellectus with ratio. Elsewhere he connects syncretism with conscientia.

'Beinquisissimus Deus quadruplex consulti ad doctiorum, selectus duplum naturae et duplum gratiae. Duplices enim indixt rectitudinis principia, et deus naturum, videlicet ad recta indixtum, et haec est rectitudinis conscientiae, idiam ad recta voluntatem, et haec est conscientia, cujus est remuneration contra malum et stimulatio ad bonum.'

In the Inleernerium he defines syncretism as 'apex mentis seu sectillae,' Herrmann of Fritzlar speaks of it as a power or faculty in the soul, wherein God works immediately, without means and without intermission. Iuysbrecb speaks it defines it as the natural will towards good implanted in us all, though weakened by sin. Giseler uses similar language, saying that the spark (so Eckhart speaks of a Flankein in the soul which cannot be extinguished) was created with the soul in all men, and is a clear light in them, striving in every way against sin and impelling steadily to virtue, and pressing back towards the source from which it came. In Thomas Aquinas syncretism is the highest activity of the moral sense. Gerson says that the cognitive faculty in man has three faculties—the simple intelligible or natural light, which comes from God himself; the understanding, which is the frontier between the two worlds; and the sense-consciousness. Syncretism is the effective

SYNERGISM

faculty answering to the first of these, and contemplation to its corresponding activity. The word also occurs in Albertus Magnus and Alexander of Hales. Eckhart sometimes seems to identify syncretism with the Finkelstein or Guinter, and with the intellectus agens or die ubeiste Vormahn; but the tendency of his philosophy is to move in the direction of the earlier mystics. He even says: 'Dies Finkelstein, das ist Gott.' In the earlier writers syncretism is usually thought of as a reassertion of the senseless state of man before the fall, whereas in the later mystics it is a state of grace, for which Eckhart becomes the seat or organ of divine illumination and of the highest personal inspiration. The notion of an impecunious 'soul-centre' may be traced back to the Neo-Platonists.

SYNDICALISM.—See Socialism.

SYNERGISM.—1. General meaning of the term and its Scriptural support. The term 'synergism' (συνέργεια, συνεργός, 'to co-operate, fellow-worker') became definitely fixed as a technical term in theology in the sixteenth century. It was applied to the later views of Philip Melanchthon and his followers on the question as to the relation between the Holy Spirit (or God's grace) and man's will in regeneration. This view, broadly stated, is that the human will can and does co-operate with the grace of God as a vera causa regenerationis. It opposes the position expressed in the sentence 'Homou convertitur nomen.' The human will was, it is true, considered as the primary cause (hence synergism differs from Pelagianism or even Semi-Pelagianism); that was unreservedly assigned to God's Spirit and to the preaching of the Word, but the energy of the human will was given a place, and its assent an essential place, in the act of regeneration. The enunciation of this view caused unusual heat among theologians, because its truth or falseness affected the whole realm of theological truth—the effects of the fall on human nature, the nature and working of God's decrees, the responsibility of the sinner, in fact all Christian anthropology and soteriology generally.

The term 'synergism' owes its origin to Scripture, but the Scriptural usage of the word operates in a different universe of discourse from the theological. In the NT συνεργέομαι (συνεργα) is never applied to the psychological relation, whatever that may be, whether creative or co-operative, between God's Spirit and man's will in regeneration or conversion. Its general usage is to describe the objective co-operation of the brethren in the furthance of God's kingdom on earth.

In 1 Co 3:5 (οις γὰρ ἐφέσασθε συνεργοί) the co-operation referred to is that between men in their outward labours for God, not a co-operation between them individually or unitedly with God, however true that may be in itself; and at any rate it refers to post-conversion experience, not to pre- or sin-conversion relationships. In 1 Th 2:9 the reference is to men already reconciled to God by faith, who are to work together in the cause of the gospel. Here the word συνεργεῖον (συνεργαμαι) is applied to the proper relationship of what is the true text—God works in all things for good with those who love God. It does not directly refer to what takes place in conversion, nor does it state the active elements involved therein and their relationships. Again, in Mk 10:9 the co-operation of the ascended Lord and the ascended Church is spoken of in regard to miracles. But the word in Scripture is never used of man's natural faculties or capacities (before conversion) working together to produce work (or fruit). This, of course, is a later doctrine, which employed the term to describe the specific and proper theological application of the term. If these things is to be understood or rejected or endorsed from Scripture, it must be by reference to the truth of Scripture, and not to its letter.

2. The origin and development of synergism in Melanchthon's doctrine.—The earlier writings of Melanchthon betray no synergistic tendencies. On the contrary, they are in some respects more rigidly determinate than ever. The religious mind is profoundly conscious of his dependence on God's grace. He does not dream of co-ordinating or equating his own freedom with the grace of God as causal in his salvation. This is true even of those whose views are termed synergistic. 'Arminians usually pray like Calvinists,' said Charles Hodge, adding, what is equally true, that 'Calvinists frequently pray like Arminians.' They appeal to man as responsible voluntary agents. The difficulty arises when one or other of these aspects of experience is made the determining factor in the elaboration of a theological system. Truth is largely a matter of proportion and balance. To begin with, Melanchthon, whose mind was eminently of a systematic cast, worked out his system under the dominating influence of the experience of divine dependence. The Holy Spirit teaches us, he says, that all things happen necessarily by predestination, and therefore there is no such thing as freedom of our will. To maintain free will was to dethrone God's grace in the view of human freedom and supremacy. This was his position in the first edition of his Loci Communes Rerum Theologicae, and it was even more rigidly expressed in his Commentary on Romans and Corinthians. Free will will be regarded as a scholastic figment emanating from carnal wisdom and obscuring the blessings brought to us by Christ. It made men arbiters of their own salvation and consequently undermined the immediacy of Christian assurance and froze the stream of personal devotion to the Redeemer. Melanchthon absolutely applied this conception of predestination to all events, physical and moral, outward and inward.

'Si ad praedestinationem referam humana voluntatem nec in externa, nec in internis operibus illa est liberta.' Since man is born a child of wrath, it follows that he is born without the Spirit of God, and therefore 'nihil nisi carnalia sapit, anath, et guanaria.'

Man has no power over his inward affections, and, though Melanchthon admits that in outward things he has some freedom, even here the power of will will seem to vanish. Thus Melanchthon, applying a transcendental conception, predestination, to the facts of human life, as he read them or understood them from Scripture, came to assert that no real causality existed anywhere but in God's will, and so the betrayal of Judas is as true and as immediately an act of God as the crucifixion of Paul. The reproach of the damned is as proper and in the same sense the effect of God's will as the salvation of the elect. We are not to think of certain events as determined while others are allowed. All things immediately flow out of God's will necessarily. All questions as to the rightness of God's procedure he silences by regarding these questionings as issuing from man's carnal insensitiveness.

It follows from this position that man could contribute nothing to his own conversion. He could not repent of himself, and so-called morality (pre-conversion) has no special place. "Homo parvis praebet, malis potest, nihil pecore.

Carolus est quidquid naturae virum fit, Scorsalis constantia, Xenodochus moderationis, nihil nisi carnalia afflicere maius est."

At this stage we see Melanchthon planted firmly on the experience of God's free grace which gave its strength to the new outlook of the Reformation, combating strongly the popular Roman Catholic view of predestination (a view which was later aided by certain ecclesiastical rites contributed

Synergism, however, is to be understood not from the extreme censure of its opponents, not even from the extreme statements of its advocates, but rather when we look on it as an ethical protest against positions that threatened to submerge the conscience and heart and to disarm the Church in her fight against licence and anarchy. It is therefore necessary to state Melanchthon’s position more fully.

3. Melanchthon’s synergism and its effect on his theological outlook.—Melanchthon’s interest, we have said, was mainly practical, not theoretic. Accordingly his interest latterly in predestination was that of the custodian of morality. He desired to safeguard God’s moral purity from any shadow that might be cast upon it by this dogma and at the same time to free man’s moral nature from the paralyzing effect of a synergistic synergism. His early statements were extravagant. Now he emphatically declared that God could in no sense be regarded as the author of sin. Evil was permitted by Him, but it was abhorrent to His nature. He therefore felt obliged to give up the dogma of an eternal decree of predestination. The cause of man’s sin was in man himself, and the hardening of his heart was due to willful disobedience and perseverance in wickedness. The possibility for his spiritual state was emphasized. The offer of God’s grace was universal. Original sin was a fact, yet man’s will, though it could not initiate a grace, could yet adapt an attitude of welcome or of repugnance to God’s grace offered in His Word. Accordingly we find Melanchthon editing the original Augsburg Confession in this interest.

Art. 18, which originally read, “justitia spiritualis is effected by the Holy Spirit which is received into the heart through the Word,” he altered to read, “justitia spiritualis is effected in us when we are enlightened by the Holy Spirit by the same alteration, adjuration, is made in art. 20. He prepared the Liturgia Interionis in the same spirit; “Although God does not justify men through their merits, nevertheless the merciful God does not act on man as on a block but draws him to his will co-operatively, provided he has come to years of discretion.”

Melanchthon’s position is clearly stated in the revised edition of his Loci (published in 1533) in a sentence that became famous and stereotyped in after controversy:

“In how extreme videntes coniungi ha causas, verbum, Spiritum sanctum, et coniunctionem conversionis repugnantes infinitae mente; or, as he expressed it in later editions; “his concurrents, the two causes both cause and effect, the Divine, Spiritus sancti, et humana voluntas assentient ne repugnantes verbo Dei. Posset enim excutire ut exeat Saul et dominus in autem, sed cur in iussione, sed ne in extremis, sed adjuvante etiis Spiritu sancto conuator assentii in hoc certamen, voluntas separat.”

There is little doubt that Melanchthon applies this to the act of conversion, and his view was that the positive assent of the will was essential, although, as Herrlinger points out, he maintained at times that the help of the Holy Spirit was necessary to enable the will to accept the gospel. While he does not make it at all times quite clear whether this assent was itself the result of the working of God’s Spirit or due to the natural energy of the will, yet he seems to maintain that something must be granted to the will itself, and here is the point on which the synergistic controversy hinges. This ambiguity is noticeable also in some of his earlier statements. Pelagius, interpreting his master as teaching that the will was a causa subordinata, after the Holy Spirit in the Word had roused up the soul.

Latterly he defined the will after Erasmus as facultas applicandi ad se gratiam, and therefore the difference between the saved and the lost is
ultimately due not to election—for even God fore-
saw something in the elect which conditioned His
election—not or repubration, but to man himself.
The difficulty which confronted Melanchthon was
just to determine what constitutes responsibility,
and, even if his solution is defective and open to
verbal criticism, as it certainly is, it is a merit
that he recognized the problem in its seriousness
and that he tried to solve it on moral grounds.

Melanchthon's synergism also affected his
practical outlook. To those who defended civil
and social outrage because they were sinners, and
would remain sinners unless changed by a divine
divine

The

care

consideration, he sternly said that man in spite of original sin had
liberty in outward actions, the reason could control
the will, and the will the bodily movements. No
man could say, like the servant of Zen, that he
was compelled to sin by fate. It is clear that his
soul loathed this Manichasism, as he called it, and
his safeguarding of predestination from those who
so understood it was elanently demanded by the
circumstances of the age and of many ages since.

It is surely as immediate a datum of Christian
experience that the sinner is responsible for his
sin as that he ascribes his salvation to God's grace.

Melanchthon did not take a prominent part in the califical
controversy. He did not altogether deplore over General
statements that 'good works are necessary for holiness,' but by various utter-
sances, when he said that, whilst something is to be said
in justification that is of grace alone, he was anxious to
show that a holy life was the inevitable consequence and the
test of the reality of a justified life. Anderson's statement
that 'good works are harmful to holiness' he characterized as a
leviathanistic hyperbole.1

4. The synergistic controversy—Melanchthon's
statements concerning free will were ambivalent and so
hesitating that men, accustomed to the brevy statements of Luther, and who subject
felt as if he attributed to the will more than he actually expressed, and his acceptance of Erasmus's
formula gave this feeling a colour of truth.

Luther on this point was delinete:

'Ve gethein aund gethein Sachen war der Seelen Hall
betrift da ist der Muench wie die Salenstein, wie Loth's Welt, ja
wie ein Ketze und Stein, wie ein teilt Bild, das weder Augen
noch Mund weder Sin no赫r Herz brauchen.'2

What Luther advocated with zeal Melanchthon
admitted with reserve. It was therefore inevitable, and it broke out violently, occasioned by
two publications of Pfeffinger—a Leipzig pro-
essor and disciple of Melanchthon.

He tried to answer the question why one man under
the preaching of the Word became converted and another did not, and he maintained that one willingly
assented and the other did not. The difference cannot be attributed to a difference in the activity in the divine with
therefore the difference lies in man himself. We must there-
fore attribute a certain synergy to our will. Man even now in
his fallen state is not as a statue or a stone, nor is he purely
passive, for, if that were the case, there would be no difference
between the pious and the impious, the elect and the damned,
Saul and David. God would become a respecter of persons and
the author of continuance in the impious and the damned. On
the other hand, the human will has not the power to effect
spiritual motions without the help of the Holy Spirit, but the
Holy Spirit moving through the Word of God, and the mind
thinking, and the will not resisting but complying under the
Spirit's influence—these are the causes which constantly
produce conversion.

Pfeffinger's defence and explanation of Melanchthon's
views called forth violent opposition especially from Amsdorf and Flacius. The former
(see above) said that, according to Pfeffinger, man could prepare and equip himself for
conversion by the natural powers of his free will without the aid of the Holy Spirit. Verbally
this was a point he held, but essentially it was an element of truth in it. Flacius appealed to Luther's
words and declared that man was worse than a stock or

1 Corp. Reform. IX. 407.
2 Hainry, in. v. 40, etc.
3 Propositiones de libero arbitrio et Questiones quibique de libertate voluntate humanae, Leipzig, 1556.

stone because he offered resistance to God's Spirit.
The will therefore does not co-operate; it opposes
and resists. Every one knows that this criticism,
though infelicitously expressed, is in touch with reality and spoken out of personal experience. As
regards religious matters, men absolutely agree—
he is spiritually dead; the image of God is not
only wholly obliterated, but is transformed into
the image of Satan. Man thus contributes nothing
positive to his own conversion; any
contribution of his is negative and resisting.

Pfeffinger replied to Amsdorf and incidentally
mentioned Flacius. He declared himself more
explicitly as holding that the unconverted will had the
power of either obeying or resisting God's offer in His Word. Thus the controversy raged,
the new university of Jena contending for the old
position of Luther and, violently opposing the
synergistic movement, which was stoutly advocated
by the faculties of Leipzig and Wittenberg.

At last, at the instigation of Flacius, an attempt
was made to silence opposition by authority. John
Frederick III., Elector of Saxony, was appealed to;
and by his command a Book of Confutation and
Condemnation of all prevalent heresies was
published at Jena in 1559. Of its nine divisions
the sixth was devoted to the abolition of
synergism. Those who took that man had
power in his will to co-operate with the grace of
God in conversion were stigmatized as over-
throwers of the grace of God. It was false to
maintain that he can do anything by his free will in
accepting or rejecting grace. Human nature
is wholly adverse from God and hostile to God and
is subjected to the tyranny of sin and Satan.

In a similar strain the oratorians—
Amsdorf, Wigand, Tilman Hessenhusen, etc.—spoke
and wrote against synergism and deduced this
anthropology from their predominant views,
the last-named saying that, in one respect,
2 God did not wish that all men should be saved, for He did
elect all. God's will acts in one uniform way on men just
as on stocks of animals.1

Melanchthon raised his voice against this deter-
ministic delirium and declared that it is absurd
to talk of conversion until the will consents, that
to reject God's grace is an act of will and not an act
of God, and that human nature has no power of
outward actions. An attempt was made to make
the book binding on teachers and preachers,
but without success. Even in Jena, the citadel
of orthodoxy, Pastor Hugel refused to read the
document; and the deacon Strigel raised his
voice on the synergistic side. Both Strigel and
Hugel were imprisoned, and it looked as if
synergism were doomed in Jena, for the university
was strengthened in the orthodox interest by the
appointments of Wigand and Judex to professorial
chairs and by the recall of Musaeus, all of whom
were strong champions of orthodoxy. However,
the prisoners were set free after an imprisonment
of less than six months, and a further attempt
was made to settle the dispute by public dis-
cussion. This disputation lasted from 2nd until
8th Aug. 1559, and occupied thirteen sittings.
The interest for us in these centres in the positions
defended and refuted regarding free will and God's
grace.

To begin with, Strigel maintained that the
substance and qualities of human nature were
not obliterated by the fall nor altered, but only
hindered in their activity. His position he made
clear by a curious physical illustration.
A magnet, he said, cannot attract iron when smeared
with olive-juice, and the rejection of its magnetic power
and it can

1 See Lutherli, p. 241.
case and not in the other. So by the fall man's nature is not destroyed, but only weakened. He is like him who fell among thorns, of whom Jerusalem and Jericho, he is dead, or like one weakened by disease but not dead as a corpse.

Strigel is here aiming at a distinction which satisfies many theologians—that between formal freedom and material freedom or that between natural ability and moral ability, a distinction largely used by Jonathan Edwards but in currency before his day. According to this distinction, man is able to will what he pleases. That is the very meaning of will—it is not compelled from without; but, though man has this natural ability, as a matter of fact he does not will the good spiritually simply because he does not want to—he lacks moral ability.

Seeberg contends that Strigel was groping after this distinction, but did not adequately express it. That is certainly true of him at this Weimar disputation. He did not make his meaning clear, but afterwards he distinguished very clearly between efficacia (δυναμία) or facultas, on the one hand, and capacitas or aptitude, on the other. Man has lost the first through the fall, and this Holy Spirit restores to the will the δυναμία or efficacy or faculty of believing, which was lost by the fall. At this disputation, however, Strigel did not go so far as to say that Flacius if the human will will co-operated with the Holy Spirit before conversion or only after, he hesitated and said that to him conversion was not a point but a line, not the beginning of the Christian life but the whole of it.

It is evident from reading the disputation that Strigel really wished to attribute power to the will, but at the same time to ascribe the chief place to the Holy Spirit. This seems to be an unfortunate term to use of factors that cannot be equated. He repeated the Melanchthonian formula: 'Concurrunt in conversione hac tria: Spiritus sanctus movens coram, vox Dei, voluntas hominis quae voc divinae assemnatur,' a sentence which is ambiguous; and on this point no decision could be reached. On the other hand, Flacius went so far as to say that the very substance of the soul was altered by the fall and by sin, and that therefore man was purely passive, or active only in hostility to God. Peace could not be restored by public controversy. In a few months the majority of all the clergy from the country, and Flacius, a man of undoubted erudition, died in his fifty-fifth year at Frankfort-on-Main. Strigel also left and died in Heidelberg at the early age of forty-five.

5. The Formula of Concord.—After various unsuccessful attempts at a solution of this and other disputes the Formula of Concord appeared, and, as it became an authoritative standard of the Lutheran Church, its position on this topic must be stated here.

The problem is dealt with in artt. 1 and 2 of the Formula, and, while no personal names are mentioned, the views of contending parties are very clearly kept in mind. In the 1st art., dealing with original sin, a clear distinction is drawn between actual transgressions (actualia delicta) and the hereditary sickness of the soul. Man's nature is in all its parts poisoned by inherited sin, and for this condition man is guilty and condemned by God's law, so that by nature men are the children of wrath, and from this state they can be saved only by the benefits of Christ's merit. How this corruption is transmitted is described. God creates every soul afresh, but because of physical generation from corrupted seed the hereditary disease of

...
SYNERGISM

In the Reformed Church the same problem arose, though it was approached somewhat differently. The distinctive feature of the Calvinistic system is its logical consistency; every doctrine is discussed not only by itself but in the light of the whole. The reason, regulatory principle in Calvinism is the sovereignty of God; and, when man's regeneration was viewed in the light of this principle, it was recognized that God's grace acted directly, and not, as it were, reflected and only on those who are not. That is obvious, but whence the difference? It was due to the determination of God. God, who had elected some, did not so as a bare matter of decree or quiescent foreknowledge or fortuitously waiting on their faith, but energetically through a series of efficient means—the redemptive mission of His Son, the preaching of the Word, the irresistible working of the Holy Spirit; and these were effective all along the line in the case of the elect, leading them from spiritual death to grace and glory. Now, in the case of the unregenerated it was a sufficient proof that this divine, all-prevailing efficacy, also existed, that it failed in this link of regeneration. It was non-existent here; therefore it was wholly non-existent. God did not elect them; the redemption of His Son was not purposively undertaken or efficaciously applied in their case. The question of the will is so embedded in the logical coherence of the system that to moot it is to raise the question of the validity of the system as a whole, and that is what happened in the case of Arminius, and especially—for Arminius himself did not attribute regenerating power to the will—in the case of his followers Simon Bishops (Episcopius), Philippus van Limborch, and others. The objections to Calvinism, as far as the subject of this article is concerned, were directed mainly against what was called irresistible grace and the extent of the Atonement.

The Arminians—for we may leave the Socinians out of account; W. Robertson Smith has aptly described them as 'Pelagians of the intellect'—held that grace worked similarly on all, the difference from which conversion arose being due not to God's grace but to man's own will. To them irresistible grace (or, more properly, efficacious grace) meant necessity, and so the responsibility for the final damnation of the lost fell on God. Again, the very fact that by the Atonement the possibility of salvation was opened to all, and they vehemently rejected the doctrine of the eternal reprobation of some, as Wesley so strenuously did afterwards, the Synod of Dort attempted to settle the problem, but in the Reformed Church as in the Lutheran it keeps constantly emerging. Here even more than in the Lutheran Church, which diffeently refrained from applying predestination theories to its anthropological and eschatological views, the problem is an acute one, for the question of God's moral character is raised, and it is from this quarter, rather than from the sphere of religious psychology, that the opposition emerges, and here its strength lies. Hence we find that Calvinistic apologetic has largely been a defense against what is regarded as misunderstandings, perjuries, and unwarrantable inferences. In regard to efficacious grace the Calvinist did not mean that God's grace did violence to the human will by outward or inward compulsion, or that it is all of the will as such, which always has worked and does work voluntarily, but that grace affected the disposition of man in such a way that the resistance of the will was changed into obedience. It was not the observation of the principle of the free will of man, that was most obstacles, but much more the efficacy of grace that

made the will not only in act but in disposition obedient.

Some Calvinists, notably the school of Samur, agreed with the Arminians that the Atonement was intended for all mankind; but the Arminians contended further, that it profited to the free will of man either to concur with or to reject this intention. The Calvinists felt that, while this opened a possibility of salvation to all, it made salvation certain for none, saving a contingency rather than a reality, and they could not understand a purpose of God which could thus be frustrated. To leave the future of mankind hanging on the slender thread of the free will—even if that thread was not itself an illusion—seemed too precarious to be consistent with a purposive God, and rendered the salvation of the regenerate itself problematic, a denial of the perseverance of the saints. Hence the position that the Atonement was meant for those that are saved or to be saved, and that grace is efficacious in the case of the elect; and so the empirical fact that some are not saved inwardly a proof that God's purpose in the Atonement was not meant for them.

Here also, as in the Lutheran Church, and as in the internal disputes on this question between the Jesuits and the Jansenists in the Church of Rome, as well as in the disputes of the Reformers on this point, we see the question at issue in spite of many current currents in the discussion itself. The Calvinistic and Arminian problem is even more illuminating than the Lutheran because it is more conscious of the persuasive nature of the issue. It is a matter not of anthropological simply, but of theology in all its bearings. A survey of the discussion, in spite of the changing outlook of our own day, reveals the palpable dangers on either side and at least teaches us where we are not to search for an adequate solution.

The problem is not an accident of history, but a fundamental problem of thought, perhaps the problem which goes deepest of all—the relation between God and man. It goes deeper and higher than the question of man's place in nature or man's place in history; it is the question of man's place in relation to God.

7. Conclusion.—What, then, is the significance of the synergistic controversy for modern Christi-anity? It would be rather difficult many of the presupposi- tions accepted by both parties alike, whether we look at the discussion as handled by Augustine and Pelagius, by Ficarius and Melanchthon, by Calvin and Arminius, or by Jansenists and Jesuit, are antiquated. The march of natural science has raised afresh the whole question of the nature of man, and the problem is now whether man's nature can be explained from below as a development of life in general. Alongside of the activity of science has gone a prodigious wealth of philosophical speculation dealing with the nature of man, his place in the universe, and the value of his experience and his self-consciousness. If the changes also in the structure of society, the emergence of democratic ideas, and the consequent application of new categories in the explanation of the significance of human life have changed the outlook consider-ably. The more direct activities of Christiani- ity itself, its vast missionary ideals and efforts, the investigations into the psychology of the Chris- tian life, the insight into what is the nature of Christian experience as distinct from what is accident- al or subsidiary—in short, the main currents of modern thought and life—have poured through Christian theology till the old landmarks are submerged, and many are left to wonder whether and what certainty that the unity of experience is a reality and that the problems of the spirit change not,
however much the outlook may change. It is on this changed background and in the light of these tendencies that the problem of synergism can alone be approached.

c. Modern Christianity in all its schools has had a naturalistic conception of man. From this point of view we can appreciate the emphasis laid by the early Greek theologians on man's freedom. Whatever may be thought of these views they are not inconsistent with the point of view as against fatalism Christianity asserts that freedom has a real meaning as applied to man. So all Christian schools to-day, whether they be historically affiliated with Augustinian or Reformed, emphasize freedom as against physical necessity or direct determinism. Freedom has a meaning in regard to man that it has not in regard to matter. It is necessary to be clear on this point because naturalistic necessitarians too often claim the Augustinian and the Calvinist as on their side, whereas they are working on a different level of experience altogether. This is brought out clearly by the following considerations:

1. According to Calvinism and Arminianism alike, man was originally created in the image of God, and his final end is to glorify God and to enjoy Him for ever. That is, man is by nature qualified by any changes brought about by sin and subsists as an inalienable characteristic of human nature.

'A lady once said to me, "The more I see of myself, I see nothing but sin, and mine as my sin."' It is true, but, 'Well, you do not see deep enough. There is something far more proper yours than your sin; and your sin is improper yours. It is a blot in your being, which, if you do not get rid of it, will never cease to be unsuiter to you. No; the image of God is more properly yours, though you had no share in the production of it.'

2. (It has always been held that man is responsible for his sin. He has formal freedom, nor can he ever become a non-moral being in the sense that he can become non-voluntary in his actions or place himself beyond the claims of the moral law on his character. Whatever his actual condition due to sin, these things hold true. His reason, conscience, and will always act rationally, morally, and volitionally. Again, the question here is not whether we agree with the content of this nature as explained by different schools of Christian thought. We may consider that the Arminian view gives too much, and the Calvinistic view too little, real freedom; but the important point is that from the general Christian standpoint man is not defined in terms of conditions, but, however subtle or refined in form. The synergistic controversy has no meaning either for opponent or for defender if the naturalistic view of man is true. The theory of T. H. Green as to the relation of the character to volitions is simply Calvinistic psychology in a philosophical dress, but its whole motive is to overthrow the naturalistic conception of man.

b. Synergism becomes a real problem when man's freedom is viewed in the light of God's activity. We are so accustomed to defending liberty against material necessity in our age that we do not as yet realize that the real problem of freedom emerges on the religious plane. What meaning and content are we to give to man's freedom, not now as against nature, but as against God Himself? The two main streams of thought emerge in history on this question.

(1) The Pelagian, looking almost exclusively at man's free power of initiative, became jealous even of God's influence. Man on this view is a bare individual and largely, if not wholly, his own creator. His sin is a bare act of will, undetermined by what went before and unaffected by what comes after. His will is his unconditionally, for the character is the result of acts of will; but an act of will can alter it easily. His merit is his own, and his salvation is his own. God never gets inside the azygion of man's free spirit, and free will is primarily the power of choosing between alternatives.

(2) To the Augustinian the problem was far more complicated. He recognized that man was organically related to the past. The influences of the past affect his will and disposition and character. He does not begin as a moral neutral or moral unit. Sin is more than a bare act of will. When a man becomes self-conscious, it is there not simply as the result of a wrong choice, but as the fruit of a vitiated disposition and itself a source of vitiation. The characteristic of moral awakening is the discovery of our bondage. We become conscious of our need of freedom more than of the fact that we are free. The interposition of God is not regarded as a violation of freedom, but welcomed as the restorer and succourer of true freedom itself, which is to be found under all the circumstances, in accordance with the highest. This deeper view of man led Augustine to the certainty of pre-individual iniquity—racial evil—as it led Kant to posit it as a supra-temporal fall. Of course there are phrases like original sin, the guilt of Adam's transgression, the fall of Adam, supra-temporal fall, and it is right to aim at verbal accuracy if possible, but it is essential that the repudiation of inadequate phraseology should not be met with by the rejection of the realities bodied forth by inaccurate phrases.

We have the same tendencies in philosophy in our day represented by naturalism in its many forms and by absolute idealism. The former is so alive to the importance of the individual that in its extreme and logical forms it makes the individual eternal a parte ante, and, if God is represented as it is, as a priva inter partes; the latter is so conscious of the claims of God that it tends to annihilate the personal life of the individual a parte post. The problem as to how a man can act against God's will is insoluble intellectually, and the Calvinist has great difficulty, in spite of his insistence on man's accountability and God's holiness, in saving himself from the pitfall of pantheism where sin is glorified into something divine, differing from what it is to the conscience. Yet, however sinful man's state may be, however the sinner may be alive to the deep-seated nature and wide extent of this diseased self-subsistence responsible to him, he cannot devolve the responsibility on God or on circumstances. That is the moral attitude. The intellect may attempt to explain sin either scientifically as a residuum from our animal origin or philosophically as due to finitude or as a necessary stage in our development; but every explanation that explains away the moral attitude is itself unsatisfactory. Pantheism, material, philosophical, or theological, sinks shipwreck on the conscience. But, on the other hand, though we are compelled to recognize centres of activity acting contrary to God's will, it is impossible to give them the self-subsistence that we give to God. Even in sinning they depend on Him and are within the scope of His control. The Christian doctrine of creation—creation in time, for creation has no other meaning than to designate dependent beings derives from anthropology and pluralism alike. While all subsist in God, personalities have a limited power of self-antagonism to God, but they do not compel God to disown His character as a free and responsible sustainer of all. He creates personalities with the capacity to create themselves. Their endowments and faculties, which vary so much as regards both individuals
SYRIANS (or Arameans).

and races, which are also so clearly dependent on their historical setting, are of God. It is this interaction of God with His world, which accounts for the presence of high ideals among men however sinful, for the unrest and lack of harmony in the life of man of which Pascal speaks so eloquently, and it is this that makes salvation possible and essential. The Augustinian tended to view man's original constitutive nature as made in God's image as an affix of an ideal human ancestor, and to leave man's will, he argued, in a fruitful organic relation. A logical distinction was made an absolute distinction in rerum natura. The divine image in man was practically regarded as a fulgur appearing once in Adam for a brief space, but now no more; but sin has meaning only when the alienable immanence of God in man is fully recognized. The Church has never agreed to the Fincian view of human nature as itself sin; but its language has often been perilously near it, and, when it has, protests have been raised, as in New England, where the amiable qualities of man have been emphasized until the need of salvation has been minimized or evaporated. On the ground, then, that man's original creation we must say that man has freedom which, alas, has been exercised against God Himself, though given by God and intended by Him to coincide joyfully with His own.

How to reconcile God's holy omnipotence and foreknowledge with this human fact seems an insoluble problem. We must give content to God's predestinating activity; it is not enough to posit a quiescent, non-interfering divine knowledge; otherwise there is no guarantee of the ultimate success of God's purposes. But, on the other hand, we must not look on God's grace to increase the moral cause of sin or as acting mechanically in man, and certainly not as an insurmountable barrier to the recovery of his true freedom, and that in a moral way.

The syncretist fought against a view of God which made Him in the case of some men the obstacle to salvation, withholding His grace from some, and making remedial provision only for some; and in this the syncretist was right. Here again the Christian doctrine of the new creation is the safeguard. God is not only inalienably immanent in man by virtue of the first creation; He is also redemptively active in man through Christ. The syncretist is mainly right in his psychology of conversion.

God's grace is efficiently active, and the consent of the will is the result of that activity; yet He is active in harmony with man's true being, and man's consent is voluntary. Man does not simply accept the offer of grace by the power of his unaided will and so convey it into the soul. His will is never unaided; grace comes into the soul as a power of God moulding the will itself. The acceptance itself is not the cause of its presence. The supremacy of grace and its efficiency is maintained by the religious consciousness on self-examination, but the acceptance itself is an act of will.

The miracle here also is not that a man's will should be effectually moved to harmonize with God's redemptive activity; the miracle is that some men should resist even this. It is not to be thought that their resistance is due to the fact that God withholds or withdraws His gracious activity, for He uses it for the other. The gospel offer is to all, even the Calvinist says, and it is a bona fide offer; it is more, for the cost to God—what we mean by the Atonement—is so real and so great that the activity of God is an energy penitent. God does not deal with the sinner simply in the way of punishing him; He deals with him in a redemptive way. How can this fact of man's resistance, again, be reconciled with God's omnipotence? Many, like Schleiermacher, find refuge in final universal salvation, in a probation extending beyond this life. But God's omnipotence is a reality which recognizes man's possible and essential freedom, it values man's freedom. This resistance does not annihilate the divine omnipotence, nor does it rob God of His character as Creator and Redeemer, He is the One which were the Father in the Old Testament.

The value of synergism is in its denials. It is wrong to regard God's activity as doing violence to this initiative of man. The weakness of synergism is that it tends to regard this activity of man as separate from God with beginning and as not co-operating with God. The relation between them is more intimate. God Himself is present from the outset in this freedom; and when, as in Christian experience, the soul awakens to the presence of God, then it is felt that God has done so much in Christ, and is doing so much, that it is joyfully acknowledged that the will's power is His, and the renewal of it is His work. Salvation is not an acquisition of a new freedom, but the welcome deliverance and liberation of the whole personality. Religion in its strength emphasizes God, and in so doing frees man into the liberty of joyful service.

C. E. Luthardt, Die Lehre vom freiem Willen, Leipzig, 1893, gives a detailed history of the controversy in its origin and development, with the Arbeiten Melanchthons zur Lehre der Notgeltung, Leipzig, 1884; Florow, De synergismo Melanchthoni, Tübingen, 1887, is a special handling of the subject referred to by G. Kauerau, who has written much on the various antagonisms in the synergistic controversy; see Schmied, Kautzsch, cit. 239 f., also PFRK xiv. 225 ff., E. F. Fischer has a trenchant Melanchthon's teaching on conversion (Melanchthon's Lehre von der Entbundenheit, Tübingen, 1905; and Paul Tschackert, Die Entstehung der lutherischen und der reformierten Kirchenlehre, Göttingen, 1920, pp. 320-321, is an excellent summary.

SYNODS.—See COUNCILS AND SYNODS.

SYRIANS (or Arameans).—I. General introduction.—The Hebrew 'Aram' is rendered in the LXX by Συρία, 'Syria.' We may therefore take it for granted that originally the words 'Arameans' and 'Syr' were synonymous. At a later time 'Syrian' and 'Assyrian' were used indiscriminately: 'Aσσυριανος = Συριανος = Συριας.' According to Gn 16., Aram was one of the five sons of Shem, and, according to Gn 10., Aram was the father of Uz, Harran, and Sha 'al. The Arameans, or Syrians, are therefore Semites.

A complete study of the Arameans would include that of all the races whose languages, manners, and religion are to be found within the Syrian scope; but our purpose here is to consider only the pagan Arameans. We shall not touch upon Western (i.e. Biblical) Aramean, represented by several quotations preserved in the OT and PSE in the form of the Egyptian papyri and ostraka, particularly those of Elephantine, nor the Jewish dialects.

SYRIANS (or Arameans) 165

represented by the Targums, the Megilloths, and the Jerusalem Talmud, nor Samaritan, nor the fragments of Christo-Palestinian literature. All those are of the greatest importance from the general Aramean point of view, religious as well as philological, but are outside the scope of this article. The same remark applies to the different branches of Eastern Aramean, which includes the Babylonian Talmud, the literature, language, and religion of the Mandaeans, Mandarins, and Harranrians (q.v.). We shall also leave untouched the study of Syriac (language and literature) and the chief Neo-Aramean (Christian) dialects.

The principal names of the Syriacs are the Palmarenes (q.v.), the Nabataeans (q.v.), and the Syriacs of Damascus and of the region north of Syria. We get our information on these races from the OT, ancient inscriptions, and Latin and Greek coins and documents.

The ethnic arami, ἀραμικ, 'Aramaean,' is found in 2 Kgs 23:20, Gn 25:29, Dt 26:5. Its fem. is aramitaa, ἀραμιτά, in 1 Ch 7:44. The plur. is aramim, ἀραμιμ, in 2 Kgs 8:10, 32. The corresponding Greek of the LXX is respectively ἀραμικον, ἀραμίκον, τοῦ ἀραμίους ἐπισκόπου, ἀραμικός, ἀραμικαί. The most famous of the Syrian kings was Zedekiah (Gn 34:31), etc.; cf. Ἰωάς (1 Ch 27:4); cf. § 261 (5 § 261). The adverb ἀρανθ in 'Aramaean,' is translated by the LXX ἀραμαίω, εἰς την ἀραμαίω, § 1536, § 1536, § 24, § 24.

The OT gives the following information on the pagan Arameans.

Aram Zobah (Zoba). דָּעַר זֹבָּה (LXX τὸν Ζωβάν Σωπα), in 1 S 14:17, 2 S 8:28, 10:5, 1 K 11:35 etc. This expression means an Aramean state in the north of Canaan or its capital. The town of Zobah was situated in Lebanon, according to 1 Ch 18:12. Aram Mu'akka (Moab), מֹעָכָא (LXX τὸν Μωβαπαίον, ἐν Μεσοποταμίᾳ, ἀλάβα τὸν Ζωβαίον (Gn 14:7), etc.; cf. Ζωβαίον (1 Ch 27:4); cf. § 261 (5 § 261). The nebrev 'mac, 'Moab, is' is translated by the LXX Μωσαμβά, in 28:7, § 258, § 258.

Aram Beth Rebah (Beth Rehob). בְּתֵה רֹב (LXX Ροῦ), in 1 S 15:5, 1 S 15:36, or of the name of the sons of Aram when fighting against Joab, David's general. They took to flight before Joab, who re-entered Jerusalem in triumph. Rehob is said to be in the north of Palestine, in the region of Laish, or Dan (Gn 15:9).²

Aram Naharaim (Nahor, נַחוֹר, LXX τὸν Μεσοποταμίαν), is identified by the LXX with Mesopotamia (Gn 20:18, Dt 26:2, Jg 3:1, 1 Ch 16:9); 'Syria of the two rivers.' This is a mistake. Naharaim means 'country of the river,' and corresponds to the Nahrims of the Tel el-Amanus letters and to Nahalim in the Egyptian royal inscriptions. It extended over two banks of the middle Euphrates.³ At the time of the Khai the name Naharaim was given to the country lying between the Balikh and the Orontes.⁴

Paddan Aram (Pudon-aram). פַּדְדַן אֲרָם (LXX τὸν Μεσο- ποταμίαν), in Gn 25:22, 28:2, Jg 3:1, 1 Ch 17:16, 'Syria of the two rivers.' This is a mistake. Aram (q.v.) perhaps refers to northern Mesopotamia.⁵

2. DAMASCUS. —Aram Damasqūs, δαμασκός (LXX Ζωπά Ναξακοος), in 2 S 5:14; 1 Ch 18:14, is Syria of Damascus, which came to the help of Hadadezer, king of Zobah; David slew 22,000 Syrians and put garrisons in Syria of Damascus (Syria-Damasus).

In the course of time Syria (Aram) comprised numerous divisions, the chief of which, besides those mentioned above from the Bible, were: Batania, or country of Bashan, Connagene with its capital Samosata, Cyrhhestic-with Cyrihus as capital, and to the south is this region, together with its capital Chalybon (Haloπ=Alip), Cilene-Syria with Heliopolis (Baalbek) as capital, Seleucia, or Tetrapolis, with Seleucus, Antioch, Laodicea, and Apamea as principal towns. Chalced in with its capital Chalceia (Kimnesean), etc. In many cases we have not enough information about these divisions to treat them separately. The best plan will be to give a résumé of the details supplied by history, inscriptions, and other documents, grouping them round Damascus and the Damascene.

The god who received most worship was Hadad, whose consort was the Syrian goddess, or Atargatis. This god was also called Ramman or Ramman. These two names appear as early as 3000 B.C. in the cuneiforms. This deity does not appear in Phenician texts. Hadad is represented in Syria and Mesopotamia. He is the god of lightning and thunder; he shakes the mountains; he is beneficent when he sends the rain which fertilizes the earth; he is the destroyer when he sends floods and inundations. According to the inscriptions of Senjirli, Hadad was the first of the gods of northern Syria in the 8th cent. B.C. His chief sanctuary was at Hierapolis (Mabbeg, Manbij), near the Euphrates.

He was specially worshipped by the agricultural populations of Syria as the protector-god of the harvests. In time his cult became confused with that of the sun; his head was then ornamented with rays; this identification is particularly noticeable in Heliopolis (Baalbek), where the cult of Hadad and that of the sun are one and the same. In Roman times Hadad became Jupiter Optimus Maximus; he was associated with various local deities (Dolichenus, Hadaranes, Heliopolitanus), but he can always be recognized by the fact that he is represented with the bull or that he is mentioned along with his consort, the Syrian goddess Atargatis. A third personage is usually connected with these great gods, regarded as their son or their daughter. These three together form the triad known as the dii syrii. They have sanctuaries in a great many Syrian towns—Rhosus, Raphanae on the Lebanon (in Graeco-Roman times). But the principal sanctuary of the Syrian gods, after Hierapolis, was Damascus, and the Bible mentions kings of Syria in the 9th cent. B.C. with theophorous names, such as Ben-Hadad, Tabrimmon. It is even possible that this cult of Hadad exercised a certain influence on some Israelite centres, which would explain the representation of Jahweh by a young bull. In Roman times Hadad became Jupiter Damascus. In all probability Jupiter Heliopolitanus, the god of Heliopolis (Baalbek), should be identified with Hadad.

The consort of Hadad is Atargatis, the great Syrian goddess—also under the names Alit and Venus—who must not be confused with Astarte, the Phenician goddess. Coins of Hierapolis call her 'Ate or Atargatis.' She was represented with her head surrounded with rays. The symbol of Atargatis was composed of the crescent moon in conjunction with the solar disc.

Besides the divine couple, Hadad and Atargatis, the Syrian pantheon included other deities, of secondary rank, several of whom had a purely local character.

Reshef, or Rashaf, was the incarnation of thunder and lightning. He was often represented as a soldier armed with spear, mace, bow, and shield; he carried on his helmet a gazelle's head surmounted by two sharp horns. Reshef is also met with in Phenicia and in Cyprus. He was in later times identified with Apollo. Some scholars regard him as a Phenician rather than a Syrian deity.

The inscriptions also mention Rekub-el, 'the charioteer of El,' who is probably an importation into Syria of the charioteer of the sun-god of the Assyrians. El was an important god, but did not occupy the first rank in the Syrian pantheon. Bel was worshipped in Syria, as in Assyria, and among the other Semitic races.

Alongside of sun-worship the Syrians devoted a very special cult to the moon-god. Of two
SYRIANS (or Arameans)

Niebrg inscriptions (6th cent. B.C.) one mentions Sahar, Shammas, Nikkal, and Nusk, the other omits Shammas, Sahar, and Nusk. In addition, only Sahar, Nikkal, and Nusk, the moon-god, was the chief deity of Harran. His wife, Nikkal, corresponds to Nin gol, 'the great lady,' wife of Sin, the Assyrian moon-god. Their son, Nusk (Nusku or Nushka, in Syrian), represents fire, according to some scholars, and, according to others, he personifies the crescent moon.

The stele of Teima (an oasis in the north of Arabia) mentions the ancient gods Teima, Singalla, and Ashira, gods of Teima. La Grange proposes to identify Salm with Salmu, the 'dark,' the dark planet, i.e. Saturn. According to other writers, the word salm, 'image,' 'statue,' means the idol of the local god (ba'al) of Teima; Singalla is of Assyrian importation and denotes the great Sin; Ashira corresponds to the Asherah of the Canaanites.

An inscription recently discovered by Pogon in the region of Aleppo, but probably the oldest Syrian inscription, mentions not only Zakir, king of Hamath, and Laash, but also a new deity, the god Kekub-El. He is the son of a local god, the genius bust of Hazak, for in the continuation of the text the important part is ascribed not to Altur but to Bar' alf Shamain.

Of the three Sejnirli inscriptions that of Hadad, the older, mentions the gods Hadad, El, Reshef, Rekbuk El, Shamash, who, according to Panammu what he asked of them. Lagrange calls attention to the fact that no goddess figures in this list. The same is also true of Anu declared that of Panammu dates from the reign of Tiglath-Pileser III. (754-727 B.C.) and mentions the gods Hadad, El, Rekbuk El, Shamash, and all the gods of Jadi. The third one, called that of Barrekeb, dates from the same period, but does not mention any deity, except that Barrekeb declares that, on account of his loyalty, his lord Rekbuk El and his lord Tiglath-Pileser have placed him on his father's throne.

When Zenobia was taken captive to Rome, the cult of the Syrian gods penetrated to the great city with her (or before her). This fact is now duly established by the discovery of a sanctuary to the gods of Harran in the Nasser villa.

We read inscriptions dedicated to the Syrian god Adad (Hadad) of Lebanon on a small white marble altar. There is also an inscription dedicated 'diis syris' at Spalato.

To the north they became masters of Trans-Jordan as far as Damascas. The oldest Nabataean inscriptions, discovered on the south of Damascus, date from the 2nd century A.D., but inscriptions at Petra and ed-Druz, a little later. At the beginning of the 1st cent. of our era, Arab influence makes itself clearly felt, especially in the regions of Hegrâ and Medain Sakh.

The Nabataean sources now in our possession are inscriptions, which are published in the second part of C1Z, and coins, which have been studied most recently by H. Dussaud and have revealed an almost uninterrupted series of kings, of whom the eldest is Malicthus I. (90 B.C.) to Malicthus III. (A.D. 106). But before these dates a Nabataean race was known which in 312 B.C. was powerful enough to gain the victory against Antigonus. After this victory the Nabataeans, an essentially trading people, occupied the north of Arabia, the country of Edon, and the Damascene. F. H. Vincent has gathered together all that is known concerning the Nabataeans.

The Nabataean inscriptions are also of chief importance for the history of the Nabataeans, who were a tribe, with the exception of some nomads; they honoured the sun, to whom they built an altar on their houses, and to whom they offered libations and burned incense. The following are the principal deities. Dushara (Dusares) seemed to occupy the first place in Nabataean religion, and his name was perhaps the same as that of the oldest god of the Edomites. The names of the goddesses Vagrada and Tâda are from a doubtful reading as well as those of Naushu and Elge. The Syrian god Bar'alf Shamin was also adopted by the Nabataeans. The Nabataeans erected temples to their gods. The temple comprised a small building to contain the statue of the god, a sacred enclosure (barrak), votive stelae, and niches for the images.

Whether the Nabataean inscriptions in the Nabataeanised Arabs or real Arameans, they gave a very large place in their pantheon to the deities and cult-objects of Aramean or Syrian origin. See, further, NABATAEANS.

4. The Palmyrenees.—See art. PALMYRENE.

LITERATURE.—In addition to the literature appended to art. PALMYRENE, see also:—M. de Chambry, Les Clefs de Palmyre, Paris, 1877; L. G. Deville, Palmyre: souvenirs de voyage et d'histoire, Paris, 1894; H. Dussaud, Notes de mythologie syrienne, pp. 80, 81; DE. E. E. Dusseaud, Les Langues d'Araméens, d'Araméens, et d'Amazéens, Paris, 1910, pp. 12-51; Répertoire d'épigraphie syrienne (published by the commission of the C1Z), do. 1900 ff.
5. Syrian cult.—In their pantheon, as in their religious practices, the Arameans had naturally very close relations with the Assyro-Babylonian cults on the one hand and with those of Phœnicia and Canaan on the other. They preserved the local gods in cults, in conjunction with the worship of sun, moon, and stars, preferably on high mountains or sharp mountain-peaks, regarded as the abode of the gods. They worshipped sacred trees or groves, placed in the fields. They also rendered worship to sacred springs, and Palmyra possessed a specially consecrated river, whose Tyche was venerated. Certain sacred rivers had miraculous powers; if the offering sank to the bottom of the water, it was approved by the deity; if it floated, it was not approved.

As among the rest of the Semites, sacred enclosures have been found among the Arameans, known as ḥaram, and much used among the Arabs. The boundaries of the ḥaram were fixed by steles, several of which have been recovered during the course of excavation.

We have little information concerning the after life among the Semites in general, and the Arameans in particular. Like the ancient Hebrews, they probably had Sheol, the kingdom of the dead. From the Semjšrī, a Jewish and Neœraic inscription, which contains a few funerary texts, we learn that the Arameans believed that a part of the dead person survived, called Ṉepēha, 'soul.' It was a material principle, to which they had to offer food and drink.

Among the most venerated objects of worship we must mention the sacred stones, or betyla, which assumed various aspects. The presence of the god was materialized by a stone placed in the sacred enclosure. The inscription of Hadad shows that the Arameans worshipped the nasib, a hewn stone or statue. A Palmyrenian inscription shows among the Arameans the use of the wasebih (q.v.), in the sense of 'stele.' And they distinguished between the funerary stele, naphah, 'soul,' of pyramidal form, and the votive stele, napāζa (whence our word 'mosque,' through Arabic), which meant the place in which the deity was worshipped.

As regards the personnel of the cult, we hear of the priest, ṇomēr, attached to the service of such-and-such a god. It was he who offered the holocaust. Barbers played an important part, both in performing the ritual incisions and in shaving the heads of those who dedicated their hair to the deity in consequence of a vow. There are also scribes, charged more especially with keeping the accounts of the temple. Sacred prostitutes were not lacking in the Aramean cults; and lastly we must mention the familiars of the temple, who rendered services to the faithful who came to worship or make vows, and who lived in the surroundings of the temple, finding their food in the remains of the meals offered to the gods.

6. Calendar.—The Aramean calendar is fairly well known; the Nabateans and Palmyrenians employed the Seleucid era, and for a very long time the Syrians made their year begin in autumn. The names of the months of the Palmyrenians are all known: Tibrī, Kanūn, Kalūl, Tḥl, Shḥb, Adar, Nīn, Ir, Šion, Qīnān Ab, Etul. Those of the Nabateans are the same, except the second and tenth, which are not known. This information refers to the Roman times. The ancient names of the months have not yet been brought to light by the oldest inscriptions (Semjšrī and Neœraic).

FRÉDÉRIC MACKLER.

SYRIAN CHRISTIANS.—1. Scope of this article.—Much confusion has arisen from the fact that several different bodies of Christians—Jacobite, Maronite, Nestorian, Malabarese, and others—habitually call themselves "Syrians," as well as from the fact that the word 'Syria' itself has meant different things at different times. It will therefore be well at the outset to define the scope of this article.

The East Syrians or Nestorians call themselves 'Sirəyâ,' said to be a corrupt form of 'Sirâyâ.' The Syrian Jacobites are in the Syrian variety of 'Sirayâ'; by way of distinction (or by confusion) 'Sirayâ' and or 'Syriac' and or 'Syrians.' The name 'Syria' (Syr. Sir̄yā, Gr. Συρία or Ζύπφ, 'a locis Palestine martiniis') has been derived from Tȳrr̄, Tyr, 'Tyre,' and it was used with a different sense, &c. It varied in meaning from time to time. In Roman days, at the beginning of our era, it denoted the country west of the Euphrates and north of the Arabian desert, including Palestine and Palmyra, and extending north to the Taurus; though the Roman procurators or the Herods ruled all or part of Palestine, being more or less independent of the governors of the Roman province of Syria. It has also been called 'Inner Syria' meant Palestine (and the coast lands to the north thereof), and 'Outer Syria' meant Mesopotamia. The modern Turkish vilâyet of Syria is only a fraction of the old Roman province, and lies east of the Lebanon, extending from Hama on the Orontes in the north to the Hedjaz in the south, Damascus being the capital, while the vilâyet of Beirut is west of the Lebanon, and the old Judaea is an independent sanjak under a muqādir. Thus the term 'Syrian Christians' has little relation to the term 'inhabitants of Syria.' The most comprehensive definition of the former is 'The Christians who worshiped the Syrian language in their liturgical services or as a vernacular.' It thus includes the Jacobites of Mesopotamia, the Nestorians, the Maronites of the Lebanon, the Syrian and Chaldaic Unions, and the Christians of St. Thomas in Malabar.

The history of many of these Christians has usually been considered in Europe only as far as it affects their relations with certain heresies, i.e. only from one episode word the Bible of the Aramean of the OT, or 'Chaldee,' as it is used to be called), perhaps not more distant

SYRIAN CHRISTIANS

than some dialects of 'English' now current in the British Isles are from one another. The Edessa Syriac was the medium of commerce in the valley of the Euphrates, and was used far and wide for literary purposes. But, though this was, and is, a written language, oral dialects of Syriac were spoken vernacularly throughout a very wide district, from the Mediterranean to the eastern limits of Mosopotamia, Assyria, and Adiabene (east of the Tigris), and southwards to the borders of Egypt and Arabia. There were many Syriac-speaking monks in Egypt in the 4th cent. and, later,4 Even the Armenian Christians used Syriac till the 4th century.5 Thus there were many Syriac dialects. They were not the lineal descendants of classical Syriac, but were rather in the position of sisters or nieces of that language.

Syriac gradually gave way, vernacularly and to some extent liturgically, to Arabic after the Muhammadan conquest, though it has had locally a considerable influence on the vocabulary, pronunciation, and even the grammatical forms of the 'Arabic' which succeeded it.6 The Christians who now speak it habitually are the East Syriacs (Nestorian and Uniat Chaldeans), among whom it is practically the only language used (though the spoken Arabic), the Jacobites of Jebel Tar, and the people of Ma'lu' near Damascus. The other Jacobites and the Maronites now ordinarily use Arabic for their vernacular. The Malabarese have probably never used Syriac vernacularly—unless the immigrants from Persia used it for a while (see below, § 9)—but have always spoken an Indian dialect. It may be noted that many Jews in E. Turkey and Persia have a vernacular closely akin to the spoken Syriac of the Nestorians; and the language of the Ma'laezeans (q.v.), or so-called 'Christians of St. John,' if they still exist, is another branch of Aramaic. In the early ages of Christianity the literary language of Syriac proper was Greek (see below, § 3), but Syriac was the popular language there till after a.d. 500. It should be remembered that Antioch itself was a Greek, not a Syriac, centre. The Syriac was predominantly Greek, though Syriac was the language of numerous monks in it and its neighbourhood, and of the country people.

The above-mentioned Christians use classical Syriac as their liturgical language; and many of them use it still as their literary language, as all did till the Middle Ages. It will thus be seen that the prayers in the Church services are only imperfectly, if at all, understood by the majority of the worshippers. In Syria proper, however, many of the prayers are said in an Arabic translation, so as to be intelligible to the people; they are then written in Syriac characters, and this combination of Syriac and Arabic is called Carshuni (Syr. garshāni).7 But those services which are the bishop's own—e.g., ordination—are in Syriac only, as are all the prayers which are said inaudibly by the priest.

The vernaculars differ from classical Syriac in different degrees. The East Syrian vernacular dialects, which vary a good deal among themselves, differ from it perhaps as much as Italian from Latin, while the Ma'lu' dialect has retained more of the older grammar and is less analytically developed.8 This last vernacular is particularly noticeable as being preserved by those who are so far isolated from other Syriac-speaking Christians. Ma'lu' (called Seleucia by the Turzi) is a village of some 1000 inhabitants, situated about 5000 ft. above sea-level, north-east of Damascus; while two neighbouring villages, though most of their inhabitants have become Muslims within the last 250 years, also speak Syriac vernacularly. Ma'lu consists ecclesiastically of two divisions; half are of the Uniat Rite (see below, § 6), half of the Greek Orthodox rite. Each division has an ancient monastery.9 This distinction is that it is spoken by the immigrants from the east, from the district of Singar or Sinjar (west of Mosul), and by those largely inhabited by Yazidis, or so-called 'devil-worshippers'; but this tradition is very doubtful value.10

Of all the Syrian Christians, whether they have lost their own vernacular or have retained it, it may be noted that their clergy are supposed all to be able to read and write and understand classical Syriac; and most of them can do so, and can even, with some difficulty, speak it. But this is now only as a foreign language.

There are some differences of pronunciation. The East Syriacs (Nestorian and Uniat Chaldean) say ă when the West Syriacs (Jacobite) and the Maronites say ē (e.g., modēk, modēk, 'a king'), the former being the older sound, preserved to us in translations (cf. "Sylloge," p. 57); but in other cases (e.g., Syc, Māran ethth or possibly Mārkān thā). The East Syriacs hardly ever aspirate p (except when it is used to form a diphthong); many of them pronounce r or ṣ; almost all of them pronounce the vowels Rīśās (Rīśās) and Rīśākh alike as B, the sound being produced by the tongue placed above the upper teeth (e.g., Zaşāp, Zašāp) with or without aspirated ṣ or p. One point with regard to transliteration of Syriac words into Roman characters must be mentioned: whereas the Asiatics retained a medial consonant in certain verbal formations and in words derived from them, the Syriacs is said to be retained (e.g., 'Adās for 'Adā). The Syriacs themselves, however, dislike doubled letters, and in their vernacular admit them only in a few (so-called foreign) words, and in that case they pronounce each letter distinctly, like the d's in 'mid-day.' On the other hand, the contemporary Aramaic of the Akkadian and Assyrian type is very similar to this, the medial consonant by converting a preceding short ı into a long one. Most of them pronounce aspirated ṭūkh (ṣāk) and  withd (lāk) alike.

3. Syrian Christianity in early times.—In considering the spread of Christianity in these regions before the theological controversies of the 5th century, caused the divisions which exist to this day, we are faced with the difficulty that legends are the traditional groundwork of the religious history. It is not easy to estimate the amount of truth or falsehood that underlies the legends; but there is no doubt that all these regions were largely Christianized at an early period.

(a) The Roman province of Syria.—Here we are not troubled with legend. In the 1st cent. of our era the province extended to the Euphrates, but was conjoined with Cilicia.2 Antioch was the civil metropolis, and was likewise the headquarters of Syrian Christianity; there the disciples were first called 'Christians' (Ac 1119). The Greeks and Syrians were both represented at Antioch (see above, § 2). There is no evidence as to the extent to which the Church services were conducted in the Aramaic vernacular rather than in Greek; but probably, at a time when the worship was in the main extemporaneous, both languages were used. Though most of the people, perhaps, understood Greek, even if it was not their mother tongue, yet experience shows that the last place in which a vernacular gives way to the language of commerce and public life is that of religion. It is therefore probable that Syrian Christians in the Roman province to a large extent worshipped in their vernacular from apostolic times onward. But Greek was the literary language. Ignatius, bishop of Antioch at the beginning of the 2nd cent., wrote in Greek (he calls himself 'bishop of Syria');4 Lucian and Dorotheus of Dorothea11 (cf. 1 Cor. 11, 10), and Theodore, bishop of Mopsuestia (both these of Antioch), Chrysostom, Theodore, bishop of Cyrrhus—all of the 4th and 5th centuries—did

...The Antiochene school of theology was...to dismiss Addai as mythical. A trace of the mixture of the Greek and Syriac elements may be seen in the Pilgrimage of Silvia ("Etherea"), a work probably of the 4th ec., which describes the bishop of Jerusalem as knowing Syriac ("sivide"), but believes in Greek ("greekos"); b) having his sermons and the lections interpreted into Syriac by a presbyter who stood by.

In the 4th ec., when the provincial organization of the Church was grounded, Antioch was one of the great centres, and its bishop was called a 'metropolitan'; the corresponding verb is found in can. 19 of the Council of Antioch in ex ecrs. (A.D. 341), and the name itself in can. 6 of Nicaea (A.D. 325), which says that the rights formerly possessed by Antioch must be preserved to it. Thus Antioch had long exercised some sort of jurisdiction over neighbouring sees. Yet the Apostolic Constitutions, a Greek work written in Syria c. A.D. 375, does not mention metropolitans, any more than the other 'Church Orders' do. This is important in connexion with the supposed dependence of Seleucia-Ctesiphon on Antioch, for which see below (c).

(b) Edessa.—This famous city of Mesopotamia, called in Syriac Ur-hâ (now Urfa), was the capital of the kingdom of Osroene (a Greek name derived from Ur): Ur-hâ'. 'Edessa' was the Greek name for the city. The kingdom was independent till A.D. 216, when it was incorporated in the Roman empire. According to the well-known legend of Abgar and Addai, Edessa was Christianized in the middle of the 1st cent.; the legend is given in full in the Doctrine of Adadai (see below, § 4), and in a shorter, and perhaps more original, form by Eusebius, who says that his account was translated from the Syriac. Edessa is mentioned as a heathen city, which worshipped (the Doctrine tells us) Bel and Nebû, though Burkitt suggests that these names come from a perusal of the OT and not from any real historical reminiscence. Abgar, the heathen king or toparch of Edessa, sends messengers to our Lord, and a correspondence ensues; after the Ascension the apostle 'Judas Thomas' sends Addai (called by Eusebius Taddeus, and said to be one of the Seventy) to Abgar to teach him the faith. Addai does many mighty deeds; one of his converts was Aiggai, who 'made the silks and headbands of the king,' and he was made bishop. If Addai's successor was not a natural death at Edessa, Aiggai was afterwards martyred by the son of Abgar; and, as he could not consecrate his successor Paûlût by reason of his sudden death, the latter was sent to Antioch and was ordained by Serapion the bishop. Narsai, king of Assyria, sent messengers to King Abgar to learn about all these matters. Such is the legend. As we have it, it is of the 4ec., though clearly based on one that is a good deal older.

For the Acts of Addai and that of Theophilus see below, § 9.

(c) Antioch.—The most independent of the kings of Edessa were called either Abgar or Maûkå.

In a Syriac Præsbyteriæ Judææ Thaddæi in Syria Thaddæus is associated with St. Peter, not with St. Thomas.

16 The title of the Myth, I.g. 466. Burkitt has pointed out to the present writer that the pronunciation with short e is not found in the mythical form of the name, 'Mattïa.'

17 Eusebius, HE iii. 16. 18 112 DB. ii. 188 n.

For Epiphanius see also Theodore, H. 28, and Jerome, de Vir. Illust. 113; for a very unfavourable view of his intellectual works see Burkitt, Early Eastern Christianity, p. 94 ff.
after he attained to manhood; and he became a great ascetic, and the friend of Cyril of Alexandria. At the end of his life he strenuously opposed Nestorianism. The other fathers of the 5th century were his contemporaries. Ibas (who lived from 435 to 457), who was inclined to favour Nestorius (see below, § 8).

During all this period the Church seems to have made rapid progress. Enaesius, a third-century bishop of Edessa, living in the eastern desert of Syria and Mesopotamia, attended the dedication of Constantine’s great church at Jerusalem in 335.

(c) The Persian empire.—A great deal of light has been thrown on early Syrian Christianity in Persia by the recent publication of the works of Nestorian writers. Formerly we had to rely mainly on the accounts of Jacobite authors like Bar Hebræus.

This is another myth and disprove more than one myth; and Neale’s narrative in his History of the Holy Eastern Church needs much correction in this respect.

One legend is a continuation of that regarding Addai and Adlai already mentioned. Addai, travelled from Edessa and evangelized ‘Persia’ (i.e. what became later the eastern part of Asiatic Turkey, as well as the modern Persians, penetrating as far as the province of Pars. Mari is not mentioned in the Doctrine of Addai, which, it is true, was a hideous gospel, but is very real to Syria. Nor is Mari mentioned in the later published and very valuable work of Chabot, lit. ‘Christ has not died and risen in the flesh, and is not the Apostle of Adiabene and Assyria (this apparently contradicts the doctrine of Addai, which makes him see the great Church of the Persians). And he that ordained Pudhā as first bishop there. The Nestorian Simhāda, or Book of Canon Law, names the ‘converters’ of that region Thomas ‘of the Indians and Chinese’ (Nendēr). Bartholomew, that is Nathansel, of the Aramaan, Addai of the Seventy, the Teacher of Aggai, and Mari of Mesopotamia and of all Persians. To the latter are ascribed mythical, but is there any truth underlying the legend? Some consider that there was no Christianity, or at least no organization of Christianity, east of the Tigris before the Sassanian empire was established by a revolution, a.d. 226. This is perhaps going rather far. It may be that there was nothing before the third decade of the 3rd. to build upon, it is unlikely that so early a writer as Mohilla Zka could have given us such details; he could not have invented Pudhā out of nothing. It is quite probable that there were Christians in Assyria in the 2nd cent., for Tantor, the disciple of Justin Martyr, tells us that he was born ‘in the land of the Assyrians.’ This must be discounted by the fact that he probably wrote only in Greek, though many think that his Didascasia (for which see below, § 4) was written in Syriac; and that he may therefore have been Greek; and parents, and have been brought up to Christianity were not uncommon. We learn from Ephraem that he laboured in Syria and Mesopotamia, and we see that there was a Nestorian Syriac Church in Persia, the twin-capital of the Persian empire, situated on the Tigris below Bagdad, till the end of the 3rd century. Papa is there ascribed to him, the bishop of that city, c. 280.

Another legend is much later, and professes to account for the existence of a patriarchate at Seleucia-Ctesiphon. It is given by Bar Hebræus and other writers, and in the Simhāda; and in the manuscript of that date from Antioch in Pisidia, the bishops of Antioch and Seleucia-Ctesiphon received the episcopal see in 150. According to the first writer, one of them was crucified as a Persian spy, as was Silbus (proa. Silvan, lit. ‘cross’), still a common name, the bishop of Antioch, while the other escaped to Jerusalem and was consecrated there, returning with a letter professing to accept the patriarchate on the Church in Persia. The Simhāda does not name Silbus, but says that two patriarchs, ‘one of the East and one of the West,’ 199 were crucified on the doors of the church of Antioch, and it gives the pretended letter of the ‘Western patriarchs’ to the ‘Easterns,’ besowing on the latter a patriarchate, and abiding them from the duty of sending their patriarchs to Antioch to be canonized. The first patriarch, it says, was the bishop of Papia or Shababū—it does not profess to be certain. 20 This Shababū was probably the bishop of Adiabene, east of the Tigris and between the two Tigris, who was a contemporary of Papa. The letter of the ‘Westerners’ is a late forgery. The earlier writers, like the other contemporary of the few that there was, that historian who wrote the life of Aēl Bishib, the bishop who is said to have escaped. The whole is a double fiction, and it is improbable that the Persian Christians ever depended for their bishops on Antioch, though they doubtless received

their Christianity from Edessa, and Edessa possibly received it from Antioch. The title of patriarchs in the Middle Ages belongs to a much later time than these pretended events. The East Syrian patriarchs, however, have been acknowledged as bishops of Antioch, a.d. 410. There is no early evidence of Antioch exercising jurisdiction over the Church in Persia. When Papa was confirmed by his bishop to be appealed, successfully, to Edessa, and perhaps to Nisibis. 1

An important event for the Church occurred in a.d. 207, when five Persian provinces were ceded to the Roman emperor. This strengthened the ecclesiastical ties between East and ‘West.’ The cession made Nisibis a Roman city. Its most famous bishop at that time was James of Nisibis, who was born there towards the end of the 3rd century. Ephraim was his disciple, and was baptized by him. James himself was a great author of Syriac works.

It is remarkable that, though James was present at Nicea in a.d. 325, the East Syrians knew nothing officially of that council till the Synod of Seleucia-Ctesiphon in a.d. 410, when they freely accepted the Nicene decrees and creed. To this day they use the other version of the creed, the so-called ‘Constantinople’ creed, which came into general use (see below, § 4). The Arian controversy did not touch them; and an illustration of this may be seen in the first part of the Church of Edessa, to whose Homilies (see below, § 4) are a continuous exposition of the Christian faith, does not mention Arianism at all, though he lived at a time when heresy was prevalent in the ‘West.’

The principal East Syrian bishops of Seleucia-Ctesiphon after Papa and before the Nestorian period were Simeon Bar Saba’ē (martyred under Sapor ii.), Yahh-ahāha i. (pron. Yaw-ahāha), and Dādīshā, i.e. the bishop of Maipharqat or Martyropolis, north of Nisibis, author of the Book of Martyrs (see below, § 4). Mārathā often acted as advisor to the Persian king and as ambassador to the Roman emperor. The Simhāda 2 mentions an earlier Mārathā, who was (it says) present at Nicea, but it is probable that he did not exist, and that the statement is due to a confusion.

The period was marked by many personal quarrels, a feature of later history also, and by the great persecution under King Sapor ii. (a.d. 379), which lasted some 40 years and resulted in many martydoms. The Persian kings at one time favoured the Church and at another persecuted it. It is important to note that in the early days the political conditions tended, quite apart from theological considerations, to separate the East Syrians from the rest of Christendom. It was the policy of the Persian authorities when they tolerated Christianity to separate it as much as possible from that in the rival Roman empire. Another persecution, at the instigation of the Magians, whose religion was that of the State, broke out under King Bahram (Varananes) v., a.d. 423. Theodoret 7 makes it arise under his predecessor Yazdegird, though continued under Bahram, but Sozocrates 8 says more accurately that it arose after Yazdegird’s death.

The title of the bishops of Seleucia-Ctesiphon, a.d. 400, was, the Catholicoi of the East, and this is still preserved by their successors. The title of ‘Patriarch’ was also thought to be a little later. At the Council of Dadiush, held a.d. 424 at *Markabata of the

Arabs.' This connell firmly established the independence of the 'Eastern' patriarchate.

4. The MSS of the Greek Bible. In the 5th cent. there was a considerable activity in Syriac literature, all written in what we call 'classical Syriac.' (c) The MSS were divided in Syriac literature in five forms. (a) The four 'Gospels separate' (Syri. Evangelyjon da-Mpharrhes), now generally called the 'Old Syriac,' are known to us by two MSS: the Curetonian, discovered in Persia in 1842, and edited by C. F. Rhinen in 1858; and the Sinaitic Syriac, a palimpsest discovered by Mrs. Gibson in the monas
tery of Mount Sinai in 1893. Both of these have the above Syriac title, which distinguishes them from the Diatessaron (see below). Both are perhaps of the 4th century. The Curetonian has the same type of text as the Sinaitic, but differs from it in many details.1

(b) The Diatessaron of Tatian (2nd cent.), sometimes called by the Syrians the 'Mixed [Gospels].'

2 is a harmony of the four Gospels, and is known to us through a commentary on it by Ephraim handed down in an Armenian translation, by quotations in the Syriac Psalter, and by a translation of the Harmony itself made in the 11th cent. by the Nestorian monk Ibn at-Tayyib. The Diates-
saron is mentioned in the Doctrine of Addai.

It does not distinguish it from the complicated recension of Thomas of Harqal (see below), is the version still used by Syriac Christians. The name is first found in the 9th or 10th century. This version, which is now often called 'the Syriac Valgate,' contains the whole Bible, OT and NT (including the OT Apocrypha), less 2 Peter, 2 and 3 John, Jude, and Revelation. Because of its universal acceptance, it may safely be assigned to a date before the divisions of the 6th century. The Gospels in this version have been critically edited by G. H. Gwilliam. It appears that Tatian's Harmony was at one time in popular use among the Syrian Christians, but early in the 5th cent. Rabbbil, bishop of Edessa (see above, § 3), and Theodoret, bishop of Cyprus, were instrumental in its being abolished and destroyed in favor of the 'separate Gospels.' Theological reasons have been very generally accepted, viz. that the Peshitta Gospels are a revision of the 'separate Gospels,' made early in the 5th cent. under the direction of Rabbbil; that the Diatessaron was written in Greek as early as above, § 3, perhaps in Rome, by Tatian, and translated into Syriac in his lifetime, c. A.D. 170; and that the 'separate Gospels' date from c. A.D. 260, the translator being familiar with the Diatessaron. These views are combated by Gwilliam, who is inclined to assign a much earlier date to the Peshitta Gospels; he objects that Burkitt's theory is not adequately attested, does not explain the disappearance of the 'Old Syriac,' and does not account for the acceptance of the Peshitta in the 5th cent. by Nestorians and Jacobites alike. The fact that the East Syrians were not definitely Nestorian in Rabbbil's time, or indeed for a long time after him (see below, § 8), appears to the present writer adequately to account for their being ready enough to accept such a version of the Gospels in place of the Diatessaron.

(1) Recensions of the Peshitta were made by Philoxenus, bishop of Mabang (Hierapolis, near the Hellespont) (not now extant), and by Thomas of Harqal (\textquoteleft Harklean\textquoteright version), A.D. 616. Both of these writers were Monophysites, and it appears that the only dissatisfaction with the Peshitta in the 5th cent. was among the Jacobites, and not among the Nestorians. But even among the Jacobites that version remained supreme.

Some characteristics of the Peshitta may here be mentioned. The MSS, which are in the Greek Bible in the 5th cent. all show practically the same text. Some of them are as old as the 6th cent., the oldest c. A.D. 450. One rather noticeable difference between the 'Old Syriac' and the Peshitta Gospels occurs in the Lord's Prayer, where the former has 'our con-
templial' bread, the latter 'our Spirit.' The noun 'spirit' being feminine in Syriac, the older writers make 'Holy Spirit' feminine also, and Aphraates speaks of the Holy Ghost as 'our mother,' just as the Gospel according to the Hebrews speaks of Him as the OT Messiah. But from the writer onwards 'Holy Spirit' is made masculine by a grammatical revolution, though in Lk 4:2 and Jn 7:38 Peter there is survival of the older usage, the feminine being retained.

Ilthibato we have considered only the Gospels. There is no extant text of Acts, or of the Epistles older than the Peshitta, but quotations in Aphraates and in Ephraim's Commentary on the Pauline Epistles, and in Menander's Manual of Apocryphal Literature, are of some slight help.1 In Aphraates and in the genuine works of Ephraim there is no clear reference to any of the Catholic Epistles. Certain texts of Addai explain the Scriptural canon to the Law and the Prophets, the Gospel, St. Paul's letters by Ephraem, and a version of the Epistles by the principal Catholic Epistles, shows an advance on the way to a fuller canon. The Peshitta OT was not revised by Rabbbil, and is undoubtedly much older than his time, perhaps dating from the end of the 5th cent. The translator had a good knowledge of Hebrew, though he was not sufficiently influenced by the Septuagint. Burkitt thinks that he must have been a Jew, and that he made his translation for the Jews, who had probably settled at Edessa before it became a Christian centre. The OT quotations of the Acts of Judas Thomas, the Doctrine of Addai, and the Eusebian Canons, the Peshitta, Syriac, and the genuine works of Ephraim (for all these see below) agree largely within the Peshitta, but there are some points where the Peshitta diverges so, rather resembling the 'Old Syriac' and the Diatessaron. After Rabbbil all the quotations but two agree with the Peshitta, the 'Old Syriac' having thus already disappeared. The 'Old Syriac' Gospels appear to be later than the Peshitta OT, as the translation of the former, direct from the Greek, uses Hebrew proper names correctly transliterated from the Hebrew, as does the Peshitta translator of the OT. The Peshitta Gospels are, however, similar to the Syriac Gospel translation, as if he had corrected the forms of the proper names before him.

Of other early Syriac works, in addition to liturgies, some of which seem in their main features to have been written before the middle of the 5th cent., and in addition also to early Syriac translations of Greek books, the following may be mentioned. The Disputation with Marcion by Archselau, bishop of Kashkar in Mesopotamia (3rd cent.), is now extant only in Greek fragments and in a Latin translation, but was originally written in Syriac. (2) The Doctrine of Addai already mentioned, is a work of the latter part, or, according to R. A. Lipsius, of the beginning of the 4th cent., giving the legend of Abgar (see above, § 3). (3) The voluminous works of Ephraim consist of commentaries, homilies, letters, and hymns. At least one of his works, On the Holy Spirit, was translated into Greek before Jerome's time. (4) Aphraates, the Parthian rabbi, and ascetic, wrote his Homilies A.D. 337–345. Their theological attitude calls for some remark in view of their aloofness from Hellenistic influence. There is no special difference between him and 'Western' writers in the presentation of the doctrine of the Holy Spirit in the works of Ephraem, and in Aphraates, as elsewhere, baptism is 'in the name of the Father and of the Son and of the Holy

5. West Syriacs or Jacobites.—We now proceed to consider the divisions of Syrian Christianity which resulted from the Christological controversies of the 5th century. It is not necessary here to repeat the accounts of those controversies which have already been given in this Encyclopaedia; but we may discuss the general history and the customs of the different Syrian bodies which separated from one another and from the 'Western' Church of Constantinople and Rome.

The Syrian Monophysites may be considered first. In Syria proper there was a constant opposition between them and the Orthodox for more than a hundred years after the Council of Chalcedon (A.D. 451), and the patriarchs of Antioch were sometimes Orthodox and sometimes Monophysite. The most famous of the latter was Severus, who maintained possession of Antioch itself from A.D. 513 to 518; he was an author, and wrote in Greek. He was a great admirer and quoter of Ignatius’s Epistles. He was the leader of his party till his death c. A.D. 540, after which a double succession to the patriarchate was continuous; and it has been preserved to the present day. The final breach between Orthodox and Monophysites may be said to have occurred in the reign of Justin II., the successor of Justinian. He persecuted the Monophysites, and an account of these troubles may be read in the third book (the only part extant) of John of Ephesus, a companion of the Bishop of Ephesus in the 6th cent., but he wrote in Syriac, and was the first Syriac historian. He was a native of Amida (Diarbekr). For James of Sarug (A.D. 521 or 522), who has been thought to have been a Monophysite (but this is very doubtful), and for other early Syriac poets, see art. HYMNS (Syrian Christian), § 1.

The Syrian Monophysites are called Jacobites from Jacob Baradai (Baradaires, or Zambalus, a monk of a monastery near Edessa, who came to Constantinople c. A.D. 540 to plead the cause of Monophysitism. After remaining there fifteen

10. For these Acts see further below, § 9.
years, he was consecrated bishop by the imprisoned Monophysite bishops in the capital, and sent to Syria to organize his sect. He consecrated Sergius to succeed Severus at Antioch, and appointed Paul the Black to succeed Sergius. He is said to have ordained two patriarchs, 39 bishops, and an enormous number of clergy. He is often called bishop of Edessa, but Bar Hebraeus says that he was a bishop with no fixed see. John of Ephesus was his panegyrist. He died, and after his death, the Monophysites were driven from Antioch. The term ‘Jacobites’ was a nickname, given by the Orthodox; but the Jacobites themselves readily accepted it, tracing it, however erroneously, to the apostle James, to whom also they ascribe their principal liturgy. Their controversy with the Greeks, like the controversy of the East Syrians, with the Greeks, was not only theological; it was largely tinged with national differences. Indeed both were to a considerable extent contests between Syria thought and Hellenistic culture.

In the 7th century, the Mohammadans conquered Palestine, Syria, and the East; and at first the new rulers feared the Jacobites as the rivals of the Greeks. The principal writer of this period was James (Jacob) of Edessa (†708), who was a poet, commentator, and letter-writer, and a notable figure of Greek work in Syria. To him, e.g., we owe the knowledge of the ‘Church Order’ called the Testament of our Lord, a Greek work of c. AD 350, now extant only in Syriac.

The Jacobite patriarchs have continued to this day (at any rate from the 13th cent., and, according to Neale, from the end of the 16th cent.) to style themselves ‘of Antioch,’ though they transferred their residence from this place to Mardin, where it has been ever since.

Perhaps the most eminent Jacobite of all history was Gregory Bar Hebraeus, or Abulfaraj (†1286), a man of Jewish parentage, who became a convert to Christianity and afterwards was ordained, and was, in the eyes of Bar Hebraeus, the greatest of Eastern authors.

He wrote many works, and his Chronicle (which may be read in Assemani) is a valuable history. He seems to have been greatly esteemed even by his Nestorian opponents who abhorred his teachings.

He died at Maraga (south of Tabriz), but was buried in the monastery of Mar Mattai on Jebel Maqlub (Syr. Elpeph), a day’s ride north-east of Mosul, and his grave is still shown there. His Chronicle is, for his age, fairly trustworthy, but when he deals with Nestorian matters it should be compared with the writings of that body.

A less known Jacobite writer was Dionysius Bar-salibi (Syr. Elihi, pron. Elii), also called James, metropolitan of Amid, a theologian and commentator, probably of the 11th century.

We know less of Jacobite organization and customs, ecclesiastical and liturgical, than we do of those of the Nestorians, of which we have been fully informed in the last quarter of the century. For the modern Jacobites the best short account is to be found in O. H. Parry’s Six Months in a Syrian Monastery, which has been largely drawn upon in the description which follows. The ecclesiastical hierarchy consists of the patriarch; the metropolitan or see of the 12th century, at Mar Mattai (see above) or in Mosul itself; and bishops of Jerusalem, Damascus or Homs (Emessa), Edessa, Amid, Mardin, Nisibis, Malpaqrak (now Farquhar, in Pp. 372), Antioch, and Jerash (on the Tigris), and Tur ‘Abdallah (Jebel 1 Assemani, Bibl. Or. ii. 327. 2 Gen. Introit. i. 102. 3 Assemani, B. 341 ff. 4 Renaudot, Lit. Or. ii. 453. Tur). There are also some bishops without sees, as at Mar Mattai, where, when the present writer visited the monastery in 1887, the establishment consisted of one bishop and one monk. The patriarch is elected by the people, and the election is confirmed by the bishops resident near Mardin; it is common for the patriarch to be promoted to the chief position. The patriarch, or more rarely the metropolitan, consecrates all the bishops, who must be either married or of the rank of a monk; those chosen from the monks are called maphrian, or ‘metropolitan,’ while those chosen from the widowed priests are called asqof (érixoroun), and are of slightly lower rank, not being eligible (for any patriarchate or maphrianate). Each bishop has the prefix ‘Mar’ (‘my lord’) before his name.1 The patriarch and the other bishops are recognized by the State as judges for their own people, especially in questions of marriage and divorce. The canonical age for the ordination of bishops is 35, of deacons 20; but this has never been kept as a fixed rule. Bar Hebraeus was ordained as a deacon, and was called asqof (i.e., ordained as little boys, but they must be able to read the Psalms in classical Syriac. The parish priests, who are elected by the parish councils of deacons and laymen, and may be married, or widowers.2 When they die, they enter a monastery or else become asqof.

The second marriage is not allowed to them. The priests must let their beards grow, but they shave their heads completely. The leading priest in a large town is often made a chorepiscopus, but he is not a bishop, and cannot ordain. There are many deacons in each village—they are engaged in secular work during the week—as they are indispensable for the celebration of the eucharist. Minor orders are practically obsolete.

Several ground-plans of churches may be seen in Parry.3 The altar, at least in most cases, stands in the middle, and there are seats for bishops and clergy behind. This is also the usual Greek custom. The whole sanctuary in Syrian churches, Eastern and Western, is called ‘the altar’ (Syr., nadd/k/), though this name is sometimes also given to the holy table itself. The latter is usually of stone, though in some of the Jacobite churches it is of wood.4 There are side chapels with ‘altars,’ north and south of the sanctuary—the churches face east—and in some cases, as at Mar Mattai, there is another chapel at the north side for the burial of priests, called leithy gaddish (‘house of the dead’). Between this and the main nave there is a stone wall or screen, sometimes with folding doors, and always with a veil. The nave has no further columns or piers, except at the great entrance placed under a baldacchino. The Jacobites, like the Nestorians, do not allow images in their churches, but have a great reverence for the consecrated vessels.

Monasteries are common; the monks are often laymen, though they are sometimes in holy orders. The monastery is a bishop except where they contain the tomb of a patriarch or a maphrian; in that case they are directly under the patriarch. Nunneries seem to be obsolete. The technical Syriac term for the consecration of both the Jacobites and the Nestorians, is ‘saddness, ‘mourning.’

The eucharistic liturgy ordinarily used is that of ‘St. James,’ a translation of which, in the Ritual form, is given in § 20; dunh/k/’s Ordination (Christian), i. 26. The Jacobite’s liturgy is very similar, and is used in all cases except among the Jacobites of the Eastern and Western, i. 69 ff. The Syrian Jacobites, Moronites, Unionists, and Malabar Jacobites all use the same liturgy with some variations.

Leavened bread is used, but the ‘bread of the deceased’ (in Communion) which the Jews used with the meal is no longer prepared. The levitation is said to have been handed down from remote ages, as among the Nestorians. The eucharist is reserved for the sick, but only for communion on the same day; it is repeated at the Mass of the dead (immediately after baptism) are communicated.1 For the forms of admission to holy orders see art. ORDINATION (Christian), i. 26. 2 See Leclercq, Dict. Cat., ii. 225 ff. 3 Syr. abshul/k/up/l (see the Nestorian Shukuh/l), vi. 2, 3, etc. 4 See a list of other Jacobite Hymns in Brightman, L. p. 1117 ff.
The antidoron or eucharistic bread not consecrated (Syr. ἀγριστός-εὐήμαρ) is distributed after the service. The celebrant wears albe, amice, un- divided stole, yellow shoes, a manipel over each arm, and a chasuble split down the front and buttoned with five or seven buttons. The vesting takes place in the side chapel, where also the elements are prepared. There are in some churches daily eucharists. There are no special vestments (except girdles, and often, for the deacons, stoles) at the daily offices. These vestments have not been published, and exist in manuscript only. One of the great features of Jacobite worship is the peculiar addition of 'who wast crucified for us' to the Trisagion (Holy God, Holy Mighty, Holy Immortal, have mercy upon us'), which is used at many of the services. The addition was first made by Peter the Pulier († A.D. 477), and was eagerly adopted and retained as a test of Monophysitism.  

Baptism is not allowed to be administered in private houses. The child at baptism is signed with moron, or ungunt (which is consecrated once a year by the patriarch), anointed all over the body with oil (which is blessed in the church), and washed in water thrice up to the neck, clothed, and confirmed.  

Confession before communion is recommended by the canons, but is now almost obsolete. Some of the more strict cannot consent to confession before communion on Maundy Thursday, Christmas, and Pentecost.  

The fasts are somewhat severe. Besides Lent and Advent, both of which are strict fasts, there are (a) the Fast of the Ninevites, three days in spring, said to have been instituted owing to a plague in the 6th cent., and strenuously maintained also by the East Syrians; (b) the Fast of the Apostles, after Pentecost; and (c) the Fast of the Twelfth, i.e., the 5th Wednesday and Friday are fasts in each week, from sunset to sunset.

The Jacobites are to be found chiefly in Mesopotamia and northwards to Harput and Diarbekr, but there are also a good many of them near Damascus and a certain number around Mosul. The largest numbers are perhaps to be found in the hilly region of Jebel TUR (Arab. also TUR Ablûn; Syr. TUR Allûn), N. of the line Marûn—Nisibis—Jezerîn. In this district Syriac is still spoken vernacularly. Here some of their oldest and most interesting churches are situated.  

It is always dangerous to reckon numbers; but Gibbon's estimate of from fifty to eighty thousand is certainly too low. We may perhaps put the total in Turkey at rather less than 200,000. Certain communities of Jacobites have become Uniat (see below, § 6). Jesuit missionaries first came to Mesopotamia in 1540. In 1646 the Uniat patriarchate was fixed at Aleppo, and the patriarch took his title from that place. The Syrian Christians in that neighbourhood mostly belong to that jurisdiction.

6. Melkites and Uniates.—The former name, which is derived from Syr. murkâz ('king'), a word used also, like Jacobus, for an emperor, was invented 1

1 But the ancient and authoritative Jacobite statement of faith (the 'Credal of our Sainted Fathers'), published by the Syrian Patriarchal Committee for the Information Committee in The Ancient Syrian Church in Mesopotamia, London, 1905, emphatically states that the Trisagion with this addition is addressed to 'the Olympic panegyrist and not to the Three Persons' (p. 102). This 'Statement of faith' is quite free from Monophysitism. It does not define the divine nature of our Lord as confused with the human nature, or that the two natures became conformed and changed so as to give rise to a third nature, and asserts that the two natures remain distinct without confusion, mixture, or transmutation, and that they remained throughout in an unalike only.

2 For early Syrian baptisms see below, § 2.  

3 Several collections of these may be read in H. Denzelinger, Rituals Orientalis Sacrorum, Lips. 1853.  

4 P. 467.

6 The Jacobites in India see below, § 9.

in the 10th cent. by the Jacobites for those Christians who adhered to the Council of Chalcedon. It was a nickname, meaning 'royalists,' and implying that they could stand only by the support of the Roman emperor. It may be compared with the nickname 'Ecclesia maritata' used in this country at the present day; both have a somewhat similar shade of meaning. But the name 'Melkites' was quite readily accepted by those to whom it had been given in derision, 1 and was applied to all those who were in communion with Constantinople, whether Syrian, Egyptian, or Greek. In comparatively recent times the name has been given, and given exclusively, to the Christians of Syria and Egypt who have been drawn from the Orthodox Eastern Church and have been united to Rome. Such, e.g., are the 'Syrian Melkites,' whose liturgical language is, or was, Syriac.

The name 'Uniat' is applied to those Eastern Christians who have been united to Rome, but are allowed to keep their own liturgies, liturgical language, and ecclesiastical customs, especially as to the marriage of their clergy—though in all these respects considerable, but not considerable, have been introduced. The earliest of these 'Unias' are the Maronites (see below, § 7); but there are also four Uniat Churches of the East Greek-Slavonic, the Jacobite, the Melkite (formed of Arabic-speaking Orthodox after the Synod of Bethlehîm, in 1672), Rumaic or Roumanian, and Ruthenian; there are also the Armenian Uniat; the Syrian Uniat, drawn from the Jacobites in 1646 (see above, § 5); the Chaldaean Unias, drawn from the Nestorians (see below, § 8); and the Malabar Unias (see below, § 9). The Unias have nine Eastern patriarchs. Those of Constantinopolis, Alexandria, and Antioch live in Rome. In addition there are Uniat patriarchs of Jerusalem (Greek), Antioch (Maronite), Antioch (Greek), Antioch (Syrian), Cilicia (Armenian), Babylon (Chaldaean). European readers are often confused by the fact that there are no fewer than six patriarchs who take their title from Antioch—one Greek Orthodox, four Unias, and one Jacobite.

The Syrian Unias use the liturgy of 'St. James'; the rubrics are often in Carshuni (Arabic in Syrian characters), the audible prayers both in Syriac and in Carshuni, the inaudible in Syrian only. 2 The Chaldaean Unias use that of the Chaldean, and Mari 3 with some amendments; their daily services are considerably abbreviated compared with those of the Nestorians, and in the case of the long festal Night Service about six-sevenths are omitted. 4

7. Maronites.—These Syrian Christians of the Lebanon derive their name from their teacher John Maro, or Maron, a learned monk, who was named patriarch of Antioch, perhaps early in the 4th century. He has often been confused with an earlier Maron, called by Gibbon 5 a 'saint or savage of the fifth century,' whose relics were greatly venerated. In the time of John Maron the Monothelite controversy was still going on, and these Lebanon Christians espoused that cause. 6 They were thus in opposition to their Christian neighbours, and later, as Christians, to the Muhammadan authorities; and they received the nickname 'Mardaites' or 'Rebels' (Syr. murkâzî). In 1182 they renounced Monothelesitism under the influence of their patriarch Atmeric, and were united with Rome, then numbering about 45,000 souls. 7 At this time the connexion with the West

7 Neale, Gen. Intro. i. 154.
was through the Latin kingdom of Jerusalem. After the destruction of that kingdom in the 14th cent., relations with Rome were at times broken off, but they were resumed, and still continue. Pious Gregory XIII. in 1503 founded a college in Rome for training their clergy, and this institution has the honour of having in the 18th cent. educated the learned brothers A. S. and J. A. Assemani, to whose literary labours scholars are so much indebted for their knowledge of Syriac Christianity. The Maronites subscribed the decrees of the Council of Trent in 1738.

They are allowed to retain their own liturgical customs, and use the Syriac 'St. James' and some other anaphoras. The rubrics in the printed books are in Carshuni; some of the formularies are in Carshuni and Syriac.

The Maronite clergy may marry. They also elect their own patriarch, who still takes his title from Antioch. He lives at the monastery of Qinzibn in the Lebanon, and has under his jurisdiction bishops at Aleppo, Tripoli (in Syria), Byblus and Botra, Baalbek or Heliopolis, Damascus, Berytus, Tyre and Sidon, and in Cyprus. Their numbers are difficult to estimate. Gibson gives 150,000 for the Maronites and 50,000 for the Chaldeans, but they probably number about a quarter of a million.

They have suffered much from their feuds with their neighbours, the Druzes, and in the year 1860, after great massacres of the Maronites, the British and French governments intervened for their protection.

8. East Syrians, or Nestorians. We may now take up the history of the Church in the Persian empire from the middle of the 5th cent. The first great event for the East Syrians after the Council of Ephesus, A.D. 431, was their final expulsion by the emperor Zeno from the school of Edessa and the consequent founding of the school of Nisibis, A.D. 489. Ibas (Syr. Ichhab, pron. ihhwa, lit. 'given'), bishop of Edessa, who was strongly Dyophysite, had been condemned by the Latrocinium, or 'Robber Synod,' of Ephesus in 449, but was acquitted and restored to his see by the Council of Chalcedon two years later, after having anathematized both Nestorius and Eutyches. During his lifetime the Monophysites made no way at Edessa, but after his death in 457 they became predominant there, and after a long struggle expelled their opponents. This was a decisive event in the Persian Church. Although up to that time it had had no direct connexion with Nestorianism, its tendency was mainly Dyophysite, and the influx of Nestorians from the Roman empire greatly strengthened that tendency. Nevertheless it is a mistake to suppose that the Persian Church at some definite date in the 5th cent. espoused Nestorianism and was therefore cut off from the Catholic Church. The process was a gradual one. The principal influence in the latter half of the 5th cent. was that of Bar Sohm (Baramass, lit. 'son of the fast'), bishop of Nisibis, who had taught at Edessa, and now, in the vacancy of the catholicate, organized the East Syrian Church in a Nestorian sense; he must not be confused with his namesake of the Latrocinium, who was a Monophysite. There was some opposition to 'Nestorian' doctrine, especially from the monks of Mar Mattai (see above, § 5), who to this day are Jacobites. The catholicos Acacius (Syr. Aqaq), who was bishop of Scelucia-Ctesiphon from 485 to 496, went to Constantinople on a mission from the Persian king, and there declared that his Church knew nothing of Nestorius; he was admitted to communion by the Orthodox, having anathematised the so-called Bar Sohm. But we may perhaps discount his statement as an Oriental exaggeration; but the incident shows that the separation was not yet complete. Still later, good relations with Constantinople took place in the time of Mar Abba (pron. Awa) the Great, a contemporary of contemporary of the so-called Bar Sohm (see above, § 5). This prelate, a convert from Manichæism, was catholicized from 540 to 552, having been a teacher at Nisibis, and having visited Jerusalem, Egypt, Greece, and Constantinople in the time of Justinian. In his Catholicate, as it would seem, the Council of Chalcedon was accepted by the East Syrian Church. The Sühoddhos quotes with approval one of its canons, and dates the council as '25th October, 763 of Alexander,' i.e. A.D. 462 (sic); the session of that day was particularly solemn, and was attended by the emperor and empress; it ended the principal work of the council.

One of the first matters discussed in this period was the marriage of bishops and clergy. A council was held in 494 at Beth Lahma, which decided that monasticism, practised in the modern Syria, was in its monastic forms of various sects (i.e. Sinai), it allowed them to marry, and even permitted a second marriage to widowers. This was confirmed by the Council of Ephesus held by Anacletus in the following year. Several patriarchs were married: Rabban (pron. Biswaal), catholicized from 466 to 468, his successor Simeon, Paul, and Ezekiel, all of the 6th cent. But Mar Abba set his face against episcopal marriage, himself declaring it 'a sin,' and the latter he crucified. The present rule is that a bishop must be a rabban ('monk'), but see below), and may not marry, or have married, and must never have eaten flesh meat; nor must his mother have eaten meat during her pregnancy. There is evidence that the rule against eating meat did not hold in the 7th cent. It is noteworthy that Ebedjesus (see below) in his Sühoddhos passes over the question of episcopal marriage in silence, and does not refer to the regulations which permitted it.

The definite official adoption of Nestorianism, or of what was taken for such, must be dated at the beginning of the 7th cent., when the East Syrians formally repudiated the term 'Theotokos' and adopted the phrase of 'gnanum,' on karpous or karpagous (μεταφυσικός), two natures' with reference to our Lord. The opposition to the 'Nestorians' of the Monophysite minority in Persia was greatly strengthened by the influence of a large number of captives of the latter persuasion from Syria, in 540 and 573, under Chosroes I; the influence of Shirin, the Christian queen of Chosroes II (560-628), was latterly in their favour.

Monasticism was at one time a most flourishing institution among the East Syrians. Thomas of Marga (see below) gives us a graphic description of his own monastery, and we have other sources of information in Socratem, in P. Beda's Acta Martyrum et Sanctorum, and elsewhere. It seems to have been introduced into the East from Egypt by Mar Awgin (pron. Ogin; ≈ Eugenius, Βαγγέλης, who founded the famous monasteries of Mount Ida (near Nisibis) and Deir-el-Zafaran (near Mardin; see above, § 5). He is said to have been the teacher of James of Nisibis. His Life is included in

Canon Law, now in constant use by the Nestorians, though many of its provisions have been obsolete.

The missions of the East Syrians have been far extended. Their work in India is attested in the 6th cent. by Cosmas Indicopleustes (see below, §9). Gibbon remarks [1] their churches, from the Gulf of Persia to the Caspian Sea, were almost infinite. The missionaries extended their labours to Sogdua, Ceylon, Turkistan, and even to China, where the Church of the monk of Sin-gan-fu, dated A.D. 781 (‘1092 of the Greeks’), attests their activity, which also gave rise to the legend of Prester John (q.v.), a supposed priest-king in Tartary. Wherever they carried their teaching, they used Syriac as their liturgical language, even though it was not that of the people. Thus the Malabarese have always used Syriac liturgies. This great activity swelling the numbers of Syrian Christians exceedingly, and the Nestorians and Jacobites together are said to have been more numerous than the Greeks and Latins together. Under Muhammadan rule East Syrian Christianity was for a time especially favoured and persecuted. Under Tamerlane (‘Timur the Lame’), whose death in 1447 must be almost annihilated. But a remnant survived and is still to be found in the mountains of Kurdistan in E. Turkey, in the upland plains of Azerbaijan, and in the mountainous part of the Persian kingdom, especially in that of Urmi or Urumi (often called in Europe Urmina), and in the low-lying plain of Moṣul (Niniveh). The patriarch, who after the foundation of Baghād (A.D. 762) had established his residence at Ctesiphon for that city, later removed to the north. But disputes as to the succession divided the patriarchate. The Nestorians themselves are now under the rule of Mar Shimūn (these two words are pronounced with one and are accepted on the Syriac and last syllables), who lives at Qāchān in the almost inaccessible mountains which surround the Great Zab, a beautiful retreat near the small town of Dūlāmēr. Each successive patriarch takes the name ‘Shimūn’ (Simon), whatever his baptismal name. The East Syrians of the Moṣul plain, now called Chaldœans, have been united with Rome since 1660, when they were received by Pope Innocent XI. Their head (‘patriarch of Babylon’) bears the name Mār Eliyā (Elijah). He has several bishops, each styled metropolitan, under him. He maintains the title (‘of Babylon’) which the Nestorian patriarchs of old bore when their see was at Ctesiphon, and it is also found in the Sānḫādā. There were at one time patriarchs at Amīd (Dīnbek), who also were united with Rome; these bore the name Mar Joseph.

All the East Syrians speak Syriac vernacularly, though many of those in the Moṣul plain speak Arabic also. It is common to hear the sailors on the Tigris steamers talking vernacular Syriac, these being Chaldœan Uniates. The total number of Nestorians and Uniates combined is, or was till lately, perhaps about 300,000.

A detailed account of the ecclesiastical hierarchy of the Nestorians is given by Maclean-Browne, The Catholics of the East, ch. ix. The patriarch, or cardinal, has under him a metropolitan, or metropolitan, who holds the dynamic name of Nun-iḥāṣ (‘mercy of Jesus’), and several bishops, the number varying considerably from time to time. The present method of filling bishoprics (including the patriarchate) is for each bishop to bring up one or two boys or young men, his nephews or near relatives, as possible successors. Such a youth is taught the vernacular nāṣūr kūrāt (‘keeper of the seat’), and is not allowed to eat meat or marry; the bishop ordinarily nominates the one who is so trained and educated.

whom he wishes to succeed, but in theory the people elect from among the ‘keepers of the seat.’ In the 5th cent. the catholicons made a law restricting the catholicon to members of his own family. It is, on the contrary, an innovation, though not a very recent one. The catholicons consecrate the bishops; but the metropolitan consecrates the catholicons. In most villages there is at least one priest, in some several; and deacons are very numerous, as the eucharist cannot be celebrated without a deacon. Occasionally a priest is made an archdeacon (orbas), but this is now only an honour, not involving special duties. Formerly there were choriepiscopi and perioteisi (‘visitors’); these were presbyters, not bishops. The office of perioteisi was abolished in Syrian Christianity (by a 6th cent.), as he mentions it in his canons. 3 The East Syrian Rook of Heavenly Intelligences describes a church as having nine orders in three divisions; (1) the episcopate: patriarch (or catholicon), metropolitan, bishop; (2) the presbytery: choriopiscopi, perioteisi (or archdeacon), prezbiter; (3) the diaconate: deacon, sub-deacon, reader. These are said to correspond to the angelic hierarchy (as given by pseudo-Dionysius Areopagita and others) of (1) cherubim, seraphim, thrones; (2) dominions, virtues, powers; (3) principalities, archangels, angels. Minor orders are now obsolete. There are no longer any deacons.

Many of the ecclesiastical customs of the Nestorians are those also of the Jacobites (see above, § 5). But there are some differences. The Nestorian priests and deacons may marry, and if their wives die they may marry again; but the parish priests are not obliged to be married, though as a matter of fact they are hardly ever single men. The Nestorian church, especially in the mountains (of Kurdistan) have exceedingly narrow and low doors, sometimes only accessible by a ladder, and which are often built for security in a cleft of a rock or on a stone in an inaccessible place, are nearly all of the same pattern. Outwardly they show no sign of Christianity save a small cross beside the church door. They have no towers or spires, such as the Armenian churches have. Internally they have a stone wall reaching to the roof and dividing the nave from the sanctuary; a doorway in this wall is covered with a veil which is drawn back at certain parts of the service. On the nave-side of this wall is a raised peace called bema (a name which in other Eastern communions means the sanctuary), and this again is bounded by a dwarf wall with apertures in the middle and at the side, where the clergy stand to communicate the people. This raised peace somewhat corresponds to the Greek στόλος. 4 Against the dwarf wall, towards the nave, are projections (said to contain relics) for the cross and for books. The altar is attached to the east wall, and built into a stone niche. Now the altar is oblong, not square as among the Greeks. The people stand in the nave to worship, the men in front, and the women behind; there are no seats, and large portions of the congregation, such as that of the sermon, the people sit on the matted floor. Two other features of the churches may be noticed; a baptistery (also used as a vestry, and usually for baking the eucharistic bread), at the south-east corner of the church next the sanctuary; and a court (often open to the air) on the south side of the nave, where the daily prayers are said in summer. This is the usual arrangement, and is that of the church of Mart Marian (St. Mary) at Urmia in Persia, which claims to be the oldest church in the world, and to contain the tomb of one of the Wise Men of Bethlehem, built (as the most ancient links into the wall of the church)—in this case at the south-east corner of the nave. 5 The people are called to worship by a wooden board (Styr. ηδρηστης) hit by a mallet; this is the Greek στόλος. 6 Bells and cymbals used to summon to prayer, and there are often strings of small bells hung inside the church.

The vestments worn at the eucharist differ somewhat from those of the Jacobites. For a chasuble the Nestorians wear a kind of cope (μυστήριον), which has no fastening at the neck, and is very difficult to keep in position. The priests‘ robes are similar to those of the Western Church, but are of different shape from those of the deacons; maniples and amices are not worn. Private confession, though often referred to in the service-books, is now obsolete. The officiers are the same as those of the Jacobites, but the fasts of the Apostles and of Mary are almost if not quite obsolete, as are some others mentioned in the East Syrian books. The Wednesday and Friday fasts do not in practice begin on (what we) call the evening before, but they end at sunset; all Eastern Christians reckon the day as beginning and ending at sunset, and our ‘Sunday evening’ is their ‘Monday evening.’

The chief liturgy used by the Nestorians is that of the ‘apostles Addai and Mari.’ This liturgy has many early features, especially a form of eucharistic invocation of the Holy Spirit which is not as full and complete as that in most of the Great Liturgies. It prays that the Holy Ghost may come and rest on the oblation, and bless and sanctify it, that it may become (or be) for us the remission of sins, a church of God, and expilicitly mention the change in the elements. But the most curious feature is the absence of the words of our Lord spoken at the Last Supper, when after ‘blessing’ or ‘giving thanks’ He gave the sacrament to the disciples (‘This is my body, etc.’).

Neale 1 argues on a priori grounds that ‘Addai and Mari’ must have originally had these words. But this is a precarious statement; there are other instances of at least the partial omission of the words. 2 This liturgy in no way refers to the Nestorian controversy. On certain days of the year the anaphora of ‘Addai and Mari’ is not used, but that of ‘Theodore the Interpreter’ (of Mopsuestia) or that of ‘Nestorius’ is substituted, the first part of the liturgy, and the ending, being common to all three. All these anaphoras date, in common, from very early times; the first probably, in its earliest shape, was compiled before A.D. 431; the other two are certainly not the work of the bishops after whom they are named, but are the work of East Syrian authors, in the 6th cent., and perhaps later. The liturgy had a Byzantine liturgy before him, as many traces of that rite are found in it. But all three anaphoras are quite distinctly of the East Syrian, and not of the Western, family. All three seem to have been composed before Narsai (end of 5th cent.), though doubtless many more modern additions have been made to them.

Eucharists do not occur very often among the Nestorians—some five or six times a year as a rule, though in a few churches weekly eucharists are the custom. The people communicate, as they pray, standing, the mothers holding up the very little children in their arms to receive. All receive in both kinds separately (the species of bread in their hands), except the very little ones, for whom the celebrant dips a small portion of the consecrated bread in the chalice and then puts it in their mouth. Reservation for the sick is not allowed. The eucharistic bread is leavened. 3 All services, without exception, are sung; but no instrumental music is allowed.

The baptismal customs do not differ greatly from those of the Jacobites. 4 The service is closely modelled on the eucharistic liturgies, than which

Syrian Christians

It is certain later, there is however, no kiss of peace. The triple immersion is absolutely total. As with all Easterns, the presbyter confirms and lays his right hand on or over the neophyte; the use of the consecrated oil at this point is not expressly mentioned in the service-book, but it is customary for the priest, when signing the neophyte with the sign of the cross, to do so with his thumb which he has dipped in the oil. There are now no interrogations or recitations, though they are prescribed to be in the 6th cent. by Narsai, where the renunciations have special reference to heresy. Private baptism is not, in practice, allowed; if a village has no church, a child must be carried to another village which has one. Thus some children die unbaptized, though it is not likely that a person would grow up without baptism. Sponsors are considered as being akin to their godchildren, and the relationship is a bar to marriage.

The non-liturgical services are of great interest, and are extremely long, at least in theory. They consist mainly of hymns and anthems. The great number of services in the Syriac Church is reflected in the frequent mention of them by name in these anthems. The calendar is remarkable, and in some respects unique. Most of the saints' days are commemorated at fixed periods with the arrangement of the ecclesiastical year, which is divided into periods of about seven weeks each, more or less—Advent, Epiphany, Lent, Easter, 'The Apostles' (after Pentecost), 'Summer,' 'Eliaji,' 'Moses,' and the 'Hallowing of the Church.' A few of the holy days however, fall on fixed days of the month, as Christmas (Dec. 25), Epiphany (Jan. 6), St. George (April 24), etc., St. St. Thomas (July 30), St. Mary, St. John Baptist, St. Peter and St. Paul (July 29), St. Mary (Aug. 15), Holy Cross Day (Sept. 13, not 14 as elsewhere). The twelve apostles are commemorated together on a Friday before Lent, the four evangelists on another, the 'Greek doctors' (Diodoros, Theodore, Nestorius) on a third, the 'Syrian doctors' (especially Ephram, Narsai, Abraham [of Kashtar, see above]) on a fourth. On other Fridays are commemorated St. James the Lord's brother, St. Mary, St. John Baptist, St. Peter and St. Paul (a second commemoration), Mar Abba or else the patron saint of the church, St. Stephen, the forty martyrs of Sebaste, all the departed, the Seventy, and some others.

The choirs are divided into two parts, and according to the first or the second choir begins the anthems each week is called 'Before,' or 'After,' 'Before and After' (Syr. Qdham a-Wathar) being thus taken for the name of the ordinary book of daily services. The properia for Sundays, fasts, and festivals are of very great length, and are contained in the books called ficult ("cycle") and Gazza ("treasure"). two enormous MS volumes, and some others. These two are not published; but the complete East Syrian service for the Epiphany is given in English by Conybeare-Maclean, Ritual Armamentorum, p. 288 ff. (from a MS in the Library of the Propaganda Fide in Rome), with the cues all filled in, and a part of these two books is published in Syria in the Breviarium Chaldæorum. The Psalms are said (at least in theory) all through twice a week, and the whole Psalter is recited on festivals of our Lord. In the litanies, which are numerous, and often still fuller, the service, the ruling patriarch, metropolitan, and bishop of the diocese are commemorated by name. The marriage-service and the burial-service for laymen (apudic) have been published in Syria.1 The burial-service for the nuns (brudt) is longer and more elaborate than that for laymen. These burial-services are most dramatic, and consist partly of dialogues between the departed and the mourners, or between the departed and those already in Sheol. After the funeral the kiss of peace is given, at least in the case of priests and bishops. All pass in line and kiss the hand of the departed, or a cross laid on his breast, and so take leave of him.2 Badger gives an English translation of the baptismal, marriage, and ordination-services, and of the burial-service for priests.

9. Christians of Malabar, or of St. Thomas. — Ancient tradition, in which, however, we can have little confidence, makes St. Thomas the apostle the first teacher of Christianity in India. The legend is told in the Syriac Acts of Judas Thomas (see above, § 4), which, curiously enough, makes Thomas (lit. 'twin') the twin-brother of our Lord. J. H. Harris sees here traces of the influence of the Heavenly Twins on Christian legend. The Ethiopic legend of Thomas is still fuller. Our Lord divides the world into twelve portions, and Thomas's lot is to go to India. Very unwillingly, but encouraged by our Lord, he goes, and is seen with Christ in India. Jesus appears in the form of a rich man, who sells Thomas as a slave, the price to be given to the poor and needy. Peter and Matthias return. Thomas is set to work as a stonemason, carpenter, and physician; but he afterwards explains that the buildings which he undertook to build were the souls which he won to Christ. He appoints a bishop, priests, and deacons, and departs in a cloud, having given his last sermon. After Thomas, there is no record of a Christian community in the land where, it says, the apostle Bartholomew had already preached.3 Panteenus is said by these writers to have found there a copy, in the Hebrew language, of St. Matthew's Gospel, and to have left it behind him. The first certain historical testimony to the existence of Christians in India is that of the Alexandrian merchant who afterwards became a monk, and whom we know from his Indian travels as Cosmas Indicopleustes. He travelled far, and his Christian Topography of the Whole World in twelve books, still extant, is a valuable historical piece of evidence, though it is marred by the erroneous geographical conceptions of the day. The first six books may be dated c. A.D. 547, the rest c. 560. Cosmas's other works are not now extant. He travelled in India and Ceylon, and describes 'Mali' (identified with Malabar) on the Indian coast, the centre of the pepper trade.

8 Eusebius, H.E. v. 10; Jerome, De Vir. Illust. 36.
testifies to a large number of Christian churches on the coast of Malabar and Socotra, whose clergy, he says, were ordained by the Persian archbishop of Seleucia, and were subject to his jurisdiction; the Church there had had many martyrs and a large number of monks. These, he says, were the Christians of St. Thomas' are the fruits of the missionary activities of the Church of the Persian empire (see above, § 8), and that their Christianity had begun long before this, probably in the 5th century.

The subsequent history is somehow obscure. Immigrations of Christians to Malabar from Baghdad and elsewhere occurred twice in the 8th and 9th centuries, and the immigrants intermarried with the native Christians. The latter of these movements was under two Nestorian priests (bishops!), Mar Sapor and Mar Peruz. The fame of the Malabar Christianity spread to the West, and from Malabar and Syria the bishops and ambassadors to that country. The converts were protected by the king of Cochin. They had their bishop at Angamala, and he was styled 'Metropolitan of India,' having in his jurisdiction 1400 churches and 200,000 souls in the whole district.

A theory has lately been put forward by P. T. Geeverges, a native of the Malabar coast, in a tract entitled the Syrian Christians Nestorianos, to the effect that the Malabarese were Jacobites till the 15th century, when they became Nestorians for a hundred years. He is agreed that Cosmas I, who was originally founded from Seleucia-Ctesiphon, and that they were under the consecration of the Syrian patriarch before that period; but this writer maintains that thereafter they depended on the Jacobites, not on the Nestorians. The only argument of any strength in support of his hypothesis is the existence of two inscriptions at Kottayam, a town of Travancore, in Pallak, the official language of the Syrian Church during the Sanadian dynasty; they are said to be of the 7th or 8th century. One of the inscriptions has a line also in Syriac, in Estrangela, confirming that the language, for the 10th century, the two run thus: (a) 'In punishment by the law (was) the suffering of this One; He who is the true Christ, and God above, and Guide ever pure'; (b) 'Let me not glory save in the cross of our Lord Jesus Christ who is the true Messiah and God above and Holy Ghost.' The words in square brackets are in Syriac. Geeverges amends 'Holy Ghost' to 'Guide ever pure' as in the former inscription. These are said to be anti-Nestorian. But is this the case? The 'Nestorians' of the Persian empire never failed to assert that He who died upon the cross was God. The existence in Malabar of Jacobite Jacobite Bishop of the 13th century, or earlier proves nothing in the absence of evidence as to when it was received into the Nestorian Church. The suggestion that the Portuguese inquirers found some liturgical practices existing which showed traces of Jacobite rather than Nestorian influence, though early, does not disprove that the latter had been dominant for over a hundred years, would hardly bear examination. Thus the indication of some Nestorian influence is a probability, not a probability being in use. There is such a known Nestorian liturgy. Therefore, it is maintained, the liturgy in use was non-Nestorian, i.e. Jacobite. It is evident the inscriptions have been reinterpreted. Jacobites had named one of their archbishops the 'Nestorian Father of Nestorianism.' The Nestorians have been accused of changing the liturgy of the Syrian Church for many centuries, and perhaps some of the changes of the 10th century. Yet, as the Synod of Diamper mentions both Diodore and Theodore, this is very unlikely. Geeverges agree that the Nestorians of the Tigris valley at the end of the 15th century and the beginning of the 16th sent bishops to Malabar, on the request of deputies who had come thence, and he maintains that these converted Malabar from Jacobitism to Nestorianism. It does not appear to the present writer that Geeverges disproved his theory; but there is possible this amount of truth in it, that certain of the Malabar Tamil Christians, who have unfortunately always been conspicuous for questionable familiarity (like their spiritual ancestors), may have had dealings with the dissident Jacobites of the Tigris valley, or with the Western Jacobites, before the 15th century. Thus a deception is said to have gone to the Monophysites of Alexandria to ask for a bishop (theologically) 'Malabarese.'

An ecclesiastical revolution was effected by the Portuguese in the 16th century. They established the Inquisition at Goa in 1560. The Synod of Diamper was held in the south of Cochin in 1599 under Alexius de Menezes, archbishop of Goa, united the Malabarese, then estimated at about 200,000 souls, to Rome, and rooted out all traces of Nestorianism. Celibacy of the clergy was introduced, the Mass was made retrospective. All old books and liturgies were destroyed, or radically altered, so that putting together, with an attempt to get as complete a copy of the liturgies as used before the synod. Renaudot remarks that the Portuguese censors intimidated the monks, which they did not do with Nestorianism. The liturgy which they substituted, has been principally used, so that it is closely related to, or practically the same as, the Nestorian 'Addai and Mari' (see above, § 8). An English translation of this is published by J. M. Neale, who states that it is given as revised by Menezes and the Synod of Diamper. Yet this cannot be altogether the case, as it contains the names of Nestorius, Diodore, and Theodore, as well as of Ephraim, Abraham, and Narsai (see above, § 8), and the phrase 'Mother of Christ' for 'Mother of God' (see below). Neale gives some of the prayers in which the Nestorian word 'Katheryn' was anything original, but in a number of numbers the order in the form approved at Diamper is kept.

The change from ancient customs was effected only after great opposition on the part of the Malabarese themselves, who rallied under their bishop, Mar Abraham (+ 1607). It was his death which made the Synod of Diamper and the real union with Rome possible.

It is interesting to notice the changes of custom and of language produced at Diamper. To this time the Malabar Christians had had but a single bishop at a time; hence, perhaps, arose the custom for the chrisma at confirmation to be consecrated by a priest (of any rank) rather than, as elsewhere, by the East, by a bishop; indeed, the Malabarese were accused of not having had confirmation at all, though this is clearly a mistake. The chief changes in the eucharistic liturgy made at Diamper were the following. The Portuguese substituted for that of the patriarch of Babylon. For the names of Nestorius, Diodore, Theodore, and other 'Nestorian' fathers, those of Cyril (of Alexandria) and others were substituted. The phrase 'Mother of God' replaced 'Mother of Christ.' Where, before the consecration, the words the 'body,' the 'blood,' occurred (as in Eastern liturgies by anticipation), the words 'bread,' 'wine,' were substituted. In the Nicene creed the phrases 'God of God, Light of light, very God of very God,' which were said to have been wanting in the Malabar form, were inserted; probably in order that the first two of these phrases were wanting in Malabar, as they do not occur in the Nestorian creed (see above, § 2). The phrase 'constubstantial with the Father' was substituted for 'Son of the essence of the Father;' the usual equivalent in Syriac (Neale unfortunately does not give the text of the creed in his Malabar liturgy). The host was ordered to be elevated at the consecration. But the chief change was a reversal of prevalent Oriental conceptions of liturgy. The epiclesis, or invocation of the Holy Ghost, was moved from its place after the narrative of the Last Supper and placed before it; the wording of the epiclesis was altered so as to make the epiclesis refer only to a good reception of the sacrament. For these changes see Howard, p. 40; but two of his statements appear to be doubtful. The Portuguese censors probably found no narrative of our Lord's words at all, as they were working on 'Addai and Mari' (see above, § 8); they probably therefore inserted them from one of the other anaphoras, though not in the place where

2. Gibbon, vi. 51.
3. Hill, 500.
5. P. Patriarchate of Alexandria, ii. 32.
they are found in those anaphoras, but in the place which they thought most suitable. The other justification of the Portuguese altered the wording of the epiclesis, is also doubtful, for, as Neale gives it; it agrees exactly with the epiclesis of 'Addal and Mari,' which, as we have seen, is of a very different character from that in the East, and most of them. The emphasis on the effects and purpose of the consecration, for the benefit of the communicants, rather than on the change effected in the bread and wine. The history of the changes at Dhamar fully justifies Rendall's statement above, and shows that the Portuguese sensors were quite ignorant of liturgical science.

The Portuguese changed the episcopal see from Angamala to Cranganor on the coast, so that it might be more accessible to them, and that they might have a greater hold on the native Church. But during the whole time of their rule in India they aroused constant opposition from the Malabarese, whom the terrors of the Inquisition were never able entirely to subdue. In 1663, after more than 60 years of Portuguese rule, the Malabarese were enabled by the Dutch conquests of the Dutch, and the independence of Theodore, a bishop sent from 'Babylon.' The Dutch expelled the Jesuits from Malabar soon after 1663, but these were not united among themselves, and about half remained in obedience to the Roman see, while the rest became independent of it. These last gladly accepted Gregory, Monophysite Bishop of Jerusalem, who came from the Jacobite patriarch at Mardin in 1665. Gregory consecrated Thomas as metropolitan, and since then the Malabarese have been in the main Jacobite. This change of front appears remarkable at first sight. Yet we must remember that in their origin neither the Malabar Church nor her mother, the East Syrian Church, was Nestorian, for they both existed before Nestorianism was propounded. And, though many East Syrians were genuinely Nestorian, it is very doubtful if their Church was consistently and officially so; still less certain is it that the Malabarese were strongly imbued with that doctrine. Hence we can understand why they grasped at the first hand that was stretched out to help them in getting rid of the Western authority which was imposed on them, but under which they could not content.

In the year 1700 and afterwards Nestorian bishops were sent, but they only secured the allegiance of a minority. In the 19th cent. the history is one of constant litigation between rival parties. The Nestorians of Malabar, after many lawsuits, won recognition in the courts and part of the endowments. In the year 1850 they obtained a bishop from Mar Shimun, the Nestorian archbishop (see above, § 6). Later, another was sent, but he was murdered by robbers on the journey. In 1907 Mar Shimun consecrated Mar Timotheus (Achinelech), who now holds office.

There are now perhaps 500,000 Syrian Christians, all told, in India; the majority are Jacobites, and have since the 17th cent. adopted the Jacobite liturgies and customs. The metropolitans usually consecrates his own successor, from the family in which the archdiocesanate has been hereditary. The archdeacon is called ramban. The archbishop is only rarely celebrated; the laity must communicate at least three times in the year, but there are church communities without lay communicants. The churches are plain, consisting of nave and chancel without transcepts. There is one altar, the so-called 'side altar' being used only, as in the Nestorian churches, for the celebration of the eucharist. There are no bookshelves, or books, or the like. The altar itself is 4 ft. high by 6 ft. long and 3½ (or 4) ft. wide, sometimes of stone and sometimes of wood. It stands out from the wall, and in the east wall almost of the chancel, is a bema, a lectern of Mesopotamia, in contrast to the Nestorian altar. At the eucharist the altar is covered with a white cloth, and has a frontal. On it are placed a wooden cross (often with the figure of our Lord painted on it), two candles, a bookstand, a slab of wood or marble for the chalice and paten to rest upon, a 'sponge' of silk for wiping the priest's fingers and for cleansing the chalice after the service, and three veils for the chalice and paten. The bread is leavened, and must be prepared on the day when it is used; each bread is round, and stamped with a cross. It is called variously Qorbdn (Oblation), 'first-bogited', 'the Seal', 'the Body,' 'the Coal' (See 6). These are common Syriac names elsewhere for the eucharistic bread. The naves of the churches have earthen floors; they have no furniture except cross, the two bells in the portico, and the bookstand. At the west side of the nave, on the nave-side of the chancel arch, there is a space railed off, not unlike the Nestorian bema (see above, § 5), and it is wide or 18 ft., as compared with a 10½ ft. width of the bema. The churches sometimes have pictures; this is probably a relic of Portuguese influence. There is always a veil at the chancel arch, which is drawn back at certain parts of the service. Externally the churches have little adornment; the west front has three storeys, and is whitewashed. The roof is high-pitched, that of the chancel being always higher than that of the nave. The vestments worn seem to be much the same as those of the Jacobites of Mesopotamia (see §5), and are more elaborate than those of the Nestorians. At the eucharist the celebrant wears special shoes, whereas the Nestorians take their shoes off; also a black serge or coarse cotton robe (perhaps a sort of casack), a white linen alb, a stole in one piece with an opening for the head, girdle, mantles, chasuble (or cope) of silk damask, and cowl. At ordination the clergy receive the tonsure, as do the Nestorians, the latter, however, only cutting off some of the ordaind's hair in the form of a cross. As in the worship of all Syrian Christians, incense is used at the eucharist and other services.

In some externals, especially in the matter of vestments, the Nestorian Malabarese seem to have assimilated their customs to those of their Jacobite neighbours.

10. Modern missions. — Besides the Jesuit, Dominican, and Lazarist missions to the Unit bodies mentioned in § 6, there have been during the last 30 years various missions to the Jacobites and Nestorians. The American Presbyterian and Congregational Board of Missions have long had missionaries among them; the Archbishop of Canterbury's educational 'Assyrian Mission' has worked among the East Syrians since 1886; and later the Russian Church sent a mission to them. Similarly missionary work from the West have laboured among the Malabarese in India. To all these missions we are largely indebted for a knowledge of the people, and for the publication of the Bible in classical and vernacular Syriac, of patristic texts, and of other liturgical and educational works.

3 Ib. p. 152. 
found walking about, they would be knocked down with clubs, nay, masked, that is, killed. 1

Property—(carrying who carries on the story after Cook's death) is perplexed to decide how far the 'implicit and scrupulous obedience' of the natives in regard to the prohibitions laid upon them as then when Bering was tampered, at the request of the navigators, while the remains of Captain Cook were being committed to the deep —was due to some 'religious principle' and how far to the 'legal authority of the Tabus'. 2

The whole account, however, makes it clear that kings, chief, priests, and the gods themselves, formed one undivided theocracy, whereof tabu constituted the chief instrument, at once spiritual and temporal in its nature and effects. More especially, it ensured a complete control of the economic situation.

Thus at Tonga the special officer who 'presided over the tabo' was a veritable food-controller:

He had his deputies inspected all the produce of the island; taking care that every man should cultivate and plant his quota; and ordering what should be eaten, and what not. By this wise regulation, they effectually guarded against a famine.

A sufficient quantity of ground is employed in raising provisions; and every article, thus raised, is secured from unnecessary waste. 3

For the rest, tabu was the corner-stone of the class-system, ensuring the subjection of women to men, of the lower classes to the chief, and of all other beings whose very name was taboo on penalty of death. 4

(6) Primary connexion of Oceanic tabu with a theocratic system.—Here, then, in this alliance of the religious with the civil forms of authority, we have the distinctive mark of tabu as understood in its local sense. R. Taylor's definition of it, as 'a religious observance established for political purposes', 5 hits off what is at any rate its leading aspect in Oceania. In the Polynesian islands a class of chief with social influence proportionate to their mana, or supernatural power, was everywhere recognized; and in the Eastern groups at any rate there were supreme potentates who might fairly be termed kings, though sometimes, as at Tonga in Mariner's day, the religious head of the community might be said to reign while the war-chief, his liege, in the hierarchy, actually governed. 6

On the other hand, the different rates of proper to be found in Melanesia. Here, however, the secret societies exercise a tumultuous, but none the less forcible, control over affairs by means of a system of tabus.s 7

(h) The English word taboo is employed there is always in Melanesia human sanction and prohibition. 8

Thus there is every reason to suppose that throughout the Pacific we have to do with customs belonging to a single type. This view is supported by the remarkable fact that, despite the diversity of tongues obtaining in this wide area, the word tabu in one of its dialectical forms, as well as the supplementary term mana, is in general use. But, if the nature and name of the institution are uniform, so presumably will be its origin. On the strength of this argument, W. H. R. Rivers has recently tried to show that tabu in its Oceanic distribution stands everywhere alike for the prestige acquired and the authority exercised by an immigrant folk—his so-called ' savage people' —in its dealings with an indigenous population of markedly inferior culture. 9

It is interesting to speculate how a system of tabus may have developed on the spot under stress of such

or mystic aspect of the penalties in store for the tabu-breaker. In this way it is possible to bring together under one head a large variety of avoidance characteristics of the less advanced peoples. This is because it is said that they have no king but custom. Just as their response to traditional rules is largely automatic, so, correspondingly, the rule itself has imputed to it an independent automatic power of self-maintenance and self-vindication. Indeed, theoretically, it is for general purposes to lay stress on the immanence of the sanction normally attributed to a tabu that it is safer to deny the name altogether to prohibitions deriving their force mediatly from a god or his earthly representative and to distinguish these as religious interdicts or bans. Tabu, in short, is to be understood as meaning "unlucky to meddle with" rather than forbidden by edict human or divine. It belongs to what may be termed the perceptual (Lévy-Bruhl would say "prelogical") stage of religion, when values are massively apprehended without analysis of their grounds. At this stage emotion of the collective or mobbish order is paramount as regards both the excitatory and the inhibitive processes that govern the social life. Now of all the emotions feared least, have the deepest haunting quality a special power of sustained control. A primary source of fear is the unfamiliar or strange as such; and this kind of fear in varying degree is always present as an element in that complex emotion of awe or reverence which is the root of religion. Tabu, then, stands for the whole mass of such fear-inspired inhibitions in so far as they proceed directly from the religious emotion, as it regulates the social tradition in the relative abeyance of reasoned direction. Here we have at any rate the psychological clue to a vast variety of customary abstinences—"negative rites," as they may be called—of which the particular conditions are a matter for historical treatment in detail.

(b) Tabu and the notion of contagion.—It may next be noted that emotions are infections. It is, indeed, the leading principle of mob-psychology that emotions are propagated more readily than ideas, their external manifestations lending themselves to unintelligent imitation. Moreover, fear is, perhaps, the most infectious of emotions. Hence the fear-inhibition embodied in tabu always implies an infections unluckiness—a transferable curse on meddlers. As A. van Gennep in his analysis of the fady (= taboo) of Madagascar shows, the inhibitory instincts, of which being that of tokina, 'contagion.'

'Everything,' says Jevons, 'which comes in contact with a tabooed person or thing becomes itself as dangerous as the original object, becomes a fresh centre of infection, a fresh source of danger to the community.'

Jevons goes on to discriminate between 'things taboo,' the primary sources of such contagion, and 'things tabooed,' in which the tabu-infection is not inherent but derivative. A single thing taboo might infect the whole universe, as he says with pardoxal exaggeration; but in practice the transmissible fear is strictly limited in its possible effects, being confined to certain channels prescribed by convention. Meanwhile it is not always easy to draw the line between the two classes. The clearest cases of 'things tabooed' are those in which, as in Oceania, a divine chief tabus something hitherto common, or noa—say, a hunting-ground—and then after a time restores it to ordinary use. But, when Jevons accepts at its face-value the Polynesian explanation that the tabu on the sick is due to the fact that they are possessed by an atua, or spirit, and therefore pronounces them 'tabooed but ... not taboo,' it is at least arguable that a 'pre-animistic' basis remains in certain cases perceptibly contiguous than certain (and those precisely the stranger and more alarming) forms of disease? It is surely no mere superstition to suppose that sickness—say, as it were, death itself—is to some extent in itself—in the local sense at least—is hardly profitable, in deference to the theory that the emotions of man afford the best criterion of his instincts, to regard 'things taboo' as so many danger-signals to which mankind has an innate predisposition to attend. Tabus need rather to be studied in relation to their proximate conditions, which are not biological but historical. In other words, tabus are primarily matters of custom, forming part of the social inheritance, not of the individual heredity.

(c) Tabu and the notion of supernatural power.—The other notion to which the tabu of Madagascar rests, according to van Gennep, is that of heomana = mana, or supernatural power. The person or thing is not to be trifled with, because liable to react with a force of unknown range and degree. There is no fear there, but an intimated and intimated lest it blast the unwary. Now, if religion were all fear, such mana would rank as wholly bad, since fear is a shrinking from evil. But other primary constituents of the religious mood make rather for interest, receptivity, approach, communion. For reckless self-assurance, indeed—for what the Greeks knew as ἑλεός—there is always the fear of the devil to pay. But fear tempered with wonder and submissiveness, and thus transmuted into reverence, is the forerunner of love. So mana has its good side as well, though from the standpoint of tabu this helpfulness remains, so to say, in reserve, being a consummation that lies beyond the purview of the fear-inhibition as such. Meanwhile to an advanced theology that has clarified its concepts by the method of antithesis the savage apprehension of mana by way of tabu seems blurred and equivocal, an experience of something monstrous, half-devil and half-god. And that there is some such ambiguity in the value perceived cannot be denied. The sacred and the abominable, the hallowed and the accursed pivot within the same perturbed awareness of the object. Nevertheless, rudimentary religion has gone a long way towards defining in practice, if not in theory, the sacred and the accursed in the ambit of the hidden power. Thus the novice at initiation or the warrior on a campaign is tabu that he may seek and find grace in the self-concentration that ensues after spiritual crisis overcome. On the other hand, the criminal is tabu because his very soul is attainted; wherefore, as the words of his doom, 'Sacer esto,' imply, he cannot touch water and fire lest he sully their purity with his foulness.

(d) Tabu as a source of personal religion.—At this point it may be observed that the institution of tabu is not only the main organ of social discipline at the lower levels of culture, but likewise the sacred-bed of personal religion. The latter function hinges on the fact that to be tabu with respect to society is at the same time to be tabu in relation to oneself. The external signs of this self-regarding attitude of precaution are often ludicrous enough, as when a man cannot feed himself, or must scratch his head with a stick, or needs to snuff up the holiness that exudes from his fingers. But an inner inwardly felt view revealing itself even in such practices. The mana to be conserved is just that part of a man that he feels to be most...
worth the saving—the will for power. Such power may be coveted for temporal ends. Savage shepherds of the people are not more disinterested than the rest of their kind. But at least it is proximately envisaged as a spiritual power. At least it is the sort of only that comes with and after self-abnegation and the exercise of humility. There is good evidence, too, that a sense of unworthiness consequent on the violation of his self-imposed tabus is the distinctive 'row'—is enough to cause voluntary resignation of office on the part of the primitive wonder-worker. There can be no doubt, then, that the experience both of the access of inspiration and of its withdrawal is often perfectly genuine; and, again, that the due safeguarding of such a gift is a lesson first acquired in the school of tabu. Further, not to lay exclusive stress on the ecstatic experience peculiar to the religious genius, the whole development of personality, so far as this comes about by way of reverence and reflection, arises largely out of the tabu condition. No other such opportunity is afforded, in the gregarious life, the savage, and for this self-communing whereby man eventually becomes master instead of slave of the sense-world. Self-respect, again, is nourished on privacy; the king or priest must keep his distance from the profane. The tabu must be respected only in their eyes but also in his own.1 For the rest, tabu stands for the etiquette of savage life, and by encouraging mutual consideration enables man to ripen into morals, the end of which is freedom.

(c) Danger of the over-development of tabu.—Hitherto the fruitfulness, the educative value, of tabu as a factor in religion of the perceptual or rudimentary type has been chiefly signalized. After all, the inhibition of impulse, as far as the measure of human advance. But such inhibition may be overdone, with paralysis of the will to live as a consequence. Tabu as such represents negation, and a religion made up mostly of negations is necessarily sterile. Denial, even self-denial, cannot but be soul-destroying, if taken as an end in itself. Hence a meticulous scrupulosity is a mark of degraded religion. Nothing, e.g., is so characteristic of the dairy-cult of the Todas as the web of tabus in which every action of the priest-dairymen is emmeshed, and Rivers not without good reason comments: 'The Todas seem to show us how a state of the highest and deepest sort of religion may lead to stooply of the ideas and beliefs through which the religion has been built up.'

Even a positive rite such as prayer may degenerate into formalism. Much more is this likely to happen with the negative rite or tabu, wherein the nature of the spiritual activity subserved is less immediately manifest. In the last stage of such decay—and in this also the case of the Todas is instructive—the scrupulosity itself tends to become a sham, an organized hypocrisy of evasions. The function of ritual in religion is to relieve attention in regard to things ancillary, and of negative ritual to do so in regard to things actually disturbing—all this in order to set attention free for active converse with the divine. It is true that there is in many forms of religious experience—and they are perhaps especially to the fore in rudimentary religion—a characteristic prelude of apparent inaction, a spell of listening, as it were; and, so far as the tabu condition corresponds to this, it is itself apart from the apparent barren of results when it is not. To judge fairly in each case, we must watch the ritual drama as a whole.

1 C. Krapkoff, 'To put on airs of distance or separation from others,' in J. A. F. de la Mare, Polynesia, (London, 1905, pp. 323, 473.
2 The Todas, London, 1905, p. 455. 3 ib.
itself felt, there is of late manifested a deeper interest in the external life, not especially as it relates to the conviction. All in social psychology with its study of the crowd and in individual psychology with its doctrine of the subconscious the conviction is growing that society and mind alike are controlled from below, as it were, as well as from above—that reason is at best a constitutional ruler whose authority rests not on force but on consent. It may be, then, that examined from this point of view, a systematic investigation of the Taboo will be found to embody elementary principles of order that to-day are as active as ever beneath the surface of a changed custom. Experience, which is experiment, has demonstrated (p. 126) to reject any scientific usage dear to the old order; but this experience, which in its most critical form is science, bids us seek beneath the accidents of history for those essential laws whereby our rational sense of direction is continuously maintained.

LITERATURE.—(1) For tabu in Oceania see the works cited above, early authorities such as Cook and Martin being especially enlightening, since the original social system has long been gone, at any rate in Polynesia; compare also Th. Wallis and G. Simson, Anthropologische Notizen über die Weltinsel Lepopo, London 1861, vii; W. Ellis, Polynesian Researches, London, 1833, iv.; G. Tournefort, Tabou, ou les negotiations avec les Sauvages, Paris 1844; Old New Zealand, by a Pakeha Maori, 1854; since the same cultural influences presumably extend to Indonesia and the Polynesian races, see also W. Y. Skeat, Malay Magic, 1890. A. van Gennep, Tabou et Totémisme, Paris, 1909, brings the local into relation with a general interpretation.

TAHITIANS.—See POLYNESIA.

TALISMAN.—See CHARM AND AMULETS.

TALMUD.—Two great works are known under the title, 'Talmud'—a word (7679) which denotes primacy, priority, and hence 'learning.' The two works are the Palestinian and Babylonian recensions, both of which are, in form, commentaries on the text of the Mishnah (7572). The Mishnah ('repetition,' hence oral teaching by repeated recitation) was completed about A.D. 200. The Talmud consists of the Mishnah with the Gemara (797). It represents the scholastic activities of the Jewish Rabbis from the beginning of the 3rd to the close of the 5th century A.D.

The history of the compilation of the Talmud has been dealt with in many treatises and essays.1 It is not the design of the present article to add to those discussions on the criteria and problems involved. Two practical questions will occupy us: (1) the attitude of the outside world to the Talmud,2 and (2) the causes and nature of the permanent value of the Talmud within Judaism.

1. The Talmud in history.—The century which saw the completion of the Talmud also witnessed the beginning of interference with the normal course of the Rabbinic movement. In the year 553 the Emperor Justinian was called upon to arbitrate on a difference which arose between two sections of Jewry in the Byzantine realm. Whereas some were desirous of publicly reading the scriptures both in Greek and in Hebrew, others wished to have the latter done only. The Emperor ordered the prefect Areobindus to promulgate the imperial decision in favour of the use of Greek (the Synagogue might use Aquila if it preferred it to the Septuagint), or of other vernacular tongues such as the Latin, in the Italian province. The emperor, moreover, forbade any attempt on the part of the heads of the schools or elders to prevent the use of the vernacular by devices or prohibitory communications. Most significant of all was Justinian's interdiction of the practice of giving the Haggadiad exposition (sermon) after the reading of the Scripture. The opening words of the rescript explain Justinian's intention. The Jews, he suggested, should read their Scriptures with an eye to the hidden meaning and see in them a prophetic announcement of Christianity. Hence the emperor would literally desire to curb the popularity of the Rabbinic exegesis, which of course would confirm the Jews in their refusal to admit Christological interpretations. Thus Justinian, who introduced drastic legislative enactments against the Jews, was also among the first to attempt interference with the free use and spread of their literature.2

We must here confine our attention to that phase of the strife between Judaism and the Talmud. It was not till the 13th cent. that the attack assumed practical shape. Paris, in the year 1241, was the scene of the first public burning of copies of the Talmud. Before that date the Rabbinic doctrines had been assailed in the de Insolentia Judaeorum of Agobard; but from the Paris incident onwards these assaults became far more frequent and dangerous. Nicholas Donin of La Rochelle had, in 1222, attacked the word Rabban in the name of the Rabbis. This occurred in 1225; he subsequently joined the Franciscans, and in 1230 he formally laid an accusation against the Talmud before Pope Gregory IX., who addressed bulls to many lands (including England) ordering the seizure of copies of the Talmud pending a public inquiry. In France the matter was seriously taken up. Charges of blasphemy, impiety, particularism, and absurdity were formulated; a public dispute between Donin and four Rabbis was ordered. The humours and retaliations of such debates have been satirized in Heine's poem 'Disputation.' But the consequences were deplorable. The Talmud was condemned; many copies of it were burnt; and popular outbreaks against the Jews resulted. Within a few years similar scenes were enacted in Barcelona. Here again the attack originated with a Jewish convert to Christianity, Pablo Christiani. He instigated a public debate between himself and Nahmanides in 1263, as to the attributes and coming of the Messiah, and the Rabbi was sentenced to exile because his defence of Judaism was pronounced blasphemous. In 1264 Christiani induced Pope Clement iv. to appoint a Commission of censors, who expunged all those passages which appeared derogatory to Christianity. In particular, as time went on, Talmudic references to ancient paganism were misinterpreted as being attacks on the Church. This charge was brought forward by yet another erstwhile Jew, Geronimo de Santa Fé, who engineered a public dispute in 1310. In 1410, and also in 1421, the Talmud was submitted to the verdict of the crowd the most intricate problems of Biblical exegesis in relation to Messianic belief. The practical outcome again

2 The view of Justinian's rescript given in the text is the one usually adopted. It is by no means the only possible explanation. See 'Literature' below.
was not a settlement as to the significance of Is 53, but the confiscation of copies of the Talmud. Of much greater interest was the controversy which arose in the decade of the Talmud's beginning of the 16th century. Owing to the part taken by Renschlin (q.v.) in this incident, the Talmud became the battle-ground between the old and the new, between the obscurantists and the humanists. Again the protagonist in the attack on the Talmud was one who had left the Synagogue for the Church. It must not, however, be thought that the proverbial zeal of converts has invariably assumed the guise of the recent assaults made on the Talmud by representatives of modern anti-Semitism (q.v.), powerful among the defenders of the fair fame of the Rabbinic system were such famous Judeo-Christian scholars as Daniel Chwolsohn and Paulus Cassel. The opponent of Renschlin was of a different type. We know very little as to the antecedents of Johann Pfefferkorn, of whom Erasimus said that from a bad Jew he became an execrable Christian ("ex scelestatus Judeo scelestatissimus Christianus"), for no reliance can be placed on the insinuations made by satirists that in his earlier days Pfefferkorn had adopted the tilting spear of the dread unpopular career of a burglar. All that we know is that Pfefferkorn was animated by a strong animosity towards his former co-religionists, that his fanaticism far exceeded his learning, and that he found support for his campaign among the Dominicans of Cologne. Though the Jews had been excluded from that city in 1426 and only regained rights of free domicile there with the coming of the French in 1799, Cologne remained during the 15th and 16th centuries the headquarters of the campaign against Jewish books. It would be unprofitable to repeat the details of the oft-told tale of Pfefferkorn's pamphlets and Renschlin's rejoinders; of the seizure of Hebrew books in Frankfort-on-the-Main in 1509, their restoration, and the long-drawn-out struggle that ensued in Rome. Nor is it of any importance to us now whether or not Pfefferkorn wrote the works that bear his name. The whole incident would have been forgotten but for certain facts. In the first place, this battle of the books gave rise to a famous satire, the Epistola Obscurorum Virorum, the first part of which appeared at Tübingen towards the end of 1514. The effect of this rather savage satire was instantaneous and permanent. As an assault designed to assail this was one of the most masterly efforts ever put forward on behalf of the importance of the Talmud. The struggle between Renschlin and Pfefferkorn became, in short, elevated to a higher plane. Renschlin, once for all, struck the trump-note when he protested against the destruction of a literature because elements of it were distasteful to certain of its critics. "If the Talmud contains errors," he said, "let us render them innocuous by studying to sift the chaff from the grain. Do not burn the Talmud, but read it." It is to Renschlin that we owe the foundation of Hebrew chairs in the universities; the first Hebrew text printed in Germany was the edition of seven Psalms used by Renschlin in 1512. The study of Hebrew in Christian Europe commenced with him, was taken up by his immediate successors, and has never since been relinquished. Renschlin died full of the vindication of his interest in the Kabába. But Hebrew was the passion of his life. And there is no doubt that to him we owe that interest in the Talmud which would, if it was realisable, make a clear and printed edition of all its tomes. There were, as we shall see, printed editions of parts of the Talmud available in 1510, when he wrote that "he would like to pay the price for a copy of the Talmud twice over but he had not yet been able to obtain one." He was referring to MS copies. Within about a hundred years in which the censorship of the law of the land it was easy to procure the Bomberg edition printed in Venice. It was fortunate for scholarship that Daniel Bomberg began to print the Talmud in 1520, before the censorship intruded its hand. Yet the censorship has this value. In 1550 the Talmud was placed on the Index. But the Tridentine Synod in 1564 provided that the Talmud might be circulated, if the passages obnoxious to Christian orthodoxy were expurgated. This was done, and between 1579 and 1581 there was completed the censored Basel edition which formed the model for many subsequent editions. In this form, the Basel edition, the Talmud may be read by Christians not only without reproach but even with profit ("Etiam cum fructu a nostris legi potest"). The Inquisitor Marco Marino went through the Venice edition of 1546-50, censored it, and affixed his name to the expurgated version page by page. The expurgated passages have often been edited and commented on separately. Attacks on the Talmud, nevertheless, continued. As late as 1816 copies of the Talmud were burnt in Poland as a result of the Kamenetz-Podolsk disputation. Literary onslaughts have naturally continued, and modern anti-Semitism has displayed much energy in seeking in the pages of the Talmud grounds for attacks on the Jews. Those pages contain enough and to spare of superstition, narrowness, folly, and intolerance. But the faults are superficial, the merits fundamental; and if anything the latter is that the Talmud retains its permanent worth.

2. Permanent value.—In the first instance the Talmud represents more fully than any other Jewish work the final development of the religion of the OT. In several important particulars, the Talmud, indeed, represents an advance on the OT. The view (adopted by the school of R. H. Charles) that Judaism was a degeneration, while Apocalypse was an advance. On the contrary, all the noble elements of the OT teaching were absorbed into and developed by Rabbinism, which was essentially a prophetic system. The moral life was at once the basis of religion and its ultimate outcome. The Talmud concerned itself with life. It therefore drew little or no distinction between the secular and the religious. This is not the place to discuss the Pharisaic life which developed in the Gospels; for, however we may explain the discrepancy, the Pharisaism of the Gospels is not identical with the Pharisaism of the Talmud.

Hence, though the Talmud, because it combines secular and religious into one whole, is often inclined to attach undue importance to ritual or customary trivialities, it cannot be said that it does so at the expense of the great principles. And, when all has been said, the fact remains that, difficult though it be to harmonize the daily round with the higher calls of spiritual moments, the Talmud did effect this harmonization with a considerable measure of success. To penetrate into the most of God in human life, and worship was not merely confined to the hours spent in congregational prayers. The home was sanctified as well as the synagogue. This fact constituted a glutification and development of the relation to the Judaism of all ages. The liberals who have rejected the authority of the Talmud have not rejected its spirit and its outlook. They, like the conservatives of 1790, confess that the accomplishment of life is the purpose of life. And, among the many attempts to effect this hollowing of life—in relation primarily to God, but also in intercourse...
TAMMUZ

with man—the Talmud must be conceded a high place.

In the main, then, the Talmud retains its worth because it has so thoroughly absorbed the prophetic conception of the close interconnection of religion and life. But life is not altogether expressible in terms of conduct. There is the intellectual side. Now, for long intervals, the Talmud was the main means by which the Jew cultivated his mind. Sometimes Talmudic Talmudists of the Middle Ages were indeed also devoted to science and philosophy, in the technical sense of those terms. But there were masses of Jews who knew no other intellectual interest than the Talmud and the allied literature. The nature of the Talmud saved them from stagnation. For the Talmud is a work of most manifold interest. It concerns itself with every phase of human activity. To read it intelligently—and it was assuredly so read—was a liberal education in the arts and sciences and philosophies. So wide is its range that a student of the Talmud is perforce acquainted with very many subjects which nowadays are regarded as distinct disciplines. The mind of the student was kept alert; his attitude never became scholastic; at every point he was in contact with actualities. It is not the Talmud, but the Talmudist, to maintain this alertness, so that to con over its pages was not identical with losing oneself in an obsolete past. The Talmud breathes with vital freshness.

This enables us to understand why the Talmud has never been superseded by the codes founded upon it even by authorities so competent and able as Moses Maimonides and Joseph Qaro. The codes omit the very element which makes the Talmud so important, so unique. The codes reduce ritual and religious conduct to rule; the decisions are stated in precise paragraphs; they are anonymous. But the Talmud presents processes as well as results; there is little of rule in it, less of precision; and the dicta are largely associated with the names of their authors. We see the religious evolution in action. And, just as it is in action in the older book, it remained in action in the modern life. The claim often put forward by recent Talmudists that their beloved tomes represent a progressive Judaism is well founded. Codes have an air of finality, while the key-note of the Talmud is continuance.

For the Talmud, after all, comes into line with the newer theory of the evolution of religion. The effect of it has been not only to obscure the difference between Scripture and Tradition. This may be true, but modern criticism tends (on quite other grounds) to obliterate the distinction. The Scripture is itself a traditional evolution—so the newer theories hold. The Talmud in essence anticipated this theory, not in the direction of belittling the divine character of the written text, but in the direction of magnifying the human part in the authorization of the message. Man has his part to play in bringing the Law into operation—in interpreting it, which is often another term for expanding it.

We can here merely mention the beauties of the Talmud, its felicities of thought, its sights of fancy, its parables, its poetry. The Jew did not merely feed his mind on the wit of the Talmud or his spirit on its idealism. His heart and imagination, too, were fed. It found there an inexhaustible literature. The liturgy derived some of its choicest prayers. In germ, the Talmud already contains the mysticism which in later ages grew up so luxuriantly. That this mysticism is rare and nearly became antinomian was due almost entirely to the Talmud, which more than permitted—for it encouraged—individualism as well as communism in the religious life. Our present point, however, is that volumes could be compiled (volumes have been compiled) out of the fine gems presented in a literary form which is unlike that of any other work—unlike in grotesqueness as well as in efficiency.

In the presence of these merits the attacks on the Talmud failed. Partly they were theological, partly moral, partly social. Ridicule was cast on its triviality; fault was found with its religious conceptions; objection was taken to its attitude to Gentiles. These unfavourable criticisms were not all unfounded, for the Talmud contains much of inferior value, and bears the marks of the different ages an intruder of thought in Judaism grew up. Nevertheless, some of the attacks on the Talmud were absolutely false; in others the assailants confused the attitude towards the Rome which destroyed the Temple with the attitude to the Rome which became the seat of the papacy.

Often, too, overmuch importance was attached to the obiter dicta of isolated Rabbinas. When, however, it was protested by Donin in 1359, and by Romano in 1553, that it was the Talmud that confirmed the Jews in their obstinate fidelity to the Synagogue, the charge was largely just. But that does not lead to the conclusion that the Talmud was not a work. At all events it explains, perhaps in the most effective manner, how it came about that a work, so curiously alien from the modern canons of excellence in literature, has maintained its position not only with those Jews who more or less order their lives in accordance with it, but also with those who, rebels against its authority, retain an affectionate regard for its spirit. Written in style far removed from modernity, the Talmud is one of the most modern of books.

TAMIL-SPEAKING PEOPLES.—See Dravidians.

TAMMUZ. Tammuz was the West Semitic, or North Babylonian inscriptions the legend of Tammuz was regarded as being exclusively West Semitic, owing, apparently, to the scene of the god's activities being located, in the then extant records, in Syria. The word is, however, in finding an acceptable root by which the name of the god might be explained.

2. its most familiar versions.—According to the classic legend of Tammuz, his mother had an unnatural intercourse with her own father, urged thereto by Aphrodite, whom she had offended. Pursued by her father, who sought to kill her for this crime, she prayed to the gods, who changed her into a tree, the trunk Adams (the Greek-Syriac name of Tammuz) was in due time born. So charmed was Aphrodite with the beauty of the infant that, placing him in a chest, she
handed him to Persephoné to take care of. The
goddess of the under world, however, when she
found what a treasure she had in her keeping,
refused to part with him again. Zeus was there-
fore appealed to, and he decided that for four
months in the year Adonis should be left to him-
self, for four months it was supposed he was
gnashing their teeth, and the remaining four with Persephone. A variant
account, however, agrees with the Babylonian
legend in making him pass six months with Erêš-
ki-gal (Persephoné) and six with Istar, or
Aphrodite.1 This representation Adonis,
or Tammuz, as being passionately fond of hunting,
and undeterred therefore by the fiercest quarry.
His end was tragic, as he was slain through the
task of a wild boar piercing his groin (see § 14).

3. The Syrian versions.—The centre of
the Syrian worship of Tammuz was probably Gebal;
in any case, Balthi ('the [divine] Lady,' as
Aphrodite seems to have been called in the ex-
treme west of Asia) was believed to have migrated
thither from her realm of Cyprus for love of Tammuz (Tammuz). But before Tammuz she
had loved Ares (Mars) and thereby aroused the
jealousy of her husband Hephaestus. In this
version Tummuz is described as the son of Cuthar,
king of the Phoenicians, to whom, when she fled
from Cyprus, Balthi made all the villages around sub-
mission. It is said of a wild boar, however, that
called the death of Tummuz, but the jealousy of either Aphrodite's husband Hephaestus or her lover Ares, who came and slew Tammuz on Lebanon whilst he was hunting wild
boars.
The Syrian lexicographer Bar Bahlu also gives the legend as he had heard it: 'Tommuwas, as they say, a hunter shepherder and chaser of those beasts; who when he married his bride took her away from her husband. And when her husband went forth to seek his Tommuwas, he was, but himself slain later on by a wild boar which he encountered in the wilderness, and his father made a great weeping for him in the month named after him.'

The Rabbinical references to Tammuz are more
curious than instructive with regard to the history
and development of the myths concerning him.
One (that of Rabbi Solomon Isaac, or Raashii, commenting on Exod. 20.10), in order to connect the root of Tammuz with the Chaldaean zêz, 'to make hot,' describes it as 'an image with which the women made hot in the inside, and its eyes were red, and they melted by reason of the heat of the burning, and it seemed as if it wept;' and they (the women) said, 'He asks for ourquartered.'

This and other varying traditions concerning Tammuz, however, seem to belong to the Christian
era.

4. The worship of Tammuz in Syria.—In all
probability the mourning for Hadadrimmon men-
tioned by Zechariah (12:1) is a reflexion of the
lamentations for Tammuz, with whom this deity
is said to have become identified; and in a
passage in Amos (8:9) the Israelites lament as for
'an only son.' The most noteworthy Biblical
passage, however, is seemingly that in Jeremiah (25:8), where it is said that they shall not lament for Jehoiakim, saying, 'Ah my brother! or, Ah sister! Ah lord! or, Ah his glory! and where the word 'sister' suggests the sympathy of the mourners for his bereaved spouse or lover. When Belia, his sister, in the Babylonian legend, says, 'My brother, only (one), do not cause me pain!' (by leaving the world again to go to the regions below), we perhaps have a better parallel. Byblos,
the site of the temple of Tammuz in Syria, was,
in the month of June, the funeral-festival of the smitten sun-god was held, and lasted for seven days. 'Gardens of Adonis,' covered over with seeds which
sprang up quickly, and as quickly, owing to lack
of moisture, faded away—were prepared by the
mourning women as emblems of the early death
of the youthful Adonis. Thongs of wailing women
filled the streets and the gates of the temple,
tearing their hair, disfiguring their faces, and
remaining barefoot. By the appointed priests of Ashur-tho, the spouse of Tammuz—took
part in the mourning for 'the bridegroom of her
youth.' These days of mourning were followed by
days of rejoicing for his resurrection, during which
the Boar was slain, the 'Festival of the Meat of
the Mediterranean from Alexandria—an emblem
of the severed limbs of Osiris, which, gathered up by
Istis, his inseparable spouse, after he had been
dismembered by Typhon, had of old arrived at
Gebal. Thus did the legend of Tammuz assimilate
itself with the Egyptian myth of the sun-god
Osiris.

5. Tammuz in Babylonia, his birth-place.—So
far Babylonian sources have furnished but few of
the details of the Syrian and the Greek versions
of the myth of Tammuz. To all appearance the
legend had not been carried from Syria to Babylonia, and not by the reverse. In its original form it must have been of consider-
able antiquity. According to the archaic list of royal names discovered at Nippur (Niffer), and now preserved in the British Museum, of Pennsyl-
Dar, the Babylonians called Tammuz, was a king of Erek and ruled for 100 years. His predecessor was the god Lagal-bands, who reigned for no less than 1300 years, whilst his
successor was the half-divine and only half-
historical king of Erek Supiru, Gilgames, who
ruled for 160 or possibly 180 years. According
to this record, Tammuz was a fisherman (Sumerian ak-ia) of the Gulf of Ela-a, a site as yet unidentified,
but which one would expect to find somewhere
in the neighbourhood of the Persian Gulf. Though
king of Erek, Tammuz was more especially
associated with Eri-ja, the divine city of Ela, the
god of the waters, at the head of the same
water-way, and it was only natural that a maritime
people, such as the southern Babylonians were,
should make Tammuz a fisherman. In that part
of the land he was evidently the god of the fruit-
fulness of the teeming waters, just as, inland, he
was god of the fruitfulness of the fertile Babylonian
plains.

6. Istar's search for Tammuz in Hades.—Out-
lines of this legend are given in the articles
BABYLONIANS AND ASSYRIANS,2 and HEROES AND
HERO-GODS (Babylonian). From this text we
see that Tammuz was, at the time of Ishtar's descent,
in the under world with Erês-ki-gal (Persephoné),
whither he had descended in accordance with
the decision of the king of the gods (Bel-Merodach =
Zeus). This legend likewise shows that Tammuz
had become the lover of Ishtar or, as the record
puts it, 'the husband of her youth.' The sacrifices
which she was willing to make on his account are
noteworthy, for at each of the seven gateways of
'the land of No-Return' she parted—under protest
—with an article of apparel or adornment, until
she appeared in the presence of the queen of the
region perfectly naked. As things went wrong on
earth owing to the absence of the goddess of love,
Esta, Sin, and Ea bestirred themselves and
secured her release. Here the subject suddenly
changes, and the name of Tammuz appears in the
text for the first time:

1 If she [Erês-ki-gal] hath not given thee her disposal, return to her.
2 Upon Tammuz, the husband of [her] youth, Four out pure water, [leptakî]vex elâl.
3 See Ezrît xxvii. [151-150] § 159. 2 EERI 118. 4 J. B. VI 645a.
Tammuz

Clothe him with a festive garment, let him strike up with the flute of lapstone—
Let the joy-mad dance, let the honoree one...
(Then) Bélili set down [her] instrument,...
And the women-mourners [her?].
[When she heard her brother’s voice, Bélili smote her instrument...]
Her ‘eyes-stones’ filled [her] thoughts (>).
‘My brother, only [one], do not cause [me] pain’ (>)
On the lapstone flute, they will play along with him the tambour of chalcedony (>)
The men-mourners and the women-mourners will play along with him.
May the dead (?) arise and smell the incense.

Bélili, mentioned here as the sister of Tammuz, appears also in the great list of gods in connection with Alala, as forms of the deities of the heavens, Anu and Anatum. The flute of Tammuz, like the divine vine at Éridu, was of lapstone, emblematic of the blue sky, and it is not unlikely that the other objects mentioned—Bélili’s ‘eyes-stones’ and the ‘tambour’—were of precious and similarly symbolical materials.

7. Other Babylonian references to Tammuz.—The first place ought probably to be assigned to the lists of gods, which furnish us with some of his names, and the deities with whom he was identified. The transcription of the group standing, in Sumerian, for Tammuz, *Demu-zi*—Dumu-zi, though in Semitic form, ‘Dunu-zida’, is often found. The commonly accepted rendering of this group into Semitic Babylonian is *mardu kunu*, ‘the true (or faithful) son.’ Of the lists in which the name is found the most important is probably the trilingual text (two dialects of Sumerian and Semitic Babylonian equivalents) published in *WAi* ii. pl. 59. In that inscription his character as a sun-god is indicated by the fact that his name comes towards the end of the section referring to the sun-god Šamaš, after Kēttu and Mēšarru, that deity’s two attendants. After this comes Tu-zī-zi (*from Tum-zi, in standard Sumerian [Dumu]-zi, rendered by *ba-zi:* i.e. transferring Dumu-zi into the Semitic Babylonian column—and from the next line we see that he bore in Sumerian also the name of U-lihir-sī (dialectic) or Enligrī-sī, probably meaning ‘the lord of the righteous covenant,’ or the like. The next line, which begins a new section, has the name of Sir-du, dialectic Shir-tunn, the mother of Tammuz. Other deities in this section are the ‘lady of the plain,’ Sītar, and ‘the lady of the gods.’ A section giving further names of these goddesses follows, and then comes the final section of the tablet, beginning with Eres-ki-gal and ending, alluding as Altalatu, the Babylonian Persephone. Important as showing the feminine aspect of Tammuz, which is also visible in the Syro-Greek view of the deity, is the list in which he is called Ama-uṣumgal-ana, ‘the peerless mother of heaven,’ which may be one of the aspects of the planet Venus, described as ‘male at sunrise.’ Another name, En-mersi, dialectic for Nin-Gur, the god of Lagas, identifies Tammuz with that deity and stamps him specifically as the great god of agriculture.

8. The abodes of Tammuz in Babylonia.—The chronological list preserved at Philadelphia, U.S.A., indicates that Tammuz was a king of Erech and seems to indicate that his native place was a city expressed by the characters Ha-n. In the incantation published in *WAi* iv. pl. 15, however, Éridu seems to have been his chief city, of which, therefore, Ša-ā may have been a suburb or even another name:

En Éridu a black vine grows—in a sacred spot it was made. Its substance was white-flaked lapstone, planted in the Deep.

En Éridu is filled with fruitfulness—
His seat is the (central) place of the earth.

His abode is in the bed of Enur [the Abyss].
In his holy house, which is like a forest, [his] shelter is set—no man can enter therein.

In the midst of it is Samâl [and Tammuz] Dumu-zi, between the mouths of the rivers (or canals) on both sides.

Here follow the names of the waterways in question: Kā-bengala, Iqrī-bengala, and Ka-na-ab-ul, though the true total seems to have been four.

Instead of ‘the god Šamaš (and Tammuz)’ we might read ‘the sun-god Tammuz,’ which would correctly describe his position in the Babylonian pantheon. The Sumerian original has expressed the name of Tammuz by the feminine Ama-uṣumgal-ana.

The connexion of Tammuz with the vine of Éridu, the Paradise-city, stamps him here likewise as one of the gods of fertility, and it is owing to this that he is so closely connected with the god Ea, to whose nourishing streams the great fruitfulness of the land was due. It is noteworthy that Nin-Gur, the god of Lagas, who was identified with him, bore also the name of Uru, ‘the husbandman.’

9. Tammuz as the herdsman.—It has already been noted that Dumu-zi, or Tammuz, was called the fisherman (*ša-ša = bagara*), but later he appeared as ‘the herdsman.’ This view of the deity is referred to in another incantation:

‘The milk of a yellow goat which has been brought forth in the holy fold of Tammuz [Dumu-zi].

The milk of a goat of the flock—may he give thee with his holy hand.

Pour it then into the skin of an undefiled she-goat.

Azi-angu, the uz-mah-Enīla (‘glorious goat of the god Enīla’), has caused [it] to be eaten with his Sacred hand.

Merodoch, lord of Éridu, has given the incantation—

May Nin-aqa-kuddu, the lady of the limbless fopun, make him [the sick man] holy, make him pure.

‘The incantation of the milk of the yellow goat, and the flour of the undefiled she-goat’s skin.’

The antiquity of the association of Tammuz with the flocks in Babylonia is shown by the noteworthy text in *The Amherst Tablets*, i. (London, 1908) no. 119, where ‘Fees’ is expressed by the phrase ‘sheep of the sky.’ This indicates that the flocks of Tammuz, the sun-god of spring, were the clouds illuminated by the setting sun, and comparable with the flocks of Hehlos in Greek mythology, expressed in the Sumerian inscription, nos. 110, 112, and 114 refer to the ‘grain of the priest of Tammuz,’ and no. 113 mentions his temple at Lagas. The date of these inscriptions is about 2920 B.C.

10. The Babylonian hymns to Tammuz.—At least two series of these existed, and they may have formed the originals of some of those chanted by the Hebrew women* as well as by the Phcenicians and the other nationalities who accepted or adopted the cult. The following will show their nature:

‘The eye and her lamb he taketh;
The goat and her kid he taketh.
The eye and her lamb she smiteth down;
The goat and her kid she smiteth down.

Arisen then, go, her road of “No-return.”

Alas, hero! warrior, Un-ana;
Alas, hero! my god Dumu-zi;
Alas, hero! son—my faithful lord;
Alas, hero! Glum-him the bright-eyed;
Alas, hero! god Nannar, lord of the west;
Alas, hero! overseer, lord of prayer;
Alas, hero! they who [are] my heavenly light;
Tammuz

Alas, hero! Ana-nun-ga-ana;
Alas, hero! brother, mother, heavenly vine.
He goeth, he goeth, to the bosom of the earth—
A distant land, in which there is no abundance for the land's dead.

For his lamentation, for the day of his fall,
In the unpropitious month of his year.
To the road of man's last end,
At the call of the lord,

(God, hero, to the distant land which is not seen.)

Or, according to the Sumerian original of the last four lines:

In an unpropitious month of thy year,
To the road of the people's end or rest,
At the call of the lord,

The warrior, in his distant land, is not seen.

'The unpropitious month' is probably Du'anzu, or Tammuz; 'the road of man's last end' is that leading to the under world; 'the lord,' who calls him, is possibly Merodach, but may be Nergal, king of that region, the Babylonian Mara.4

After a division-line the text continues:

'Alas, my abundance which has been withheld! Alas, my produce which has been detained!
My heart is oppressed, shepherd, dwelling in exile—
Where is his city? My heart is oppressed!
From the house of gloom he shall be brought forth—
Whom you worthy, from the house of gloom shall he be brought forth!
Alas, hero! warrior, Un-anu, etc., etc., as above.

Though these lamentations may have been recited by the women and others who joined in the ceremonies, it is probable that they were originally alliterative stanzas placed in the month of Ilun. They are plentiful and referred to is probably the fruit of the earth; the oppression of heart was due to the lack of these things, and also to the god's exile in the regions below.

The bearing of these hymns upon the legend is clear. We learn that (1) some accident had happened to Tammuz, by which his sojourn in the under world is explained; (2) this accident was that in some way he fell — either through an attack by a wild animal (boar) or, like Eshmun, the Phoenician deity, by his own hand; (3) the result was that he passed part of his life in the under world, whereby the earth suffered and the underworld profited; (4) the under world, to which Tammuz went, was man's last abode and the place of the people's rest. Notwithstanding that he was fulfilling his mission, the exile of Tammuz was still an unpropitious event for him, the realm of Eres-ki-gal not being, even for the earth-dweller, that place of delight which the man looking forward to life with his god in the realms of bliss would like it to be. It was supposed, however, that the worshipper of Tammuz, when he departed this life to dwell with his god, hoped to enjoy companionship with him not only in Hades, but also on earth when his time came to return thither.

11. The transfer of the legend to Syria.—As has already been stated, 1 the legend of Tammuz in Babylonia was of considerable antiquity—as early, in fact, as 4000 B.C. or even earlier, and it had had, therefore, ample time not only in which to spread abroad, but also to assume new forms and receive additions. Besides Byblos, the Babylonian Gubal (Ghal), Tammuz was also venerated in many intermediate states and cities — Cilicia, Cappadocia, Lydia, Lydia, Ephesus, and Phermum. Everywhere the cult was most enthusiastically adopted, falling in, as it did, so exactly with the Semitic view of the nature of things. Apart from

the theories which were held as to the creation of the universe, the legendary teaching connected with Tammuz dealt only with the continuance of what had been brought into existence by the Creator. Regarded as a sun-legend, it was recognized that the kindly fruits of the earth were due to his rays, and to the fact that, when these and their accompanying warmth were withdrawn or reduced, the growth of vegetation ceased.

12. The reflex-influence of the legend of Tammuz in Babylonia and Assyria is seen in this enthusiastic worship of the Babylonian Dumuzi, under the name of Tammuz, had influence in Babylonia and Assyria, sympathetically related as they were with the Western Semites, is but natural; and its greater importance in the countries of its adoption than in the land of its origin is also easily comprehensible. This was due to the fact that the Babylonians had, from the date of the rise of Babylon, accepted Merodach, who was also a sun-god, as their supreme deity. Tammuz therefore continued to represent simply one of his forms, and thus remained ineligible as chief of their pantheon. With the construction of a philosophical system, his position of supremacy would have destroyed.

13. The development of the legend farther west.—In all probability more than one version of the legend existed in Babylonia and migrated, with the worship, westwards. Representing the summer sun, with all its warmth and its vivifying and productive power, Tammuz was regarded as the god who passed the six months between the beginning of autumn and the end of winter in the under world. As the planet Venus seems to follow the course of the sun, her disappearance with him was interpreted as her desire to rescue him from that prison-house, but, as her movements do not coincide with the seasons, she generally had to come forth without him. When the time for his release came, therefore, he had to return to earth unaccompanied by his spouse.

In the West the legend was modified, and Tammuz-Adonis there appears as the son of the Cyprotite king Kyynras and as beloved of the goddess Aphrodite. He died, it was said, in the forest of Lebanon, killed by the wild boar typifying winter, and since the time of that catastrophe of the river Adonis now the Nahr Ibrahim, 'Abraham's stream,' flows yearly, when in flood, reddened by his blood. The name Adonis is the Greek form of the Phoenician Adon, 'lord,' which this deity, in common with many others, bore. In the Samaritan hymns (mostly in the dialect) he is constantly called the 'lord,' Ash or iawen, and it is probably owing to this, at least in part, that Adon (Adonis) became one of his names.

14. Tammuz in Cyprus.—According to Ovid, 1 the scene passes, in part, from Assyria (Syria) to Cyprus. Kyynras, king of that island, had, by an incestuous relation with his daughter 2 Myrrha, a beautiful son named Adonis. The child was brought up by the nymphs and had hardly reached manhood when he became the lover of Aphrodite. One day, notwithstanding the goddess's succussions, he went hunting in the forest of Lebanon and was wounded by a bear sent by Ares (Mars), who was jealous of the divine youth. Aphrodite, hearing of this tragedy, filled the forest with her lamentations and tried to revive him, but without success. Feeling the blood of the dying Adonis had its root, and the river Adonis was thenceforth reddened yearly by his blood.

15. The legend of Tammuz in Greece.—According to Pausanias, 3 Sophocles, 4 Adonis was the son of a princess of Assyria (Syria), Myrrha or Smyrna, 5 Metam. x. 2 See § 5, 15.

1 Variant rendering: 'Samal will make him great in the land of the dead,' but that given above seems preferable.
2 The rendering in Semitic is 'filled with lamentation on the day that he fell and (was) in distress,' but the Sumerian is insufficient for all this.
3 In the calendar of lucky and unlucky days (W 4 1 v. 45) the entries for the month Tammuz (col. iv.) include 'weeping' on the 2nd day. On the 21st day, but is it doubtful whether really refer to the legend.
4 See § 6 above, and § 14 below.
5 See § 6 above.
whom Aphrodite had infested with a violent love for her father Theias. Myrrha profited by her father's drunkenness and the darkness, but, when afterwards Theias found out what had taken place, he was at the point of killing his daughter, when he was attacked by the anger of the gods. Theias took Myrrha, flew, praying the gods for protection, and the divinities who had been the cause of her ruin, recognizing that she was the goddess of whom they were afraid, disappeared into the tree which, since that time, has borne her name. Nine months later the tree opened and gave birth to the beautiful Adonis. Aphrodite took charge of the infant, placing him in a basket, handed him to Persephone to take care of.

Other variants of the legend of Tammuz are recorded, but, as they are later developments and seem not to bear upon the origin of the myth, it is needless to speak of them here. How far the above or any other variants may be founded upon further details from Babylonia is uncertain and will not be known until the Babylonian legend of Dumu-ziha comes to light.

16. Why did the legend vary?—Not only was Tammuz faithful in fulfilling his fate and passing a part of his existence in the under world, but he was also faithful in his regard for agriculture, the fruits of the earth to perfection in their season. The climates of Babylonia and of Syria are so different that any legend common to both was bound, in its province, to differ; hence the variations in that of Tammuz noted here. According to G. Rawlinson,1 increasingly heavy showers fall in Babylonia, in November and December, raising the river-levels. As spring advances, theShowers become lighter and fewer until about May, when summer-weather arrives. From May to November rain is very rare indeed, and the sun's rays are only tempered at morning and evening by the grey mist. For five months, therefore, Babylonia is a land of drought. With this description the month-list of Lagas, whose principal deity was Nin-Girsu, identified with Tammuz—seems to agree,2 but it is the common calendar of later days3 that is the most instructive. In this it would seem that it was the fourth month, Su-(n)inanna, 'perfection of seed,' or the like (June-July), that ended the time of productivity, and that this month was called Tu-uz, the West Semitic Tammuz, as the month of the god's greatest fruitfulness. The month next following, Bibb-gur, apparently means 'month of the god,' while the month, August-September, is Kin-Inanna, 'the errand of Istar,' generally regarded as that in which Istar descended to Hades in search of her lover. Its Heb. name Elul (in Babylonian, Ululu) probably means 'grief' and seems to express the common Semitic sound of mourning and distress. In Marcheswan, the 8th month, the opening of the water-channels took place and was succeeded by the rain-clouds of November-December (the Heb. Chislev). The 11th month, January-February, was 'the month of seed' and probably marks the time when sowing became general. Finally came the 1st and 2nd Adar (Feb.-March), in Semerian Se-gur-kud and Dir se-gur-kud, the two grain-plant cutting months, when the seedlings were chopped to encourage the increase of sprouts. Roughly, the 12 months of the year fall into three groups of four each, Ninan to Tammuz marking the growth and perfection of the grain, Ab to Marcheswan practically barren owing to the great heat, and Chislev to Adar the season of deposition of the rivers and the sowing of the crops. It is probably to this that the three periods of the year of Tammuz—with Istar, with Eres-ki-gal or Persephone, and at his own disposal—are due, the division of his year into two periods of six months each being apparently Western.

17. Tammuz in the late Assyrian inscriptions. —In these documents there are certain names that appear most forcibly to the god—such, however, under the name of Dumu-zi or Tammuz, but under that of Adon. The Assyrian form appears as Adunu, and the names containing it may be divided into the specific and the general and the Assyrian—the latter apparently invocations, or translations from Syria into Assyrian. Among these are Aduna-apia-iddina, 'Adon has given a son'; Adunnasal-sual, 'Adon, giver of a son'; and Adunu-matsuwar, 'Adon, protect the land.' The purely Syrian names seem certain to be Adunaziz(i) or Adunai, i.e., perhaps 'my lord hath sprinkled'; Aduni-tu and Aduni-tari, 'my lord is my rock.' (Heb. gad'; Aduni-ba'ali, 'Adon is my lord,' is West Semitic and belongs to about 850 B.C. (he was king of Siana), but all the rest fall between 650 and 660 B.C.

Whether, with Vellay, the gods of the countries into which the worship penetrated may be regarded as having become identified with Tammuz or not is difficult to say. To the fact that Tammuz, under the name of Adon, 'lord,' was designated by a word which could be applied as a title to any god, whether the Merodach of the Babylonians, the Moloch of the Syrians, or the Hadad of the Amorites. It is this, in all probability, that caused Tammuz to become, in a measure, identified with the Adonai of the Hebrews—that more general divine name which, with them, replaced the all too sacred Jehovah (Jeboveh) of their own monotheistic creed.

18. The Tammuz-cult and its contemporary creeds.—Naturally, the idea of a kind of martyr-god, dying, it may be, for the good of mankind, notwithstanding the difficulty of bringing Tammuz into this category, has to be taken into consideration. The most striking parallel, perhaps, is the Osiris of the Egyptians; and the Babylonian Merodach, who died in order that mankind might be produced from his divine blood, is equally noteworthy. As Merodach, the 'steer of day,' was a sun-god, it is not unlikely that he was regarded as enjoying his golden hour on earth in the afternoon. The sun as Tammuz, however, died yearly, not so much that men might live, but because he fell under the evil influences of the spouse of Nergal, the god of battle, disease, and untimely death. Vellay contends that Jesus Christ, like Tammuz, was a sun-god and also like him, descended into Hades; but there are so many fundamental differences in the care of the mythical sun-god of 4000 or 5000 years B.C. and the Christ of history that comparisons may well be set aside. The half-mythical Babylonian ruler, with his 100-year reign, comparing so unfavourably with his predecessor's 1200, may have had a misadventure in the hunting-field which gave birth to the nature-myth which the Babylonians, Syrians, and Greeks have handed down to us.

TANJORE—TANTRAS

TANJORE.—1. History.—Tanjore (Tamil Tanjavur, 'city of refuge') is the capital of the District of the same name in the eastern portion of the Madras Presidency; it is situated in 10° 47' N. lat. and 78° 10' E. long.; in 1911 the population was 60,341. The District formed part of the ancient Chola country, and the kingdom reached the zenith of its power under Rajaraja I. (A.D. 1674-1701) who extended the rule of the Hoysala Ballāllivas of Dornapuram and the Pandyas of Madura. An independent Nayak dynasty was established in the 16th cent., which was displaced by a Marāṭha kingdom about 1674. It was occupied by the British in 1772 and finally ceded to them in 1799; the royal family, who were pensioned, became extinct in 1885.

2. The temple.—Tanjore owes much of its importance to the great temple built by King Rājaraja I., who was a devoted Saiva, but tolerant of other religions. It is known as Brihadisvara, Brihadisvarar, said to mean 'temple of the great god,' or Rājārāja, after its founder. Fergusson writes:

'In nine cases out of ten, Dravidian temples are a fortuitous aggregation of parts, arranged without plan, as accident dictated the place of erection of their erection. This plan gives the great excepction to this rule to be found at Tanjore. The Great Pallavas, in whose time the temple was built, were in a state of transition and st mating plan, which was persevered in till its completion.'

3. Entered by a fine gateway (gopura), which is supposed to cast no shadow on the ground, the outer court, used as an arsenal by the French in 1772, is 550 ft. long and 250 broad, and is surrounded on all sides by a cloister. The main shrine stands to the west, and above it rises to a height of about 200 ft. a magnificent tower, decorated with pillars and statues. The summit is crowned by a single block of granite, weighing 80 tons, said to have been raised to its present position upon an inclined plane commencing at a village four miles distant. An interesting feature of the tower is that the carvings are generally of a Vaishnava type, while the ornamentation of other parts is Saiva. Another curious fact is that one of the figures on the north side of the tower represents a European, the popular belief is that it is the figure of a Dane who assisted in the building or that it was erected to foretell the British occupation. It is probable that both the European figure and the Vaishnavas were selected by one of the Nayak princes, and that he was helped by some Danes who acquired Tranquebar in 1620. The base of the great temple and many of the other buildings are paved with inscriptions which have been translated, and nearly all of them belong to Rājarāja and his successors.

Another noteworthy building is the temple of Subrahmanya, god of war, younger son of Siva, with a colossal figure of Nandī, the bull of Siva, a perfect gem of carved stone-work, the tooling of the stone in the most exquisite delicate and elaborate patterns is as clear and sharp as the day it leaves the sculptor's hands.1

1. The temple, though beautiful, is not considered particularly sacred. The legendary cause of this is that the Saivite saint Appar was refused admission to it, and that therefore it was not celebrated in his hymns or those of the other three Saivite post-saints. A peculiarity about it is that Śidras are admitted to the apartment next the shrine, from which in most temples in this District they are excluded, and that Vaishnavas [a hunting, fishing, iron-making, and cultivating castel], who are usually not admitted at all, here come as far as the great bull.2

3. Tiruvādi.—Tiruvādi (Tiruvāyirāru, 'the five holy rivers'), six miles N.W. of Tanjore, is a place of great sanctity, said to be other than Benares by one-sixteenth, where pious Hindus desire to die and where their bones are cast into the river. It has a fine temple, called Paścanadīsvara, 'Lord of the five Vīrus,' which preserves inscriptions of Rājarāja and his successors.3

LITERATURE.—The authorities have been quoted in the article. For the early Tamil history see V. Kannakasabbi, The Tamil Eighteen Hundred Years ago, Madras, 1914; C. Oppert, The Original Inhabitants of Bharatavarṣa or India, London, 1803. W. Crooke, TANNAI.—See JUDAISM.

TANTRA.—In the series of sacred books of the Hindus the Tantras occupy the fifth or sixth place. According to their character and contents they are fourth in the order of inspiration and authority, the degrees being bruti, smṛti, Purānik, and Tantrik. They are also known as a fifth or the fifth Veda to those who regard them as authoritative and observe the ritual which they enjoin. In neither case is the series entirely chronological or consecutive. The Tantras, which succeed and are in part dependent on the Puranas, are also in part connected to the older Vedas of greater antiquity. Their date, however, is impossible to determine with any precision. The existing treatises are probably for the most part at least reproductions with additions and variations of older works which are no longer extant. In their present form they are usually ascribed to the 6th or 7th cent. of our era, but they may be considerably older. The Tantrik usages and popular formulas were current and practised in a much earlier age; they belong to a type of thought that is primitive and among primitive peoples varies little in the course of the centuries. Until recent years little was known of these works outside of India. A few have now been made accessible in translations, but the greater number are as yet unexplored.

The name tantra signifies a 'web' or 'warp,' then a continuous or uninterrupted series, and in religious usage an orderly rule or ritual. The word was then further applied to the doctrinal theory or system itself, and finally to the literary work or treatise in which it was set forth. In the last sense the word is not found in the Amarakosa, the great Sanskrit dictionary, nor is it used by the Chinese pilgrims. The Mahābhārata also contains no reference to the Tantras or to any religious system founded upon them. All these facts are confirmatory of the comparatively late origin of the existing books. Saikara enumerates the titles of 64 Tantras, comparatively few of which can be identified at the present day. The best-known of these treatises and the most worthy of study are perhaps the Tantrabhaumuti, Sāk̄ṣī-agama, Bādreyavamala, Kalika, Kukkura-vana, Tan-tratattva, and Mahākāśi. Translations of the two last have been published by Arthur Avalon. Parts of the Hitopadesa also are known as 4tantras.4

Traditionally the authorship of these works is attributed to Daśātreyan, who was an incarnation of the Hindu trinity, Brahmā, Viṣṇu, and Siva.

4. For further titles see Monier-Williams, Sanskrit Dict., s. a., and Brahmanism and Hindūism, p. 207.
They are therefore to be regarded as equally the revelation of the three supreme divinities. In form, however, they are dependent on Siva alone, who, in dialogue with his wife Durgā or Kāli, reveals the mystical doctrines and also the sciences, which are to be received and practised by his worshippers. This authoritative or ‘higher tradition’ is further said to have been delivered from his central or fifth mouth. As such it is mythically secret and, by reason of its mystic authority, and secret and may not be revealed to the initiated. ‘The Vedas, the Śastras, and the Purāṇas are like a common woman, but this mystical Saiva teaching is like a born woman.’ And its communication is forbidden. The real authors of the several treatises are unknown. They bear the name also of Agamas, and as such are sometimes distinguished from Vignāṇa, the text of the Vedas, Dharma Śastras, and other sacred books. The Indian commentator, Kullūka Bhātta, asserts that revelation (trāti) is two-fold, Vaidik and Tantrik.1 In the popular knowledge and belief they have practically superseded the Vedas over a large part of India, where religions practice and ritual are guided by the teaching of the Dharma Śastras, Purāṇas, and Tāntras. A native writer and exponent of Vaidik beliefs equally confesses that Brahman and the second-thirds of our religious rites are Tāntric, and almost half our medicine.2 They are the Śastras, the scriptural authority and rule for the religious teachings. Tejas or the Sun, therefore, is the incumbent on all orthodox Hindus to follow their directions.

In particular, the Tāntras are the religious textbooks of the Sākta school, and of their various sects. Though the Tīrtha Śastras and Śrīvaiśnava Śastras are, however, said to be in harmony with the Vedas, while that of the Vaiṣṇavas is intended only for Sākta. Their influence unquestionably extends far beyond those who profess to accept their authority. Wilson quotes a passage from one of these treatises which claims that ‘many a man who calls himself a Saiva or a Vaishnava is secretly a Sākta, and a brother of the Mahāyāna’;3 and, in the case of N. India, are said to have adopted formule and ritual from the Tāntras, and the Lāmaism or corrupt Buddhism of Nepal and Tibet owes much to the sacred source. The teaching of the Tāntras, as of the Purāṇas, is essentially based on the bhakti-mārga (q.v.), which is regarded as superior to the karma-mārga and jñāna-mārga of the Brahma Śastras and Upaniṣads. Adoration of a personal deity is inculcated, especially of the wife of Siva, who is worshipped as the source of all regenerative power. In all these writings the female principle is personified and made prominent, to the almost total exclusion of the male. Ultimately their doctrine is derived from the philosophy of the Śāktya-Yoga, with its theory of purāya and prakṛti, with especial emphasis on the mystical side of Yoga teaching and practice. Like the Purāya, the Tāntras also evcry Tāntra should theoretically discuss in order five subjects—the creation and destruction of the universe, the worship of the gods, the doctrines of super-natural power, and the way with the Supreme Being. In reality their contents are almost entirely magical and mystical, but they range over a wide variety of subjects, scientific, religious, medical, spiritual, and even on all that concerns human need and destiny. One at least of the more important Tāntras expounds in metaphysical terms the nature of the Supreme Brahman, who is nātha, nātya, nāyi or jñāna.4 These teaching are based on true pratyā, nāyiyan, and jñāna; in the beginning only the nāyiya Brahman existed, etc. Great use is made of mystical syllables, om, om, um, um, etc., with which sometimes whole pages of writing are filled. There are also secretly sacred letters or syllables which they call bija. The significance of the letters of the alphabet is taught, the employment of mystic diagrams (yana), sacred circles (chakras), spells, charms, and amulets (karaṇas), symbolic movements and crossing of the fingers (mudrās), etc.

Together with all this, which appears to us so meaningless and puerile, there is undoubtedly much that is of historical interest in the Tāntras, and that is of value for the interpretation and interrelation of Hindu doctrine. They are generous and broad in their sympathies, recognize no distinction of caste or sex, for men and women are considered of equal importance, and the practice of sāti. According to the orthodox view, the rites and doctrine which they inculcate are to prevail until the close of the Kaliyuga.

TANTRISM (Buddhist).—A complete study of Buddhist Tantrism would include the description and the history of its rites, its deities, and its doctrines, practically the expoise of the many problems which confront the historian of mediæval India. Buddhist Tantrism is practically Buddhism, Hinduisn, Hinduism or Saivism in Buddhist garb. The present writer intends only to provide the reader with a definition of the chief types.

Buddhists are not quite clear about the specific meaning of the word tantra, ‘book.’ The Tibetan canon distinguishes the Sutra (Mōlo) and the Tantra (Rgyud), but a number of texts are classed in both sections; the limits between, e.g., Mahāyānasutras and Tantras are not fixed. On the one hand, topics which are essentially Mahāyānis—e.g., hymns to bodhisattvas (stotra), resolutions to become Buddha (prajñādhāma)—are met with in Tantras; on the other hand, Mahāyānasutras include a number of fragments and often whole chapters which would constitute by themselves so many Tantrik texts.

A good example is found in the Siddhārmapariniṣkāra, ‘Lotus of the true Law,’ which contains a whole chapter of dākārapis, or talismanic voices, invocations in literary form to a female deity. ‘Glandless’ are mentioned as protectors of the Sutra and of its readers. There are good reasons for believing that this chapter is a late addition: such an addition testifies that the spirit of Mahāyāna had become largely tinted with the spirit of Tantrism, and that the Tantric creation made little distinction between Mahāyānism and Tantrism properly so called.

Tantra books, by assuming the title of Sutra, secured ancient authority. The Kārnāḍayāna is styled Mahāyānasutradhārata-nāyiya, ‘the very best of the Sutras.’ As a matter of fact, the introductory section is written according to the pattern of a Mahāyānasutra; it does not pretend to relate, as

1 Quoted from Monier-Williams, Brāhmaṇīda and Hinduism, p. 191.

4 Ch. xxvi.
Tantrics do, the dialogue of a god with a goddess; it preserves the old phrase, 'Thou hast I heard,' followed by the mention of the place, Śrāvasti, Jetavana, and the description of an audience of bodhisattvas. But, when we consider the chief topic of the book—the glorification of Avalokiteśvara as the owner of the 'science in six syllables,' we cannot say that the author has written what we should like to style a Sūtra. In many cases he is not even genuine, for the author does not deign to be found by mere titles; e.g., although the Swāvyaprābhaṭa is styled Sūtra, it is not in the Mdo, but in the Rgyod, that the Sanskrit and the Chinese versions of this celebrated book are to be found. But the fact remains that Mdo and Rgyod overlap in a great number of cases.

These confusions or 'overlappings' are accounted for by the fact that a number of speculations, beliefs, and practices which reach their full development in the Tāntrik or last period of Buddhism were not unknown during the former period—e.g., the use of talismanic spells. Again, the Vajrayānas establish a close connection between the word 'Tantrism' and the worse forms of Hindu (or Buddhist) paganism—magic, theurgy, left-hand worship—and so far they are right, for the magical or theurgical rite, if not a Tantrik, was a religious text, and nearly always to be found in Buddhism outside Rgyod; but these practices are not the whole of Tantrism. Tāntra, with the Hindus as with the Buddhists, covers a large field. We find in the Rgyod the texts which are concerned with worship; whether it is 'Tantrik' worship or Mahāyāna worship, including the building of domestic stūpas, the erection and the consecration of idols, the sūtras or hymns, the daily offering; Worship, with the whole of his religious practices, is a Tāntrik topic. The Bhadračāriprāpachāna, 'Resolution of Pious Conduct,' is reckoned a Tāntra, because the recitation of this prapachāna is one of the daily duties of a Buddhist devotee of the Great Vehicle; from the point of view of the Western definition of 'Tantra,' this text is absolutely non-Tāntrik: it is free from any tinge of idolatry, it breathes the most lofty spirit of the Great Vehicle. 4 Litanies, lists of 100 names, whether of Prajñāpāramitā, Avalokiteśvara, or Mañjūśrī, are also Tāntras. Litanies may be used for Tāntrik or non-Tāntrik worship, while the Great Vehicle's manuṣyāna-gaṭi, 'Collection of the Names of Mañjūśrī,' is susceptible of a twofold interpretation: the first is a gnostic or purely philosophical one, the second sociological, i.e., a mode of propagation of the most decent phrares the worst Tāntrik doctrine. 5

Therefore, in order to draw a general outline of the history of Tāntric ideas in Buddhist literature and life, we must disregard the traditional divisions as embodied in the Tibetan catalogues or the Western theories on the subject, and build a classification of our own.

I. EARLY BUDDHISM.—The Old Buddhism, as preserved in the Pāli canon and in the Sanskrit Hinayāna literature, has a number of features which are not specifically Buddhist, which are alien to the noble eightfold path, which, to put it otherwise, are more or less Tāntrik or open the way to Tāntrism properly so called. Let us mention a few topics. (1) There is a general belief in the mystic power of the 'statements of truth'; 6 Sākyamuni praises the use of half-magic 'formulas of protection' which have a large place in the more recent Sinhalese Buddhist paritta, parīta. 7 (2) In the earliest documents respect is paid to a number of deities or nonhuman beings who are both powerful and unfriendly; there is an 'orthodox' way of dealing with them, but 'orthodox' worship is the natural result of fear. Vajrapāni is regarded as the 'guardian angel' of Sākyamuni, as the protector of the avatāra of the Church. He is the pattern of the 'Dharmakālas' of a later age. (3) The worship of relics, the building of stūpas, pilgrimages, and idolatry are old features of Buddhism. (4) Last, not least, the earliest machine of meditation or trance is akin to the more intricate machinery which constitutes the basis of the Yogatantras. Buddhist 'meditation' is simply Hindu yoga more or less transformed. The 'insight into the truth' (satyaparākhyana), which is the only and the sufficient means to nirvāṇa, practically implies (a) the meditation on looth-someness (asubhābhaṭa), when the ascetic, often 'a dweller in the cemeteries,' 'purifies his bones.' 8 (b) Or a similar kind of meditation, one which sees only the bones behind, until the whole world appears to him as full of skeletons—and thus succeeds in craving desire; (b) the restraint of breath (prāṇayāma), counting the expirations, in order to render the breath more tractable and to direct it towards the Buddhist truths; (c) the vimaṅka, abhibhūtyātanā, and kṣoṣaṅa, prolonged contemplation of disks of earth, etc., by which (d) a number of supernormal states are induced, the so-called dhyānas (jñāna), or 'trances' and samāpatti, or 'ecstasies.' According to the Pāli and Sanskrit theologians it is only when absorbed in those supernormal states that a man is susceptible of rightly understanding the four Buddhist Truths (satyābhāsīnavaya) and thus progressing towards nirvāṇa. Now it is quite safe to state that meditations on corpses, restraint of breath, the diverse methods of inducing trance, and the trances themselves have been borrowed by Buddhism from Hindu yoga. Buddhism established, more or less artificially, a strong connexion with the various branches of Hinduism, religious or spiritual aim, nirvāṇa. But Buddhism did not ignore, and their books do not conceal, the fact that the discipline of yoga, when it may have been 'supramundane,' was also 'lowly.' The same is true of nirvāṇa, also provides a man with many 'mundane' (lantikiko) advantages: he who lives in cemeteries acquires power over the bhūtan and the manifold spirits who haunt these places; he who 'restrains the breath,' masters thought and the body; he who practises trance becomes the possessor of magical powers and secures rebirth amongst gods. In short, a man who practises yoga becomes a yogin, or a siddha, an owner of 'perfections' or 'powers' (siddhi). It is clear that the position of Buddhism is not a safe one. Let us state it in plain words. A monk must perform in a Buddhist spirit, i.e., for the sake of nirvāṇa, a number of ritual meditations and which confer the most precious 'mundane' advantages; he must disregard these advantages—which, in India, are the surest mark of holiness—unless he perfectly knows that he can and will enjoy them when he likes. We may be sure—even if there were no documents to this effect—that many of the monks of early

Haig and L. de la Vallée Poussin, Catalogue of the Tibetan MSS of the Stein Collection in the Indian Office Museum, London, 1876. 8 Kaunji, Rgyod (Beckh), xxiv. 351; also in Vinaya (Dulva); J. Sanjana, A Catalogue of the Chinese Translation of the Buddhist Texts treasured at Peking, Oxford, 1883, p. 114; also Paul Pelliot, Note sur le Nātanaka, Die Bhadracari: Eine Probe Buddhistischer-religiositer Lyrik auf dem Tibetanischen, 1896. 9 The Mañjuśrīmanjusāraṇī has been published by I. P. Minayeff together with the Mahāyānaprāpta in Buddhisms, Reprints from the Petrus And. I.A.S. Mess. (in Russian); we refer to the commentary called Manjushcagā.
CHRISTIANITY were not strong enough to go so powerful a temptation; e.g., they performed miracles for 'vain glory.' In such cases they acted as 'mundane' yogis; technically they followed the rules that later constitute the Yogântarkârî.

I. MAHÂYÂNA. — In Mahâyâna bhakti, or devotion, and pîjî, or worship in the Hindu guise, increase.

Mahâyâna is, like Hinâyâna, a thoroughly Buddhist cult; but to which the disciple of Mahâyâna is a candidate for Buddhahood (bodhisattvâ, future Buddha), because Buddhas alone reach nirvâna; he will become a Buddha by acquiring the wisdom and accumulating the merit of a Buddha. But an essential feature of the doctrine is that the candidate for Buddhahood cannot succeed without the help of the Buddhas and of the future Buddhas nearing Buddhahood; this help is secured through bhakti. The early Buddhist paid worship to Sâkyamuni, to the relics, to the holy places, but there was little or no bhakti in his respectful behaviour. Now the objects of worship are so many living gods, so many bhagavats, quite different from Sâkyamuni, very much like the Hindu bhagavats, and they are entitled to the bhakti of the faithful. As has been pointed out, bhakti is a philanthropic, free from elements which easily take a Tantrik shade. To mention only one point: a man will be saved by remembering at death the name of Avalokîtêśvara or of Kârna. The names of the Buddhas or the bodhisattvas, which they have themselves placed a wonderful force, acquire a rôle in the sanctification of the devotee. Bhakti has exalted the god to such a degree that bhakti is very long ago transformed into a worship of a divinity of the Mahâyânaist school, praises without reservation the use of dharmiyâ for the pardon of sins. The schools of the Mahâyâna known as the Sâkhavâti sects place the highest spiritual advantages at the command of the man who knows how to worship Amitâbha.

Every form of pîjî, including the circumambulation of a stûpa,6 offering incense to a stûpa, going to the relics, etc., was considered very useful from the beginning. A treatise like the Advântara-pradâta7 shows us that Mahâyâna has added much to the primitive liturgy; it gives a description of the fifty-four rituals of the Mahâyânaist devotee, a 'beginner' (âdikârâkara), was expected to perform — recitations of formulas, symbolic offerings, wonderful advantages to be obtained by acts which easily assume a mechanical character, so many features which give to Tantrism its specific aspects. A daily observance of the eightfold high pîjî (stâtvâdhi amâtrâr pîjî), a sort of worship 'in spirit and truth'; confession of sins to the Buddhas and bodhisattvas—to the Buddhas who have a special claim to the title of 'Buddha of confession'—resolve to become a Buddha, 'application of merit' (parinâmam), etc. That this eightfold pîjî often becomes a mere ritualistic performance—a special kind of dhârayî —is proved by the fact that it is a part of the sādhana (see below). It is well known that Mahâyâna is prompt to admit any sort of spells that provide 'mundane' advantages — of course it objects to 'black magic.' From our point of view, it is more important to observe that Mahâyâna rewards a number of beings which are no longer Buddhist in character. The demoniac origins of Vajrayâna are not forgotten; he nevertheless obtains a body of power in the pantheon; as he is the 'destroyer of the enemies of the Law,' he is probably one of the first gods who have been worshipped under a 'choleric' aspect.8 Female figures are also supposed to have been part of the Mahâyâna; but there is not in this association any tinge of 'properly so called Tantrism.' The same can be said of Hariti, the former goddess of smallpox, the account of whose avatars is one of the most curious and the best known pages in the religious and iconographic history of Buddhism. Her worship, both in the monastic and in the popular milieu, gives a correct idea of the Mahâyânist and of the half-Tantric methods of worship.

III. TANTRISM PROPER.—Tantrism, properly so called, bears a twofold character; on the one hand, it is a systematization of the vulgar magical rites and it has existed under this form for many centuries in India and in Buddhism itself, together with its formulas and its pantheon; on the other hand, it is a 'theurgy,' a highly developed mysticism. In this form Tantrism is an innovation in Buddhism.

Tantrism has its professionals, the sorcerers (yogin, sidhi), and its laymen, the disciples of the sorcerers also the Hindus who worship deities or idols of the Tantrik type. The sorcerers, who are at the same time 'mystics' or adepts of the Vajrayâna, constitute a number of schools; there are many rival secret traditions of the 'theurgy' and different sets of formulas, of deities, and of theories.

We shall deal with only two points which deserve special notice: (1) the methods of sādhana, (2) the vajrayogâ. To be complete, it would be necessary to study a number of vâdhis, or rites, many of which are part of the Tantrik daily cult and have been adopted by Mahâyânist Buddhism. 1. Sâdhana,—the only way to perform a sādhana, i.e., the evocation of a god, the ascetic must be duly instructed by a guru and duly consecrated. The ascetics who have established the manifold secret sects of Tantrism had to prepare the gods by the ritual equations before being favoured with the manifestation of the god; they at last received from him the secrets they are now able to teach to their pupils. The guru therefore assumes great importance; he is the paramount god of his pupil and the incarnation of the Buddha himself. When he has been taught all the details of the rites, the Tantrik must undertake the sādhana, by which he renders visible any god he wishes and obtains control over him. The most important items in these magical performances are the knowledge of the bija, the mystical syllable which is the 'seed' of the god and the knowledge of the vîdhyê or mantra, which gives to its owner control over him.

On a chosen day the ascetic, after performing the regular ablations, with a fresh dress or a renewal of a solitary place, either auspicious—a wood or the bank of a river

13 We say sufficiently, for it is difficult to say whether Amîthâbha, e.g., is of course, or is not originally a sun-god; but Amîthâbha is strictly Buddhist and Vajrayâna, as is not the case with the Tantric doctrines, a modification of the Jain, or Vimalakîrti, or the Mahâyâna works, but a change of the rapidly-accumulating influence of the Buddhist view of the universal Buddha of the Doccic school.
14 The latest authority on the subject is A. Foucher, L'Art et autres articles, p. 46-55. (Note 4.)

—or wholesome—a cemetery—according to the purpose. He sits there,apps, in a purified space, and in order the different acts of a Mahayana-puja, offering of flowers and perfumes, either to the Buddha, the Bodhisattvas and Deities, without confession of sins, etc. He continues in the same style by practising the virtues of friendship, pity, joy, in- due, and purity, and during the course of all things. Thus he is supposed to have acquired both merit (satta) and wisdom (jnana): all this is only a preparation to the rite itself. The rite begins with the meditation on the bliss of the god who has been chosen for some technical reason (every god has his own development in undetermined matters). If the god is Yamantaka or Yamani (the enemy or the destroyer of man, god of death), the syllable is Hn; it is to be written on the disk which in the magic circle (tantrika) is the symbol of the sun. The ascetic causes to arise from him the wrathful Yamantaka, hair bristling, blue, with six faces, with six arms, with six feet, riding a bull, standing in the abheda pose, adorned with a garland of skulls, exceedingly frightful. When the god has been summoned in that way, the ascetic undertakes the second part of the rite: he fancies that he is the god; the identity of the ascetic and the god is a metaphysical truism; the ascetic does not identify himself with the god; he only realizes the identity. As soon as the ascetic knows that he is the god, he possesses all the powers that belong to the god; any wish he utters to the proper form—for his voice must be the voice of the god—will be accomplished. As A. Foucher, from whom this definition of Sddhana is borrowed, rightly observes, the description of the gods as given in Tantrik treatises must be accurate: any mistake in the mental representation of those frightful persons would be fatal. The Sddhana treatises have been the principal source of information for the Hindu and Tibetan artists, and they furnish the best means to the identification of the icons or idols. Sddhanas serve all sorts of purposes—worship, wish-fulfillment, the vehicle of the Maga Formulas, more often and more technically, the Vajrayana. Vajra, ‘lightning,’ is originally and remains the weapon of Indra, of Vajrapani, of the ascetics or yogins. And we may define them. But vajra has assumed new meanings: (1) it designates the mystic or divine energy which is identified with ‘intelligence’ (vidyā); there are vajrabodhisattvas, bodhisattvas of vajra, vajrasana, ‘divine female sorcerers,’ vajrasvarupa, ‘the divine sow’; all divine beings are so vajrasthavetas, ‘beings of vajra;’ the supreme being, the Adibuddha, is the vajrasattva per excellence. (2) On the other hand, vajra (with the variant visai) is a decent or mystic phrase for liṅga, the male organ, just as pada, lotus, is the literary rendering of bhūga or yoni.2 So this twofold meaning of vajra correspond two Tantrik schools, right-hand and left-hand. Both owe much to the Mahayānist doctrines, to Madhyanaka, and to Vījñānabha,3 they cling to the theory of universal voidness (śūnyatā), but they develop the concepts of tathatā, tathagata-garbha, etc., and result in a great variety of schools, sects, etc. While Mahayana states that all beings are ‘future Buddhas,’ that all beings are ‘embryos of tathagatas,’ the two Tantrik schools maintain that all beings are vajragarbhas or the unique Vajrasattva; they also maintain that the nature of vajra is immanent in all beings and can be actualized by appropriate meditations and rites. Now the latter reads the Tantras of vajrayana, to the nature of vajra according to the Saivite pattern; the right-hand school is nearer the Vedantist or Yoga tradition: on the one hand the traditions of the Madhakalacarnas, etc., on the other hand the Church of the MahaMrtyurajgiriSaivism, the Vajraśekhara, etc.—the modern Japanese sect of Shin-gon-shū.

In the Tantras of the Śaivite tyre we have to deal with a Buddhist adaptation of Saivism and Sāktism. The three traditional bodies of a Buddha are preserved, but the true nature of vajradhātu is his fourth body, the body of bliss (tāmā, sukhamati, mukhañālāyati), the body of vajra: it is with that body that the eternal tathāgata or bhagavat eternally embraces his lakti, Tārā or Bhagavati. From this erotic conception of the nature of being or the divine being it follows that, in order to actualize his real divine nature, the ascetic must perform the rites of union with a woman (yogini, madrī) who is the personification of the bhagavati, who is Bhagavati herself; as it is possible to unite with the male divinity, so it is possible to unite with the female. The most conspicuous topic of this literature is what is called the stripās, ‘worship of women;’ disgusting practices, both obscene and criminal, including incest, are a part of this pūjā, which is looked upon as the true ‘heroic behaviour’ (dakikara-chārya) of a bodhisattva, as the fulfilment of the perfect virtues. Buddhist mythology and mysticism are freely mixed with sikṣas; the semen is the five Bhañj (Bhañj), the essence, and is the one who says that ‘everything is pure to a pure man,’ omni sancta sanctis, is often expressed. ‘Lust is to be crushed by lust. . . Do strenuously that which is conceivable by the other party, and. . . one who is united with a woman, and united with a woman, and united with a woman. . . . If a man has the desire of love without fear. Do not fear; you do not sin.’1 We may add two remarks. (1) Some ‘morai’ rules are to be observed even in the ceremonies (ṣaṅkha) which are provided for the thorough enjoyment of the sex (maṅga, maṅgavi, maṅgas, ‘alcohol,’ maṅgavi, ‘sexual union’). A modern Śaivite work, the Mahābhairavapatarā, explains that ‘the ascetics should drink so little that their eyes do not roll and mind is not agitated. Beyond it, drinking is like the sight of a beast.’ The rites of purāṇikās or tattvatākṣakā must not be practised with any woman, but with one’s own wife; so far, but there are two marriages, one for life, the other contracted for the purpose of the ascetic and lasting only till the completion of the rite. (2) Secret rites are the business of a few ‘devotees.’

TAOISM

197

On the whole and for the largest number of its adherents, Taoism is simply paganism.

According to the left-hand Taoist tradition which we have described, the rites of union (maithuna) are not effaced by themselves; but practising the candidate for vajrasattvā-hood must be 'purified' in a threefold respect; he must possess the body, the voice, and the thought of a tathāgata. This threefold purification constitutes the initiation of the Taoist.

These are 'aspirations' or 'consecrations' (abhishēka), 'marking' (nyāsa) which consecrates the different limbs of the body, 'prayers' (jap) which consecrates the hands, 'interwritings of the fingers' (mantra); some will admit the rite of union, but with a female described as a jñāna-mūḍrā, a mental female.¹

³ In Tintin literature is supposed to be included in a fourth basket, the Dharmaprajyotika or the Vidyadharasagotra, on which see H. Heine, J. F. Ulmann, Figures des poètes bouddhiques, under the title of Buddhist Records of the Western World, London, 1884, ii. 163; Lévi-Seroux, 'Interprétation de textes bouddhistes obligations de religieux enceints,' tr. E. Chavannes, Paris, 1894, p. 101; L. de la Ville-Poussin, JRAS, 1895, p. 428.

TAOISM.—Taoism is one of the three 'Teachings' (Tri Chinas) of China, the others being Confucianism and Buddhism. Like Confucianism, and unlike Buddhism, it claims to be a native growth.

² Chinese TAO-ting. The primary source for our know-ledge of Taoism is the Tao-Teh Ching. This small book of about 5000 characters, usually divided into two parts, 'Concerning Tao' and 'Concerning Teh,' comprising 81 chapters, is traditionally ascribed to Lao-ting (born 604 B.C.), an older contemporary of Confucius. Lao-ting, surname Li, named Er (ear), also called Lao San, a character which implies some rural peculiarity, is said to have been an official at the court of Chow and to have been visited on one occasion by Confucius, who after the interview exclaimed in his respect for Tao's hollowness: 'Respect for the world, Lao-ting retired from office and disappeared through the Western Passes, the guardian of which is deduced from leaving to compose the Tao-Teh Ching as a record of his teaching. This account of him was in later times supplemented by many marvels, e.g., his prolonged gestation, which entitled him to be called 'the father of the Taoists.' Lao-ting might also be translated. Si-ma Ch'ien (+ 85 B.C.), who gives the more sober account of Lao-ting, gives also the names of his son and grandson and of the great-great-grandson of this grandson. He tells us further that about the middle of the 2nd cent. B.C. a book of Lao's was a favourite with the widowed emperor of the second Han. The emperor Kung (166-145 B.C.) is said to have made him provost of the Han dynasty by Si-ma Ch'ien we have in Hwangian (+ 122 B.C.), Han Fei (+ 230 B.C.), and Chwang-ting (+ 4th cent. B.C.) many quotations from Lao-ting (or Lao San) which are to be found in the Tao-Teh Ching. According to Legge, the first two of these authors quote the whole or parts of 71 out of the 81 chapters of that book. On a review of the evidence thus summarized, Legge concludes that he does not know of any other book which antedates a precise date of which the authenticity of the origin and genuineness of the text are so well substantiated.

Criticism, however, has been busy both with Lao-ting and with his book. Founding upon the name Lao-ting, who may be equally well 'old philosopher' or 'old philosophers,' an extreme criticism has resolved him into a number of ancient thinkers, some of whose sayings are preserved for us in the Tao-Teh Ching. For this view there is no ground except the ambiguity of the name. A less drastic criticism, of which H. A. Giles is representative, allows that at a remote period Lao-ting lived and thought and taught, and that some fragments of his teaching are preserved in the Tao-Teh Ching, in which we have those fragments pieced together by a not too skilful forger of later schools, confounding Lao-ting with his contemporaries and successors. This conclusion is said to be practically certain. The criticism, however, by which it is attempted to falsify the evidence is founded on a tacit assumption that evidence summarized above at least does not support it; nor is it warranted to infer a coincidence in time and place of sayings ascribed to Lao-ting which do not appear in the Tao-Teh Ching and of sayings ascribed to Hwang-k'o which do appear there, or by the three added fragments produced from the Tao-Teh Ching itself (repetitions, quotations, late characters, rhyme), while the discrimination of what is called 'bouddhisme' may be rejected as compiler's padding is too subjective to be convincing. In favour of the earlier date of the Tao-Teh Ching it may be noted that, in its general type of teaching and in the avoidance of technical terms current in later Taoist authors it leaves on the reader the impression that it belongs to a less developed stage of Taoist thought than is found in the Hwang-ting, however, still awaits a thorough application of sound critical principles. Indian influence on both the matter and the form of the Tao-Teh Ching has been asserted by some. The truth of this assertion can be considered apart from the general archæological question of the intercourse between India and China. There is a certain convergence between the content of the Tao-Teh Ching and that of Buddhism, but not such as requires the dependence of one on the other as its explanation, and the present statement is far heavier and more difficult to reconcile with the scanty record of contact with Indian thought early enough to influence the Tao-Teh Ching, unless that book is derived from a remote earlier evidence. According to B. T. Suzuki, the so-called Indian influence on the early Taoists is not probable. Indeed it cannot be said that the book of the Tao-Teh Ching, ch. 29, 3, 4, is not a Chinese production. In contrast taken from a classic and its parts to which T. W. Rhys Davids is indebted on the socalled ashtamangala, the founder of the Madhyamikas of Northern Buddhism, who taught about the beginning of our era. It is to be noted, however, that this latter argument, only with a proper mixture of a classic as illustration, is found in Chwang-ting, bk. 25, p. 125.

It is not difficult to cull from the Tao-Teh Ching admirable ethical maxims.

¹ Buddhism, London, 1878, p. 97.
TAOISM

The highest goodness is like water. Water is good for all things because it changes all things without being changed. Men hate water. But he who knows water is like him who knows the way that men hate (ch. 8). He who makes himself conform to the Tao, even as it runs and changes, is like to the person who, when we attempt to define it, becomes nothing (14, 25); if we must make a name for it, it is not the name of a thing. That is the power of God (14); it becomes nameable in relation to the universe that springs from it (1), in an order which may be partly known (2); not only is it the dynamic of the whole, but it seems to overpass all beginnings (21), reaching everywhere (25, 3) and doing everything, while remaining unknown to us, (25).

Summing up what we have here, we may say: (1) as transcendent existence Tao is something quite indefinite, which Lao-tse struggles to express by negatives; (2) from this indefinite ground the universe of men emerges, and in its grace the Tao is the mother of all things (55--61), and by its operation is emanation from Tao as mother and not creation by Tao as agent; (3) Tao is immanent in the world, working in an unobtrusive way, producing and bringing to perfection individual existences. On the whole, we perhaps come nearest to the meaning of Tao when we say that it is pure being (most abstract of categories) endowed with spontaneity, the ultimate essence and impulse of all definite things. Obviously this conception of Tao excludes all idea of its equation with God. In ch. 4 Lao-tse says of Tao, 'I do not know whose son it is: it appears to be before God (72). There can be no doubt that with Lao-tse Tao is the ultimate ground of all definite existences, Ts among them, while, by saying that he did not know whose son Tao was, he lets us see that, having arrived at his conception of a Tao beyond and beyond the world for in the line of logical abstraction there is no going further than 'being' which is nothing, he yet dimly felt that it did not explain itself.

The only term in the Tao-Tek King capable of a theistic interpretation is Tien, Heaven. In some instances of its use a near approach is made to what we mean by Heaven when we use it as equivalent to Providence. In this, its highest use, it is not merely the physical sky, but a power supreme in the world of visible things obscurer connected with the sky, which is the supreme exemplar of Tao, but, even so, posterior and subordinate to it. Tao is to Lao-tse the ultimate and determining fact.

His metaphysics, as thus explained, explains his ethics. The ground of existence being a perfectly indefinite spontaneity, a dark abysmal essential which, for no reason assigned, the multiplicity of the world emanates, by the immanence of which the world is and is moved—all this agrees with the ethical doctrine of abstention from self-determination and of the being held in abstinence to be found in vegetable life, in obedience to an inner impulse or appointment passes through its cycle of growth, culminating and again subduing (16). The Taoistic life is therefore a life of equable indulgence, outwardly of non-action, devout, i.e., of action for chosen ends; moved in obedience to an inward spontaneity rather than motivated by outward inducement: a life conscious, rather than self-conscious, spontaneous rather than self-determined. Hence the sage is simple (19) with the simplicity of unconstrained wood as contrasted with the delinquent of a carved beam; i.e., he is free from self-determination. Again, he grasps 'the one' (22), withdrawing himself from the manifoldness of self-determination among particular lines and holding to 'the one,' i.e., the principle which Lao-tse knows as Tao.

The metaphysics of the Tao-Tek King centre in this conception of Tao. In many passages Tao has a significance which is neither the ethical way that men should follow nor the method of action followed by Heaven (cf., 'course of Providence') or prescribed by Heaven for man's following it in its metaphysical principle (ch. 1, 4, 14, 21, 25, 34, 37, 40). The gist of what is stated in these chapters is as follows:

The origin of heaven and earth is nameless (1), is indeed non-existent (10), is without nature and exists (11). This quite indefinite, rich, when we attempt to define it, becomes nothing (14, 25); if we must make a name for it, it is not the name of a thing. That is the power of God (14); it becomes nameable in relation to the universe that springs from it (1), in an order which may be partly known (2); not only is it the dynamic of the whole, but it seems to overpass all beginnings (21), reaching everywhere (25, 3) and doing everything, while remaining unknown to us, (25).

Before turning again to the practical side of Lao-tse's teaching, we may refer to what may, by courtesy, be called his theory of knowledge. It is by freedom from desire that we can attain to a knowledge of the mysteries of Tao (1). Inasmuch as Tao is the principle of all existence, knowing it, we are at the heart of all knowledge. There is no need for the man who expounds it to start by simply moving out of doors he already knows (47).

Knowing one case, he knows all, for Tao is the one universal principle (44). We can best return to Lao-tse's practical teaching by the Tao-Tek King, which next to Tao is his key-word. Like Tao, it received from Lao-tse a
new meaning, since it is the outcome of Tao (51). There is indeed a Teh which begins where Tao ends. This Teh, the result of a lifetime of effort, self-conscious teh. Teh in the Taoist sense is usually distinguished by some epithet—'mysterious,' 'large,' 'lasting,' etc. As the outcome of Tao, it is activity devoid of self-determination. Yet it is not activity, the spontaneous activity of the immanent Tao. The various virtues commended by Lao-tse are aspects of, or approximations to, this teh. It is in this Taoist sense that we must take the numerous maxims of the Repository of Taoist Wisdom with a grain of salt, for it is a mistake to translate teh by 'kindness.' The maxim is no more than a precept of indifferent self-possession: 'Be a Taoist, even though provoked' (cf. 5).

Lao-tse's practical teaching is completed by his speculations on physiology and politics. As to the former, it is asserted that the Taoist adept aims at 'lastingness' (7, 10, 44, 59). There is no place of death in him, and so he passes through dangers unscathed (50). Hints are also given of a death which is not destruction, implying a persistence in spite of death which is true long life (50). This is doubtless, however, not development. With the other form of longevity appears to be associated a certain management of the breath (10, 52), and through this vein of thought there is a certain tendency towards certain deficiencies.

In Lao-tse's politics, as in his ethics, there are attractive thoughts—e.g., the protest against luxury in the court alongside misery among the people (53) and the devastation of war (31). The Taoist method of government is leisuré-faire. The sage king does nothing, and everything comes right of itself (32, 37, 57). Logically Lao-tse's thought implies that any sage would be the centre of a universal away (49, 57, 77), but it is hinted that the influence of a sage becomes effective only when he has the advantage of high place (56). Here Lao-tse is in line with Confucius, who asserted that his principles would transform the world if only he could find a ruler wise enough to give him office. In describing the society which would come to being under Taoist influence, Lao-tse pictures a society of self-sustained communities devoid of letters and of luxury, content with what is theirs and utterly incurious of what is not. As men within a Taoist society so societies in their relation to one another are to act Taoistically. "The earth abides in its place" (58).

There are unexplained remains in the Tao-Teh King, but Lao-tse does give us a reasoned view of things. As we think back and back, we come to something which we cannot see or hear or touch, an obscure something from which all things come. It is in all things, which could not be apart from it. Yet it never parades itself. It simply is, a mysteries, ever-going, all-working existence. Let us form ourselves to this: let us become one with it. For it is in us as in all else—our essence which would realize itself if it were not hindered by our self-will and self-seeking. If we put away these, then we know it and are and become what it tends to be. It is Tao, unqualified being, origin of things, and in them as essence and spontaneity.

2. Taoism before Lao-tse.—The question has been raised whether Taoism existed prior to Lao-tse. That there was such an early Taoism is argued on the grounds of quotations in the Tao-Teh King. That there was a Taoism, the persistent reference of Taoism not only to Lao-tse but also to the at least semi-mythical Yellow Emperor (Hwang-ti, 2697 B.C.), so that 'the words of Hwang-ti are to be taken as the fundamentals of Taoist teaching, and the allusions in the Tao-Teh King and other Taoist writings to an age when the world moved on Taoist principles. It has also been argued that, while the I-King is dualistic, it also contains enough of a Taoist strain to make it an essential part of the persistent strain in pre-Confucian speculation, and that a doctrine of that from which the dual principles derived (Tao) was in various forms well known. Hence, it is claimed, the I-King, the doctrine of Tao, and the other ethical principles intuitively known were the materials on which Confucius and Lao worked. Lao appropriating the monistic speculations of the I-King but placing his emphasis on the chief relating to the conflict of the unexplained hand down from the Yellow Emperor. In the same line E. H. Parker says that there is little doubt that Lao-tse simply gave a name (Tao) to a floating group of ethical principles already for many centuries spread far and wide over China and already well known as the maxims of Hwang-ti, and that every single thought in the Tao-Teh King had been foreshadowed, usually word for word, in the Book of History, Book of Rites, Record of Rites, Book of Changes, Book of Odes, or other very ancient work. Among these other ancient works Parker puts the volume attributed to Kwan-tse, which he dates from the 7th cent. B.C. In spite of all that is here said, it may still be reasonably maintained that there is no conclusive evidence of an explicit Taoism previous to Lao-tse. Even Parker does not deny that certain parts of Tao-tse in developing a new quietist conception of how human affairs once presumably were, and ideally should be, regulated. There may have been a Bottling group of ethical principles which Lao-tse took over, but it is the reasoned quietism of the Tao-Teh King based on Tao as metaphysical principle that alone has the right to be called Taoism, and of the earlier existence of this proof is yet lacking. In the Tao-Teh King itself there is no mention of Hwang-ti, and the allusions to the simpler social conditions of earlier times do not prove the existence then of a reasonned Taoism. Certainly this would be proved if we found Lao quoting from some sage anterior to himself who had already formulated the doctrine of inaction in the very terms we are accustomed to associate with the name and fame of Lao-tse himself. The reference is to Tao-Teh, ch. 57. But the introductory phrase may be translated 'Therefore the sage says,' meaning that such language is characteristic of the sage, whether actually or hypothetically the existence of men and things. The next chapter contains a similar gnomic reference to the sage's action. Five other quotations (22, 41, 50, 69, 78) may be admitted, but they are not of a kind to prove the existence of Taoism anterior to Lao-tse. Only if numerous other phrases introduced by the formula 'ku yieh' are treated as quotations, can justification be found for speaking as Legge does of 'the sentence-makers often drawn on by Lao-tse' for or saying that Lao-tse 'abounds in sentences out of some ancient lore of which we have no knowledge but for him.' But these phrases may not be quotations so much as aphoristic expressions of Taoist teaching, perhaps already current with Lao and his school. Parker's wide reference to ancient literature must be heavily discounted. It is difficult to justify his appeal to books so innocent of Taoism as the Book of History and Book of Odes. Moreover, it is one thing to find in ancient literature expressions congruent with Taoism and quite another thing to interpret them as expressing Taoism. It is true that Tao-Teh is a conjunction of characters.
long consecrated by use in the Book of Changes and the Book of Rites. In the Book of History or elsewhere we may meet with phrases such as 'the father and mother of the world, and as such is the King of the world,' or 'That the Prince of a State should hold dirt in his mouth is the Providence (Tao) of Heaven.' It is of course not possible to illustrate any particular Taoism which one would enjoy who was entirely under the influence of the 'heavenly' (i.e., 'natural' as opposed to 'self-determined') element of his constitution.

(b) Chwang-tse.—The most brilliant of the Taoist writers is Chwang-tse (c. 330 B.C.). In him as little as in the Tse-Tse King is there any systematic exposition of Taoism. In the development of his views he is to a great extent an anecdote, allegory, and imaginary conversation. In some places he handles somewhat freely not only Confucius, but even more ancient worthies, such as Yao and Shun. How little historical accuracy or consistency is regarded is shown by the fact that Confucius is also introduced speaking in quite a Taoist vein. It is not easy to see the drift and relevance of all Chwang-tse's chapters, but the reader cannot fail to find a characteristic attitude towards reality. As in the Tse-Tse King, the metaphysical basis of everything is Tao, which as the explanation of all things is not itself a thing.

3. Taoism after Lao-tse.—The history of Taoism immediately subsequent to Lao-tse is obscure. Somewhat later its development can be traced in a succession of authors.

(a) Lieh-tse.—The earliest of these may be Lieh-tse (= Licius, 5th cent. B.C.), but the authenticity of the work ascribed to him is doubtful. According to him, the whole of things is in perpetual transformation. The ultimate basis of all is a vague something which differentiates itself into ch'i, k'ang, and chih. The second and third terms may be translated 'form' and 'matter,' respectively, though, we must beware of assuming an exact equivalence to these terms as used elsewhere (e.g., in Greek philosophy). Ch'i is more difficult to translate. Gils gives as its meanings the 'vivifying principle or aura of Chinese cosmogeny, breath, vital fluid: force: influence.' The state of things when these three were in an undifferentiated and therefore imperceptible condition is called 'chaos,' whether this is or is not to be identified with the ultimate origin and basis of things. Progress is made from chaos by an evolution vaguely indicated, in the final stages of which the particular 'heaven,' the heavy and gross form 'earth,' and 'man' appears as the vehicle of their harmonious ch'i. The general ethical temper is quietist, based now on ignorance, now on fatalism. Another root for it is found in the subjectivity of knowledge, and the absence of any criterion of truth and falsehood, right and wrong, though this is hinted at rather than developed. Along with this may be noted a disclaiming of any discrimination in worth between waking and dreaming experiences. Views of death are given which are perhaps not quite consistent. On the one hand is put the question, which might suggest Buddhist influence, 'When the spiritual enters its gate and the material returns to its root, where do "I" survive?' On the other hand, it is asked whether death may not be another birth. Lieh-tse makes much use of anecdotes, a good many of which seem to have been treated by Taoist writers as the stock property of their school. The magical side of Taoism seems often to have developed more in comparison with the Tao-Tse King. The secret of it is such a selfless identification with the life of nature as brings the Taoist into harmony with all its forces, animate and inanimate. The alleged immortality of a drunken man from injury by accident is brought to illustrate another immortality which one would enjoy who was entirely under the influence of the 'heavenly' (i.e., 'natural' as opposed to 'self-determined') element of his constitution.

3 Parker, p. 76. 4 E.g., Appendix, iii. 5 A Chinese-English Dict., London, 1912, c.s.
Mencius criticized, and is there regarded as congruent with the teaching of Lao Tzu. Some other writers reckon as belonging to the Taoist school are Han Fei-tse († 230 B.C.) and Hwainan-tse († 122 B.C.). The writings of the former are preserved in 55 chapters, which are entitled 'Explanations of Lao.' Apparent quotations from the Tao-Teh King occur elsewhere in his writings. Han Fei-tse hardly differs in respect of the practical side of Taoism. His book is ethical-political, and is marked by shrewdness rather than by loftiness of tone. He sympathizes with the Chinese student who protests against his being classed as a Taoist and explains what he regards as the degenerate nature of the teaching as due to a perversion to a scheme of selfishness of such sayings of Lao-tse as 'When one is about to take an inspiration, he is sure to make a previous expiration;' (36) and 'The sage wishing to be above men, puts himself by his words below them'; (66) Hwainan-tse is a more genuine Taoist than Han Fei, but his writings in their fanciful analogies and extravagant statements give evidence of a progressive deterioration of Taoism. Ethically he is superior to Han Fei. In at least one statement of his fundamental ethical position he shows a close verbal approximation to Confucianism: action in accordance with the nature (hsing) is called Tao, and this nature is to be distinguished from the passions (yi). 4. Later Taoist literature. — Later Taoist literature is voluminous and reflects that medley of subjects which make up Taoism, such as the search for immortality (which Chu Hi singles out as its main object), the conquest of the passions, alchemy, the observance of fasts and sacrifices, ritual and charms, and the multiplied objects of worship. Much of present-day popular hortatory literature may be reckoned as Taoist. Probably the most well-known of all Taoist writings is The Tractate of Actions and their Retributions, which dates from the Sung dynasty. According to the original text, retribution takes effect in this world. The practiser of virtue indeed not only may receive earthly happiness but also may hope as the culmination of his reward to become immortal and immortal, hsien-jen (=psi of Buddhism). As for the transgressor, he suffers in his personal enemies if at his death guilt still remains unquieted by punishment, judgment extends to his posterity. Of this retribution Heaven and spiritual beings are recognized as the agents. In the illustrative anecdotes added in many editions to the original text the stage of retribution includes the other world and successive rebirths in this world. The complicated morality has many excellent details, but extends also to tabus—e.g., striding over a well or leaping over food.

5. Present-day Taoism. — Chang Tao-ling (A.D. 34) has been regarded as the founder of present-day popular Taoism, which is not unfairly described as a mass of superstitious magic. The earlier literature, however, makes it evident that before his time Taoism had yielded to the love of the marvellous. Chang Tao-ling is said to have received from Lao-tze himself, who appeared to him from the realm of spirits, a sword and other apparatus in virtue of which he was able to exercise control over the spirit world. Descendants of Tao-ling, in each of which he said the soul of their ancestors is successively incarnate and, whose residence is at Lung-lu Shan in Kwangsi, have inherited his powers, and since A.D. 748 hold by imperial decree the hereditary dignity of 'Master of Heaven.' They are the present keepers of a work on China as Taoist popes. After the introduction of Buddhism into China Taoism shows very evident traces of Buddhist influence, which was particularly potent in the 3rd and 6th centuries A.D. In its religious literature and practices it follows Buddhist models and borrows Buddhist phraseology. It has been said of its temple and monasteries that 'in all the statement, that the celibacy of Taoist priests has been strictly enforced since the 10th cent., is subject to qualification. Eitel says that Taoist monks withdraw to the cloister walls and spend the whole time between meals at home. Doolittle distinguishes two classes of Taoist priests. A Christian influence in the names and titles of objects of Taoist worship has also been traced by some (e.g., Wiegert). Many of the best known objects of popular worship are members of the Taoist pantheon; e.g., Yu Hwang Shang-ti, who is the Supreme Taoist god, is also he to whom the great name Shang-ti 'suns phrase' would be most readily referred by the ordinary Chinese. Lao-tse is himself worshipped as one of the 'Three Pure Ones' whose images are prominent in every Taoist temple, the two others being Yu Hwang and Pan Ku. Taoism has produced a plentiful crop of legends and fairy-tales, the influence of which is considerable.

The gulf between the Taoism of the Tao-Teie King and present-day Taoism is a wide one. It has to be remembered, however, that even in the Tao-Teie King there are passages which suggest a marvellous mastery of nature by the Taoist adept and provide a starting-point for that search after immorality which, according to Suzuki, first opened the door for the irruption of superstition. The suggestion has also been made that the opposition sharpened between Confucianism and other strains of thought, all of popular religion and superstition that found no encouragement in Confucianism took refuge in Taoism, and above all such acceptions and any particular phrases in the Tao-Teie King which might suggest a germ of magical developments, the general position of Taoism from the beginning exposed it to such deterioration. Starting from the assumption that man and nature are fundamentally one, its quietism obliterated the line between moral and physical, and promised its adept such a harmony with Nature as was willed with Nature—made him merely the vehicle of her great powers. The distinctness of the moral person was lost in the all-embracing sweep of Tao. Confucianism also speculated on the relation between man and nature, and thought of the sage as exercising a cosmic influence. But this influence is the issue of moral development, and the Confucian emphasis on self-determined morality prevented any sinking of man into nature.

The noble elements of Taoism are, however, not extinct. The Taoist pope is not recognized as head by all the Taoist priesthood. There are celibate Taoists among whom the noble Taoist stratum is cherished, who disdain any connexion with him. In some of the secret societies also elements of the higher Taoism survive. Even in Confucian circles classical Taoism has influence. The writer recalls one scholar who would not have described himself as other than Confucianist, who was well acquainted with the Tao-Teie King, and who used to repeat with genuine appreciation, 'The highest goodness is like water.'

6. State relations. — During its long history Taoism has experienced a considerable vicissitude of political favour and disfavour. In the pre-Ch'in
times the various schools of Chinese thought seem to have been allowed free play. With the Ch'in dynasty, the first emperor of which ruled from 256 to 210 B.C., Lao-tse was in favour, and it continued to enjoy imperial patronage under the early Han dynasty. Thereafter its political relations were chagrined: e.g., in the 6th century, it was suppressed under the empress of the Northern Wei dynasty, in 548, and it was again exalted by the emperor Hsiian Teung. After other such vicissitudes it was by the late Manchu dynasty reckoned along with Buddhism and Christianity as a heterodox teaching in contrast to the sacred teaching of Confucians. See also art. MYSTICISM (Chinese).

TAPAS.—See ASCETICISM (Hindu).

TARGUMS.—Thou the term 'Targum' was used by Jewish authorities to designate the translation of the Hebrew Scriptures into any language, it was specifically restricted to the Aramaic rendering of the Hebrew Bible. As translations were used liturgically; the Hebrew text was read from a scroll, and this was followed by the Aramaic, recited without book by the official called meterger. The term 'Targum' is used to the 5th century, and was in parts maintained beyond that date. It is possible that the famous rescript of Justinian in 429 was directed against the liturgical use of the Targums.

The most widely read of the Targums was that ascribed to Onqelos (i.e. Aquila), who lived in the 2nd century A.D. Aquila really rendered the Scriptures into Greek, but his name became associated also with the Aramaic version of the Bible. One of the main translation of the Pentateuch only, and it is known as the 'Babylonian Targum,' not so much because of its language, as because of its official adoption in the Babylonian Jewish academies. Thus, though edited in Babylonia, Onqelos is diacritical Palestinian. Onqelos probably includes elements of considerable antiquity, which were derived from oral tradition to some extent, on the other hand, is a descent of literary origin. Onqelos went through various re-editions, so that the exact text is not usually referred to an earlier period than the 4th or 5th century. The 'Palestinian Targum' (known also as the 'Targum of Jonathan'), though later than the earliest recension of Onqelos, contains elements older than the latter. The most remarkable theological characteristic of the Targums is the occurrence of anthropomorphisms. They are thus paraphrases rather than translations, though in very large part Onqelos is literal enough.

Similarly, there were two Targums to the Prophets: the 'Babylonian' (ascribed to Jonathan, son of Uzziel), which originated (despite its Babylonian use) in Palestine; and the 'Palestinian,' which is fuller of homiletic elements. The later, derived from the prophets (haftaroth) in the synagogues, these Targums also partook of an official character.

On the other hand, there were also such official Targums to the Psalms of the Bible from which no haftaroth were derived. Hence these Targumim to the Hagiographa form independent groups. On the whole they are free, and in some cases (as in the Second Targum to Esther) are of greater interest for folk-lore than for exegesis. The Targum to the Song of Songs is through liturgical use.

TATHAGATA.—Whatever it may have meant originally, or from whatever source it may have been derived, Tathagata is an epithet of Buddha used to express his very personality. It is, first of all, an appellation to specify his dignity as an enlightened being and a teacher of men and gods. He is the one who has realized the four truths according to reality (yathâbhedam) and, consequently, mastered the way to the realization of the truths. Sensation, perception, and thoughts are all under his own control. He is free from the bondage of the six senses and attachment to their objects, because they are not his masters, as they are with the common people, but he is master over them. Thus he is beyond all the confusions and disturbances rising from contact with the objects of sense and thought. He was born a man, but has become a superhuman being in respect of and by virtue of these highest moral and intellectual attainments. In order to express these superhuman excellences of Buddha's personality, the Buddhis from the earliest time used to call their master the Tathagata with a special reverence. In this use, he is the master of the ancient and the modern, of the one who is nearly the same thing as Sugata ('the one who has gone blessed'). Here Tathagata means the one who has gone (gata) from the realm of attachment to the other beyond according to reality (tatha, which means the same as yathâbhedam).

But the virtue of a Buddha does not consist in attaining this position for himself alone. He teaches the people the Way to the same attainment and guides them in its realization. He is the Master who, having himself reached the castle of fearlessness, invites and leads them to the same. The Tathagata is not only sure that he has perfectly enlightened one and has thoroughly overcome the miseries of existence, but also equally sure that he is the master of the Truth and the Law. With this confidence he shows the wheel of the Dharma and roars a lion's roar in the assemblies of beings.

Thus the Tathagata is the enlightened one who knows the Way and reveals that Way by treading which he himself has become the 'thus-gone.' He practises as he preaches (yathâ-vâdah, yathâ-bhrâ) and vice versa. Though this explanation of the term is, as etymology, certainly far-fetched, it is quite natural that the Buddhists saw in their Master a being without any falsehood and self-deceit. The association of the appellation with the very personality of an unerring Master of the way to final emancipation is undeniable. A stance which is said to have been uttered by the disciples at the death of the Master is another testimony to this association. It reads:

The Master, such a Master as he is (pāṭhā cividus), without any parallel in the world, the Tathāgata is gone.1

The Tathāgata is the Master who has seen the way and revealed it to us, according to reality.

To the Buddhists their Master was the ‘thus-gone’ or ‘thus-descended’ (translation of Edmunds) to final enlightenment, the ‘perfected’ (der Vollendete, Neumann) in wisdom and its realization, in short, the ‘truth-winner’ (Rhys Davids). The appellation was certainly a self-designation of Buddha, for it was more used by his disciples to express their confidence in the Master.

So far the empirical aspect of the concept. We must now take up the metaphysical side of the idea conveyed or attached to the term. The Buddhists were, probably in Buddha’s lifetime, nearly realizing for themselves the truth that the revealer of the Way must be at home in it, and that therefore he is the Way itself. They said:

‘The laws (dharmas) are real and not otherwise as they are and these are perfectly known by the Tathāgata.2 Here the laws mean not only Buddha’s teaching, but the things taught in his teaching and their essence. Here the teaching: ‘He, the Blessed One, knows having known (the laws), sees having seen, born of Light, born of Wisdom, born of Truth (dharma-bhuto), and born of Brähma; He is the one who reveals and tells, the One who gives immediate knowledge (maha-sammā-samādhi) to the Tathāgata.3 Hence we have transcribed the dharmas by ‘truth’, i.e. the truth expressed in Buddha’s laws.

The idea here formulated cannot be called metaphysical speculations; still they show a tendency to base the faith in the Master on the transcendental entity of the Truth, not only revealed to us by him, but also represented personally by him. The foundation and elaboration of these ideas must proceed to a further development of Buddhological (so to speak, in analogy with Christological) speculations. The fact of the transcendental foundation of the teaching of the Master: thought and clear conception must follow it. And it is quite natural that the Buddhological ideas were always closely associated with the appellation Tathāgata. These thoughts may be studied from three aspects or phases of their development. They are: (1) the relation of the Tathāgata to the Truth (dharma) which he revealed, (2) the communion of the Tathāgata with the many other Tathāgatas, and (3) the eternity of the personality of the Tathāgata.

(1) The term dharma (in both singular and plural) is a very flexible one. But the various aspects of the term have a necessary connexion, when viewed as centring in the person of the Master. The dhamma (plural) are qualities of things, both physical and mental, which are transient, but subject to the laws. These laws make up existence,4 and our attachment to and thirst for them are the causes of the miseries of life. Misery, its genesis, its extinction, and the way of release from it—these truths have been revealed by the Tathāgata according to reality (yathābhātām). Thus our emancipation from the miseries is possible only by realizing to ourselves the laws according to reality. These are the laws of the existence of the Tathāgata. Therefore the laws have their root, light, and basis in the Blessed One,5 Buddha is the king of the laws. On the other hand, however, Buddhism is attainable only by the comprehension of the laws. Hence it is true also that Buddha is the protector of the laws, who, leaning upon the laws, reverses, honours, and adores them.6 The law and its revealer are mutual in their relations. He who

6 See Aṅguttara, iii. 14 (PTS ed. l. 139), v. 183 (PTS ed. ili. 150), etc.

sees the Law sees the Master, and rice versa.7 The dharmas is not merely a phenomenon or an instruction; it is the Tathāgata’s truth, and by virtue of which the Master and his followers, and consequently the Buddhás of the past and future, have attained or shall attain Buddhahood.

(2) According to a great master, as given by Barmont, Tathāgata (tathā-agata, ‘thus-come’) means the one who has come thus, in the same manner as his predecessors, the Buddhás of the past; it is, on the other side, tathās and gata, thus-gone and gone, the one who has borne his burden or departed as they.8 The oneness of enlightenment and Law among the Buddhás of the past and of the present is an idea as old as the history of Buddhism, and the development of its philosophy has always had a close relation with the idea. ‘The Tathāgata (plur.) lead men by the right law (sadādharmam)’—these are the words believed to have been spoken by Buddha himself to his disciples. This and similar passages, speaking of the Tathāgatas and the Law, indicate the communion of the Tathāgatas, or the unity of Buddhahood in the same truth. Not only has the Law been proclaimed to the Law-born Buddhás,4 but they have all one and the same road to tread. This one road (ekayāna)9 consists in nothing but reverence towards and realization of the Law. Herein lies the metaphysical essence of the teaching of the Tathāgatas, or, speaking metaphysically, their entity—dhammatā or dhamma-sudhammati.10 In this concept of the essence of Buddha’s teaching or Law, and consequently of his personality as the Law-born, the Buddhist philosophers have found a metaphysical basis for their faith in Buddha as the dhamma-born. They were to find, by the help of the Tathāgata, a metaphysical foundation of the union of all the Tathāgatas. It is quite natural that Nāgārjuna,2 the Mahāyānist philosopher of the 2nd cent. A.D., founded his theory of Buddha’s dharmakīrti, or dharma-dīna, upon this concept of dhammatā and the authority of the verses speaking of the ceyyāna, above referred to.

(3) This point gives us a key to the consideration of Buddhological speculations on the eternity of the Tathāgata’s life. Whether the Tathāgata exists after his bodily death or not is a question that had been asked from very early times in Buddhist history. Buddha is said to have neither affirmed nor denied it,1 every time this question is asked Buddha is named by the epithet Tathāgata. Whatever this connexion may have implied, we see that the question is affirmed on a metaphysical basis in the Mahāyāna texts, and that here again the appellation Tathāgata comes most conspicuously to the front. We have two most important texts, which devote each a whole chapter to the question of the duration of the Tathāgata’s life (Tathāgatāyugas-pravṛddhā)—the Lotus of the Law11 and the Golden Light.12

TATHAGATA

In summing up these ideas we may see that with the Buddhists the Tathagata has meant the personal aspect of the dharma. To found metaphysical faiths in the person of the Tathagata has always been the task of Buddhist orthodoxy, even in its phases of development in the East. But, in addition to this, we should consider two other forms of thought, one besides the central one. (a) One of them is the theory that denies personality in the Tathagata or anything else. It may be designated the theory of "no-sigal (lakṣaṇa) and is represented by the Diamond-cutter\(^1\) and other texts of the so-called Prajñā class. There the person of Buddha remains as the preacher of the sermons, and the epithet Tathagata remains also; but nothing is allowed to be defined, any definition or qualification being thought to be a limitation, which means the same thing as illusion. Thus the texts which assert the omniscience of the Tathagata deny to him any ascribable quality (lakṣaṇa). \(^1\) Tathagata means one who does not go to anywhere, and does not come from anywhere.\(^2\) Here we see that the very idea of Tathagata is put away. Notwithstanding this, the identity of the Tathagata and the Law is asserted.\(^3\) This is indeed a testimony to the tenacity of the idea.

(b) Another current, opposite to the above, may be called the theory of 'signs' (dharmas-lakṣaṇa). In its theoretical aspect this doctrine cannot be distinguished from orthodoxy, being founded upon the idea that all the dharmas are realities, which are realized in the person of the Tathagata. But in practical aspects it looks to a Tathagata beside the historical Buddha. Amitābha, the lord of the Sukhāvatī, or Vaiśāja-guru, the lord of the Eastern paradise, or Maitreya, the future Buddha in the Tārā heaven, is the object of their adoration and their hope of salvation. The cult of the Tathāgatas in various heavens is found also in the Lotus,\(^4\) and it has proved to be useful for propaganda. Buddhism of this kind, whichever may be its Tathagata and ideal heaven, is founded upon the belief that any Buddha or saint is the manifestation of one Tathāgata. This philosophy of the Tathagata-ลक्षणa is a natural outcome of the early Buddhist concept of dharma and is in conformity with the faith that every dharma is the manifestation of Buddha's wisdom (providence, so to speak). Moreover, the religion is one of adoring him, the source of compassion or as our saving is not only in accordance with the philosophy, but also has a very sympathetic aspect of faith and piety. But the defect of this system lies in its losing concentration of faith in the historical Tathāgata and therefore in its running sometimes to an extreme pantheism.

To sum up the results: Buddhist philosophy started with the ideal of release from the miseries of life in conformity with the real nature of things (dhamma). As the reality, so the existence (yathā-dhammā tathā-saṅkāya). This yathā-tathā has been revealed by the Tathāgata whose personality consisted in yathā-visā tathākārī. This Buddha's personality is inseparable from the metaphysical entity of dharma, and vice versa. The idea of the Tathāgata has, in this way, become the pivot around which both philosophical speculations and religious faith have moved and developed.

LITERATURE.—Besides the works quoted, see J. H. Moore, "Saying of Buddha's Tathāgatā," J. R. A. S., 1956, p. 133. See also poems, such as "Kātanā," by Mrs. Macgregor, 1958, p. 161; M. Ansani, "Nīhīren, the Buddhist Prophet," Cambridge, Mass., 1916, Appendix IV; and M. Ansani, Tathāgata.

TATI BUSHMEN.

1. Race and distribution. — The Tati Bushmen, or Bushmen of the Biechuanaland Protectorate, and of the Matabele and Zulu territories, are a branch of the Bush people of S. Africa, from whom they have many characteristics, both morphological and linguistic, in common. The Bushmen as a whole were formerly spread over a much larger area of the continent of Africa than they occupy at present. Traces of their occupation, such as paintings, weapons, and implements found far beyond their present limits, indicate that they were originally a much larger people than they are now. Indeed there is good reason for believing that at one time they occupied practically the whole continent and were driven by other peoples into their present territory.

2. The name. — The name Bushmen is derived from the Bushman language. The Tati Bushmen, who are the most numerous tribe of the Biechuanaland Protectorate, are called Bushmen by the Tati, as their neighbors among the Hottentots are called Hottentots. The name Bushmen, as their name (originally given to them by the early Dutch settlers) implies, is a name of the open country, a race of hunting savages living largely in the Stone Age. Their love of freedom amounts to a passion, and they are passionate, irresponsible, courageous, and cruel.

3. Mentality; artistic and moral life. — The Bush people as a whole are low in the scale of mental development, but they are highly intelligent, as their knowledge of the outdoor world, especially of the habits of wild animals. They are wonderful as trackers and have a remarkable sense of direction. Their reflective instincts are not highly developed, although some of their paintings, and more especially their folk-tales and songs, are not wanting in this respect. The most interesting thing among the Bushmen is their artistic ability. They have left paintings, figures on stones and rocks and incised figures upon boulders all over the country. Most of these paintings or chippings indicate objects of the chase, the habits of animals,
or more rarely scenes of war and domestic life.

The drawings of the wild animals are in many cases filled in with red, the method of which can be traced in places the gradual evolution of the art of painting. A fresco recently discovered in the Matopo Hills near Bulawayo is remarkable for its vivid colors. It is not, as is the case in most of the paintings, while the execution as a whole reminds one of the paintings of the Old Stone Age. Certain paintings of figures are supposed to have a mythological signification, as they cannot be connected with animal life. In a few instances, the paintings as a whole are not ritually important; there are other cases which show some advance, especially one by the Natal Bushmen. The Bushmen are not devoid of religious spirit.

The dance of the Bushmen is due to the same magic as the painting. This was the idea underlying it. In other words, that the Bushman painted the animals on the walls of his cave-dwelling to give him power over them in the field. While this is possible, and we can believe that it was, there is not any good evidence of it. It has been maintained that paintings usually depict animals desirable for food, and that noxious animals are conspicuous by their absence. Bushman paintings, we are concerned, this is not true. If animals such as lions, leopards, snakes, and rhinoceroses are considered, we can see that only noxious animals, they occur often enough on the paintings. But such animals are not desirable as food to the Bushmen, as they eat practically everything, and certainly would not refuse to eat the flesh of a lion, unless it happened to be the totem of the hunter. On the whole the paintings reflect more than the ordinary life of the people plus the caprice of the particular artist. At intervals of leisure—and the Bushmen, when food was plenty, had much of that—the scenes of the past would rise up in their minds, and they would attempt to visualize them by painting them on the rock, and by constant practice the faculty of drawing improved. The colours employed were yellow, brown, red, and sometimes white, and blue. Some of these paintings are ancient, and some are quite modern, as certain of the artists are or were recently alive. The faculty of drawing and painting was said to be hereditary in the Bushmen. It has been advanced that the painters and sculptors belonged to different tribes, but there is no good reason for accepting this.

The Bushmen are passionately fond of dancing, more especially at full moon and at certain seasons of the year. Fires are lit outside their caves, and dancing is kept up all night, or until the performers are exhausted. Some of these dances, in which the performers paint their faces and bodies, are of a religious nature. Some of them are more or less coarse. Songs are sung by the leaders, and the other performers join in the chorus. The motions are not at all graceful. Some dances are called after animals—e.g., the eland bull dance, the baboon dance, the bee dance, and the frog dance—and each has its own peculiar tune. The dances give very good imitations of the animal in its different moods and postures. The instruments used to accompany these dances are stringed instruments similar to an ordinary bow, with a tortoise-shell as a sound-box variously called fango, fangula, matè, and many other names. The dancers have rattles round their ankles, made of the skin of the inside of the springbok's ear, with small pebbles inside to make much sound, and the dance is a lively one. Sometimes, after the boys have undergone the ceremony, these are of a distinctly religious character. Bushman music is, as might be expected, of a very primitive and monotonous nature, the repetition of a few notes. It does not usually consist of more than six tones (which do not belong to our scale), but the strangeness of the music transforms the mere notes into a peculiar charm. There are other tunes which show some advance, especially one by the Natal Bushmen. Harmony does not exist.

The Bushmen have an extensive range of terms for family relationships, both male and female. Some of these are connected with taboo; e.g., a mother-in-law must not see her son-in-law or mention his name; he, on his part, must not mention hers. The same rule applies to some other relations also. A woman must avoid mentioning the name of her husband or any of his near relatives. There are different terms for these relationships, but the system among the Bushmen is not nearly so perfect as that among the Australians.

Marriage is usually a very simple matter among the Bushmen, some of whom are monogamists and others polygamists. In some polygamous cases, the men may marry as many women as possible, according to their worldly position. Two young people very often simply go off and live together, but usually the young man has to prove his prowess by going into the wild and killing their animal. The strongest and fiercest he can find—and presenting the whole or a selected portion to the girl's father. Among some tribes this is considered indispensable before asking the hand of a girl in marriage. If the present is accepted, the marriage is complete. Sexual intercourse before marriage, while looked upon as a crime, is very often practised. Divorce is too simple. A man or woman leaves his or her partner and goes off with some other one. The custody of the children does not cause much trouble, as the young people are accustomed to fend for themselves at an early age. Parental control is thus exceedingly weak. Marriage usually takes place within the clan, but a man cannot marry a woman of the same family as his own i.e., bearing his own surname. So far as we know, a man cannot take his own sister to wife, because of his totem, but he may take his sister-in-law. Although there is much freedom in the intercourse of the sexes, incest and adultery are regarded as crimes and punished by death, usually by retaliation of the same sort. The injured person, murderer, thief, abduction, and especially witchcraft, are crimes against the Bushmen, and are punished by fines, expulsion from the tribe, or death in the case of persistent offenders. The old people, when too infirm to follow the family in its wanderings or unable to procure food for themselves, are left to die.

4. Totemism and religion.—As has been remarked, totemism exists among the Bushmen, especially among those tribes that have had long contact with the Bantu peoples, but they are too much the children of the wild to have developed it to any extent. Some call themselves the Zehn clan, or the Eland clan, or the Duiker clan, and, while they avoid killing and eating these animals or certain portions of them, they are not at all strict about the matter when pressed by hunger. In the case of the Duiker clan, the members may eat all of the animal except the heart. Those clans whose totem was the buffalo did not scruple to eat every portion of it, although they might not eat every portion of a wild buffalo, even though they looked upon oxen as tame buffaloes.

They believe in a spiritual world, to which the northern tribes call Thor, and the southern !Kung and !Nkunggn
with one slash of the knife. It quickly retracts and so prevents excessive bleeding, and usually heals rapidly. It is not known for certain whether the girls underwent the rite or not. The southern Bushmen cut off the last joint of the little finger of the right hand in the case of boys, and of the left hand in the case of girls. This was also a religious ceremony, but whether it took the place of circumcision or was additional thereto is still uncertain. Fracturing the joints of one or more fingers was also practised as a sign of mourning.

The Tati Bushmen, whatever they may have done in the past, do not now practise finger-cutting.

5. Omens.—The great factor in the life of the Bushmen is their divining bones, commonly but erroneously called dice. The Bushmen would undertake no expedition without consulting them. They are four and sometimes five in number, and designated male and female. The female bone is usually longer than the male. They are made from the hoofs of animals, bone, horn, wood, or even the stones of wild fruits. Sometimes they are ornamented with designs on back or front. To consult them a man would clear a small space of ground, rub the bones with various kinds of medicine, blow upon them, and then cast them upon the ground. From the results of the conjuncts he divines what he wants to know, according to certain laws. If the result is unfavourable, it is useless for him to persevere in his object. Divination is also practised by means of the shoulder-blade of a springbok, and by certain other animals, such as the mantis, lion, jackal, and snake.

6. Spirits.—The Bushmen personify some animals and look upon them as men in another state of existence. They also believe that men, especially witch-doctors, can assume animal shapes at will and compel other people to do the same. This, they say, is to 'have power' over such victims. It has been held to indicate a belief in the transmigration of souls, but the point is very doubtful. They certainly believe in transformations of animals. The Tati Bushmen thoroughly believe in the existence of spirits, usually of a malevolent character, and, when closely questioned, admit that they can change their shapes at will, but they will not tell which spirits are born again into other animal shapes. Lightning, wind, eddies of dust, storms, and other natural phenomena are looked upon as spirits. This is probably a relic of primitive man's belief that the animals and all things of no account atone for their own sin by being born again from the earth—certainly to some extent the Bushman view. There are spirits of rivers, fountains, and thermal springs known to the Bushmen and much revered by them.

7. Mythology of the heavenly bodies.—The Bushmen have no regular system of mythology in the sense that the ancient Greeks or the modern Hindus have, but they have the elements of such. They are said to have worshipped the heavenly bodies and are therefore to be included among those people who attained to heathen worship. Among the Tati Bushmen no special ceremonies are connected with these bodies, although it is evident from numerous tales in which the sun and moon appear that a considerable degree of reverence is paid to them. The new moon figures in many of their tales.

The moon is the slave of the mantis. Her waxing and waning is explained as her dying and coming to life again. The Tati Bushmen have no special tales in a moralized form; e.g., one speaks of the moon coming down to wash her face in a pool of water. The Bushmen do not know why the sun is hot, and there is no heat in the moon. Among the southern Bushmen the sun is spoken of as a little boy by the wayside; and it is said to have drunk the water and run into the sky by some children while he was sleeping. Again, the moon is spoken of as being cut by the sun and after death
TATUING

carry away the people who are dead. Some of the Tati Bushmen say that the stars were once human beings and animals, and the Cape Bushmen speak of girls as having been turned into stars, and the flowers by the light of the stars. The prominent stars have particular names among the Bushmen; e.g., Jupiter is that of the female, Venus the Male. Female Steinbock, the Southern Cross the Giraffe Star (Tati Bushmen), Aldebaran the Male Hartbeest, Procyon the Male Elephant. The origin of the stars is explained in the following manner. A girl of the early races of Bushmen, born a hero, had been asked her for a certain kind of food which she had put to rest in the fire; threw it together with the wood ashes that were upon it into the fire. In this way the stars were born, and the ashes became the Milky Way. The rising of particular stars at certain seasons of the year was, as they were then related with the return of the seasons. Shooting stars were considered unlucky by the Tati Bushmen, and, if they appeared in great numbers, led to terror.

8. Folk literature.—The Bushmen have a great body of folklore, mostly relating to animals and natural objects, customs, and so on, but next to none of a historical character, certainly none that throws much light on their origin and migrations.

Not a title of those folk-tales have been garnered, and, as the race is a vastly vanishing one, they will soon be completely lost. Bleek collected a large number of them, as well as a selection from his great mass of materials was published in 1911 by his niece, Miss Lloyd. Smaller collections by Schultz, Theul, and Dorman have been issued. A study of those writings throws light on the mental and moral outlook of the Bushmen.

S. DONNAN.

TATUING.—The word 'tatu' or 'tattoo,' meaning to mark or puncture the skin, is derived from the Tahitian word tatau, a reduplication of the root tau, 'to strike.' It was used by Captain Cook in the account of his visit to Tahiti.

1 Both sexes paint their Bodies, Tatoos as it is called in their Language. This is done by inlaying the Colour of Black under their skins in such a manner as to be indelible.1

Cook was thus the first to introduce the word to the English-speaking world of his day. Many writers since his time have included in the general term 'tatu' the practice of marking the skin with cicatrizations; the two processes are, however, very different. Tatu proper is the insertion of pigment under the skin, whereby a practically permanent stain is produced, while cicatrization is the marking of the body, either by cutting or burning the skin in such a way as to cause scars forming small depresions or elevations in the skin. 

1 Antiquity and distribution.—Both these modes of personal decoration are of considerable antiquity and of wide distribution; they have been found among people of greatly varying culture, from the aborigines of Australia, who adorn their bodies with cicatrizations, to the Polynesians and Japanese, who have developed tatu proper to a fine art. At a very early stage man no doubt felt a desire for personal decoration and learnt to use pigment for this purpose; and it is possible that tatu was resorted to as a means of giving a permanent characteristic to the designs thus made to beautify the body at a stage prior to the use of clothes. Archaeological evidence can, unfortunately, give us no direct proof of the practice among primitive peoples of cicatrization and tatu, he says:

1. Premiers habitants de l'Europe préhistorique s’ornaient, comme il semble, de manière analogique, et ils n’avaient pas de particularités qui nous permettraient de les distinguer nettement de cette période entre la sculpture corporelle simple et le tatouage. C’est à un fait établi par des peuples modernes que nous devons les cicatrisations, car l’archéologie nous a donné un exemple de ces cicatrisations parmi les héliolithes, pour l’époque néolithique et le commencement de la métallurgie.2

In the pre-dynastic tombs of the old Egyptians excavated by Flinders Petrie, de Morgan, Amélineau, and others, some rude human figures have been found bearing marks that suggest the use of tatu.3

2 In the second Théban empire the Egyptians tattooed themselves on the breast or arms with the names or symbols of deities, but decorative tattoo marks are rare among Egyptian peoples of the classical period.2

3 The exhibition in LV 192; You shall not make any cuttings in your flesh for the dead, nor print any marks upon you,4 indicates that the Jews had seen these practices carried on by the heathen nations among whom their lot was cast, and perhaps had themselves adopted them.

There are many classical allusions to tatu in Europe. Herodotus writes of the Thracian women being tattooed as a sign of nobility.4 Pliny 4 says that the men of the Dacians and Sarmatians marked their bodies (corpora sua inscribant). That tatu was known to the Pictones and other tribes of Gaul is shown by the evidence from coins.5 Chinese travelers mention that the chieftain of a tribe hero Tschaipefao tattooed fatu among the Ainus of Japan, who indeed practise it to this day. In China it ceased at a very early time to be a desirable mode of decoration and survives only as a method of imposing a distinctive mark. A. T. Sinclair says that 'among the ancient natives in the West Indies, Mexico and Central America, tattooing was general if not almost universal.7 It was also practised by the early inhabitants of S. America, as notably among the coastal tribes of Ecuador and ancient Peru.8 G. Elliot Smith finds it along the coast-lines of a great part of the world and includes it in the culture-complex of the "heliolithic track.9 Darwin, in drawing attention to the universality of the custom among primitive peoples, said: 'Not one great country can be named, from Polynesia in the north to New Zealand in the south, in which the aborigines do

not tattoo themselves. W. Jost goes so far as to say that no race or people exists that has not had the custom of either painting or tattooing the body. On the other hand, some investigators have failed to find traces of cicatrisation or tatoo among certain primitive tribes, such as the Veddah of Ceylon, the British Guineans, the Tati Bushmen, and others; but this negative evidence does not rule out the possibility that such practices were once known to these people and have since been lost. Cicatrization is mainly confined to dark-skinned races, while tattoo proper prevails with those of lighter colour. Thus we find cicatrisation in Australia, Tasmania, New Caledonia, Fiji, and other parts of Melanesia, in Torres Straits islands, among the Papuans of New Guinea, in the Malay Peninsula (Sakal), the Andaman Islands, and in negro Africa. It has been superseded in S. America by tatoo proper, as has been observed among the Caribs of Guiana and in Brazil. The light-colored races who have practised tatoo proper include the Maoris of New Zealand and the inhabitants of the other islands of Polynesia. It is also found in Melanesia, Micronesia, the Malay Archipelago, the Malay Peninsula, Burma, India, among the Tibetan-Burman peoples in general (but rare in Tibet), and in Java Properly speaking it is found in Egypt, among the For, the Tushilang, the Namaquas, Hottentots, and other tribes, but it is by no means so widely distributed in this continent as cicatrisation. On the other hand, cicatrisation was very prevalent in the New World, especially among the Indian tribes of N. America, such as the Iroquois, the Pricked Pawnees, the Delawares, and others. It is used extensively at the present day among the Haidas and Iroquois of the N.W. American coast, and also by the Eakimo, and in S. America, notably among the Mundrues and Guaycuru tribes.

Tatooing is said to be one of the chief occupations of the Oriental gypsies. Sinclair found that most of the tatooing among the lower orders in Syria, Mesopotamia, Arabia, Egypt, and some parts of Persia was done by them. They also tattoo themselves, and in this they differ from European gypsies, for these do not wear tattoo marks. Hence their tattooing is an easy mode of identifying Oriental gypsies, who are often seen in all parts of Europe and America. At the present day tatooing persists in Europe among the lower classes. Lombroso made a comparative study of tattoo among soldiers and criminals, and conclusion was that tatooing was of the latter. He noted that the designs in criminal tatoo are often extremely complex and are formed by the most barbarous and obscene patterns. There was a considerable revival of tatoo among the soldiers and sailors serving with the British forces in the recent war. A revival, too, is noticeable among the mountaineers of New Zealand. Tatoo ceased to be a penalty or punishment and came once more into vogue, with the result that it is now an elaborate art. Apart from these and similar isolated revivals, tatoo is, on the whole, rapidly declining, especially in Polynesia, once the centre of a highly developed system of tatoo. This change is due, no doubt, in a great measure to the action of the missionaries, who have discouraged the practice, because of the orgies that often accompanied the tatooing operations.

2. Methods and implements.—The methods and implements used to produce these marks on the body vary considerably in different parts of the world and often reflect the cultural conditions of the people among whom they have been found. It is impossible here to do more than indicate briefly some of the striking varieties of the processes which have been recorded and add a few examples by way of illustration.

(a) Cicatrisation.—In Central Africa prominent keloids are formed by detaching a piece of skin, which is raised and held by a pellet of tow till the wound is healed. A. L. Cureau alludes to 'dandies of the Upper Ubangi and Equatorial Congo' who undergo this operation as a means of obtaining the prominent crest which gives them a fierce expression. Irritant substances are sometimes rubbed into the incisions to prevent the wounds from healing too rapidly. Among the Bagashe, a Bantu people of South-Western Congo, the body of a girl is painted with red ochre. When the girl is two years old, a small groove is made in her forehead. A small piece of leather dipped in or mixed with blood is placed beneath the groove, where the blood soaks into the leather. The skin and the incision heal together, and when the scar is formed it is shaped like a small cross.

Cicatrisation begins with the Andamanese at the age of eight and continues at intervals until the sixteenth or eighteenth year is reached. It is usually done by women, who use a flake of quartz or glass helix with a knife handle attached or a crab shell. While the arm is in the air, the women hold it, and afterwards the chest, abdomen, and legs, but never the face; the special tribal marks are, in some tribes, done by women. Women with a patch of flour as a mark of distinction and for drinking purposes are also tattooed by women. Among the Bagashe, a Bantu people of South-Western Congo, the body of a girl is painted with red ochre. When the girl is two years old, a small groove is made in her forehead. A small piece of leather dipped in or mixed with blood is placed beneath the groove, where the blood soaks into the leather. The skin and the incision heal together, and when the scar is formed it is shaped like a small cross.

These are formed by making vertical incisions in the skin, rubbing in a medicine, and then binding tightly with a cloth, so that wrinkles appear in the line of the process. Cicatrisation begins with the Andamanese at the age of eight and continues at intervals until the sixteenth or eighteenth year is reached. It is usually done by women, who use a flake of quartz or glass helix with a knife handle attached or a crab shell. While the arm is in the air, the women hold it, and afterwards the chest, abdomen, and legs, but never the face; the special tribal marks are, in some tribes, done by women. Women with a patch of flour as a mark of distinction and for drinking purposes are also tattooed by women. Among the Bagashe, a Bantu people of South-Western Congo, the body of a girl is painted with red ochre. When the girl is two years old, a small groove is made in her forehead. A small piece of leather dipped in or mixed with blood is placed beneath the groove, where the blood soaks into the leather. The skin and the incision heal together, and when the scar is formed it is shaped like a small cross.
produces a bluish-black effect. This method has also been observed in some of the islands of the South Seas.

The implements used for pricking the skin range in complexity from such simple natural objects as thorns, fish spines, cactus spikes, shells, and bones, to the elaborately fashioned appliances, such as the steel and the electric needles of Japan and Europe in use at the present day. The Rorospeaking tribes of British New Guinea obtain the desired effect by very simple means. The operator, who is generally a woman, mixes colouring matter—soot mixed with water—with a fragment of wood frayed out at one end to form a coarse brush. The colour is pricked in by means of a pricker having one or more thorns set at right angles to its long axis; these thorns are driven into the skin by tapping the pricker gently with a small wooden mallet. The women of these tribes are tattooed from head to foot, but the operation takes place at intervals, and there is a regular order in which the different parts of the body must be tattooed; thus the hands and arms are done in childhood, and later the tattoo is gradually increased until the whole body is covered to the shoulders. The buttocks, legs, and last of all to the face. 2

The Polynesian method of tattooing is generally to trace the design on the skin first with charcoal and then to outline it with soot. The pattern is framed with a flared bone edge. The skin is perforated by hammering or tapping this implement with another made of wood and shaped like a paddle. But the ways and means employed vary a good deal in the South Sea Islands, and the operation is often accompanied by much ceremonial and feasting, and the keeping of certain tabus; e.g., brides in the Fiji, while being tattooed, are Indio stag, and are kept in seclusion, for they must not see the sun. 3

In New Zealand a very strict tattoo has to be observed by the person undergoing the ordeal; he may not communicate with any one not in the same condition, nor may he touch his food. The Maori chief had to be fed through a special funnel during the process, which entailed a good deal of ceremonial of a somewhat religious character. The Maori tattoo, or moko, was of two kinds, of which the older method was a cutting into the skin with a small chisel-like tool made of sea-bird's wing-bones, shark's teeth, stones, or hard wood, and of different sizes and shapes. The edge of this tool was thus applied to the skin and tapped by a small mallet, which sometimes had a broad flattened surface at one end used to wipe away the blood. This chiselling process was superseded by prick tattoo, which was done with small-toothed or serrated implements dipped in colouring matter obtained either from charcoal mixed with oil or dog's fat or burnt and powdered resin. 4

In Borneo the design is pressed on to the skin with a tattoo block dipped in pigment made from a mixture of soot and sugar-cane juice. The needle points of the pricker, which are also charged with pigment, are then driven into the skin by taps from a striker. Among the Kayans the men carve the designs on the blocks, but the tattoo is done by women. The artists are under the protection of a tutelary spirit to whom sacrifices must be made, and the operator has to avoid certain foods. The women are tattooed in a hut built for the purpose; their male relatives are dressed in bark-cloth and must remain indoors until the operation is completed; in fact it cannot be commenced unless their men-folk are at home.

It is prohibited to tattoo women at seed-time, or if a dead body lies unburied in the house, and bad dreams, such as a flood of blood, foretelling much blood-letting, will also interrupt the work. 5

In Burma the outline of the desired pattern is roughly scratched on the skin with a coarse hair brush and is then picked out in a series of punctures close together, which merge into a rough line. The pricker is of an unusual kind, being two feet long and weighted at the top with a brass or lead figure; the pattern is contained in a single line, which, when fitted into the body, is thus joined to the weighted end. 6 In Japanese steel needles of four different sizes are used; the effect of shading is procured by tying rows of needles together. Sepia, vermillion, and Prussian blue are used in the designs, which are very ornate. 7

In some parts of N. America the pigmented effect is obtained by running a needle-like implement through the skin with a thread coupled with some material coated in pigment.

This method was followed by the Salish tribes, who used a 'needle of fish-bone or a cactus spine, which passed a line at each with charcoal under the skin, or sometimes the charcoal was carried on an unthreaded needle, which was thrust under the skin in a horizontal line. 8

The E-kinono use a needle and thread smeared with soot or gun-powder. Thus, speaking of the personal appearance of the Greenlanders, D. Curtans says: No one can be finished without a tattoo of the chin, hands and feet, has been thronged with a string smeared with soot, which when drawn out leaves a black mark. The mother performs the useful operation of tattooing in childhood, fearful that she will else attract no husband. This custom obtains among the Inuit, or Eskimo, and various Tartar tribes, where both sexes practise it; the one to heighten their charise, the other to inspire terror. 9

Patterns: A detailed study of the patterns would doubtless yield results of considerable ethnological interest as pointing to the migrations and culture-contact of peoples. Flinders Petrie has drawn attention to the resemblance between the Algerian patterns described by Lucien Jacquot 7 and those on the female figure found at Tukh and on the Libyans in the tomb of Seti 1 (XIXth dynasty, 1300 B.C.). The dominating designs in Algeria are crosses and a figure resembling a fish, which are thought to be degenerate forms of the swastika—a device widely distributed in Africa and elsewhere, and of great antiquity, as is shown by its appearance on a leaf in an Egyptian hieroglyph (about 2500-2000 B.C.) and by its prevalence in ancient Crete. The designs in favour among the Haida tribes on the north-west coast of America are similar to those on their boots, house-fronts, pillars, and monuments, and include family crests and totemic symbols such as the thunder-bird, wolf, bear, codfish, and so on. There is a great variation in the patterns of the Polynesian tattoo, for almost every island has some distinctive characteristic of its own. The Marquesans, e.g. tattoo in broad straight lines. Many of their signs suggest a hieroglyphic system which can be interpreted only by their priests; in Ama, however, sea-urchina and quaint zoophytes are well represented on the leg and thigh. The Marquesan women have a design somewhat resembling a tattooed on their lips. In Tahiti the patterns are simpler, but of greater taste and elegance than those of the Marquesas Islands.

Tatuings

The coco-nut tree is a favourite object, and figures of men, animals, as well as stars, circles, and lozenges. The Maori tautu stands out in striking contrast to that of the rest of Polynesia, its chief feature being the blending of spirals and serpentine curves, which follow the conformation of the body, yet are generally completely covered. This prevalence of curved lines suggests Melanesian influence; for Polynesian tatu is generally rectilinear in character. The Maori tattoo is more symmetrical, perhaps because it is done at different times and by different artists. Here again the patterns are very diverse and suggest, as regards some islands, Polynesian influence. Each of the three principal centres of tatu proper in New Guinea has peculiarities of design and execution; thus, curved lines prevail in Humboldt Bay instead of the broader stripes of the south coast, and in the central district the designs used in tatu resemble those on the pipes and gourds, which show a preponderance of straight lines over curves and an absence of human or animal forms. The Motu (Port Moresby) and kindred tribes are said to lack geometrical art, and their tatu is angular in character, but there seems to be no good evidence that many of their designs were naturalistic in origin and became conventionalized later. 

In the Dobu Islands the men wear cicatrices on chest and shoulders in the form of circular spots of the size of half-a-crown. Tatu proper is mainly confined to the women, who have rings round the eyes and all over the face, and diagonal lines on the upper part of the front of the body crossing one another so as to form lozenge-shaped spaces.

Completed serial designs are worn by the women in Borneo. The fingers and feet are done at the age of ten, the forearm at eleven, the thighs partly at twelve, being finished at puberty; it is thought improper to be tattooed after motherhood. The men have isolated designs, such as the dog design, in elongated or rosette form—a device prominent in Kayan art and one that can be traced in the shoulder tatau of many of the tribes including the Barawans (Sarawak). The primitive tatu in Borneo is that of the Uma Long women of Batang Kayan; it is stippled in—on the forehead only—in irregular dots. Indigenous patterns are done by freeland, no blocks being used for them. The designs are partially made to effect of tight-fitting breeches, and resembles that found among the Burmese and some of the Naga tribes. The latter have an elaborate face tatu called ok, formed of continuous lines across the forehead, round and underneath the eyes, over the cheeks, to the corners of the mouth and the chin. Rows of spots follow the outside lines, and two fine lines mark out the nose in a large diamond space.

With the Nagas both sexes tatau, but some tribes do not mark the face, and have the tatu placed on the breast, shoulders, back, wrists, and thighs. The Burmese tatau generally from the waist to the knees, but among the Shan it extends from the neck to the feet. The designs include mystic squares, triangles, and a great variety of animals. The old or jungle style was to cover the skin with tracery producing an indefinite effect; the new style is distinct in outline. Perhaps the most highly developed tatu is that of the Japoneso, who cover the body with fantastic figures of dragons, hippopotami, and landscapes, in a manner that recalls the patterns on their silks.

4. Use and significance.—(a) Magico-religious. The use and meaning of the marks vary; they can be sacred, as in the sacred mark of the Kainga, and they have played an important part in the life of primitive man, since they had a magico-religious as well as a social aspect. Their widespread use, even at the present day, as a magical protection against smallpox shows a very general belief in their supernatural efficacy. The Yquin tribe of S.E. Australia wear vertical electrifications round the upper arm to make boomerangs glance off. In Tahiti the women are made with red-hot stones on the arms and shoulders in imitation of smallpox marks to ward off that disease. The Andamanese believe that electrification is good for rheumatism, toothache, headache, paralysis, epilepsy, and phthisis; it is resorted to for these and other ailments when all else fails. The Todas use it to cure the pains caused by milking buffaloes. Tatu proper is a remedy for rheumatism much in favour with the men of the Haik caste, who work on the lands in the south of the Raipur District and the Kanker and Bastar States in India; its action is probably that of a counter-irritant. The Gonds and Raingas have a number of designs for the protection of different parts of the body, including a figure of the monkey-god Hamman to give strength, of Bhimsen's club and arrows to enable them to shoot better, and so on. The Burman has similar safeguards worn on all parts of the body; they are a protection against wounds and secure freedom from pain, and are sufficiently potent to procure even the favour of princes. The only tatu worn by the Burmese women is a love-charm in the form of a triangle between the eyes or on the lips or tongue; it is done with the 'drug of tenderness'—a mixture of vermillon with herbs and other ingredients such as the skin of trout-spotted lizards. The Shan tatu boys as a test of courage, but special designs are added to prevent injuries or other mishaps. In Borneo the Kayan men wear a special tatu on the wrist called lukut, which keeps away illness. The lukut is a much-valued bead, which was formerly fastened on the wrist of the sick man to tie in the soul; but, as the bead was liable to be lost, a tatu representation of it came to be worn instead. The Ainu women are tattooed on the lips and arms to keep away the demons of disease, who are thus driven away. The forehead is the favourite part since these are all tattued in this manner. If an epidemic occurs in a village, the women must tatu each other; they also use tatuwing as a remedy for failing eyesight.

Many races believe that the efficacy of tatu marks extends beyond the present life to that of the next world, where they serve as marks of identification—e.g., Nagas of Manipur, Kayans of Borneo, N. American Indians, and many others—as or a guide, or as currency enabling the traveller to accomplish his journey.

The Brahmanes, who inhabit the wild hilly country adjoining Chota Nagpur, say that tate marks remain on the soul after death, and that she shows them to God, probably for purposes of identification.

Women of the Brâhman caste believe that after death they will be able to sell the ornaments tattu on their bodies and to subsist on the proceeds. In Africa a similar belief is found among the Eked women, who think that in the next world they can exchange their scars for food, and that the ghost is able to remove them one by one for this 1 Howitt, p. 726.

6 R. G. W. Woodthorpe, 'Notes on the Wild Tribes inhabiting the South-east of New Guinea,' JAI vi. (1851) 298.
7 Shway Yoe, p. 411.
The Eskimo and the Fijians believe in Elysium only for the tattooed; the Fijian women who are too young for certain tattoos to avoid being used as food for the gods. Some investigators have insisted upon a considerable religious element in tatau, since the operation is often accompanied by sacrifice, prayer, and other religious ceremonies, and the markings frequently represent sacred animals, objects, or other objects that may be regarded as symbols of gods. These serve to express a close union between the god and his disciple; hence the need for certain talismans to avoid the dread consequences of contact with persons in this dangerous state. The priest of the Ewe-speaking people of W. Africa has special tatu marks indicating the deity whom he serves and the rank for which he holds in the priestly order; the shoulder marks in this case are so sacred that they must not be touched by the laity. In San Domingo the priests did not wear a distinctive dress, but had a figure of a zemi (tattoo) tattooed or painted on their bodies. Tatuimg was regarded by many people as a sacred profession, and the artists were under the special protection of deities of the craft. In Tahiti these were the children of Taurao, the principal deity; their images were kept in the temples of those who practised the art professionally, prayers being addressed to them by the operator before he began his work. The Tahitians say that tatuimg originated among the gods, and there are legends in Samoa and elsewhere telling of its sacred origin.

(b) Informatory.—To people who do not possess a system of writing the wearing of permanent and distinctive body-marks is not merely an aesthetic advantage, but in many cases a real necessity. Used extensively by uncultured peoples, these marks became a convenient means of conveying to their fellow-men all kinds of information concerning their activities and environment. They serve as a record of achievement and a means of identifying a man's tribe, clan, totem, social status, age-grade, and so on; and they have been regarded by some authors as a primitive form of writing.

Thus, in Africa cicatrisation is a common form of tribal mark, the scars being worn on the face or on other parts of the body and arranged in a certain pattern. In the Andaman Islands, Sulluk, Dunka, Dalomans, Mxosa, Mtypoi, and Hausa tribes are among those who follow this practice. Scars are used for the same purpose in the Andaman Islands, and in Melville and Bathurst Islands and the New South Wales. Ellis, writing of the Maoris of New Zealand, says that their faces were much tattooed:

1 Each chief had thus imprinted on his face the marks and involutions peculiar to his family or tribe; while the figures tattooed on the faces of the dependants or retainers, though fewer in number, were the same in form as those by which the chief was distinguished.

Even individual Maoris could be identified by special marks which were tattooed on the face—usually near the ear—in addition to the general pattern. These came to be used as the signature of the wearer and have been accepted as such on documents related to transactions carried on between the Maoris and white men.

The Salish and Dené tribes of N. America have marriage generally on the breast—symbol of the totality of possessions of the individual wearing them. The Haida Indians of Queen Charlotte Islands have their family totems or crests tattooed on their bodies with great skill. The designs are often very elaborate and resemble those on the tatoos that stand outside their houses.

The R. C. Harris Museum contains an instance of the use of cicatrisation to represent the totem of the individual. Trois Strats, where he saw some women wearing it cut into their backs. He was told that the men wore it cut into the shoulder or calf of the leg.

The Kawaiyan Indians of California formerly used the tatu designs worn by a landowner as a property mark by cutting or painting them upon trees and posts selected to indicate the boundaries. It was customary for the landowner to cause the red spot tattooed on the forehead by which, if taken prisoners in war, they could be identified by friends and so ransomed.

A curious use of tatu occurs in the well-known story in Herodotus of the slave who was sent from Sparta to the court of Mileus by Histiaeus with instructions that he was to be shaved, and that Aristagoras should look at his head; this being done, it was found that a message had been tattooed on the man's head, urging Aristagoras to revolt against the Persians.

Cicatrisation and tatu proper are included in the puberty rites and initiation ceremonies of many primitive peoples. In an account of one of these ceremonies in Australia Spencer and Gillen report:

The final ceremony of initiation to manhood in the Urubumna tribe is called Wilyaru, and the same name is given to men who have passed through the whole ceremony. The most important part of the ceremony consists in making cuts on the back, one in the middle line of the neck and four or six others down each side of the backbone.

In the Marquesas Islands the tatu proper was the principal initiatory rite.

In Samoa, as a young man was tattooed, he was considered in his minority. He could not think of marriage, and he was constantly exposed to taunts and ridicule, as being poor and of low birth, and having no right to speak in the society of men. But as soon as he was tattooed he passed into his majority and considered himself entitled to the respect and privileges of mature age.

It sometimes marked the admission to secret societies, as in the Banks Islands (Melanesia), where at the performance of the kole-kole ceremonies the head of the tatuimg device adopted by members of the society is tattooed on the wrist, a part of the body highly valued.

Mary H. Kingsley says of the initiation of boys in Africa:

The boy, if he belongs to a tribe that practice tattooing, is tattooed, and handed over to instructors in the societies' secrets and formulae.

In New Zealand tatuimg began with both sexes at puberty, the women being tattooed chiefly on the lips and chin. Chin tatu on women signifies marriage, not only in New Zealand, but also among the Eskimo, the Chukchi, the Indians of the Pacific Coast, and in Syria, Egypt, and Tunis. Women are usually tattooed at puberty. This is not, however, always the case, for in some of the islands of Fiji and among the Todas of the Nilghíris it is deferred until they have borne children, while with some races it is begun in infancy and completed at marriage. Only women are tattooed among the Chukchi, most Californian tribes, the Ainus of Japan, and in many parts of India. In the Omaha tribe of N. America chest marks on women signify great honour and a rank equal to that of a chief. Bachofen saw in the limitation of tatu to women among the Thracians an expression of their desire to retain the good social qualities of the individuals wearing them. This is contrary to the view taken by Plutarch, who said that the Thracians tattooed their wives as a punishment to avenge the murder of Orpheus. In 1

Melanesia, where tatau is mainly confined to women, their social position is very inferior, whereas in Polynesia, it is comparatively high, and they are seldom tattooed. But it is questionable whether there is any necessary correlation between the tatau of women and their position in the social scale. The indication of tatau to one sex or the other may be due to other causes; e.g., it is possible that in the South Seas it may be connected with the migrations of different peoples.

Among some Indians of Brazil the executioner, or matador, was scarified above the elbows by the chief of the clan 'so as to leave a permanent mark there; and this was the star and guiding light of the night in the absence of honours. There were some who cut gouges in their breasts, arms and thighs, and with a club smashed and rubbed a black powder in, which left an indelible stain."

The wearing of tatu marks proved a convenient method of recording, among other things, great achievements demanding personal value and skill. The Koita tribes of British New Guinea have a special tatau for h Dictionary.

Those of the Baronga (Bantu) who have slain an enemy used to decorate their special marks from one eyebrow to the other:

'Dreadful medicines were inoculated in the incisions and there remained plumules which gave them the appearance of a buffalo when it frowns.'

On the Mendalum river in Borneo, the Kayans reserve thigh tatau for head-taking braves. With the Western Eskimo the men are tattooed as a sign of distinction. Those who have captured whales have marks to show this, so that their tatau becomes a kind of whale tally.

In many countries it is not only a record of great events, but also a memorial of the dead. In the Saibai and Daunian Islands (Torres Straits) the women wear a shoulder scar for a brother's death; it represents his nose, and the longer the mark the greater the brother's size.

In New Zealand 'the women were the chief mourners at funerals . . . the custom was, in days gone by, that they should blacken cash faces, neck, arms, and bodies with sharp shells until they streamed with blood; the naraku or mokoro was sometimes applied to the wounds, and the stains commemorated the scenes at which the women assisted.'

In Polynesia the tongue was tattooed as a sign of mourning. Ellis saw this operation performed in a house where a number of chiefs had assembled for the purpose of defacing the memory of Queen Rihorhio's tongue for the after-life of her mother-in-law.

(c) Decorative.—Perhaps the most general use for which tatu has been put is that of personal adornment. Ellis, after noting that tatu was used in Polynesia as a badge of mourning and a kind of historical record, adds: 'But it was adopted by the greater number of people merely as a personal ornament; and tradition informs us that to this it owes its existence.' Among the Kayans of Borneo, who have a very artistic style of tatu, this is the chief decorative ornament; so do the women in Greenland, New Zealand, and elsewhere. In fact both sexes in many parts of the world attach to it considerable aesthetic value. In regard to eisatization among the Andamans, Man says that it is primarily to prove beauty, and secondarily to prove courage in enduring pain. It seems evident that in the Torres Straits islands it was adopted as a means of acquiring a certain proportion of the heroism of the various peoples, so that the women had a T-shaped scar to prevent the breasts from becoming too pendulous. This fashion is also found on the neighbouring coasts of New Guinea and was observed by Seligmann among the Otali, an Australian tribe on the south coast of Cape York.

In contrast with the opinions expressed in the writings of Walde-Gerland and others in reference to the religious significance of tatu, Joost and Westernmark see in it only an expression of marks ranks and love of adornment: 'At present tattooing is everywhere regarded exclusively, or almost exclusively, as a means of decoration, and Cook states expressly that, in the South Seas discovery, it was in no way connected with religion.' Westernmark admits, however, that it has been made to serve many purposes, but adds: 'Nevertheless, it seems to be beyond doubt that men and women began to ornament, mutilate, paint, and tattoo themselves in order to attract the opposite sex,—that they might court successfully, or be courted.' Westernmark also notes that the first one who gave magical protection against evil powers, but gradually became merely decorative, and were used to make the personal beauty of the wearer more striking, as in the case of the women, who wore them to increase their terrifying aspect. On the other hand, E. Gross thinks the priority should be given to the taste for embellishment, and that the marks only later came to have a tribal or social significance: 'Summarising the results of the investigations of the significance of primitive scarification and tattooing, we find that the marks serve partly as tribal tokens and have perhaps as such a religious meaning, although this cannot be proved for a single instance. But in other and the largest number of cases the scars and tattoo marks are for ornamen7.

5. Origin and development. Many theories have been put forward to account for the origin and development of the practice of thus marking the human body: as regards the origin, however, they must remain, for lack of evidence, little more than mere speculations. Instances have been known of involuntary tatu occurring among mechanisms and other workmen, who have accidentally grazed or cut themselves while handling charcoal or other colouring matter. Primitive man may have arrived at the notion of tatu by accident, such as the pricking of his fingers by a half-burnt stick, or throrn while kindling a fire. The unusual mark thus made might well excite his interest and so lead to an attempt at imitation and to elaboration and invention. Herbert Spencer thought that the practice arose from the custom of making blood-offerings to departed spirits, and that the marks thus made expressed subordination to or close union with them, and became in many instances tribal marks, 'as they would of course become if they were originally made when men bound themselves by blood to the dead founder of the tribe.' In this connexion P. B. Jevons writes:

'The marks probably left on legs or arms from which blood had been drawn were probably the origin of tattooing, as has occurred to various anthropologists. Like most other ideas, we may add, that tattooing must have been forced on it was not his own invention, and, being a decorative idea, it must have followed nature as which regular steps were made in all decorative art. . . . So the scars from ceremonial blood-letting may have suggested a figure; the resemblance was deliberately accentuated and next time he drew the figure from the beginning designedly arranged to form a pattern.'
TAUROBOLIUM

M. Neuberger regards tatau as one of the popular customs that have spring from primitive therapeutics; "Smearing the skin with coal-tar, with which the body is painted, the blood and blood-corpuscles are coagulated into tattooing." Wundt, Jeest, and others see a possible causal connection between body-painting and tatooing and suggest that the ancients, in a crude attempt to express their sentiments, once painted the body. Wundt regards both practices as analogous in respect to the idea of putting in pictures; hence Wundt recognizes two types, the one a crude system of simple marks often intensifying the natural lines of the body, the other a more refined that in which the skin is treated as a material to work on—just as sand or rock is used for drawing upon—when the simpler marks are replaced by pictures. The notion being, says Capart, that "the practical importance of replacing temporary marks by permanent ones, if they have a special meaning attached to them."

1 The deslins that the proponents of this view maintain, have not as yet been made permanent to save trouble. Hence arose the practice of cutting the face and the body with dyed incisions.

Concerning the origin of moko, or Maori tatu, native tradition says that the first settlers marked their faces for battle with charcoal, and later these warlike decorations were made permanent to save trouble. Hence arose the practice of cutting the face and the body with dyed incisions.

How difficult and well-nigh impossible it is to assign at this unaccustomed knowledge of the early history of such a custom may be gathered from the admission of W. Ellis, who, after many years of personal contact with, and careful observation of, the natives of the South Seas, said in reference to their tatu: "Although practised by all classes I have not been able to trace its origin."

CONSTANT VON NEXINSON

TAUROBOLIUM.—The taurobolium, a sacrifice performed in connexion with the cult of the mother of the Gods, but not limited to it, was one of the most peculiar and characteristic ceremonies of the rites of the last two centuries of paganism. A striking description of it is put by the Christian poet Prudentius, of the 4th cent., into the mouth of one of his characters, Romanus the Martyr (Peristephanon, x. 1096 F.). The high priest of the Great Mother, a golden crown on his head, his temples richly bound with fillets, his toga worn cinetra Guinna, descends into a deep fosse which is completely covered by a platform pierced by a great number of fine holes. On to this platform is laid a huge ball, bedecked with garlands of flowers, his front gleaming with gold. His breast is pierced by the consecrated spear, and the torrent of her, steaming blood floods the covering of the trench, and rains through the thousand chinks and perforations on the expectant priest below, who throws back his head the better to present his ears, lips, nose, and even tongue and palate, to the purifying baptism. When life has fled and left cold the body of the slain bull, and the flames have removed it, the priest emerges and, with solemn steps, sweeping with his feet, or standing on blood, presents himself to the expectant throng of worshippers, who salute and do obeisance to him as to one who has purified.

There are two principal notices which prompted the ceremony of the taurobolium. In the earlier period, the 2nd and 3rd cent. A.D., it was usually a sacrifice whose object was purification for the Emperor, Empire, or community. An entire college, community, or even province could give it, and a frequent date for it was March 24, the Dies Saturnalis of the annual festival of the Mother and Attis. The most frequent time of the rite in the late 3rd and 4th cent. was the purification and regeneration of an individual. Its efficacy lasted for twenty years, or was even eternal, the baptized saint. The ceremony was performed by laymen as well as priests, and by persons of all ranks and both sexes. A special altar was erected for the occasion, the time occupied by the ceremony varied from one to five days, and the expense was borne by the individual or association that inaugurated it. Besides the personal and the patriotic motive, it was performed as a fulfilment of vows, or at the command of the Mother herself. In Rome it usually took place near a shrine which existed where the present church of St. Peter stands. The erudobolium—the sacrifice of a ram—was instituted later in connexion with the legend of the taurobolium, in order to give him due prominence in the rites of the cult. See art. Chriobolium.

As the taurobolium was celebrated in honour of both the Mother and Attis, it probably possessed a significance regarding that part of the legend which concerned them both (see MOTHER OF THE GODS). The priest descends into the dark pit and leaves the light of day; Attis dies; the vegetation of the earth withers; the priest is bathed in blood, and rises from the pit purified; Attis is restored; the vegetation returns.

The similarity between Christian doctrine and the phrase taurobolium (ταυροβολίων 'horn again for eternity') is startling, and has suggested belief in some connexion between the two religions in the way of borrowing, especially as paganism vied with Christianity in later days in promising such benefits as the latter conferred. The taurobolium, however, is better explained as the survival of a primitive Oriental practice based upon the belief, not uncommon among rude peoples, that the strength of brute creation can be acquired by consumption of its actual substance or by contact with its blood. The spiritual meaning of the practice first came with the advance of culture and the discarding of the primitive, literal belief (see Cumont, op. cit. below).

Though the taurobolium might with reason be supposed to have come, with the cult of the Great Mother, from Asia Minor, there is no positive evidence that it was originally connected with it either in the East or in Italy. Cumont thinks that it was a rite in honour of the eastern Artemis Tauropoles, deriving from her name tauropolion, which was corrupted to taurobolium; and that the rite, having become widespread in Cappadocia and the neighbouring provinces in connexion with the worship of Artemis Tauropolos and other deities closely allied to her, identified with her—principally Anaitis and Bellona—naturally found its way with them into Italy early in the 2nd cent. A.D., after the annexation of that part of Asia to the Roman Empire, and was soon after popularized by the priestesses of the Great Mother. Its first known celebration took place at Pozzuoli in A.D. 131, in honour of Venus Carlesis, who, Cumont thinks, was Anaitis under a Roman name. His conclusion is that it was calculated in connexion with the worship of Bellona rests on slender evidence. Others believe it to have been a part of the Great Mother's worship in Asia Minor (Heged, op. cit. below). It is certain that the taurobolium was attained through the cult of the Great Mother.
TEETH—TELEOLOGY

It spread throughout the Empire, and maintained itself up to the fall of the last
celebrated known occurring at Rome in 394.

LITERATURE.—E. Esperandiu, Inscriptiones de Lectorum, 1892, p. 91. E.; Zippel, "Fettschreiben zum Doctorphilosophen Lehrer,

TEETH.—1. Ornament and trophy.—Among both pre-historic and savage races teeth of animals and human beings are used as an ornament, usually strung together as a necklace, head-band, or girdle. Such ornaments are already found among burial remains of Solotstane, Magdalenian, and Azilian horizons, the corpses having been buried wearing them. In a ceremonial burial of thirty-three skulls in the grotto of Ofnet, on the upper Danube, the skulls were ornamented with stag's teeth and shells.1 Among savages the custom of wearing teeth is well-nigh universal,2 and, while it may simply serve an ornamental purpose, the intention often goes further. The teeth are worn as a trophy. Thus, among the tribes of the N.W. Amazon, necklaces are made of the upper jaw-teeth and other animals' bored and threaded, or of human teeth bound into a necklace with fibre strings. These denote the skill of the wearer as a hunter, or his bravery in war, and the human teeth, which are those of an enemy, are a visible and abiding token of completed revenge, and are buried with the owner. Sometimes the larger animal teeth are ornamented with lines of carved. Analogous to the practice of wearing teeth as a trophy is the curse used by savages, 'Let their teeth be broken,' and the Psalmist's words, 'Break their teeth.'3 The Prophet says, 'Thou hast broken the teeth of the ungodly.'4 The suggestion is that of enemies as ferocious beasts deprived of their power to tear and rend.5 Men doubtless used their teeth in early times as a weapon, as savage men and monkeys still do. Divine images are known to have actual teeth set in their mouths, possibly as a trophy or offering.6

Possibly teeth worn by men also served the purpose of an amulets, as having a connexion with the qualities of the animal or person from whom they were taken, or as protecting the wearer from similar animals in time to come.7 On the other hand, a person's own teeth serve as a sort of relics in the belief that the first tooth shed by a child was so used and protected him from pain.8 Where teeth are knocked out at initiation, they are sometimes carefully preserved, or regarded as sacred, or used for magical purposes.9

Teeth taken from a corpse were used to cure toothache or for magic, and those of an old woman were used as a fertility charm in the yam gardens of the New Caldonians.10

2. Mutilation of the teeth.—Filing the teeth to a point either singly or in pairs, and knocking out certain teeth as a ceremonial act, usually at

initiation, and the purposes which these practices serve, have already been discussed.1

Staining the teeth is practised by several lower tribes,—e.g. in S. America and Indonesia—as well as at higher levels—e.g. in China (applying lac to the teeth is a custom).2

3. Teeth as relics.—Teeth of Christian saints have often been formed relics, and in early Buddhism the four canine teeth of Gautama were among his seven great relics. One of these has been famous in Ceylonese Buddhism as the Devadatta. Its miraculous preservation from every means taken to destroy it by a hostile Indian king, and its ultimate arrival in Ceylon in A.D. 312, are the subjects of a long narrative, and the Chinese traveller Fa-hian describes the procession of the relic as he saw it in 405. At a later time the Portuguese are believed to have destroyed it, though the Ceylonese allege that they only destroyed a counterfeit and that the real tooth is the one still preserved at Kandy in a shrine. It is probably not genuine.3

4. Teeth myth and legend.—Greek myth told how Cadmos, having slain the dragon guardian of the spring Areia, at the suggestion of Athena scattered its teeth on the earth like grain. From the teeth that were armed men called Spartai ("scattered") from the manner of their birth. A similar myth was told of Jason.4

In the 19th cent. a report that a child had been born with a golden tooth in Bilesia caused much anxiety in Germany, being regarded as a portent. The physician Horst in 1939 published the result of his astrological researches on the subject, and declared that the tooth symbolized a golden age preceded by the expulsion of the Turks from Christendom.5

TELEOLOGY.—I. INTRODUCTORY.—I. The term.—The word 'teleology' (Mod. Lat. teleologia, Ger. Teologie, Fr. teleologie) appears to have been devised by Christian Wolff in 1728. He felt that in explaining the ends which natural phenomena appear to have in the light of the concept of end or final cause. In popularizing Leibniz's philosophy, he set explanation based on final cause side by side with explanation by efficient cause. Presumably Wolff derived teleology directly from Leibniz, 'an end,' but, as J. Burnett has remarked, the word is properly derived in the first instance from tēλων, 'complete.' Thus, etymologically regarded, it does not bear the implication, which it has historically, of an external end; and the

4 For a connexion of these myths with the preservation of the teeth knocked out at initiation rites as a possible vehicle of resurrection or metaphorical re-introduction of the physiological, see Jane K. Harrison, Themis, Cambridge, 1912, pp. 276, 44.
TELEOLOGY

prevalent 'organic' use of it in modern thought is justified.

2. The concept.—As already indicated, the concept is much older than the term. It attaches itself primarily to that organic view of nature which was developed in the ancient Greek philo-
sophy, especially Aristotle's mechanical view. Accordingly, to the
teleological view, the whole is the product of the parts by their mutual interaction. Accord-
ing to the organic doctrine, the whole is ideally explained in this way and the purpose or determination of their mechanical actions and reactions. This last was a doctrine influential not only in the
sphere of natural philosophy but in the spheres of political and social philosophy as well, and it led to the teleological interpretation of nature as a realm of ends or final causes. As the whole was an unchangeable form, it gave to all movement a purpose and goal; and in the light of its purpose and goal the movement itself was deeply interpreted. This ancient opposition between the mechanical and teleological standpoints, as repre-
sented by Democritus and Aristotle respectively, is a problem which runs through the whole history of philosophy. The question at issue, Are natural processes subordinate to
conscious rational purpose, or is the world to be explained and interpreted by mechanical principles alone? Is the philosophical issue in its
most clear-cut form. There is a narrower issue which has assumed increasing definiteness in modern times. The fundamental question here belongs to scientific method rather than to meta-
physics, and is most prominent at the present time in the dispute between mechanism and teleology in biological theory. Are the characteristic prob-
lems of biology (e.g.) capable of solution by means of mechanical categories, or must teleological factors also be postulated?

II. HISTORICAL.—A. ANCIENT PERIOD.—I.

Anaxagoras (c. 500–428 B.C.) has been hailed as the
father of teleology, but he is 'so only in a qualified sense.'
His explanation of nature—to judge from the fragments of his Περὶ φύσεως
preserved by Simplicius and from the references in Plato and Aristotle—appears to have been virtually
a mechanical explanation on the basis of a qualifi-
atatominism, nor is it even certain that his First
Cause of motion was an immaterial or incorporeal
essence. The movement and order of the universe he was evidently to be attributed to a N환 운용 (νοείν
reason), which by an initial impulse imparted a
rotatory motion to the pre-existent chaos in which,
'All things were together.' But, once the rotatory
motion was set up, Νόει apparently had little else
to do. It may be that a thoroughly tele-
ological view of nature is logically involved in the
Anaxagorean doctrine of Νόει, whether Νόει (which
is represented as omniscient and omnipotent) be
regarded as a spiritual or a corporal essence, be
mind or mind-stuff. On the other hand, it is
altogether probable that Anaxagoras did not carry
cut the full implications of his doctrine. Socrates in the Phaedo—complains that in actual explanations he called in only mechanical causes—
'airs, athers, waters, and such like absurdities'; and
Aristotle in his Metaphysics (in a passage reminis-
cient, as Burnett allows, of the passage from
the Phaedo), charges him with making use of
Νόει merely as a deus ex machina, to account for
the formation of the cosmos or for phenomena that
he would, metalike, need to account for. Similar objections, as J. Adam reminds us, were
afterwards urged against Descartes and Newton.
But, however we may interpret the Anaxagorean
corelation, no thought is repre
sented as musicological showing than can actually be found in

Socrates. In keeping with his ethical and social philosophy, Plato seeks in his metaphysics to interpret the real in terms of the end or ideal of the Good. Ethics is for him the foundation of metaphysics, as it came to be for Lotze, and reality grows up out of the idealism of the Good. At this point he becomes clearly the adherent of the old metaphysical method of abstraction, and all the rest of his scheme is apprehended. His conception, already adumbrated in the Phaedo, of a 'Jacoab's ladder of science' (as E. Caird calls it), beginning with the lower rungs and ascending up to the highest principle of unity or the idea of the Good, by which all the others are explained, is developed more fully in the Republic. 2 The Good or Universal Reason ( Nous) is the final cause of every event and change, and to the idea of the Good all the other ideas are teleologically subordinate. The Good, as we may learn from a famous passage of the Laws, is the perfection of the whole, and in the preservation and perfection of the whole every creature has its own proper end to fulfill. Thus it was that Plato sought by means of his theory of ideas to interpret the rational nature of the whole, and to look upon the world, says J. Hutchinson Stirling, 'as a single teleological system with the Good alone as its heart.' 4 1

(b) In applying his metaphysical principles to the interpretation of natural phenomena, he was naturally liable like the Socrates of the Memorabilia to the charges of externality and abstractions. It is impossible to determine, as the Stoa, in which he so often appears, may have been, whether the phenomena of the world are found, is, in its details at least, 'mythical.' In consistency with his theory of ideas, Plato could make all the more for having weakened accounts of the phenomenal world than that they were 'likely tales' (póssed kópes). In any case he does not, even in the Theaetetus, lay much stress upon particular instances of adaptation in nature, nor does he encourage the notion of adaptations so to make the phenomena as the Teleological system, as indeed in the Philolaus in non-mythical form, a teleological interpretation is offered of the teleological concept of the whole. In offering it, Plato would apparently overcome the dualism between the ideal and the phenomenal which is inherent in his theory of knowledge and reality. God, the Demiurgy, is represented as bringing order and harmony out of the moving chaos of not-being (μη ὑπέρ), in accordance with the pattern of the Good, and in so far as natural necessity (γλυκόν) allows. Thus natural necessity comes in when divine activity according to ends fails as a principle of explanation, and something is yielded to Democritus. But, while the teleological explanation involves a recognition of divine activity, and is so far on the lines of the theistic argument, the Demiurgy of the Timaeus—the self-moving mover who fashioned the world—is not identified with the Good, nor is he to be equated with the God of modern theism.

5. Aristotle.—(a) While it may be allowed to Plato that no ultimate explanation of anything is possible without its being referred to final cause, we have to turn to Aristotle (q.v.) for a more adequate recognition of mechanical causes as principles of explanation, and this although a sort of teleological and teleologiæ and teleologiæ of the universe. In the endeavour to overcome the Platonic dualism of ideas and things, Aristotle gives an even more thorough-going interpretation of the Anaxagorean Nous than is to be found in Plato. With Plato he believes in the real existence of the form or idea, but he cannot think of it as separate from the world. It exists in the world and in things. Reality is a process of development, and in it the more imperfect to less imperfect being is to be interpreted in the light of the πάντα, which in things that are not eternal is the moving form or final state of the Cosmos. This is a system of ideal forms. Aristotle conceives of the living thing as the autonomous unit, having the teleological principle within, and with every part functionally related to every other and existing as the servant of the whole. That is the implication, we are told, of his comparison of the organism to a well-governed commonwealth, in which, once order is established, the individuals duly play their parts and a separate monarch is no more needed.

6. The Stoics.—(a) Among the so-called sects that came after Plato and Aristotle the Sceptics (q.v.) had no contribution to make in teleology. If causality was suspect with them, as with Hume in a later age, so also was finality. The contribution of the Epicureans (q.v.) was negative. Epicurus is to be classed with Leucippus and Democritus, of whom Aristotle said that they 'rejected design and referred all to necessity.' 5 But the Stoics (q.v.) recognized teleological principle, and teleology. There was one philosopher indeed, an Aristotelian, who came near to Stoicism in his opposition to the mechanical explanations of the cosmos; it was he who imputed it, he 'threw away the keystone of the Aristotelian teleology.' This was Strato of Lampsacon, who denied the existence of pure form as of 6

pure matter, declaring form to be always immanent in matter, and so converting the Aristotelian system into naturalism. Stoicism may therefore be described as naturalism, but it was at the same time a pantheistic system. The old dualism of form and matter which Plato and Aristotle had inherited from Anaxagoras, and had finally been resurrected by them in the Platonic and Aristotelian systems, was treated as interchangeable or con- nontants of the great cosmic movement, and it was said that this movement had been the work of God, and that he could take the point of view of the whole. But the Stoic appeal to order and adaptation often descended to externality and anthropo- centrism, as well as to teaching attributed to Memorabilia. Thus it was said that the peacock was made for the sake of its beautiful tail, and the bee to carry man's burden. Yet an immanent or intrinsic teleology such as is characteristic of Plato and Aristotle would have been altogether congruous with Stoic principles.

(b) In carrying out this teleology, Stoicism made much of the beauty of the great divine order and the adaptation of means to end, especially in organic nature, as manifestations of the rational unity and ideal meaning of things. The evils of the world, which offered even more difficulty on the monistic hypothesis than in the Platonic and Aristotelian systems, were considered as insignificant or con- nontants of the great cosmic movement, and it was said that they would be transformed or be utilized as such. If the poet could take the point of view of the whole. But the Stoic appeal to order and adaptation often descended to externality and anthropo- centrism, as well as to teaching attributed to Memorabilia. Thus it was said that the peacock was made for the sake of its beautiful tail, and the bee to carry man’s burden. Yet an immanent or intrinsic teleology such as is characteristic of Plato and Aristotle would have been altogether congruous with Stoic principles.

(c) If the Memorabilia is possibly influenced by Stoicism, Cicero's De Natura Doemian (indubitably) is. There is therefore no difficulty in the way of the doctrine of naturalism and the adaptation of means to end, especially in organic nature, as manifestations of the rational unity and ideal meaning of things. The evils of the world, which offered even more difficulty on the monistic hypothesis than in the Platonic and Aristotelian systems, were considered as insignificant or con- nontants of the great cosmic movement, and it was said that they would be transformed or be utilized as such. If the poet could take the point of view of the whole. But the Stoic appeal to order and adaptation often descended to externality and anthropo- centrism, as well as to teaching attributed to Memorabilia. Thus it was said that the peacock was made for the sake of its beautiful tail, and the bee to carry man’s burden. Yet an immanent or intrinsic teleology such as is characteristic of Plato and Aristotle would have been altogether congruous with Stoic principles.

7. Teleology of history.—While in the ancient Greek philosophy a teleology of nature was expounded, in the religions period of the ancient world and within the early Christian Church the idea of a teleology of history gradually developed. The opposition in the Gnostic view of history to the OT religion as the revelation of an inferior Deity led to the view of history which has established itself as the truly Christian. It fastened upon the Pauline doctrine of the apocalypse of the Law and the Gospels, the climax of the divine redemption culminating in Jesus Christ. With Irenaeus the teleology of nature is ancillary to the teleology of history as thus expounded from the Christian standpoint. At the hands of Augustine the whole conception receives an impressive treatment, and the human race is regarded as a teleological unity, as being destined to receive entrance into the catholic or universal Church (citius Dei). This anthropocentric view of the teleology of history the doctrine of the divine redemption in Jesus Christ still prevails in Christian theology, in which the teleological principle of history is sometimes described as Christocentric.

B. MEDIEVAL PERIOD.—Thomas Aquinas.—All through the Middle Ages, in Christian and

1 Aristotle, Polit., i.

2 See Hutchison Stirling, Philosophy and Theology, p. 178 f. Muhannad countries alike, the Aristotelian teleology dominated philosophical and scientific thought. Uneasiness was expressed by the teleological form in its defective form by final causes alone (i.e. apart from mechanical causes), and it laid an arrest upon the movement of natural philosophy. Yet Archimedes and others who placed the problem of mechanics and natural philosophy in a somewhat facile monism, in which one eternal substance manifested itself as spirit (καθοχις σπερματικος) and matter (νηναι δυναμος). It was essentially a teleological view of the history of the world and the scholastic ages, and he quotes as exponents of it John of Damascus and Averroès on Aristotle's Physics. There is an intelligent 'somewhat,' says Aquinas, by which all natural objects are ordered in relation to an end, and this 'somewhat' we call God—which, indeed, is the gist of the teleological argument, whether in its popular or in its more philosophical form. Aquinas also catches up the patristic idea of the teleological unity of nature and history, and through his doctrine of the State gives it a more systematic expression. The State was not with him, as with Augustine, the devil's province (s. c. divisus humanae). The theory of the natural law or right (lex naturalis), which has its source in God, and the life of virtue, which Aquinas said was to be realized in the political society, was the preparation for the higher life of grace in the society or community of the Church. ' Gratia naturam non tollit sed perficit.'

C. MODERN PERIOD.—I. Bruno.—The transition from ancient and medieval to modern thought is well illustrated in this matter of teleology. Thus, in others, in the views of Giordano Bruno (q.v.). His whole philosophy represents an attempt to combine in a unitary system the Platonian and Aristotelian idealism and the modern mechanical view of nature, of which Democritus was the precursor. Like the atomists, he affirmed that only, as it were, after repeated experiments on nature's part did combinations of elements arise which, as being adapted to ends, conserved their stability. At the same time he affirmed—and here the idealist strain appears—that there is a world-soul, or inner principle of motion in nature, which is purposive in its working, and so orders all things as to secure the world's progress. Thus the mechanical and teleological views are united in this thinker.

2. Bacon.—Though Francis Bacon (q.v.) may also be said to belong to the age of transition, he was more definitely the precursor of the scientific movement. It would appear that he looked upon the philosophies of Plato and Aristotle as ' planks of lighter and less solid wood' than the physical philosophies of ancient Greece lost in the wreckage of the Roman Empire. For him philosophy was restricted to the investigation of nature, and there were certain ' idols of the tribe,' or common pre- judices, to be dismissed from the mind if nature was to be explained aright. Among these was interpretation by final causes. Under the illusion that man is the measure of things (which Prota- gorean utterance, curiously enough, is actually become the watchword of a recent philosophical movement) we interpret things in reference to ourselves (ex analogia hominum) instead of universally (ex analogia universi). Yet Bacon does not reject the reality of final causes.

1 For the causes rendered, that the hairs on the eyeballs are for the safeguard of the sight, doth not impugn the cause rendered, that pithole in relation to being doth of necessity, and causes in physics are, however, sterile like Vesta's virgins, and, worse than that; we are once more in impotence of making us conscious of monism and frus to stay and the ship from further sailing.' But final causes have their place in mythology and religion. The doctrine of perfection even appears in theology when nature 'intendeth' one thing and providence 'draweth forth' another.1
Thus Bacon throws off the two thousand years' yoke and fetters hands with Democritus and Leucippus, and in doing so, while vindicating physical causation as the one form of causation of which physical science need take cognizance, he conserves the metaphysical and religious interests which were fused together with the Platonic and Aristotelian teleology. It were incredible to him that this 'universal frame' should be 'without a Mind.' He failed, however, to appreciate the intensity of the Aristotelian concept of organization in biology, as also—but this was the legacy of the schools—the philosophical depth of the essential Aristotelian doctrine of the end.

2. Hobbes and Descartes.—(a) Hobbes (q.v.), following Bacon and Galileo, tried to liberate philosophy from the Platonic and Aristotelian ideas and forms and to substantiate the mechanical view not only of the physical world, but also of mind and society. He reduced all cause to motion, and philosophy to a doctrine of motion. (b) Though Descartes (q.v.) also dispensed with final causes in nature, he did not fall into like Hobbes into materialism. He explained natural phenomena by the mechanical principles of matter and motion, so founding the now orthodox systematic view of nature, and distinguishing himself from the ultimate positions of the ancient atomistic philosophy. Mechanical explanation was not ultimate explanation. But his rejection of final causes in nature was on theological rather than epistemological grounds. We may legitimately enough, he thought, attribute ends or purposes to God, but we cannot hope to discover these, as they are hidden in the inscrutable abyss of His wisdom. Here, as in Bacon, there is a clear distinction between the scientific and the metaphysical and religious interest in final causes—a distinction which became clear only in the modern period of thought.

4. Spinoza.—(a) The most vigorous, as it was the most uncompromising, attack upon final causes in nature came from Spinoza (q.v.). In explaining a particular phenomenon we cannot, he said, go beyond the particular attributes of the one divine substance, be it the attribute of thought or of extension, under which the phenomenon appears to us. For, while the attributes are parallel to each other, there is no interaction between them. Thus material phenomena, including the movements of the human body, are only explainable in physical terms. Matter cannot be grounded in mind. There can be no ends or purposes in nature.

(b) Apart from the incompatibility of the doctrine with his fundamental premises, the main objections are urged by Spinoza against final causes. The first is Bacon's objection—that acceptance of final causes would lead to trivial truth in mathematics, which, as dealing with the essence and properties of things, leads to rational knowledge. The other objection is that the method of explanation by final causes would express false anthropomorphic conceptions of God. A God who works purposively, or who is subject to futility, lacks perfection of being. It implies defect in God that He should be in need of anything. Nor have we any right to infer distinctions in the divine nature analogous to the elements of the human mind. The nature of God will not involve anything more analogous to our intellects and will than the constellation of the Dog in the zodiac. (c) Undoubtedly Spinoza did good service in exposing the weakness and superficiality of the traditional teleology, but it should be observed that, whilst the denial of final causes has already involved in the doctrines of substance and parallelism with which he sets out, at the close of his thought a certain light breaks in upon his system. The amor intellectus Dei with which he concludes is part of the infinite love wherewith God loves Himself and all the universe in which He is well pleased. The ideas of satisfaction and value which are essential to a teleological interpretation of the universe appear to be here conserved.1

5. Leibniz.—(a) Despite the able efforts of the Cambridge Platonists (q.v.), such as Cudworth and More, to restrict the sphere of consciousness, and, moreover, to maintain the mechanical view found increasing support, being applied also as against Platonists and vitalists to the phenomena of life, and it was left to Leibniz (q.v.) to attempt a reconciliation of the opposing principles. Leibniz's essential position still meets with great acceptance among scientists, philosophers, and theologians. In the phenomena of nature, he says, everything happens mechanically and at the same time metaphysically, and the source of the mechanical is the metaphysical. This position finds clear expression in two sayings that may be placed side by side—one from a recently discovered fragment, and the other from his 'Omnia in tota natura demonstrari posse tantum per causas finales, tum per causas efficientes.'

'Cause efficientes pendent a finalibus.'

(b) While Leibniz was as 'corporeal' as Descartes or Spinoza in the explanation of the local nature of his universe, he did not rest in the mechanical explanation. One reason appears in his metaphysical construction. It is at the present time, he says, 'the general and peculiar property of the substance. Rejecting the Cartesian and Spinozan opposition of extension and thought, and affirming substance to be force (l'estrentsubstance) and form (l'essentiel de la chose), and feeling himself obliged from an abstract to a more concrete notion. Matter was no longer to be defined as extension but as a form of force, more specifically as power of resistance; and mind was no longer to be restricted to the sphere of consciousness, and was presented as comprising subconscious states (petites perceptions). With this view of substance, and with the aid of the Aristotelian principle of continuity and development, Leibniz at length reached the speculative position that the real world consists of an infinite host of independent monads or individuals, at complete different stages of development, whose activity is fundamentally spiritual or perceptual. Now it is the very nature of the monad to think or to re-present to itself the realization of all its possible possibilities. It has to relish itself of confused perceptions and attain true knowledge. After the realization of all its possibilities, the monad becomes a Supreme Monad—an end which may only be achieved on the plane of self-consciousness and spiritual freedom. So it is, according to Leibniz, that the forces acting upon the monad may be interpreted from the standpoint of teleology. Everywhere in nature purposefulness may be discerned, whether in an inward view, or, rather, like the universal view, and the world of physical causes and effects becomes a world of means and ends. (c) The second reason that led Leibniz to uphold the teleological interpretation of the world starts from his postulate of 'pre-established harmony,' which is intimately connected with his monadology. Though independent or 'windowless,' each monad 'mirrors' the rest of the universe. Though subject to its own laws, each monad is in harmony with the universal development. Guillemain and Spinoza had already applied the principle of harmony or correspondence to the two Cartesian attributes, but Leibniz applies it to the totality of substance. He compares the correspondence which he has in view to different bands of musicians who may keep perfectly together without seeing or even hearing one another. He compares it also, not without a frequent analogy of the time (and with the relation of body and mind chief), to two clocks so skilfully made as never to get out of time. The pre-established harmony is not imposed upon the world from without, but belongs to the inner life of the monads, or, more precisely, it is derivable from the monads themselves. The only possible explanation is to be found in the will and purpose of God. It is this principle of concord which brings to pass the close connection of substances whereby the world is orderly and rational. Thus the order of the world, interpreted as a pre-established harmony, should be well understood, as Leibniz pointed out.

(c) The principle involved in the teleological inference is named by Leibniz the principle of determinate or sufficient reason, viz. that nothing can exist or be true without a sufficient reason for it, and that the contrary is not possible.2

1 S. Pringle-Pattison, The Idea of God in the Light of Recent Philosophy ('Mind', First Series, Cambridge, 1902, p. 501; also below, 9 II, C. G. 9, 10). 2

2 Enntol, xvi., 'Of Atheism.'
principle, implying the complete rationality of existence, philosophy was to be reduced to a science, as Descartes or Spinoza. But Leibniz gave the principle a characteristic application to the contingent truths of natural science, just as the principle of identity and contradiction was the foundation of the neces-

sary truths of mathematics and logic. So that the conservation

of force or energy and the equivalence of cause and effect in the

world must be teleologically explained as dependent upon the

divine wisdom and order.

(c) In biology, as in physics, Leibniz advanced the teleological position. The corpuscular theory with which Leibniz was to

establish his philosophical system was teleological in essence; the

world is a machine, subdivided into an infinite number of lesser machines, which, even in the ignorance of the 

observer, from the point of view of the divine mind, will be 

inferred to have been designed for each other with marvellous accuracy. This universal adapta-

tion of means to ends so resembles the products of human

contrivance that Leibniz felt bound to infer that the Author of nature is somewhat similar to the mind of man, both possessed, one might say, of 'design', or

Philos replies, in Hume's own sceptical vein, that the principle of analogy is not a sure basis of argument, especially as we

depart the more we get from the human sphere, or, to use

real speech, e.g., of analogy between the fabric of a house and the generation of the universe? And why do we infer

on design, intelligence, be made the model of the whole? If it

is valid to say that, because the world resembles a machine, it 

arose from design. It is not at least equally valid to say that,

because the world resembles an animal, it arose from genera-

tion? And why go beyond nature in search of a transcendent 

cause? To take one step beyond the mundane system is to

be forced to go on in an infinite progression. For the ideal

world, in which the material world is traced, is itself to be

traced into another ideal world, and so on. May it not be

that there are forces in nature by means of which, even after

a boating and bunching of many worlds throughout an

eternity, this orderly and harmonious system was struck out?

At most the argument from design can only prove the existence

of a being in time and space, fashioning a given material, and

all pretension to ascribe infinity to the deity or even perfection

in His finite capacity must be renounced. Can we even pretend

to decide from the phenomena of nature as to whether the

Deity is one or multiple? (A simile is the only figure of speech

of the argument is found in the Enquiry concerning Human

Understanding, where the author is criticized for the

assertion of the human mind's potentialities and virtue, and

made famous by Kant.)

(d) By the objections thus urged by Philos a strong impression

is made upon Clays, who, as we have seen, was too fond of

the problem of evil, that the Deity might be described in the

terms of 'benevolence, regulated by wisdom, and limited by

necessity'—an old position of the Greek theologies with which

we have been familiarised in recent thought. The carefully

formulated conclusion of the Dialogues, that (as Philos says)

'the cause or causes of order in the universe probably bear

some remote analogy to human intelligence,' may not have

represented in Hume's mind the whole of 'genuine reason' 

but it dealt a destructive blow to the teleological theology

of his time, with its deistic implications, its petty teleology, 

and its hedonistic view of life.

(d) On the scientific or philosophical side, how-

ever, Hume is put in the second place. He contributed nothing to the

principle of natural teleology. The idea goes back as far as Empedocles, and is expounded in Lucretius,

that in nature the principle holds of the survival of the fit. In this sense, the Dialogues, as we have seen, may reduce

Hume gives expression to this principle, and he

does so in respect of both inorganic and organic

nature. Described as the tendency towards equilibration or equilibrium, it is a modern physical science as teleological in

character; but, when Hume speaks of it further as perhaps originally contained in matter, he at least suggests the idea that there is a deeper and
more original teleology in nature than ordinary mechanics can provide. So that with Hume the teleological appearance of nature is perhaps more than a postulate of the reflective or subjective judgment, as it is with Kant.

2. Kant.—(a) In his early work on *Universal Natural History and Theory of the Heavens* Kant acknowledged the great value of the arguments drawn from the beauties, harmonies, and perfections of the universe, and more particularly of the human character, to establish the existence of a supremely wise and powerful Creator. At the same time he rises above the popular teleology. In a later pre-critical work on *The Only Possible Proof of the Being of God* he declares himself impressed with the physico-theological argument, but, like Hume's Philo, he doubts the validity of the inference to a Creator who is perfectly wise and good. In the *Critique of Pure Reason* a similar criticism appears, with a famous tribute to the physico-theological argument as 'the oldest, the clearest, and that most in conformity with the common reason of humanity.' The argument at the best, however, cannot take us beyond the great power and wisdom of the Author of the universe; and it can prove, not a Creator, but no more than an Architect, who is necessarily limited to the means he has chosen. His omniscience in Certe- tinancy belongs not to the matter but to the form of the world. The attempt to show that matter is contingent and dependent upon a principle of intelligence is to fall back upon the cosmological proof, which in its turn rests upon the ontological, with the consequence that the claim of the physico-teleological to be a pure induction from experience is invalidated. This argument in fact originates in the propensity of the human mind to view the order and purposiveness of nature as though they were the products of intelligence and design—a propensity for which on the principles of the critical philosophy there can be no real basis.

(b) We need not dwell on Kant's views in his pre-critical writings of the teleological principle. It is sufficient to note that they were on the lines afterwards developed in the *Critique*. In the *Critique of Pure Reason* he justifies, as against Hume's scepticism, the mechanical or scientific view of nature as subject to causal determination. In the *Critique of Judgement* he vindicates the teleological view of the spiritual life as a realm of moral freedom and independence. From the critical standpoint therefore the doctrine of nature and the doctrine of morality may be true in its own sphere, and mechanism and teleology be so far reconciled. In the *Critique of Judgement* he seeks to overcome the dualism—in his own phrase, to bridge the gulf—between nature and the moral order, which he had regarded to begin with as closed systems, independent and separate. He realized that the sensible world of things and persons is but one aspect of reality, and the supersensible world of moral values but another, and that the two must be interrelated. Accord- ingly he draws attention to certain things belonging to the sensible world of nature which we cannot describe adequately in terms of the world of purpose or end which has its proper sphere in the supersensible world of spirit. One of these is the phenomenon of beauty, the other that of organic being.

(c) The first section of the *Critique* treats of the aesthetic judgment. In the aesthetic experience the beauty of nature, as of art, is felt to be purposive, in the sense that, while it arises from functions of a non-mechanical order, it is 'unfree,' and un'seconded.' The second section has to do with the teleological judgment, in which nature is regarded as purposive in itself, and not merely, as in the aesthetic judgment, in relation to the subject of experience.

(d) The purposive character of living beings for Kant is the whole problem of the world as a teleological or organic system. Philosophy gives the notion of a priori judgment, meaning the a priori of Kant. In his use of the categories of the understanding for the subsumption of the particular under the general he follows the faculty of judgment. Kant's teleological judgment had been shown in the first *Critique* to be determin- ing or, as he says, teleological; i.e., it subsumes under a mechanical, or as he says, teleological, or a priori conceptual, category and attempts to determine or specify the phenomenal world of experience as a mechanical system under inviolable principles. But judgment is also of a priori teleological causation, and the teleological causation particular under the universal, reflective judgment makes use of the idea of subsumption to purpose or end as the ground to its operations. The determinate judgment is analytical, and simply brings particular facts under the universal principles of the understanding. The reflective judgment is synthetic, and, operating with the idea of nature as a teleological or organic unity, discovers its particular, and at every step, in the teleological, the final or inclusive principle.

9. Hegel.—(a) In the course of his examination of the critical philosophy Hegel (q.v.) dealt with Kant's view of the physico-theological proof. He agrees with Kant as to its inadequacy as a rational or logical argument. The conception of design, like that of purpose or end, is of a nature which transcends the particular and individual, but expresses the true nature of the relation of the world to God. At the same time the argument represents a further stage, the first stage being represented by the teleological argument, beginning with the universal, and ending with the particular and individual. The process whereby in the hidden or implicit logic of the appreciation of the idea of God in the fixed teleological causation. For it is impossible to distinguish the categories of mechanical and teleological causation as being constitutive and regulative of the subjective and objective, respectively. With his true apprehension of the idea of purpose as internal and immanent, Kant, but for his rationalistic prejudices, might have advanced to the recognition of the constitutive character of the organic or teleological principle. Internal

---

adaptation or design is no less constitutive than the principle of mechanical causation. To over-come the objections of the empiricists and nomenists, we must follow the development of the world from the realm of nature to the realm of mind and thence to the unity of nature and mind in the idea of God, in whom the world is seen to be a rational system.

10. Schelling: the philosophy of nature.—(a) If Kant promoted the movement of German idealism, it was promoted—perhaps indirectly rather than directly—by no one more than Goethe. Kant, for his part, in the recrudescence of the nominalist school, saw in the philosophy of Kant the young Schelling in the realm of nature and mind. In his Speculative and Theological writings, Schelling, the world-soul, was, at once, the great body of the scientific thinkers of his age. In his speculative teleology he had affinities with Leibniz, Spinoza, Kant, and Herbart. Indeed, Leibniz was led to conceive of the world as a plurality of real spiritual elements, but in mutual interaction according to the principle of immanent as distinguished from transcendent causality. In his endeavours to account for the causal relation and the reciprocal interaction of the elements, he was led, by a similar process of thought to that which Spinoza went through, to the idea of a universal all-embracing principle, which, for religion has the value of God. Under the influence of Herbart and the Kantian criticism, he utilizes the principle of human analogy in interpreting the inner reality of nature, which he regards as the instrument of a purpose, viz. the purpose of supreme good, though it is by a practical conviction rather than a logical or rational process that we pass from the world of things and forms to the world of values. So it is that Leibniz reaches his teleological interpretation of nature.

12. Darwin.—(a) At first sight it would appear that the theory of biological evolution associated with the name of Charles Darwin is strikingly vindicates the mechanical view of nature as to banish the idea of teleology altogether, not only from scientific explanation but also from philosophical interpretation. Certainly, as Darwin himself realized, the doctrine of descent by natural selection gave a fatal blow to the old argument from design as expounded by Paley.

"We can no longer argue," he says, "that the beautiful hinge of a bivalve shell must have been made by an intelligent being, like the hinge of a door by a man." 12

Paley had not appreciated the metaphysical difficulties involved in the notions of an external designer or contriver and of special external adaptations, and he laboured under the further limitation that he believed with the orthodox science of his time in the fixity and immutability of species. If species were not fixed and permanent forms but the results of long evolutionary processes determined by necessity or chance, then Paley's argument was still further discredited. There appeared to be no more design in the principle of natural selection than "in the course which the wind blows." 13

(b) But, while the Darwinian theory was subversive of the teleological argument in its popular form, which was deditious or rationalistic theism, it was not really anti-teleological in the Aristotelian and post-Kantian sense. No doubt the principle of natural selection is in itself fortuitous or non-teleological, and that despite the teleological flavour of the terms 'selection,' 'fitness,' by which it is expressed; so that J. Ward, borrowing a 'plain term from Herbert Spencer, would describe the principle in mechanistic language as one of 'equilibrium.' 14 Moreover, in the hands of ultra-Darwinians natural selection of random variations has been employed as an exclusive explanation of the modification and transformation of species, and, so employed, may be properly described as anti-teleological. But Darwin himself did not urge natural selection as an exclusive principle. He recognized in evolution other factors besides, both non-teleological and teleological; e.g., in the last edition of The Origin of Species he added the following note:

2 The Life and Letters of Charles Darwin, 3 vols., London, 1887, i. 309.
3 Jb., i. 309.
4 The Realm of Ends (Gifford Lectures), Cambridge, 1911, p. 101.
point of saying that natural selection is "aided in an important manner by the inherited effects of the use and disuse of parts." Ward contends that this, the Lamarckian factor, like the factors of sexual and human selection, is strictly teleological. He maintains that it presupposes psychic activity, conscious or at least sentient, directed to the end of the satisfaction of needs or desires. Whether the Lamarckian is a real or suppositions factor in evolution with which we are not here concerned. It might be added, however, that the anti-Darwinian theories of evolution are more favourable to the teleological idea than the Darwinian and ultra-Darwinian theories that Darwin's general theory of organic evolution, like the general cosmogonic theory of Kant and Laplace, is being increasingly recognized as not inconsistent with an ultimate teleology, profound, subtle, and less rationalistic than Paley's.

4. "Unless the cosmos itself," says Ward, "is to be regarded as a finite and fortuitous variation persisting in an idealisable chaos, we must refer its orderliness and meaning to an indivisible informing Life and Mind." 5

13. Lacheler. — In Merz's opinion Lacheler's short tract, De Fondement de l'Induction, 6 is "conceived in the edifice of modern thought." 7 Lacheler faces the problem of the contingent (or the collocation of things in space) which, along with that of the discontinuous, is involved in the Leibnitzian philosophy, that "the things which surround us are the material in which, the laws of nature the forms through which, the world of values, or the Ideas, are, or have to be, realized." Following Comte, he took up into his philosophy the old distinction between nature passively conceived and nature hypostatized or taken actively (natura naturata, natura naturans). The possibility of inductive reasoning rests, he says, on the recognition of both these aspects of nature, which are complementary. From the one standpoint nature is a mechanical or serial unity in which the antecedent determines the consequent; from the other it is a teleological, systematic, or harmonious unity in which the whole determines the existence of the parts. Efficient causes and final causes are both needed in the inductive process. Nature is at once a science, for every producing effects from causes, and an art, for ever setting about new inventions. As there is a principle of regularity in nature, so there is a principle also of harmony or order. The contrast of mechanism with teleology, he says, is in fact just the different light in which we regard the very nature of totality. 8 We shall see that this philosophical position of Lacheler has been fruitful in the scientific investigation of the problem of universal teleology.

III. SYSTEMATIC. — A. TELEOLOGY IN EMPIRICAL DESCRIPTION. — 1. Description, explanation, interpretation. — (a) In proceeding from the historical to the systematic discussion, it will make for convenience of treatment to distinguish three aspects of teleology. Historically they have been closely associated, and it is impossible to separate them in any rigid fashion. They may be named, however, the descriptive, the explanatory, and the interpretative. If one hesitates to set up the distinctions here implied, one hesitates more as to the terms by which to designate them. For descriptive explanation, and interpretation are ill-defined terms in current usage, although — perhaps because — they circulate so freely in discussions of the world and its meaning. By descriptive teleology we mean the teleology which answers at once to the definition of the concept of end or purpose and is immediately recognizable. It might be otherwise named as formal, empirical, or de facto teleology. By explanatory teleology we mean the teleology which is postulated in scientific theory in explanation of things, processes, and events. It might be otherwise named as methodical or logical teleology. By interpretative teleology we mean the teleology which offers in philosophy and religion a spiritual interpretation of the world as a whole. It might be otherwise named as speculative, ideal, or spiritual teleology.

(b) It might be objected to in particular to this scheme that modern physical science leaves explanation to metaphysical philosophy and claims for its formulas no more than descriptive validity. It concerns itself only with the question, 'What is it?', and hands over to metaphysics and religious philosophy the questions, 'How came it to be?', and 'Why came it to be?' But it appears to us that physical science has been suffering in the last generation from an excess of reactionary modesty. Behind its so-called descriptive formulations, which are broad generalizations, lie worlds of patient observation and experiment and a host of-inducing inspirations and, if it is not true of the 'How,' it tells us a great deal about it, and is richly entitled to the larger claim involved in the term 'explanation.'

1 It is an interesting point," remarks J. Arthur Thomson, "that just about the time when physics began to proclaim emphatically that its office was to describe and not to explain, natural history in Darwin's hands passed emphatically from description to historical explanation. 9

For the rest, there is in any case enough and already classical authority for a certain individualism in matters of teleology. 10

2. Descriptive teleology. — (a) Teleology, in the sense of purposiveness or activity directed towards an end, is immediately recognizable in the ordinary work-a-day world. Conscious striving after ends, with adaptation of means to ends, is characteristic of human life. The concept of end or purpose is itself derived from observation of the human mind, and conative activity involving ends is central in human experience. But the idea of teleology is readily extended beyond the reference to consciousness. There is a teleology below consciousness, just as there is a teleology above consciousness.

Neither Charles Darwin nor the coral reefs, "were ever any design of the men or the insects which constructed them; they lay altogether deeper in the roots of things." 11 (b) As in the organic history teleological purposiveness appears to be present in the process, though the individual goes forth, like Abraham, not knowing whither he goes, so it is also in the spheres of sub-conscious and unconscious life. Many biological processes show the appearance at least of purposiveness, and Kant was right in saying that we could not attain to the knowledge of living things except under the form of the teleological judgment. The structure of the organism, the reciprocal relation of its parts as both means and ends for each other, and its growth, in which it is at once continually self-produced and self-producing, all appear to him to demand a teleological explanation. It may be that, as Kant's critical philosophy forced him to admit, the teleological principle is subjective and only regulative of knowledge. All we have to say is that the phenomena of organismal life have been explained both mechanistically and teleologically, but prima facie they are susceptible to description in teleological terms.

1. The System of Natural History (Gifford Lectures), 2 vols., London, 1820, 1. 12

(c) When we pass from organic to inorganic nature, we meet no longer with the appearance of purpose in organic things, but the causes there are, to the eyes of sight at least, no individual beings. Yet, if we were to indulge the 'pathetic fallacy,' we should look even upon inorganic nature, the stars, as a teleological in our varying moods and thus as so far teleologically constituted.

(d) But, if purposiveness may not be discerned in inorganic world, it is recognizable in products of the hands of man's device, composed of inorganic elements. To our fancy a piece of machinery is often informed with life and purpose, like the machines in Samuel Butler's satire of *Erewhon*, but the purposiveness resides not in the parts but in the processes they subserve. A machine, as Driesch says, is distinguished from other human 'artefacts' as being made for purposes. That is why the comparison of the world to a machine in the old natural theology, as by Cleanthes in Hume's *Dialogues*, is apt enough, especially when the Deity is deistically conceived as not directly in the world. There is also the reason why the comparison is inapt from the standpoint of materialism or naturalism, and why from such a standpoint mechanism as applied to the world is nearer, in its general form, to that of mechanism.

(e) Nor should it be forgotten that under descriptive teleology may be included the recognition of order, beauty, and adaptations in nature as a whole. These things are upon that empirical level of reality which has been attained by the unreflective processes of common sense, and are consequently appreciated by all; and they form the sufficient basis of the traditional argument from design. For order, beauty, adaptation, all speak the language of teleology.

3. The argument from design.—The argument classically expounded in the ancient world by the Stoic Lucius Balbus in Cicero's *De Natura Deorum*, and in the modern world by Paley in his *Natural Theology*, is doubtless made more impressive, but is not essentially strengthened, by the multiplication of curious instances of extrinsic and internal adaptation derived from the scientific order of nature. It is sufficiently based, as already said, on the fact of the empirical order. As an integral part, may the very narrow and substance, of the old nature, and the science, the *Paley and his Treatises*, the argument is liable to criticism for its debit flavour, its hedonism, its anticipated pre-evolutionary science, its old-fashioned teleology; and apart from its limiting historical associations it is liable, as Hume and Kant made it abundantly clear, to the charge of being essentially fallacious. In inferring divine purposeful agency from the teleological appearance of nature, it is guilty, as the logicians would say, of the fallacy of transcendent inference. Obviously it must be restated in a profounder way, if it is to retain validity. The essence of the argument, says K. Flint, is that order implies intelligence. It is an argument not from but to design, and it is only to be regarded as part of a great cumulative argument. G. T. Ladd admits that the argument is properly an argument from universal order, and he is careful to say that it implies the validity of the ontological argument. From the 'orderly totality' of the universe he would postulate a world-ground conception of design and purposes. But the 'plain man,' with his eye only upon the empirical order, uses the argument without hesitation or logical scruple. When his mind beholds the chain of causes 'confederate and linked together, it needs must fly to Providence and Deity.' Not only has the plain man a deeper appreciation of nature's order, but is disposed to follow the 'plain man.'

'The Logos,' says J. Arthur Thomson, 'is at the core of our system, implicit in the nebula, as now in the devout. It slept for the most part through the evolution of plants and coral-like animals, whose dream-souls are a joy for ever. It slept as the calf sleeps before birth. It became more and more aware among higher animals—feeling and knowing and willing. It became articulate in self-conscious Man,—and not least in his science.'

'There ... something,' says D'Arcy W. Thompson, 'is the order of the universe and the beauty of the world, that lives in all things living, and dwells in the mind and soul of man. ... You may call it Entelechy, you may call it the Harmony of the World; you may call it the *Étonnant*, you may call it the Breath of Life. Or you may call it, as it is called in the Story-book of Creation, and in the hearts of men—you may call it the Spirit of God.'

B. Teleology in scientific explanation.—
1. Cosmology.—(1) Mechanical explanation.—The teleological appearance of nature and the forms of life, considered above, has set a problem which science no more than philosophy can afford to ignore. In cosmology, however, narrowly interpreted as the science of the physical world, teleology is not required as a principle of explanation, whether the cosmos be considered in the spatial or in the temporal reference, i.e. from the standpoint of cosmogony or the world-order of natural theology. The inorganic world is not teleological, for physical science at least, in the sense of exhibiting imminent purposiveness. In its formulations of the things and physical world science employs only the mechanistic terms of kinematics, mechanics, physics, and chemistry; and it has amply vindicated its right to employ mechanistic terms exclusively in this sphere. Whether it may also do so in the sphere of biology, and sociology is another question. But in cosmology it has no use for the category of end or purpose, or for that matter for the categories of cause and substance, but assumes the working only of the non-spontaneous, the automatic, the mechanistic. It may possibly be that such real categories as substance and cause (whether efficient or final) are, in Macl's phrase, tinctured with 'fetishism,' but the exact sciences as such are by no means committed to a materialistic or naturalistic standpoint. Materialism and naturalism are ultimate positions, and scientific explanation is not called upon to defend that ultimate position, or to explain it. If we would include under the term 'interpretation,' in point of fact, exact science increasingly recognizes the abstract and artificial quality of its explanations, as it realizes increasingly the distinction between conceptual formulation and perceptual reality. Its formulae have been variously characterized as symbols or counterfactuals of reality, as a kind of conceptual shorthand, as economics of thought, as convenient, hypothetical summations, or, in J. Royce's favourite metaphor, as the ledger entries and balances of a particular method of book-keeping. It is open to science, as he truly remarks, to enter its accounts by other methods of book-keeping. Gravitation, e.g., may yet be explained as a mere appearance of some more genuine process of nature.

(2) Collocations.—In view of the foregoing, we may allow that mechanical explanation, if abstract and hypothetical, reigns supreme and alone in the physical domain. While therefore Chalmers may be strengthened in the case for physico-theology by reviving the Cartesian distinction between the

1 Bacon, Essays, xvi., *Of Atheism*.
3 Life and Individuation (two synopses of the Aristotelian Society), London, 1915, p. 54.
4 The World and the Individual (Gifford Lectures), 2nd ser., New York, 1901, p. 216.
TELEOLOGY

laws and the dispositions or collocations of matter, he placed his argument as follows: he said that the main evidence for a Divinity lies not in the laws of matter, but in the collocations. But what would become of this main evidence for a Divinity, remarks J. Ward, if the laws of matter could be explained by non-teleological factors? Yet, although science has been gathering the collocations within the mechanism of nature, the problem of order still remains. As in the biological applications to the cosmos, there is an ultimate collocation or configuration to be acknowledged which natural laws cannot explain. Says L. J. Henderson:

'The forms and stases and quantities of matter and energy in the nebula determine the resulting solar system.'

So that we may affirm that the universe possesses an original teleological character.

(3) Fitness of the environment.—(a) But is it possible to discern an explanation of the order of matter beyond the laws of nature's uniformity? Henderson thinks positive thought has found a clue. He points out that, the scientific or mechanistic origin of the natural order is to be explained, it must be argued principles that account not merely for the general character of orderliness in the phenomena of nature and the products of evolution, but also for that rational or fundamental departure between the order and the conditions necessary to the evolutionary process. Such principles, clearly, are to explain the order of matter beyond the laws of matter. Accordingly Henderson has investigated the properties of the elements hydrogen, carbon, and oxygen, and the two elements essential to the life of organisms which have been the chief factors in both biological and organic evolution. These properties are found to be those of groups of singular physical and chemical characteristics, so that they are unique or the fittest possible for organic life: e.g.—to take the medium in which the primary conditions of the environment—the solvent action of water is greater than the solvent action of other liquid, and the solubility of carbon dioxide in water is such that it must always be evenly distributed between the atmosphere and aqueous liquids. Or—to take the medium of the-physics and chemical properties possess the greatest number of compounds and enter into the greatest number of reactions, involving the greatest transformations of energy known to the chemist. Further (and here a teleological consideration appears), the aforesaid unique ensemble of properties is uniquely favourable to the existence of systems—of which the world of physics and chemistry consists—of numerous, diverse, stable systems. In fitness for systems no other elements and compounds even approach hydrogen, carbon and oxygen, water and carbon dioxide. In short, the fitness of the primitives, and the elements makes the diversity of the evolutionary process possible.

(b) It is Henderson's opinion, following up these results of physico-chemical research, that, as according to the law of teleology the relation between the properties and the process cannot be due to mere contingency, the properties can only be explained as, so to speak, preformation for the process, or, in other words, as resembling adaptation. There must be a functional relationship between them—something like that known in physiologically what is called 'deficiency' or 'teleology'. How otherwise can we express the fact that the collocations of properties unconnected with the vital process that to which it is necessarily related? Just as biological organization is teleological and non-mechanical, so with the connection between the properties of hydrogen, carbon, and oxygen and the process of evolution. This is the positive contribution Henderson has to offer towards the vast problem of the contingent set for natural science by Lotze and Lacheller, and it goes to strengthen the philosophical position that the teleology is at both the foundation of the natural order.

2. Biology.—(1) Evolution.—(a) The term 'evolution' (q.v.) is itself teleological in its primary meaning, and denotes the teleological process; but it is possible that the mechanism (i.e. physico-chemical) explanation of biological descent may be found sufficient in natural science. Possibly the evolutionary process is mechanistically determined throughout, and that by natural selection interpreted as non-teleological (whether working upon so-called fortuitous variations or upon variations themselves subject to the law of pure chance) and conditioned by other non-teleological factors, perhaps by some non-teleological factor yet to be discovered. On the other hand, it is evident that we regard natural selection as exclusive of teleological factors, and it may well be that the psychological principles of self-conservation and subjective selection, on the hypothesis of J. Ward, are required to give natural selection a point of appui.

(b) It is a searching test of the sufficiency of mechanistic explanation that H. Bergson in the role of biologist proposes. It could be proved, he says, that life may manifest itself in the way of apparent, by unlike means, on divergent lines of evolution, then pure mechanism would be not be enough and finally in a certain sense so far demonstrated. Accordingly he examines the evolutionary hypothesis in the two forms of it that have emerged from the "sideral" or biological considerations since Darwin's time. He puts it to neo-Darwinism and neo-Lamarckism alike, What is the explanation of the structural analogy between the eye of a vertebrate and that of a mollusk, common to other organisms? It is possible to explain neo-Darwinian principles, which enter readily into a mechanistic philosophy of life, to account for the production of the same effect by two different accumulations of an enormous number of small causes, whether the possibility be urged, as by the straiter Darwinists, on the theory of innumerable accidental variations or, as by de Vries, on the theory of sudden and simultaneous variations or, as by Euler, on the theory that assigns a direct rather than an indirect influence to the "natural causes", as in the case of life. Henderson therefore concludes that he is interested in the critical work that in their constructions. Turning to neo-Lamarckism, which explains variations not as the result of mutation but of the influence of the environment being to adapt itself to the environment, he declares it to be the only form of thought, which may express the organic effect a deeper and more psychological thing than any neo-Lamarckian supposes? So Bergson returns to his speculations which create and create new species, in the transmission of the species producing a new generation of organisms which bridge the interval between the generations. Life does not proceed by the association and addition of elements, which is the false anthropomorphic view both of mechanism and of finalism. Life proceeds by dissociation and division. It starts with a direction or tendency no doubt, and is in this sense finalistic, but we cannot foresee how and where it will end.

(2) Mechanism and vitalism.—(a) Leaving genetic considerations and concerning ourselves with the teleological hypothesis, which affirms "living matter" to be completely describable as a physio-chemical system, and organization and mechanisms to be reducible to physio-chemical bodies—to be conceivably in physico-chemical terms. But it is also maintained against this that the way of physico-chemical analysis and synthesis yields but an abstract product, falling short of what answers to the usual idea of "ensemble" which Comte advocated in the study of the living.

(b) Mechanistic theory in biology may be said to follow two main types, so far as regards the relation to teleology. Sometimes it has no traffic with teleology at all, and is still affiliated with what von Baer called 'teleophobia,' in its jealousy for the mechanical explanation. Sometimes again—and this requires the phenomenon of admittance—it finds room for the teleological view, re-affirming in fact the Aristotelian doctrine of the internal teleology of the living thing, which is its self-regulation.

(c) But, with the more synthetic method involved in this type of mechanistic theory, vitalism has appeared once again in the history of biological theory, if in subtler and more elusive forms. The teleological position of the elements of admittance and the vitalistic hypothesis may be expressed in the distinction due to Driesch between statical

1. Natureulin and Agnosticism, l. 290.
and dynamical teleology.\(^1\) Whereas in statical teleology the processes of life are judged to be purposive in virtue of a given machine-like order or form and not actuated by an external agent, dynamical teleology is in virtue of their possession of a peculiar autonomy; and dynamical teleology leads, as Driesch thinks, to some form of vitalism. We suppose in Johnson, who did much for the phenomenon, might then be also named a statical teleologist; for, while on the whole persuaded that organization (the central issue between the mechanism and vitalism) is not already contained in the information—though not as yet explained—in physico-chemical terms, he is also persuaded that the teleological concept of organization, if to be found also in sociology and in the meteorological cycle, is a necessary biological category, and that a mechanistic physiology is at fault in not recognizing this.\(^2\) But, though he thus believes with Driesch in teleology as an 'irreducible peculiarity' of vital phenomena, he is not a dynamical teleologist in the neo-vitalist sense. He might allow that organisms, like machines, are inert embodiments of purposiveness; he would not allow that they are autonomous consciousnesses.

(d) The anti-mechanists also fall into two main groups. In the first are the neo-vitalists, of whom Driesch is the most prominent representative. They contend that biological processes are not properly explicable as physico-chemical processes within the living matter of the organism, but that some non-physical principle (like Driesch's entelechy or unifying causality) impresses itself upon those processes, to suspend, regulate, or control the physical and chemical reactions. With such a principle at work, the outcome of events, experimentally considered at least, is no longer determinate and unequivocal. Bergson's \textit{elan vital} is such another non-perceptual determiner. Now, as Bergson realizes,\(^3\) the contention of neo-vitalism is relevant and weighty on the critical side, but on its positive side is beset with difficulties. Even granted the existence of the mysterious non-physical semi-psychical entity postulated in the theory, it is impossible to say where and how it works in the biological processes. In recent constructions, no doubt, there is none of the crudity ridiculed by Mollier in the obscure vitalism when he declared the cause of sleep to be the 'dormitive virtue' (which reminds one of the John Bansa test); but that the new principles we have once attributed to the learned doctor to the streptococcus of circumulatory motion. All the same the conception of neo-vitalism remains mystical in quality, and biological science is reluctant to entertain it. An entity such as Driesch formulates, which is neither an energy nor a material substance but an agent \textit{en un general}, non-spatial, albeit acting into space, non-material, but logically belonging to nature, may have a strange fascination for the metaphysician, but will hardly retain a place for itself in the world of scientific explanation. We are assured, moreover, that the second law of thermo-dynamics, which entelechy is said to be capable of suspending, will hold even in the obscure cases in morphology on which Driesch foun his theory.\(^4\) We are also assured that physical phenomena which is supposed to intervene in physical and chemical processes is invariably dependent upon the existence of physical and chemical conditions, yet it is not explained what part these conditions play in bringing about the actual results. Vitalism sets itself a hard task indeed in seeking to steer between the Scylla and Charybdis of the mechanical and metaphysical explanation. Where does the line fall?

(3) \textbf{Biological.}—(a) Even as a scientific hypothesis neo-vitalism appears already on the way to occupy an intermediate position. The issue now is between those who believe that life is somehow based upon a fundamental law, a form of teleological theory even more anti-mechanistic than neo-vitalism. For want of a better name, the theory may be called 'biologism.'\(^5\) Thus it is the last word in the mechanical theory of life. It is vitalistic in a sense, for it regards it as impossible to conceive distinctly biological phenomena in physical and chemical terms. For it the autonomy of life is more than a statical conception involving a teleological mechanism and non-mechanical relationship between mechanical things and processes. The autonomy of life is a dynamical conception, involving a dynamical teleology. But it is the living organism itself, and not some directive force within it, as in properly vitalistic theory, that is dominant in organic activity. The organism exists as such, and its structure and activities are the expression of its existence.

(b) Here, as is claimed by J. S. Haldane,\(^6\) a protagonist of the biological theory of life, we have a good working hypothesis, necessary to biology, and capable of explaining the biological phenomena. The theory, biology, he urges, is essentially different from physico-chemical approach to life. Its phenomena differ, not merely in complexity but also in kind, from physico-chemical phenomena. Although physico-chemical explanation has failed to teach us concerning the mechanical and statical destiny of the material and energy in the body, it fails to throw light upon the apparently teleological ordering of that material and energy. The inadequacy of the physico-chemical explanation appears when we enter into the deeper problems of the organism's activity, not to say fundamental problems such as reproduction and heredity. Animal heat, respiration, circulation—these examples from physiology—all contain teleological (i.e. physiological) elements that do not yield to physico-chemical analysis. Life is a unity of structure, environment, and activity, and is not reducible into mechanisms. Separate a living part from its environment, or suspend its activity, and you set it completely. What therefore matter and energy are to physics, or the atom to chemistry, the living organism is to biology.

(c) Haldane is further of opinion that, inconsistent with each other as are the biological and ordinary physico-chemical theories of life, he personally he would say that the teleological with the mythologic history of his Saxon forefathers as to the mechanistic physiology, a common meeting-ground between biology and physico-chemistry, must be discarded. Yet however, not a reduction of the organic to the inorganic, but the inclusion of both within the sphere of biological processes. In such an opinion the contrast between the principles of mechanism and biology is sharply revealed, but with it we seem to be carried beyond the universe of discourse of natural science.

(d) It appears to us that in their bearing upon scientific explanation the differences between the mechanist or statical teleologist and the biologist or dynamical teleologist (if we may wrest Driesch's terms to our own use) is not so very radical after all. It is significant that Henderson accepts the mechanistic hypothesis as upon the whole most consistent with the evidence;\(^7\) and that Haldane advocates the biological hypothesis on account of the unsatisfactoriness of the ordinary mechanistic (i.e. physico-chemical) explanation.\(^8\) They both accept the principle of organic autonomy, and are good Aristotelians (as indeed Driesch is also, and possibly they would unite upon the formula: 'Not mechanism or vitalism, but mechanism and teleology.' This is a thesis admirably supported

---

by R. F. Alfred Hoernlé, who would make the particular point that in biology teleology not only is indicated by its being the dominant, but also by its being the dominant, if not overwhelming, factor in the development of the species. The telological stance is required, he says, not as substitutes for physico-chemical terms but to express the dominancy of the structure of the organism and of the organism's directives. He goes on to say—cannot be reduced to exclusively physico-chemical terms without disregard of the difference, on which Bergson insists so strikingly, between the mechanical and the vitalistic.

(c) In an intimate and eloquent discussion of mechanism and vitalism J. Arthur Thomson relates this abundantly clear that biology is at present so much more a descriptive or methodological theory. It distinguishes itself from mechanism in demanding ultra-mechanical categories, but what these categories should be is not as yet determinate. He himself describes the organism in Bergsonian language as 'a historic being,' which is a confession of its past experiences and experiences, and which has ever its creative bent towards the future.2 Restating to inter- potent with Drifled and the positive validates a new agency or directive activity, he is content to say that the organism reveals new aspects of reality transcending theoretically mechanistic formulation.

3. Psychology.-(1) Body and mind.—(a) If the teleological standpoint is required in the scientific examination of the world of objective matter, it is also required in respect of the world of mind or consciousness. The world of mind is the native sphere of purposive activity, and only a vestigial vitalist will not see its presence in these categories. According to W. K. Sorley's analysis, the contrast between a purely mechanical and a purposive system lies in this, that, although purpose is consistent with the law of causation and the principle of the conservation of energy, yet as the result of a pur- pose or mental idea there is a liberation of energy passing from the potential to the kinetic form, and the same purpose may also control, non-mechanically, the order and the direction of the movement of the body. Therefore, it is not to account completely for the activity of a purposive system to describe it in merely mechanistic terms. When this position is challenged (as it is in psychology as well as in biology), as not fitting into the mechanistic hypothesis, the discussion passes inevitably into the speculative sphere.

(b) In psychology the mechanistic position stands upon the Cartesian foundation of an objective mind, and represents the relation between brain-processes and psychic changes as one not of interaction but of consequence, and it usually takes the form of the parallelistic hypothesis known as conscious automatism or psychical epiphenomenalism (Daseinsrhein- phänomenalismus). Here is to be found or conscious states are regarded as ad- cultural products of the physical phenomena. On such prin- ciples, the acts of the mind, in particular the psychic phenomena, the appearance of purpose or ideal direction is an illusion, and the consciousnesses of purpose either belong to a different order from the physical, or is simply a reflection, however vague, shadowy, impalpable, of the neural organization. On the first alternative, every neuron has its purpose, but they cannot affect each other. On the second alternative, every neuron has its purpose, but the neuron cannot react even a very little upon the psychical. Either, then, the mechanical theory does not apply to consciousness or the principles of the conservation of energy breaks down. The mechanist must either give up his case or overthrow the foundations of his faith. If this line of argument laid down by J. Ward is valid, then we are free to turn from the mechanistic hypothesis to one that allows full value to the teleological appearance of conscious life, say, the animistic theory which so long persisted in human thought and for which W. McDougall has made no more a strong case in recent times, or the double-expect theory which under the direction of G. Lloyd Morgan is associated and which J. Arthur Thomson favours as in line with his holons theory. But it is largely based on a study of behaviour, that the organism is a psycho-physical unity.

(2) Psychology.—(a) But the working scientist need not commit himself to any speculative position on the relation of the science of psychology to what we

5 Science and the Aristotelian Society, 22nd session, 1911- 1912, p. 22.
6 Some Political Obligations, in International Review, 1911, p. 641.

4. Sociology.-(1) Two functions of psychology.—A. E. Taylor speaks of two functions of psychology, the first being not a proper function but which it exercises 'phead the majority of the world's life and work,' the latter being not a proper function but which it exercises 'phead the majority of the world's life and work.' It is to set forth mental processes as mechanical uniformities of sequence. The other function is to find the inner purposes, activities, and adjustments, and thereby to afford a suitable terminology for the sociological sciences, and in particular ethics and history. From apart
the teleological symbols supplied by psychology, ethical appreciation and historical interpretation would be impossible. With this remark let us pass on to the consideration of the teleological method in ethics and history.

(2) Ethics.—The teleological standpoint has its place in ethical theory, just as teleological symbolism has its place in the interpretation of conduct. Among the possible divisions of ethical theories a fundamental one is into the teleological and the formal or jural. In the first case the moral standard is represented by the idea of good or evil, as the secondly that of duty or right.

The teleological theory, which is found in Greek philosophy, takes the form either of hedonism or, as F. Paulsen, 1 borrowing an Aristotelian term, phrases it of, "energism." With Aristotle as with Plato the ethical end or ideal was the good personally realized in social relations as the actualization or full fruition of human powers and capacities. In modern ethical teleology, the practical and aesthetic forms of the teleological method have been revived. The formal or jural method is older than the other, as attaching itself to the legalistic stage of religion. Through Judaism it entered into the theological stage of thought, and the exposition at the hands of Kant, the fundamental idea of whose ethics is the original mental principle of the good will. As against a Kantian formalism and in favour of the teleological standpoint in ethical theory, it has often been urged that morals and motives of action are not abstract and transcendental principles but, as psychology and history teach us, general rules of the will which grow out of individual experience, and their value consists not in defining but in their power of promoting the ethical end. 2

(3) History.—(a) The teleological principle has also been applied to the interpretation of the process of history. As we have already noticed, a teleological view of history took shape under the influence of Christianity, receiving various expression in Augustine and Thomas Aquinas. But it was not until Lessing and Herder, or rather not until Hegel, that history was reflectively and intimately treated in the light of the Aristotelian principles of continuity and development.

(4) Note here the consequences of the types of historical theory. J. S. Mill recognized the principle of continuity as one that had been transferred from the natural to the historical development the atomizing, mechanizing principles of Democritus and Descartes, treating history as a kind of science of events and processes and their causes and effects, and the course of events as a rigorously determined mechanism. In this view it may be said that the hypothesis of mechanical causation is irrelevant in the sphere of history and of sociology in general, as in the sphere of psychology in its most characteristic aspect. Psychical events are not duly appreciated by means of subpersonal categories. A similar criticism is applicable to Herbert Spencer's theory of history. Although Spencer, here following Comte, applies the idea of organic or super-organic evolution to the interpretation of the historical process, he never really breaks with the conception—'fixed probably in his mind,' says J. T. Merz, "through his engineering education'—that change and process in society, as in nature and mind, are explicable on mechanical principles.

(b) The second type of historical theory is represented by Hegel himself, for whom the course of events is a continuity, not of mechanical causation but of evolutionary development. It is still a rigidly determined movement, but it is teleologically conceived, the end dominating the process. 'As the germ carries within itself the whole nature of the tree, the flourish and the root of the fruit, so the first victory to the virtuality contains the whole nature.' 3 The history of society is for Hegel the necessary evolution of the immanent idea, and the process is fixed in all its stages. Through human interests and actions the final purpose of history is carried out, but the course of events is the outcome of the inner necessity of the reason—beyond and external to human interests and actions. 4

(5) It may be objected to this organic view that, in so generalizing the Hegelianism of historical teleology, it does not bring out its true nature as a process of interaction between conscious and self-conscious minds. Nor does it appear to offer true rationale of any historical progress. A mere dietary of the historical process, in our judgment, is implied in the words of G. Gallyany, 5 following St. Silbeck, say, "setting up the spiritual vocation of humanity: it is a task which it sets to itself, but as inherent necessity of its constitution. The... ideal is freely posited, and is to be realized never that which performe must be. 1 In other words, the organic view is no longer replaced by the historical or spiritual view, in which the freedom of human personality is more clearly acknowledged. 2

(c) The fuller justification of such a position must lie in the teleological spirit. It may be here observed, for the third type of historical theory might be distinguished from the others as teleological determinism, or mechanical teleology. In its development it is acknowledged to be epigenetic or, in Wundt's phrase, creatively synthetic, whereas in the teleological and determinist views above named development is the necessary effect, as it were, of an attraction from before or an impulsion from behind, of a nai'a fronte or via a tropo.

(7) It may be also observed that teleological indeterminism in the theory of historical science naturally leads in metaphysics to a form of spiritual pluralism (p.e.), that teleological determinism makes a ready alliance with pantheism, and that mechanical determinism is at home in a naturalistic or positivistic setting. Yet it is not without significance that in J. S. Mill a survival of the deistic tendencies through the whole of his system is not unjustly said that dalsm, as a dogmatic or theological position, with its shallow rationalism of religion and its mechanical conception of the relation of God to the world, greatly promoted what J. Royce calls the 'mechanistic deduction' of our time. An 'absentee God' may be done without, so long as the mechanism of the universe keeps going. At any rate naturalism, deism, pantheism, and determinism will meet us as we pass from the world of scientific explanation into that of philosophical and religious interpretation.

C. TELEOLOGY IN SPIRITUAL INTERPRETATION.

1. Universal teleology.—As we view the world in its totality and seek to discover its meaning, we pass from empirical description and scientific or logical explanation to spiritual, i.e. philosophical and religious, interpretation. Here we are face to face with the metaphysical aspect of teleology, which is the aspect it has chiefly presented in history. The need of a philosophical interpretation of the world has always been more or less consciously realized, and in recent years there has been a renewal of interest in the deeper problems of nature, mind, and spirit. Philosophy and religion alike welcome the tendency among natural scientists to think of the universe as a great machine, and this has for long regarded as the 'foreign field' of metaphysics—a tendency begotten of the increasing recognition that no more than materialism does naturalism speak the last word on the perennial metaphysical problems. This has been largely due to the lifting influence of biology, 3 and is marked among biologists. We have already noticed the idealistic position of J. S. Haldane, and Driesch has advanced beyond a conceptual materialism, having even formulated a critical metaphysics which leans to theism. 4 The new and wider scientific outlook is well reflected in the significant preface to Herbert Spencer's last work, "The Origin of the Earth." 5

TELEOLOGY

2. Teleology and naturalism.—(a) It is the essence of naturalism to construe the phenomena of life as essentially natural or entirely reducible to the mechanical or non-mechanical conceptions which serve in physical science. But we are persuaded that thus to reduce the world to a mechanism is to fail to account for large tracts of experience. Mechanism is a scientific hypothesis, and such hypotheses may be either valid or invalid, but is inadequate as an ontological dogma. Moreover, with the mechanistic dogma teleology cannot live, i.e. teleology as philosophical interpretation. It has ever been the contention of teleologists, from Aristotle onwards that meaning and purpose underlie all material and mechanical processes, that mind or spirit is ideally prior to matter and more fundamental to reality. Naturalism, it may be said, ignores the distinction implied in Lotze's remark that 'the machinery which produces the image of a phenomenon is not identical with the meaning of this image.'

(b) The counter-contention of spiritual philosophy is to be justified on epistemological grounds, as by J. Ward in Naturalism and Agnosticism. Ward insists boldly with Kant that the intellect makes things, and though it does not create nature, he shows that the fundamental principles of knowledge, unity, causality, and regularity have entered anthropomorphically into our conception of that which is not natural. This anti-uniform is teleological, being found conformable to human intelligence and amenable to human ends. The result is that unity of nature and man in one rational and coherent scheme of things, that confronting of human reason by universal reason, in which idealism or spiritualism has always consisted. It is the fault of naturalism, as Pringle-Pattison expresses it, that it prematurely closes the record, that it substantiates the antecedents in abstraction from their consequences.

'there is no system,' as he says, 'no whole of being, no real fact at all, till the external gathers itself up, as it were, into internality, and existence sums itself up in the conscious soul.'

3. The essence of teleological interpretation.—Teleological interpretation is then necessarily anthropomorphic, or, as F. C. S. Schiller would say, humanistic. It rests upon the general epistemological principle of analogy, and is itself a particular instance of it. According to the teleologist, the worlds of nature and history are to be interpreted by teleological analogy of the analogy of the reciprocal life of man which man is conscious in himself. Since Hume and Kant, at any rate, the analogical character of the teleological principle has been widely recognized. We see it in Lotze, who believed none the less that the category of end or purpose afforded a definite clue to the nature of ultimate reality. We may see it in Bergson, who, however, regards the category of end or purpose as applicable only to the lower scientific order of reality. Yet, as H. Höfking points out, Bergson himself actually employs the principle of analogy along with that of intuition. With him intuition is only the first step towards the interpretation of reality. As mechanism proceeds by analogy in taking the organism to be a machine, and finalism in making it respond to a preconceived plan, so is it not to go against analogy to understand life as an "elan, a thrust, an effort? But in this instance, it must be allowed, the analogy is drawn not as in finalism from the intelligent self-conscious life, but from the mechanical and semi-mechanical life. While there is force in this criticism of Bergson's position, it does not follow that Bergson's philosophy of life is thereby discredited. All metaphysics, as Leibniz said, is founded on analogy.

Apart from the analogy of human experience, no kind of knowledge would be possible, and it is this analogical character of that knowledge that is of any analogy to the consideration of the truly and ultimately real. But it may be urged, as against Bergson, that the analogy of purposeful self-conscious activity—so central a feature in human experience—is a valid principle of interpretation, and that the absolute experience than does any analogy based on experience which is subpersonal. In any case what is claimed here is that teleology is a valid principle of interpretation, and that purpose may be recognized as a true cosmic principle. We shall see that, if divine purpose is actually so recognized, the "analogia hominis" must not be pressed in detail. The category of purpose or end, viewed from the side of the Absolute, requires to be delicately handled.

4. Pragmatic teleology.—Pragmatism (p. 59) claims to be different from other philosophies in respect of the clearness of its consciousness that teleology is no more than a methodological postulate. It is astounded at the misunderstanding revealed in the recent criticism that it assumes teleology as the logical conclusion of a principle that is more fundamental. It proceeds from the recognition of the necessity of human desires and needs—a presumption which is not assumed by teleology, but is derived from the recognition of the necessity of human desires and needs. In reply F. C. Schiller insists that, while the pragmatist makes use of the teleological principle, it is not for him an "a priori" truth that the universe is going to prove it, but a postulate which may be found false. This is a heuristic teleology. He assumes commensurability between the supreme reality and human faculty, and then acts upon the assumption in hope. In contrast to this methodological optimism, one recalls the attitude of Bertrand Russell, who repudiates the 'will to believe' as an argument and can only face the universe with 'unyielding despair.' For, according to his naturalistic view, the universe is blind to good and evil and indifferent to human interests. Perhaps, as C. A. Richardson suggests, it is the preoccupation of logical pluralism with the objective side of experience that leads it to lose its hold on the notion of teleology with doubt and suspicion. But more likely the attitude arises out of a personal conviction or resolution of character.

5. Teleology in personal idealism.—(a) Where personal idealism means spiritual pluralism of a theistic type, the concept of purpose applied to the interpretation of the universe yields a conclusion that satisfies. Consider first how thoroughly an application of this concept is embodied in personal idealism. It conceives reality, as in the monads of Leibniz and Lotze, as consisting of a plurality of experiencing subjects or spiritual centres of experience. In this it builds upon the analogy in respect of purposiveness between human persons and the lower forms of organic life, and upon the conjecture that even inorganic matter is composed of purposive individuals. Like organic species arrested in their evolution, or apparently so, these exhibit the minimum of spontaneity and the maximum of habit, according to the idea expressed by J. Ward, 'routine presupposes antecedent living purpose.' The essential nature of the monads or spiritual individuals is affirmed to be their self-activity, involving self-determination (conscious, subconscious, or unconscious) in...
reference to ends. Thus spirit and spontaneity, which naturalism banishes from the world, are restored on this panpsychist hypothesis throughout the whole vast and weight of experience. But that coherent experience may be made possible, a sympathetic rapport or responsive sympathy is, as with Lotze, postulated among the monads.

(c) Within the theory of a voluntaristic judge this supply of the divine activity advances from its pluralistic base to its final theistic position, in which the world-ground is also teleologically conceived. Sympathetic rapport implies unity in the plurality, and unity implies a law; and the unity of the principle is best stated not in the abstract terms characteristic of absolutist systems but in terms of that conative unity, that striving after the realization of ends, which is given at once in the most simple and the most complex individual experience; and in terms, moreover, of conscious and self-conscious activity, according to the teleological principle of the interpretation of the lower by the higher. Further, if we describe the world-ground as an ultimate self-conscious will, we are not to think of it, as in absolute idealism, as a purely immanent principle. Though God gives unity or sympathetic rapport to the world and to Himself, the self in which they subsist. There is a principle of distinction in a self-conscious mind, in virtue of which it belongs to itself and does not belong to anything or anyone else than to itself. G. Galloway, e.g., presses to a theistic conclusion.

(e) The map of reality consists, according to this theistic argument, of simple monads interacting within a common medium, or environment, which is grounded in a transcendent self-conscious will. It is claimed that the theory offers a better key to the understanding of unity and individuality than absolute idealism or natural realism can supply. It is a brave attempt at any rate, and this is our particular point to justify the teleological view of the universe on metaphysical grounds. Whether it yields too much to the voluntaristic psychology we do not pretend to judge; but we appreciate its consistency with the theism of the moral and religious consciousness, in which the teleological character of the world is felt.

At the heart of religion and morality, says Wiebeck, 'is the feeling that the world is the handiwork of an indiff erent matter, but is designed to realize a best Good.'

When therefore ethical theism, with its religious conceptions of God as the absolute ideal or the moral governor, is seen beside the metaphysical theism of the pluralistic approach to reality, it seems possible to state a conclusion in terms such as these. (1) In the language of philosophy: though individual existences and personal spirits have a being for themselves and are variously endowed with spontaneity, the development of experience remains in the control of the world-ground. (2) In the language of theology: though the actions of the creature are not absolutely foreordained or predestinated but manifest spontaneity and freedom in various degrees, they fall within the providential government of God. (3) In the language both of philosophy and of theology, and in Galloway's concluding words, if the world has its ground in a self-conscious and ethical will, which comprehends and sustains all the individual centres of experience, faith in a providential order of things is sufficiently justified.

6. Teleology of desism.—(a) While it may be said from the humanist side that the development of the universe is towards the goal of spiritual personality, it is difficult to conceive of the world-process specie externa. The desic con-

cept of it, however, is an easy target for criticism. Its view of the world has been described as 'heterotetic.' The world is regarded as a sphere of divine purpose, but divine purpose is as it were imposed upon it from without. There is an inherent dualism in this, as J. S. Mill realized.

(b) In the traditional form of the 'argument from design,' where the theistic setting of the divine Artificer fashioned the world to its present form out of an already given matter; or else, as in the ecclesiastical doctrine, the matter was first created out of nothing by divine power, then shaped by divine wisdom and benevolence. But this initial dissociation of matter and form is inconceivable, and has been 'as much a bugbear as a chimera.' The idea of external adaptation should be replaced by that of internal or immanent purpose. God is not beyond or even alongside His world, says a truer theism; He is within it as immanent life, will, intelligence.

(c) In the sphere of history, in the sphere of nature, the deistic teleology is also superficial and inadequate. Its language, if not inappropriate in the world of concrete relationships in which religious lives and moves, can hardly be literally applied in philosophy. It is imposed on God as a moral governor who imposes His laws upon man after the fashion of an earthly potentate. But, says a truer theism again, the divine laws are not externally imposed, but are immanent in man's heart and conscience; and the divine providence is not exercised ab extra, but is an immanent righteousness working in and through free human agency.

(d) May we not say that the end or purpose of God in nature and history is His self-manifestation or self-communication to personal self-conscious individuals capable of a spiritual response to Him whereby His own life receives enrichment? But, even in so saying, we speak in the manner of men in terms of time rather than eternity.

7. The purgation of purpose.—(a) With the deepening of its philosophical interpretation, the teleology of theism loses undeniably much of its traditional and popular meaning, but a substantial meaning may remain. The finite element of contrivance, with external adaptation of means to end, may rightly fall away from the idea of purpose, as applied to the nature of the infinite experience. No part of the world is then in danger of being handed over, as virtually in deistic theology, to mechanical necessity; and the inorganic becomes essentially related to the organic, and both inorganic and organic to the whole cosmic process. It is the strength of idealistic interpretation that it can thus dispense in the cosmic reference with the 'theistic Deism' and associate itself with what has been called an 'autotelic' view of the world-process. When purpose is no longer thought of as superinduced in creation and providence upon particular events of the world, but is in principle applied to the world in its totality, we learn to appreciate Kant's ideal of nature as a complete teleological system, in which for the intuitive or perceivse understanding the distinction of ends and means is transcended, and the whole appears as the unity of its members and the members as the differentiation of the whole.

(b) If the notions of contrivance and external adaptation are to be dismissed as unduly anthropomorphic, is the notion of a preconceived plan to be retained, or is the so-called plan the nature of the process itself? It would be for the personal idealist or the theistic pluralist to retain the notion than for the absolutist. It was the
conviction that God cannot be regarded, except by the logical imagination, as devising schemes and selecting the facts of the universe, from his standpoint of abstract monism or singularity, to restate the principle of human analogy altogether and to deny of God the faculties of intellect and will. These, as being exercised in the outworking of finite plans and purposes, could not be predicated of the eternal Being. There is danger as well as truth in such a position, but what we are here concerned to say is that Spinoza’s views are not only consistent with the essential idea of teleology. He denounces externalism and anthropocentrism, but none the less he looks upon the world as a significant whole, necessitated indeed, but overshadowed by the divine nature itself, which is the nature of the whole.

It is the idea,” says Pringle-Pattison, “of the divine necessity as a self-affirmed life, and not as a blind force acting within the universe like a fate which it undergoes, that constitutes the difference between a theistic and a non-theistic doctrine.”

(c) In support of Spinoza’s objection to the notion of a pre-existent cosmic plan, it is pointed out that the conception of purpose therein involved is even inapplicable to human action of the highest kind, such as moral conduct or artistic production. We may accordingly grant it to a sympathetic interpreter of Bergson, that, if the world is a purposive system, it possesses a unity or individuality in time as well as in space. Apparently such a consideration lies behind Bergson’s rejection of radical finalism—such as Leibniz’s—as being only an inverted mechanism, as implying that things and beings realize a programme previously arranged (“Tout est donné”). To postulate the totality of the universe as thus complete in the beginning is to make time (q.v.) of no account. If time does nothing, it is nothing. Yet, according to Bergson, time—not abstract spatialized time but concrete time or real duration (la durée)—is the very substance of our world, and there is no stuff more substantial or more resistant.

(d) The force of what Bergson here essentially contends for is acknowledged by idealistic thinkers. If the course of the world were preformed and predetermined—“the dull rattling off of a chain that was forged immeasurably ages ago”—there is indeed not much to choose between naturalism and idealism. In this connexion it is significant that naturalism and idealism, like fatalism and determinism, are often met and, like righteousness and mercy, kiss each other. It is also significant that method of spiritual realism, in its various forms, against the absolutist systems is for the redemption of the spiritual values sold by them—‘‘treacherously sold,” says P. C. S. Schiller—“to the bondage of naturalism. If then we abandon radical finalism with its illusion of preformation and predeterminism, shall we say that ‘the history of the universe is the history of a great adventure’? So C. P. D’Arcy puts it, in sympathy with the Bergsonian view.

(e) Where idealism differs from Bergsonism, if not from Bergson himself, is in holding that the adventure is not in the experience of the absolute but in the experience or from the standpoint of the finite subject. Moreover, for a theistic idealism there are bounds to the scope of the adventure. The theistic universe is fundamentally a theistic universe and the core of theistic faith that an eternal purpose of good is working itself out in the world. In terms of

modern Christian theology, the world is the scene of the progressive realization of the Kingdom of God.

(f) It is but to state the complementary side of this faith to affirm that the world must possess value and real existence for the divine experience, and that into the divine experience the time-process must enter somehow. The purpose which God possesses in Himself is independent of time, which is not as in Bergsonism an ultimate reality, yet it is somehow connected with the time-process in which we live, and not only revealed and yet transcended in God we do not know, nor can we. Yet we are not without a clue. In mystical contemplation and in artistic enjoyment, we may be conscious, that for them the gates of the future are ever and yet vanish from the consciousness; and it is claimed that the life of the philosopher or artist bears in this respect some kind of analogy to the divine life. It is at least suggestive of the idea for which Pringle-Pattison contends that purposive activity is the concrete reality and time only the abstract form. If this be so, then Bosanquet’s criticism of teleology, in the sense of ‘aiming at the unfilled’, is so far correct. Such a teleology, he says, gives undue importance to time and to the last term of a time-sequence. But, says Pringle-Pattison.

The last term is only important because in it is most fully revealed the nature of the principle which is present throughout. It is precisely this linkage of the first term with the last, that distinguishes the Bergsonian teleology, a teleology in the conception of an eternal reality, that seems to me to be expressed by the profound Aristotelian idea of telos or end.

(g) The question may be raised here whether the purpose that may be attributed to the infinite ground of the universe is to be regarded as conscious or unconscious. On this question Bergson would appear to range himself in the succession of Schopenhauer (q.v.) and von Hartmann,4 with this difference that for them the gates of the future are closed. Undoubtedly the vie media of unconscious purpose avoids the difficulty of explaining how one self-consciousness may exist within another, the finite within the infinite, but it possesses inherent difficulties of its own. It has to account for inorganic arrangement and process, and for the transition from the unconscious to the conscious and self-conscious, nor can it explain the reason why the vital process should tend in one direction rather than another.

“Yet,” as W. R. Sorley says, summing up an illuminating discussion, “purpose be admitted as necessary for the interpretation of organisms and if organisms are held to have arisen out of inorganic material, then there is room to postulate that the process which led to organic and purposive life was itself animated by purpose,” not individual nor merely racial purpose, but universal purpose acting, moreover, not ‘after the fashion of impulse’ but ‘in the manner of mind or consciousness’.

This theistic postulate of universal conscious purpose is to be justified in face of the facts of dys teleology, yet it appears a more reasonable postulate than that of unconscious purpose, and more hospitable too of human experience in the realms of fact and value.

8. Teleology and value.—The category of end or purpose, when purged of its finite incidents of preconceived plan and external adaptation of means to end, tends to pass into the category of worth or value (q.v.). In the teleological view of the universe the end, which is the nature of the whole, is an ethical end worthy of being purposed, i.e. worthy, so to speak, of enlisting the desire

TELEPATHY

and effort of the Absolute. And may we not attribute desire and effort—conative activity—to God? 1 May we not say that in the Infinite Experience comatose and its correlative satisfaction are to be found? Because it is possible to say that we are conscious of it, 'the contradiction of a co-existence with fruition must somehow be realized.' 2 It seems to us that we must say this if the world is to be regarded as truly an effect of souls. In which case we must consider evidence cases and not fate, the concurrence of the living God and not the eternal decree, and in which spiritual values are created and realized. It is our belief that God is thus present and active in the universe and that the true image of Him is not the pre-existent Creator of the deistic theology, but the static timeless Absolute of acosmic pantheism, but the eternal Real of a cosmic common denominator.

TELEPATHY.

Telepathy, 'feeling from afar,' is a term coined by F. W. H. Myers, on the foundation of the Society for Psychical Research in 1882, to express the apparently supernormal transmission of information from mind to mind in 'thought-transference' experiments and the like, just as 'telepathy' was suggested to cover the alleged facts of clairvoyance and clairaudience. It was defined as 'communication between one mind and another otherwise than by the usual means of sense or sound.' As thus defined, the notion was in the first place not free from vagueness. For, as a certain amount of hyperesthesia of the known senses was admitted to be under the influence of telepathy, it might be extended so as to amount to miracle, while it yet in a way explained away, it was not clear how hyperesthesia was related to 'telepathy.' Secondly, the definition was essentially negative, a declaration of ignorance, which suggested no agency or adequate cause for the phenomena if described. Now this was neither satisfactory nor a very strong or stable position logically. Even if the difficulty about the limits of hyperesthesia is not raised, and if it is admitted that the possible causes of such phenomena as the senses may be taken as fairly completely explored, we are impelled to develop such a definition in one of two directions. We may imagine some unknown evidence of a sort of vibration, radiation, or 'brain-wave,' as a physical explanation of the phenomena alleged, undeterred by the facts that no positive support has yet been found for any such agency, and that, unlike physical forces, it would appear to be indifferent to distance; or else we may conceive telepathy as essentially psychic in its nature, and shall then tend to exalt it into a fundamental 'law' of spiritual being, as Myers himself subsequently inclined to do. But, so conceived, it is manifestly a challenge to further exploration of the spiritual world of which it claims to be a law; and yet it proves rather a double-beded position for beliefs about a spiritual world. It enables those indeed to hold to a very mind, incarnate or discarnate, may in principle communicate directly with any other by telepathy; but it seems to formulate this possibility so broadly as to render it almost impossible for a discarnate mind to authenticate itself by communicating information. For any verifiable information must normally be, or have been, known to incarnate minds; and if, in any living mind can tag any other, and if knowledge can 'leak' subconsciously from any mind to any other, and still more if we entertain the somewhat fanciful but not unsupported hypothesis that all knowledge may be pooled in a vast 'cosmic reservoir,' before it bubbles up in individual minds, the telepathic hypothesis can evidently be used to discredit nearly all the primae facie evidence in favour of 'spirit-communication.' Accordingly the opponents of this belief have made great play with it, even while holding also that the evidence for telepathy is itself insufficient to establish it as a vera causa. 1 This objection is one of the believers endeavour to meet in various ways. They point out rightly that, if telepathy is a fundamental psychic law, it cannot be restricted in its operations to living minds. They argue, however, that unrestricted telepathy between incarnate minds is not only logically improbable, and quite unsubstantiated. Lastly, they try to develop methods of experimentation which avoid this objection, because the information communicated, though verifiable ex post facto, can be shown never to have been, as a whole, in the possession of any living mind. Hence the importance of 'cross-correspondences' between the information received through several channels and dovetailing into a coherent message; by this method some striking successes have been recorded, though different minds will long continue to vary widely in the estimation of their weight. Again, certain sorts of prediction may be made consciously by telepathy. At present, however, no agreement, either about the nature of telepathy or about the degree to which it may be taken as a fact in nature, has been reached. The case is still required, and, until it is obtained, opinions will be determined not so much by the evidence itself as by the bias with which it is regarded. The existence of evidence of telepathy at a distance, recorded especially by Gilbert and

2 Cf. art. PSYCHICAL RESEARCH.
Pierre Janet, and experiments at close quarters, though without contact between the 'perceipient' and the 'telepathic.' The results were as cards and numbers, in reproducing diagrams and figures, etc. The transition to the 'spontaneous' evidence is mediated by a few rare cases in which the experimental projection of a phantasm is attested, or the stress is of such a sort that it becomes possible to conceive the ordinary 'ghost' as an apparition telepathically projected by the dying or the dead. In all these cases the transfer of information has an emotional intensity which is generally lacking in experiments of the first class, and this may conceivably account for their apparent capacity to override the obstacle of distance, which com- plexionally differentiates them from the former. Still it should be remembered that to ascribe these phenomena to telepathy is a hypothesis which is possible only if telepathy is established independ- ently by experimental evidence. Accordingly it is on this that the real stress falls. Now, as regards this evidence, it may be said in general that its character is very similar to that for other supernormal phenomena. Much of it is bad, some respectable, none beyond cavil. Its quality is not better than that of the best evidence for some of the most extreme phenomena, such as 'materializations.' It is liable, moreover, to the same varieties of error. If, in a certain case, (in the form of shape, codes, collusion, and mendacity), mal- observation, lapses of attention, errors of memory, coincidence. The ultimate reason for these defects is that the attempt does not exist as yet any real experimental control of the phenomena and their conditions, so that the evidence cannot be accumulated at will, crucial experiments cannot be made, and the pragmatic test cannot be applied to the doctrine of the direct intercommunication of minds and to distinguish the real from the alleged phenomena. As, however, this sort of situation occurs commonly enough in the beginnings of a science and sometimes lasts for centuries, it is no disproof of the reality of what is now provisionally called 'telepathy'; it may well be dispelled by perspicacious and concerted investigation. In any case, the matter should not be left in its present ambiguity.

LITERATURE.—This is largely the same as given in art. Psychological Research and Reviews. There may be mentioned in addition Boeke, La Psychologie, Paris, 1912; and L'avenir des sciences psychiques, do., 1917, Eng. tr., Our Understanding of the Unknown, New York, and London, 1918; the art. by F. C. Hansen and A. Lehmann in Encyclopedia of the Philosophical Sciences, 1907, pt. 4, 'Ueber unwill- kürliches Flüstern'; E. Parish, Halleck's Blinde Wahlungen and Fractions, London and New York, 1897; J. E. Cooper, Experiments in Psychical Research at Leland Stanford Junior University, Stanford University, Cal., U.S.A., 1917; L. T. Treland, A Technique for the Experimental Study of Telepathy and other Alleged Clairvoyant Processes, 1917. All but the first of these attack the historical evidence, with some success, while the last two confess also (almost) complete failure in repeating the card- and number-guessing experiments of the Society for Psychological Research.

TELUUGI-SPEAKING PEOPLES. —See DRAVIDIANS.

TEMPERAMENT. —The doctrine of the temperaments is at once one of the earliest and one of the most persistent and popular efforts to classify the varieties of mental character in relation to bodily characteristics. It has always been recog- nized that there are broad differences of type in mind, and that some of these differences are in- born, and, practically at least, unmodified through- out life. What has been the natural life that should be looked for mainly in the feelings and emotions, which appear both more dependent upon the bodily constitution and less under individual control than of their own accord or will. The temperament is in accordance a permanent disposition to certain

forms or degrees of feeling, so far as such disposi- tion is dependent on the inherited organic consti- tution. The number of temperaments has been variously given as two, three, four, six, eight, and even much larger numbers, but on the whole the classic four has held the field down to our own day, as if it corresponded in some mysterious way to some ultimate differences in mind or body, or both.

This number was derived originally from the four elements of Empedocles, fire, earth, water, and air, and the four qualities of heat, cold, wet, and moist; on these in turn was formed Hippocrates' theory of the four cardinal humours of the body—blood, corresponding to air, warm and moist; phlegm to water, cold and moist; yellow bile to fire, warm and dry; and black bile to earth, cold and dry. From these came through Galen the names of the main temperaments, sanguine, phleg- matic, choleric, and melancholic. Occasionally physiologists have suggested other terms for the phlegmatic and the melancholic, as 'lymphatic' and 'nervous,' lymph and nerve being at least known constituents of the body; but the names most generally employed are those of the four old four have kept their ground. For the Greeks the temperament meant a mixture or union of the four elements, qualities, or humours; where this contained a certain idea of proportion (in the form of shape, ratio, and mental health; where an excessive degree of one or more, or an excessive defect, there was dis- temper or disease. There should therefore have been only one ideal temperament, and hence a variety of intertemperaments, but actually the four temperaments were regarded as falling within the limits of health and as implying only a slight pre- dominance of one or other of the four qualities. With the progress of physiology, the physical basis of the temperaments underwent a series of changes in the conception of the theorists; first the mixture was sought in the blood itself, as conveying nutri- ment to all the tissues of the body,—e.g., the pro- portion of fibrin to fluid in the blood, the width of the vessels, the porosity of their walls and of these of the tissues; then stress was laid on the presence of this or that tissue, with a corresponding nervous tissue, its strength and its excitability (Haller); and finally on the more delicate qualities of the nerves as shown in intensity, and in rate, persistence, etc., of impression and of reaction.

Here we are still in the dark. It is true, that it is with the nervous system that mental qualities and degrees are most directly correlated, but it must be admitted that we have no really scien- tific knowledge as yet of the precise relation of one to the other.

The problem may be approached from another side by considering the actual characterization or description of the four temperaments, the psychi- cal qualities which each reveals; these are inferred of course from the behaviour, more especiallythe emotional expressions and the reactions of the will upon impressions; and here also there has been a constant tendency to simplify by seeking the main features of the temperaments in two pairs of mutually opposed characters, such as receptivity and spontaneity; change and persistence; feeling and action; pleasure and pain, etc. The most satisfactory of these psychological accounts is that of Wundt, based on the strength or weakness, and on the quick or slow rate of change in feeling and in mental processes generally. Strong and quick is the choleric temperament; strong and slow, the melancholic; weak and quick, the sanguine; weak and slow, the phlegmatic.

1 Henle, Anatome, Vienna, 1807.
2 Volkman, Lehrbuch der Physiologie, 1. 297.
3 Wundt, Grundzüge der psychologischen Physiologie, 3. 105.
As E. B. Titchener has put it, 'the man who thinks quickly and feels strongly, is choleric, the man who thinks quickly and feels weakly, melancholic; the man who thinks slowly and feels weakly, the melancholic thinks slowly and feels deeply'.

The classification does not adequately explain, however, the fact that the feelings of the sanguine are predominantly cheerful or pleasant, those of the melancholic predominantly painful or gloomy; and Hoffding has suggested another classification of temperaments, or another division—'the bright and the dark temperaments'—in order to explain 'the tendency to one or other of the two great opposites of the life of feeling, which gives colour and direction to the whole disposition'.

'This opposition is more fundamental than that upon which the other four temperaments are based, for it has its root in the fundamental conditions for the preservation of the individual organism.'

More recently an interesting attempt to analyse the dominant characteristics by experimental methods has been given by Narziß Ach: he finds that it is mainly on the strength or weakness of the 'determination', along with the persistence or rapid falling away of the determining force, that the feelings, the associations, and generally the whole mental mechanism depends; according to these characters the basis of his five temperaments—for he adds a fifth, the reflective (besonnenne) temperament.

Whatever the ultimate characters may be, mental or physical, they must be such as exercise a decisive influence on the whole life, inner and outer, of the individual. The facts that the pure temperament is rare; that it makes, as Volkmann says, 'an almost uncanny impression', when it does appear; that most of us are of 'mixed' temperament (however illogical such mixture may be); that the old terms have lost all meaning, and that the scientific analysis is still to seek—these facts, which have led many psychologists to drop the doctrine of the temperaments altogether, do not dispose of the existence of broad and deep differences of mental type, mainly in the spheres of feeling and action, for which some names, and a scientific analysis, must be found.

The organism, through the afferent nerves, sends from its every part a stream of influence to the brain; to the functions of every tissue there correspond impressions and feelings which may or may not reach or effect separate consciousness, but which produce a mass-effect in the commeshed, or the self-feeling, or the feeling-tone which corresponds to it. This is the basis of the self-feeling: it is the inner or subjective aspect of the temperament. There is, as d'Henle says, a tonus, or degree of tension, in every nerve, even when the muscles which it contracts or the sense-organs from which it is impressed are 'at rest'; it differs in degree in different individuals; for each individual it varies from time to time, under varying conditions of health, fatigue, etc., but there is a relatively constant value for each below which it does not fall, so long as the nerves have life. Where the tension is high, response of feeling and action will be energetic and rapid; where it is weak, or low, response will be feeble and slow. The tonus is the physiological fact corresponding to the mass-feeling—vague and indefinite as it necessarily is, but of which the different moods of the individual are the essential expressions, down to the simplest feelings of sensory pleasurable and 'unpleasant', emerge like waves on the sea. Like all feelings, the temperamental feeling is both an index of bodily condition and a cause of bodily expression and action; like all feelings, it influences alike the intensity, the quality, and the course of thought. Hence the detailed descriptions of characteristic temperament, so far as we find them, even in some of the later writers on temperament are not without interest.

Johannes Müller, who regards the phlegmatic as the highest type—the ideal among men that the whole of his well-developed intelligence, his phlegm enables him to accomplish results impossible to others, even with their livelier feelings and desires, and a thinking capacity that cannot be induced to act of which he would repent on the morrow; he can calculate in all security the chances of the success of what he undertakes; in danger, at the decisive moment, he is master of himself, wherever it is not a question of sudden decision and energy; he feels his life, and bears them patiently, nor is he such moved by those of others; speed and quickness of choice often give others an advantage over him; but, when he has time before him, he arrives quietly at his goal, while others, heaping mistakes upon mistakes, are lost in endless side-issues.' On the other hand, Müller finds that the species of phlegma characterized by lassitude, apathy, insensibility, irresolution, equal, absence of intellect, and like, is not the true type, but a pathological form. The choleric has a remarkable power of action, both of energy and in persistence, under the influence of passion; his passions inflame at the least obstacle; his pride, his jealousy, his desire of vengeance, his thirst for dominion, know no bounds, as long as his passion moves him. He reflects little, acts without hesitation, or prevents the measure he undertakes. He is vividly conscious that he is right, and above all because such is his will. He rarely turns aside from error, but follows the course of his passion to his own ruin and that of others. With the sanguine, pleasure is the dominant tendency, along with great excitability, and a disposition to any mood sympathetic and friendly to others, but without persistence or constancy; quick to anger, but equally quick to regret; prodigal of promises, but not careful to forget them; cheerful and confident, he loves to make plans, which he soon lays aside; indulgent to the end of others, he claims the same indulgence for his own; easy to appease, frank, open, amiable, sociable, incapable of inherited calculation. With the melancholic, sadness is the prevailing tendency, and with the phlegmatic sadness; that of the sanguine, but disagreeable sensations are both more frequent and more intense than those of the melancholic. Sufferings of others call out his sympathy to a high degree; for himself he is fearful, unstable, distrustful; a trifle wounds and offends him; he scorns the mean, and renders him incapable of reasoning to overcome it; his thoughts are full of melancholy, and his sufferings appear to him beyond all consolation.

In their Psychology in the Schoolroom T. F. G. Dexter and A. H. Garlick ventures to describe, on behalf of teachers—for whom it is necessary to know their pupils' temperaments—not only the mental but also the external physical appearance of the types. The sanguine, lively, excitable, quickly but not deeply moved, with feeling generally uppermost in his character, has the circulatory and respiratory system set on edge; it has red hair, blue eyes, skin fair, and face animated. The choleric, self-reliant and independent, red hair, blue eyes, warm-sweating skin, quick to anger and inflammation of the muscular system well developed, hair and eyes dark, complexion sometimes sallow, face impassive. The phlegmatic or lymphoid, mind calm, sensitive, and soporific, sometimes puffed and proud, has the blotches of phlegm, self-reliant, and slow, has the abdomen large, face round and symmetrical; the feeling is for depression and incline to the latter. The melancolic, with great love of poetry, music, and nature, and marked indifference to the practical affairs of life, has the head large, eyes bright and expressive, figure slender and delicate, movements quick.

It may be doubted whether teachers would be well advised to guide their treatment by such physical characters as these, when noted in their pupils. Nor has the attempt been very successful to look in the physical for the temperaments for predisposition to certain diseases of the body. It is, however, antecedently probable, and appears to be confirmed by experience, that different temperaments limit or tend to certain forms of insanity; at least it is true that in insanity the differences of temperament are as clearly marked as in health.

As in drunkenness one man is ‘tactile and boshful,’ another ‘mudawrin,’ another ‘naive and violent,’ another ‘melancholy and silent’: so the lytic of sanguine temperament... is lifted up and varies in his mind, sometimes of many ways and its feeling voices; the choleric patient suspects everybody in the least of his enemies, and hates voices insulting him or urging him to deeds of violence and work, that his balance is often auditory than visual, the contrary is the case with the

---

melancholic, and especially, as the name implies, with re-

ligious "visionaries".1

It is especially in the melancholic, nervous, or,
as it is called in extreme cases, the "neurotic" tempera-
tment that the tendency to insanity is marked. T. S. Clouston gives a striking descrip-
tion of the modern phase of this temperament.

TEMPERANCE.—There is much difference of opinion among writers on moral theology as to the true relations between grace and the human state of sobriety, moderation, and temperance. Each has
had its claims to be the archetypal virtue, which includes the others, advocated by representative writers; but it is clear to be very difficult to see why temperance should be regarded as the inclusive virtue, the chief being that it has been placed a place from early times among the 'cardinal' or principal virtues. From Plato to Aristotle the tempera-
ture is considered as based on a current classification, and it passes through Aristotle and Stoics into Christian thought. The definition of temperance given by Cicero may be accepted as typical:

' Temperamentia est rationis in libidinem, atque in alias non rectas impetus anima, firms et moderata dominatio. Eius partes sunt, communes infinito modorum classificatione, modumquisque quidem,

Aristotle, however, defines the word as ἐγκατανόημα περὶ ἄμοιος and distinguishes it from ἐγκαταναστία. The temperate man (ἐγκαταναστός) or, he says, does not feel the pressure of inordinate desires; the continent (ἐγκαταναστός) feels it, but holds desire in restraint. So Cicero: 

' Contemnentia est, per quam cupiditas consili gubennationes regit, et in quodlibet, quod est in latere, et in vitam, quod est in specie, et in illud, quod est in ullamque, et in illud quod est in illamque. Ἐγκαταναστία occurs in Ac 2:45, Gal 5:21, 2 Cor 5; 2 Cor 5:2; Ἐγκαταναστήσαμεν in 1 Cor 7:2; Ἐγκατάσθησα in Tit 1:8.

The general idea of temperance or moderation as an element in all virtue is peculiarly Greek, and it reap-"
true self-love, duty to self, necessarily takes. It
is the spirit of discipline, or rather the spirit
of love consecrating itself—body, soul, and spirit—to
God.

The function of temperance consists in restraining and moderating the desires whereby we yearn for those things which are apt to be used to excess. Hence, the virtue of temperance consists in the moderate and regulated use of those pleasures of sense, especially of touch and taste, which are most apt to draw the soul away from God, and to overflow the supremacy of the rational faculty in
man. Temperance implies the control of appetite
at those points where its demand is most impor-
tant and difficult to resist. While 'moderation'
(moderatio) means self-control in matters of less
difficulty, 'temperance' is concerned with the
instincts and passions which in average human
nature are the strongest and the least easy to
restrain.

The following points seem to be worthy of
special note.

1. The aim of the 'temperate' man is positive,
not negative. He aims not merely at the subjugation
of his lower nature, but at the cultivation of
moral and spiritual power. Temperance is the
virtue of the man of high ideals who strives to win a
'sovereign self-mastery.' It implies 'no
monotonous restraint, but an ordered use of
every gift.' The temperate man faces life and uses its gifts and blessings in the temper of an athlete training for
a contest (1 Co 9:27) or of a soldier engaged in
a campaign (2 Ti 2:5). He exercises self-control
'not only in cutting off superfluities but in allowing
himself necessities'—watchful against any form
of self-indulgence that may bring him under the
power of the world or of his lower nature (1 Co 6:12).
He is hindered and overpowered by circum-
stances, but controls them; he makes them sub-
servient to his spiritual progress; he passes through
them upwards and onwards to God.

So Augustine describes temperance as 'that action whereby the soul with the aid of God extricates itself from the love of
lower (created) beauty, and wings its way to true stability and firm security to God.'

2. Temperance holds a very prominent place in
the earliest Christian teaching (cf. Ac 24:25). In the
Acts of Thecla the substance of St. Paul's teaching
is described as μην θανατών συνελογισμός
(aor. subj.) in the early Christian writings, the word
συνελογισμός was probably identified with sexual
purity, and was gradually extended to include any
form of world-renunciation and mortification of the
body through ascetic discipline, practiced
frequently in Hermas, but already the tendency is
to connotate by them the temper of self-control or
temperance in general. It includes control of
appetite in the sphere of sex, food, and drink; but also
the temper of moderation in expenditure, of
sobriety in judgment and self-esteem, of self-
restraint in matters of speech, etc. There follows a
list of virtues in respect of which διὰ μὴν
συνελογισμός. According to Hermas, συνελογισμός is in
fact an archetypal and inclusive virtue. It is
coupled with τὸ λόγιον in Vs. ii. 3. It has a saving
virtue. The 'first commandment' is ἴησαν ἐκ τῆς
πίστεως καὶ τῆς ἀγάπης καὶ τῆς ταύτης. Self-
restraint is a fundamental duty because it is
directly involved in that conflict between flesh and
spirit which is the condition of our mortality
and the occasion of moral victory or defeat. So
Augustine asks:

'Cui pecato cohibiendo non hancum necessarium continem-
uram, ne coquatur iaculis? . Universalier ergo continenda
nobis opus est ut declinamus a malo.'

3. Temperance or self-control forms part of 'the
fruit of the Spirit' (Gal 5:22). 'Walk in the spirit
and ye shall not fulfill the lust of the flesh. As a
gift or endowment of the Spirit it was supremely
manifested in our Lord.

'Where,' asks Bernard, 'is temperance to be found if not in
that life of Christ, whose whole nature is temperate who strive to
imitate His life, . . . whose life is the mirror of temperance.'

It is of self-control that Augustine is speaking
when he exclaims, 'Du quod jubes et jube quoq
vis.' The presence of the Spirit in man gives him
liberty—the true freedom which consists not in
following the impulses of the lower nature, but in
fulfilling the will of God. Accordingly in Eph 5:18
St. Paul suggests that we 'put on the whole
man, the one infallible safeguard of temperance is the
knowledge of the presence and action of the Holy Spirit in the
soul.

The sin of intemperance is wrongly limited to
one particular form of excess. It may include
want of restraint in work, in recreation, in
intellectual speculation, in the pursuit of wealth or
power, in the use of the faculty of speech. On
such work this last point is stressed is laid by
moralists. The fact is that the habit of loose,
unrestrained speech paves the way for grave lapse
of truth, purity, or good faith. 'It defiles the
man' (Mt 15:32). It hinders or weakens that power
of controlling the whole body' (Ja 3:3) which is
implies to Christian perfection. St. James
implies that the 'sovereign sway of the Christian
conscience' must be exercised even in what seems a
small sphere, and hence gradually extended to
the whole field of human nature till man becomes
'Deo solo dominante libertas.'

TEMPLES.—A temple, in the original sense of the Latin word templum, meant a rectangular
place marked out by the augur for the purpose
of his observations, which were taken within a
rectangular tent. An extended sense gave it the
meaning of a consecrated place or building, of
rectangular shape, 'inaugurated' by an augur.
In this sense it was applied to the house of a
god, though, strictly speaking, this meaning belonged
to the aedes. In its primitive sense templum cor-
responds to the Gr. ἱερὸν, a place marked off as
sacred to a god, in which a θᾶν, or house of the
god, might be erected. As we shall see, an enclosed
consecrated space often precedes an actual temple
in our sense of the word, viz. the house of a god, a
structure containing his image, and sometimes an
altar, though not infrequently the altar stands out-
side the god's house (as in Greece) but within the
enclosed place in the open air, as it did before any
house for the god was erected. As images became
more decorative and costly, it was natural to
provide a house for them, though this might be done
for a quite prior reason. In this case or even a fetish, as
ten, however, the chamber or house of the god
contained no image; it was merely a place where
he might invisibly dwell or which he might visit

from time to time. Where a god has his image in such a place, there are often other shrines or altars there or in subsidiary chambers connected with it. In the popular sense of the word, 'temple,' while it is connected with worship, is not usually a place within which the people worship. The priests alone enter it, if it is in the shape of a building. It was probably a result of earlier nomadic conditions prevailing after the people had become settled—and to some extent this is the case even now among aboriginal tribes in areas in which the climate offers little possibility of dwellings—had they been the product of the earliest cult—cults which have exists for centuries in the cases of certain ancient Persian and Egyptian temples which keep the precincs, if ever there. Temples vary from the smallest and simplest buildings, as they mostly were at first, to the most elaborate and vast structures.

In studying the origin of temples, no single source for all can be found, as this differs in different regions. Nomads could have no temples, though they might have tribal sacred places, or sacred tents carried in their wanderings. With the advent of a more fixed mode of life and permanent dwellings, a similar dwelling for the deity became necessary, as is seen in 2 S. A variety of primitive temples is known, and it could have been only in the course of a long period of time that the more elaborate buildings came into existence, while, generally speaking, the intermediate stages are not well known or understood.

1. Origin of temples.—(a) Sacred places.—Among savages, and probably also among most groups of primitive men, most of the rites of worship were on the open air, sometimes because no images of divinities exist, or, where they do, they are not always enclosed within walls, and sometimes because spirits are regarded as connected with natural objects. Sacrifices are usually laid on sacred stones, or cast into the waters, or into the fire, or hung upon trees. Worship takes place in the open air among many of the lowest tribes (Veddhas, Australians, Mānasus and tribals). The worshipers, such as the Dravidian tribes, Melanesians, Sakai, and Jakun) as well as among tribes at a higher level (some American Indians, Lapps, Burmats, etc.). This is often the result of a nomadic life, yet even nomads carry sacred images with them* or have a tent for these or for other sacred things. Such open places for worship tend to become sacred and to be preserved inviolate for cult purposes, and there images are set up.

Examples of this kind are found among the Sakai, Jakun, Mānasus, Fjord, and Indians of California.7 This is obviously necessary where a sacred tree or stone stands in such a place. Sometimes sacred places are associated with the trees or stones on which appears of spirits, gods, or ancestors, and must therefore be holy for all time. The mere fact that a religious gathering takes place in a certain spot once is enough to give it sanctity, and the gathering becomes recurrent there. Such sacred places will usually be marked by images or symbols, or by boundary-stones forming an enclosure.* Single graves, often with a structure over them, and places of sepulture also become recognized places of cult.

The same preference for open-air worship in a recognized sacred place is found among the Chinese—ap., in the cult of the Altar of Heaven, which dates back to early times when the genius loci was worshipped at an altar under a tree. The practice is also found in the primitive cult of the Indo-European races, as a result of their conceptions of deity, not dissimilar from the beliefs of the First peoples and stones erected to the tree or grave, the sacred spring, were places of cult and usually possessed an altar. The limits of the shrine were marked by boundary-stones or pillars set up by some religious sect or post in which the deity resided. In early Indian worship there were no temples, but dwelling permanent enclosures, which—after the altars of the cult—probably a result of earlier nomadic conditions prevailing after the people had become settled—and to some extent this is the case even now among aboriginal tribes in areas in which the climate offers little possibility of dwellings—had they been the product of the earliest cults which have existed for centuries in the cases of certain ancient Persian and Egyptian temples which keep the precincs, if ever there. Temples vary from the simplest and smallest buildings, as they mostly were at first, to the most elaborate and vast structures.

The Boi had a temple in which were stored the spoils of war, and the barrel (sn REPL) had a similar temple.8 Plutarch speaks of the temple where the Arverni hung Caesar's sword, and DioDorus of 'temples and sacred places.' The temple of the Nanaitic (Samite) women, unroofed and re-rooted in a day, must have been a simple building.9 In Gallo-Roman times elaborate temples were built after Roman models, as well as smaller shrines at sacred springs.10 Similar sacred groves existed among the Teutons, as many passages of Tacitus show.11 What we figure of the sacred tree or grove as a built and walled house, resolves itself, the farther back we go, into a holy place enclosed by human hand, embowered and shut in by self-grown trees.12 The use of the sacred grove continued during many centuries. But in these grove-like temple-like places are still found references to by Tacitus, while sagas and later ecclesiastical writings speak of them, and the sacred grove, when the altar was destroyed, a Christian church was often built on the site.13 The Latin names used for these are 'canopus, camale, and temples. The sacred grove was probably a mere tent in which stood the sacred image; the others were more elaborate buildings, whether of wood or stone.

The grove is thus a primitive holy place, which may have had an as necessary a small structure for the image which later becomes a more elaborate temple. This worship in groves, which might become the seat of a temple, is also found in the larger races of trees.

The village shrine among the Dravidian tribes of India is an example. Under a sacred tree or grove stands a heap of stones or a mound; this may be replaced by a mud platform or a mound but with a thatched roof, or by a small building of masonry with a domed roof and platform. These forms an abode for the deity and are thus a primitive kind of temple.14

The early Somitic sanctuary was a sacred place associated with a theophany or with the continued presence of a spirit or divinity. This might be a tree, a stone, on a hill, or in a cave.

These holy places were sacred territory enclosed by boundary stones or walls. At Altar, and aubhah, on the altar pole. The 'high place,' or koshāh, as its name denotes, was on a height, and in the enclosed space or court there was the altar, the aubhah, and the natajuk (q.v.) the abode of the divinity, which were connected with these 'houses' probably of the priests, which sometimes contained images (2 K 17:29), though these were also enclosed in tents (2 K 22, 15.10). These houses or tents represent a primitive abode within the heathen, and, though no clear traces of actual temples have been met with in excavations, these may have been the origin of actual Canaanite temples such as those at El Bethel and Gezer (q.v. 2).

13 A tent was used as a sanctuary in the temple of Belis at Harran, and elsewhere (H. A. Clough, The Syrian world of the Hebrews, St. Louis, 1882, 131); and by the Carthaginians at a portable shrine (Hist. Soc. xx, 65).

2 Rom. 12:18, 19.
(b) Shrines at groves.—The grave as a sacred place may be another point of departure for the temple, when it is associated with a structure, though it be no more than an enclosing wooden fence with shrubs, as among the Tami of New Guinea—where a cult is carried on. Sometimes an altar is placed over a grave, as with the Mayans and the Nicaraguans, 4 and by the Chineses of the Khius, 5 the stone circles with a rectangular niche in their circumference found in Algeria, the rectangular, elliptical, or circular groups of stones in Syria, 6 and the stone circles in Britain, varying in size and elaboration in the composition that has been termed Stonehenge. 7

Though long regarded without evidence as 'Dedalical temples,' were probably connected with a cult of the dead in the same way that the kitty of the Khius, like the Fijian nanga presently to be referred to. Some have regarded such a circle as that of Stonehenge as a temple dedicated to the sun or other heavenly bodies. 8

Akin to these are the sacred stone enclosures, or nanga, of the Fiji islanders, now existing only as ruins. These formerly presented the form of a rough parallelogram enclosed by upright stones, divided into three compartments by cross walls called respectively the little, great, and sacred nanga, the last enclosing the sacred beer bowl. Trees stood round the enclosure, and outside, beyond the sacred nanga, was the pole haum ("sacred house"); a 1-bedrook bed. Here the forefathers of youths circumcised on behalf of a sick parent were offered to ancestral gods with prayers for the patient's recovery. In the nanga 1 the ancestral spirits are to be found by their worshippers, and latter offerings are taken on all occasions when their aid is to be invoked, and here firstfruits are presented to them. They were also used in the elaborate initiation ceremony of the Fiji people, the object of which was the initiation of the candidates to the ancestral spirits. 9

Where large chambered tombs exist, as they do in many parts of the world, they have been used for worship of the dead, either all the time of the building or on special intervals thereafter. To this extent, therefore, they form temples, and sometimes they contain a conventional image of the dead like the human figures roughly sculptured on the walls of rock-hewn tombs in France. 10 The structures built over graves may be no more than large huts, of logs and thatch, like those built over the graves of kings and chiefs among the Banyoro and Baganda, but these are regarded as tombs, with priests and attendants, where the spirits of the dead are consulted. 11

In Fiji certain temples of a primitive kind are associated with graves and with the cult of the kalamughe, or ancestor-gods. 12

Not unlike these are the huts of reed and grass built over the graves of chiefs in pre-historic Egypt, where offerings were made. They gave place to mud houses and again to structures of stone. Of the latter the megaliths had a chamber for the soul of the deceased and its offerings. The inner chapels were part of the tomb-structure, but, where pyramids were built, this chapel or temple was constructed in the pyramid, and in its cells and offerings were made. Sometimes they developed into large temples, which, like the smaller funerary chapels, had lands attached to them for their maintenance. 13

(c) Caves and temples.—Caves occasionally served as scenes of a cult, and by their shape and enclosed space may have been carried out at Stonehenge.

The caves of mid-Magdalenian times, which contained elaborated paintings of animals or even of human figures, have been regarded as the scene of religious or magical rites, but of this there were no developed into large temples, which, like the smaller funerary chapels, had lands attached to them for their maintenance. Therefore, where caves were used, was also an altar for an image or fetish, it might easily and conservatively still be regarded as the dwelling of a god, when men no longer used it for a dwelling. It might become a temple or be associated with a temple built above it. Caves used for burial purposes would doubtless also acquire a sacred character and be used for commemorative rites.

Thus some of the Canaantine 'high places' are associated with caves, which may have been abodes of the living or burials, and which, or of a magical purpose or regarded as sanctuaries of an god. 14 Natural or artificial grottoes also constituted the earliest Phrygian temples of gods, and the Sidonian shape inhabiting a cavern which served as a temple occurs in Fiji in the case of the temple of the Khius, where its worshippers and offerings were made there. Names of divinities worshipped in caves among the ancient Babylonians are known, as well as the caves themselves with inscriptions to them. Sacrifices were probably offered in front of the entrance; in the cave niches contained sacred objects. Rock temples are known in early Egypt and in N. Arabia, but they are most elaborate in India and Ceylon, where they are both hewn out of solid rock and sculptured in caverns. Some originated in Buddhist times, and many still exist as examples of striking architectural skill,—e.g., Elapana and Ellora. Their prototypes are caves used as shrines and for the cult of Hindu gods in N. India. 15 Among the Carib Indians were the places where sun and moon emerged and fertilized the earth. They were places of pilgrimages, were adorned with paintings, and contained images. Spirals were supposed to guard them. 16

Another reason for caves becoming associated with worship is the belief that men first came out from them from their subterranean home. Examples of this are found in ancient Peri and other parts of America. 17

Caves may also be the depositories of sacred cult objects or images of gods, and thus serve a purpose to which temples are also put.

The Arunta urntungal is a receptacle and sacred place for offerings, and its inwelling spirits. They are visited ceremonially and are highly sacred. 18 The Vedas keep their secret ceremonies and are contaminated, especially by women. 19 The Hupi use clefts in the rock in which to place the baks, or prayer-sticks, in honour of their deities, and the Cornellis deposit ceremonial arrows and images in sacred caves. 20 The Otokya keep their images or stones representing the gods in sanctuaries in the hills guarded by a shaman. 21

(d) The village-house, man's house, etc., as temple. —In many regions where separate temples are unknown, or when separate temples do not exist, the village-house, or the kiva, to some extent serves the purpose of a temple among many of their other uses, and corresponds to the pergulum of the Greeks and the sanctuaries of the Romans.

Religious dances or sacred dramatic plays are held in the village-house among the Alaeus or in the so-called 'assembly-house' of the Washo tribes, which may contain a circular domed-shaped structure or a mere brushwood enclosure. 1 To the latter corresponds the bowen worship used in the fire-ceremony of the Washo tribe, in which certain women maintain for hours a continuous singing to the accompaniment of beating home-guts. 2 Among many South American Indian tribes, especially those living in the southwest, religious rites are associated with a sacred house, 3 as with the Hopi, which does not differ in construction from other houses in the village. Here sacred dances take place, and traditions are connected with them. 4 With the Pueblo tribes the kiva serves at once as sacred council-house, medicine-lodge, and temple of the members of a mystery society. In some districts kivas of ancient date are circular; more generally they are square and often below the surface of the ground. The pre-historic sites of Colorado and Utah are of similar type. Women will not enter the kiva except to give food to husband or son. Kivas are often very large, but the well openings are small and entrance is gained by a ladder up to the roof, whence by another ladder descent is made to the interior from a hole in the roof. The walls are often decorated with paintings of symbolic animals and are surrounded by a bench. At one end is an altar on which the symbolic objects of the society are placed. Here it is a dry and sacred place, expressing gods and forces of nature. 5 Corresponding to these are the sacred lodges and club-houses of Melanesia and Papua, which are generally the sacred approach to temple-like houses. Examples are found in the 'sacred houses' of the Solomon Islands, sometimes circular enclosures with a large room where the drums and masks were prepared and members of the society met, whence the procession proceeds to the temple-like house proper. The structure consisted mainly of wood and thatch. The men's houses of the Moriori, of New Zealand, are circular, and contains skulls and heads, effigies of the dead, and symbols associated with ancestor-worship, and sometimes masks, drums, and objects connected with the ancestors as confiscated from the uninhabited. These houses are often used for the worship of the ancestors.

(e) The house-shrine as temple.—Still another aspect of the primitive temple, sometimes suggesting a point of departure for more exclusive temple structures, is the hut or house of a corner which is sacred, a place or shrine in the hut, the image or sacred objects. This custom is well-nigh universal, and only a few examples need be noted.

Among the Banyankole in each hut is a special place for the image of the deity. A board is set in the wall, on which a leather of the boor, a strip of goats' hair, is fastened round, bound with grass laid upon it. 6 With Coast tribes the yatimta containing a spirit has an honoured position in a corner of the house. At the larger posts, which are places with the Yoruba, the house-god Olorun, represented in human form, is set up at the door, and huts have a recess in the wall for the fetish. 7 Here and there in Melanesia and Papua images of ancestors are kept in houses, or, as in certain islands off the western end of New Guinea, in a separate room of the house, in which miniature wooden houses are placed for the souls to reside in. Offerings are made to them. In the chief's house are shrines for the souls of all who have died in the community. "Such a house might well be described as a temple of the dead. 8 Among the Bajau alamans images are kept in the houses, or, as also with the Kayans, stand before them. 9 The Vedas set their earwax, or chia-god, on a shelf in the out-house. 10 In higher religions the household shrine is well known. Most Melanesian and Sudust house shrines are the edible part of a general domestic temple, and the spirit is the Shindots treasure objects of private cult on a house-altar. In ancient, high, and heroic houses he had his domain in which he sat usually a receptacle with the figure of a household god.

In certain regions the temple seems to have arisen out of the private sanctuaries of the king. In Mycenaean Greece especially the king's tombs had chapels as part of the structure, and the palace later became the temple. With the Phoenicians the temple was at first an annex of the palace, like Solomon's temple at Jerusalem. When a cult of the hero-dynasty, with Ribkal, was thrown into the fire, existed—e.g., in Roman houses—the house itself was a temple with the hearth as altar.

2. Actual temples in the lower culture.—We have seen that in the lower culture there is no separate temple structure, and that actual temples are unknown, many approaches to temples exist. Yet even savages are not devoid of temples of a primitive kind, for it was natural to suppose that the worshipper by a fire or the god or spirit also should have one, either as the permanent shelter of his image or as the place whither he might resort and be approached by men in worship.

(a) The most primitive temples are probably those found in Africa, both Negro and Bantu. While frequently the 'place of praying' is a mere clearing under the tree in the village courtyard, 11 thus conforming to the place of his altar, the European worship, sometimes an actual hut is provided for a god, not differing much from the ordinary hut.

On the Lower Niger the temples contain images standing on mud platforms, and the ju-ju house in the bush is secret to all but the priest, and contains images, while the walls are wholly decorated with paintings. 12 Similar temples exist among the Fon, and that of the rain-god is painted with the colours of the rainbow. 13 The temple was a square mud building, with a door on each side; there was a small circular hut, thatched with grass—a privilege allowed only to shrines and temples—standing in an enclosure. In it the sacred snakes were kept. 14 In Dahomey temples are circular huts, so low that a man must bend double to enter one. Images stand in them on a platform of clay, before which are earthen pots and vessels smeared with blood, eggs, and oil. Some temples are elaborately decorated, and they as well as sacred groves are distinguished by calico streamers fluttering from poles or trees. 15 Among the Yoruba—e.g., at Benin—the ju-ju temple consisted of a circle of painted mud 150 yards in diameter, thatched by a high wall, and covered with grass. At one end a long shed extended across the circle, and was made of three posts, each the whole length of the shed. This was slightly raised in the centre, and on it stood ivory tusks on bronze heads. In the lower common huts were walls adorned with hooks, and a well for the reception of the bodies of victims. Among the Baganda there was a sacred place found the king's house. They were circular structures with an elaborate roof thatch covering nearly to the ground, and supported on posts, with hides entwined in the roof. The outer wall was of plinth face of layers of reeds bound together and fastened to the top of the roof. The floor was strewn with a carpet of scented grass, dried, and cut to uniform length. These temples took some time to build, and their structure was frequently renewed. Some had also a court surrounding them, and in the case of the more important gods only the priests and mediums could enter it. In others the temple attendants had their beds in the court. Temples without courtyards could be approached and even entered by the people. The temple of the god of war was usually that of a thick, high temple consecrated to him. Each temple had its priests and mediums who lived in huts near by, where their vesicae, worn on ear-rings, the temple were kept. Young girls tended the sacred fire always burning in the temples, save in those which might not be entered by the people. The larger temples had a platform attached to them for their upkeep. Temples of gods had no images, for images are here unknown, but they were adorned with gorgeous and the invisible devil was supposed to sit, or on which his relays were kept. Sacred drums were stored in certain temples. Priests had a complex with priests and mediums in which there were special temples for the king's jaw-bone and umbilical cord,

TEMPLES

and others for his ghost. Temple for similar deities and for the royal jaw-bone existed among the Busho, Banyoro, etc., but with these and the Baganda the creator-god had no temple.

(b) In Melanesia temples are not common, but in the Admiralty Islands wooden, thatched huts of a beehive shape, with carved door-posts representing male and female figures, serve as temples. The doors were surmounted by the heads of pigs and turtles are attached to the rafters, as well as balls of human hair. A mystery was always made about the principal temple, which contained images, and was sometimes opened, sometimes closed. In Fiji each village had one or more temples (bare), built on a mound faced with stone rubble-work. The roof was high-pitched, with a projecting ridge-pole, and the height of the structure was twice its breadth. Each bare had two doors and a fire-place, and contained images, jars, boxes, mats, etc. From the roof hung a long piece of bark cloth reaching to the floor at one of the corner-posts, and was the holy place which none but the priest approached to be inspired by the god, who descended by this cloth. The dead were sometimes buried in the bare, but the building was only used for worship on special occasions and often became ruined in the interval. It served also as a council-house and chiefs' club-house. Bares were also erected in memory of the dead, and had an altar at the front.

In the Tamile, New Guinea, parraks, or temples, built of wood and standing on piles, are found. They consist of two storeys and have high galleries, and are approached by ladders with hand-rails carved in the form of crocodiles and apelike figures. Nothing but drums and flutes is found in the paraks, and these, played by men, signify the presence of the spirits, for whose worship the temples exist.

A certain degree of mystery attaches to the parraks; no woman or child may enter them or loiter in their vicinity.

(c) In certain parts of Polynesia—Society and Sandwich Islands—the temples, or marae, were enclosures open to the sky and they were domestic.

The national temples, called tabu-tabu-a-tea, perhaps because of the pictures were the property of the chief images and the places where great festivals were held. Each of them was composed of several marae, some with inner courts for the chief images, altars, and sacred dormitories for the chief divinities, all enclosed by stone walls on two sides. In front was the main entrance, and on the back a projection, very often of large size, with images and altars before it. At Atchura this structure was 370 ft. long, 94 broad, and 70 high. Steps led to the roof of this temple, and the enclosed area of the marae was 3,290 sq. rt. Within the enclosure were the priests' houses, and trees grew both within and around it, forming a dark grove. Offerings were placed in the marae. Men alone usually took part in the festivals, but on the completion of the year women and children also attended, but were not allowed to enter the sacred enclosure. Local marae were those belonging to the different districts; the domestic marae were for the family gods. In both of these, as well as in the royal marae, the dead were deposited, and were there under the guardianship of the gods. In other districts—i.e., Samoas—temples resembled the beehive thatched huts, or, again, the village house where the chief lived served as a temple. In some villages groves as well as temples were used as places of sacrifice.

(d) Among the coast Veddas temple structures exist. One is 12 ft. by 10, roofed, and facing eastwards, with the roof carried forward in front of the front wall and door. Outside this structure are a long pole, a wall, and a tree with a platform, and just outside the door stands an altar. The altar anterior is decorated with cloths and branches on the occasion of a ceremonial dance, and ceremonial garments are kept within it. Some of the village Veddas have temples of bark or of mud resembling their own huts. In these the Shaman dances, and symbols of the spirits are kept.

(e) With the Todas, worshippers of the sacred buffalo, the dairy forms the temple or sacred place, with its cereals and vessels and other things, which are preserved there; and precautions are taken to prevent their contamination by the touch or look of unauthorized persons. Relics of heroes are also stored in these. The temple-dairies have usually two rooms, and are of the same form as the native huts.

(f) As an example of various stages in the evolution of temples from simple to highly elaborate, over a large area, we may cite those known in N. and S. America. Most of the lower tribes, and some of the more advanced (Hurons, Iroquois), had no temples. But usually there were sacred shrines or altars, where ceremonies were performed, sacrifices offered, and images set up.

Among the Hopi such places were called pakoki, 'prayer-house,' and others of nothing to mark them but prayer-sticks—sticks with feathers attached. Others were denoted by circles of stones—e.g., the sun shrine with an opening to the direction of sunrise and sunset. The Alasks, by a single pole set up in a natural mark on a rock. To these correspond the sites on which are erected bowers or lodges for the public performances of mystery societies in other tribes, often containing an altar with sacred objects. More elaborate shrines also exist among the Hopis and the creeds of the So. America corresponding to such shrines is the secret spot where the botato, or sacred trumpeter is kept. The Orinoco tribes also have shrines where ceremonies are performed, sacrifices offered, and images set up.

Many of the Hopi such places were called pakoki, 'prayer-house,' and others of nothing to mark them but prayer-sticks—sticks with feathers attached. Others were denoted by circles of stones—e.g., the sun shrine with an opening to the direction of sunrise and sunset. The Alasks, by a single pole set up in a natural mark on a rock. To these correspond the sites on which are erected bowers or lodges for the public performances of mystery societies in other tribes, often containing an altar with sacred objects. More elaborate shrines also exist among the Hopis and the creeds of the So. America corresponding to such shrines is the secret spot where the botato, or sacred trumpeter is kept. The Orinoco tribes also have shrines where ceremonies are performed, sacrifices offered, and images set up.

Among the Apaches, Siouks, and others, sacred caves took the place of temples, where religious rites (tabou to women) were performed, or tipsis, which were carried from place to place, like the Hebrew 'tent of meeting.' They consisted of poles tied together at the top, arranged in a circle, and covered with buffalo skins. They sheltered the three sacred objects—the sacred pole, the sacred buffalo-skin awning, and a sacred bag. The household tent as a shrine containing an altar is also sporadically found—e.g., among the Biskopa, with whom each tent has an altar, a mere hole in the ground, in which sweet sticks are burned. With the Apaches and Navaho, tipsis were also used as a place where he may be consulted. It is called a 'spirit-house' and is tabu. Here also may be mentioned the special 'medicine-lodge' of many tribes, erected for the performances of the shaman, corresponding to that found among the Ota-Affric tribes of N. Asia.

With other tribes—e.g., the Omaha—the sacred structure consisted of three sacred tents, or tipsis, which were carried from place to place, like the Hebrew 'tent of meeting.' They consisted of poles tied together at the top, arranged in a circle, and covered with buffalo skins. They sheltered the three sacred objects—the sacred pole, the sacred buffalo-skin awning, and a sacred bag. The household tent as a shrine containing an altar is also sporadically found—e.g., among the Biskopa, with whom each tent has an altar, a mere hole in the ground, in which sweet sticks are burned.  TEMPLES 

Throughout this region, on hills or by lakes. Among some California peoples structures, temporal or ceremonial, in honour of the god Chichi-michich, consisted of an oval enclosure, four or five yards in circumference, with interior divisions formed by branches set into the ground, and mats, and a hut or lodge, supporting an image.2 The temples of the Natives, one in each village, which stood on mounds about two-thirds the size of the house of the god Chichi-michich, contained the sacred fire as a division in which sacred objects were placed. Thus a platform in a square or rectangular area, with the sacred objects of the sun-chief, with sacred images, and in an Inca ceremony was the sun-chief or king of the sun, and the temple was the object of great reverence.3 Thus sun-temples existed over a wide region in Florida, Arkansas, and Virginia, and were no more than an enlarged mud hut, with an oval, domed-shaped roof with images of eagles. Images stood in them, and women were excluded from them. There were more elaborate or smaller temples described by travellers among Virginian tribes, in the Mississippi region, among the Fox Indians, and in B. America with the Tupinquines.3 Among the Hopis are temples (topeka), 'god-houses,' and sacred caves, though the difference between the two is not clear. The temples are larger but otherwise resemble the houses, which are circular, stone-built, and roofed with thatch, and which possess a low entrance to the east. The roof is supported by upright beams. In the centre is a fireplace—a circular basin of clay. Niches in the interior walls contain ceremonial objects, and each of them is devoted to a god, and in charge of an officer of the temple. The priests meet in the temple for consultation, and the temple is a square open space for the 'god-houses,' in which the officers live who watch the temple. They are rectangular, dome-shaped, and often have sacred images of the gods on the walls. The interior contains symbolic objects to please the gods. The pictures in the temples for communication with the gods are placed for the duties invisibly present. Images are kept in sacred caves in the mountains, sometimes set in miniature temple structures. Similar structures in Pueblo regions, containing shrines, were of the nature of temples. They consisted of sealed stone enclosures, sometimes with symbols painted on them, and contained images and symbolic representations of supernatural beings. Among the Hopi the shrine of the earth-godness is a sacred grove; it was an open space now sacred, and where the symbol of the 'new fire' ceremony a slab is removed, and offerings are placed on the shrine, while every four years the image is carried in procession. In all Pueblo shrines are placed permanent objects (images, stones, carved slabs, etc.) and a few offerings of fruits and vegetables. The sacred objects are set about in clay images.4

The small house, men's house, the kiva, etc., as serving enter all the purposes of a temple, have already been referred to.5 In the case of a kiva, or lodge of a mystery society, it is far more particularly styled. Next to host parts or the initiated may enter the sacred place; it is made the sacred objects used in the ritual; and here prayers are said, and various offerings presented, and other ceremonies—e.g., purificatory rites—are carried on.

The rude stone structures just described form a primitive aspect of the more elaborate stone temples of barbaric peoples in N. and S. America. It was also natural that, where wooden temples existed, they should be replaced by temples of stone, as the primitive inhabitants of the world, like the more advanced and civilized tribes, had no great variety in the forms of houses that were attained. Intermediate stages between these simple structures and the massive and elaborate temples—the ruins of which still command respect—are seldom met with, but Potter describes one in Hayti, and Schoolcraft another at Cayunbe—a circle of sunburnt bricks 48 ft. in diameter and 134 ft. high, with a small door, open to the sky.6 Probably many of the Peruvian temples were of such a simple character, and even the great temple of the sun at Cuzco, comprising many buildings and apartments, though it was richly adorned with gold plates, cornices, and stairs, and was provided with gardens and fields, had no pictorial or architectural characteristics. In other squares and parallellograms of one storey, roofless or thatched.7

TEMPLES

resembling African native temples. The hut was sometimes square, sometimes domed, and stood on a platform of earth to save it from inundation. With a thatched roof the ground opening for light was the doorway or portico, with a mast at each side. In front was a court fenced with a palisade.

The hut gave place to a stone building, but, when additional rooms were built round the central 'house of the god,' and when the whole structure of the temple, with its spacious siphon-grammar, porticoes, courts for the images, pillared halls for processions of priests, etc., was elaborated, the dark central chamber of the god, accessible to the higher priesthood only, became the sanctuary, and the outer hall was the common assembly.

The temple building consisted of a long outer hall, opening into a smaller one with the holy place, or parthenon, where stood the image of the god. The open court of the holy place was open to the priests alone, or to a worshipper accompanied by a priest for special religious purposes. The altar stood in the court, and the inner chambers in the outer hall also. The names of temples are many, and some of them show their great sanctity, others are marked as being 'the house of the shining mountain,' 'the lofty house.' This points to the high tower like structure called the ziqqurat, which stood beyond the important temples, or towered within the sacred enclosure where stood many temples dedicated to various gods, as well as the houses of priests building up the buildings of religious cities. The ziqqurat was a storied tower or pyramid, consisting of storeys and superimposed platforms. These varied in number and symbolized the mythological mountain of the world. It consisted of several storeys, these representing the seven zones of the earth. Each storey was approached by an inclined pathway or a flight of steps, either directly up the face or diagonally across it, until the top, which formed a broad platform, was reached. On the platform stood a chamber for the god, containing a couch and screens, and perhaps an image. As with the Mexican teocalli, procession winding up the tower could be plainly seen below, and, while the Egyptian temple in its grandest development was spread over a large area, the Babylonian, as far as the ziqqurat was concerned, aimed at reaching a lofty elevation, and represented in miniature the structure of the universe. It seems to have been regarded also as the grave of the god to whom it was dedicated, and persons of importance were sometimes buried round it. 2

Both Egyptian and Babylonian temples were endowed with lands which yielded large revenues. Hence, outside their religious purpose, they had greater or less extent of control on the nation. In the Babylonian temple area also, as the priests were administrators of the law, there were courts of justice, chambers where national archives were stored, and even tanks.

(c) The Greek temple was preceded by the nympos, the open sacred place with its ἑδαμον of the deity, altar, and other sacer. In the Ægean religion the sacred cave served as a temple where the Mother-goddess was worshipped, as in the double cave (upper and lower) of Dicte in Crete, where a rich store of cult objects has been found in recent years. 3 Palaces had their domestic chapel or shrine, plain and of small size, with a lodge at one end for images and sacred objects. The ruler was a priest-king, and in one instance, that of the palace of Knossos, "The Place of the Double Axe" (Mikyos), the whole building has the character of a temple. 4 Free-standing shrines or temples also existed, like that discovered at Gournia, a small enclosure 12 ft. square, in the heart of the town, in which were found many images and statues. With the development of the temple image, a house to shelter it became necessary, and the earliest type was no more than a rectangular oblong cela, or σκόπος. To this was soon added an additional chamber, with a couple of columns supporting an architrave, the corners of which rested on flattened columns attached to the ends of the side walls. These columns were at first of wood; the earliest stone columns date from the 6th cent. B.C. Throughout the whole period of Greek religion the rectangular cela remained as the central part of all Greek temples, though it was sometimes prolonged back and front with additional chambers, or surrounded by single or double rows of columns, while these were sometimes also introduced within the cela. Vitruvius, indeed, classifies temples according to the arrangement of the columns in relation to the cela. 5 The temples of the gods faced eastwards, and opposite the entrance stood the image of the god. The cela also contained an altar or altars, votive offerings, and treasure, the last being also stored in a chamber. The cela in these temples were never large; they were merely houses for the image, and hence were often kept closed. They were decorated with sculpture and painting both within and without. The temple stood within a τεμπειον, where the great altar was placed, and where the worship was carried on. 6

(d) The Roman templum, as already shown, was originally a rectangular space of ground marked off by the augur, in which a cult was pitched for augural purposes, like the 'medicine-hut' of the shaman. Strictly speaking, the temple of a god was the ades, but the word templum was now applied to such a structure, inaugurated by the augurs, and usually of larger and more complicated structure than the ades. In the earliest times divine dwellings were unknown. The grove, the cave, the hearth, were the earlier sacred places, or the vocolion, a small place consecrated to a god, enclosed by a fence or wall, but roofless, with an altar and possibly an image. The Romans, in erecting houses for the gods, were influenced by the Etruscan, and the Greeks, and the Roman temples were of wood, oblong, with one or more chambers and an open portico. The Roman temple had also a central cela, but of much greater length than those of the Etruscans, and probably a result of Etruscan influence. The structure of temples, whether simple or elaborate, was generally determined by Greek architecture, though there were differences in detail—e.g., the absence of columns at the back. Circular temples were also built; these had become common in Greece from the 4th cent. B.C., although it was not impossible that the form may be copied from the early Italian sanctuaries.

The temple building was erected on an eminence, and faced westwards. Before building a temple, a space of ground was liberata et effata by the augurs, and consecrated by the pontifex. When the building was erected, it was consecrated to a god. In some instances, however, a building might be consecrated to religious use without the preliminary augural ceremony. Such buildings were sacer, or ades sacer, like the temple of Vesta. 6 Outside the temple stood the altar, and within burned the sacred fire. In the temple were stored votive offerings, gifts, treasure of all lands, as well as the images of the gods.

(e) During the Vedic period in India, as has been seen, there was no temple in the strict meaning of the word. The concept of the temple in the pre-Buddhist period is known, but, if any exist, they must have been of wood, as they still are in Burma, the use of stone in temples being rare.

7. Vitruvius, de Architecture, III. 2
architecture not having been introduced until Asoka's reign, as a result of contact with the West. Religious edifices are certainly known for the first time in Buddhism. The primitive sacred object in Buddhism was not an image, but a relic. This at first was not set in a temple, but enclosed in a stūpa, or tope (Sinhalese dagoba)—an elongated hemispherical structure, standing on a square base, often finely carved or ornamented, and crowned with a square capital and the chhatra, or umbrella. Many stūpas contained no relic, but were erected as commemorations of objects. A path fenced by a railing surrounded the stūpa, for circumambulation. The stūpa was decorated with flags, streamers, and flowers; and it was the chief religious edifice of early Buddhism. Another religious edifice was the chaitya, a name applied to any religious monument—e.g., a stūpa with relics—but also restricted to a building corresponding to a temple or church, the ‘chaitya hall,’ with pillars, aisles and a front facing the stūpa. This soon became an imitated Buddhist feature.

The earliest known structural building of this type—e.g., at Ter, Kathahara—consists of an apsidal chamber with high barred-membrane windows. In front is a square in two storeys—perhaps a later addition, lower in height, with a flat roof supported by arches. In another example of the hall has a niche containing now a Hindu image, which was probably at one time a window. Within the temple stood a stūpa, now replaced by a squat chaitya image. Chaitya type must have been common in India. Buddhism made use of rock excavations for an early time for chaitya halls, which sometimes had aisles.

A third structure was the vihāra—a hall where the monks assembled, with cells at the sides for sleeping. The vihāras were later used as temples and became the centre of monastic buildings grouped around them. They usually stood beside chaityas, though they came to be furnished with chapels in which religious services could be performed as well as in the chaitya.

During ten centuries from Asoka's time onwards cave chaitya halls and vihāras were excavated all over India. In early examples in Bihār the chaitya halls are merely oblong chambers, sometimes with a cell or apse at the farther end and for the dagoba with its relic. Others are more elaborate. The facade of the cave represents the exterior of a wooden chaitya in all its details. The interior is apsidal. Pillars are cut out of the rock, with cells in the apse that now has the image of Buddha in front of it. Some of these caves are highly elaborate in their carving both within and without, and are associated with buildings and structures with aisles.

These vihāras have a central pillared hall with cells at the sides for monks. Beyond these are one or two storeyed porches or cella, surrounded by chapels. These are later additions. Here the architecture and adornment varies from simple to highly elaborate. The earliest freestanding spires were probably built with cells attached, and were sometimes of a square pyramidal form, each successive story decreasing in size, and giving a series of pillared halls on one side the other, with cells for the monks on the terraces. This architectural structure supplied a form for all the later temples of southern Hinduism. Attached to great monasteries, as at Peshāvar, was a court, or vihāra, with cells for images, and beyond that, opening from it, a circular or square court surrounded by similar cells, and with a stūpa in the centre. These belong to the period of Mahāyāna Buddhism.

One of the earliest known temples, or chaityas, is at Nalanda, in the stomach of the great bower of a banyan tree. Frequent restoration, it was probably erected in the 6th cent., and is 100 ft. high by 60 ft. wide. It is rectangular with an elongated pyramidal form of nine storeys, each with exterior niches for images, and the interior cells contained originally an image of Buddha. Such a nine-storied pilared temple is unique in India, but is found frequently north of the Himalayas.

Hindu temples doubtless owe much in their conception to Buddhism, and are of great variety in structure, size, and ornamentation. But there are two principal groups, one in Southern India of the so-called Dravidian type, and the other in Northern India, each of which shows great uniformity in general plan. In S. India the structure consists of the temple proper, or vihāra, the vehicle of the gods—a square building with a pyramidal roof which may have one or several storeys, like the typical stūpa it replaced. The storeyed vihāra at Badami, the hall containing the chief image of the god, and lit only from the doorway. Between the wall of the inner cell and the outer wall is the procession path, or padakṣeti. Pillared porches, or hall, and mantapam (Skr. mandapa) preceded this entrance, and are usually larger than the vihāra. Vihāra and mantapam stand in a walled enclosure with gate-pyramids, or gopura, corresponding to the Egyptian pyramid and Egyptian winged image. Within the enclosure stand a pillared hall, priests' dwellings, tanks, and other structures. These temples are devoted to the Vaiṣṇava and Śaiva cults, and are not otherwise distinguishable apart from the sculptures and images. The earliest examples of the vihāra show its derivation from the Buddhist apsidal chaitya hall. The apse for the relic-shrine has become a niche, and in another early example the circular apse has been given place to a cell with altar and image, surrounded by a tower, and the hall in front, distinct from the cell, is pillared. Cell and pillared nave or mantapam are the remains of these vihāras, which were of immense size. The most elaborate of these temples of later date, together with the storeyed tower. The enormous size and elaborate architectural and sculptural design of these buildings make them still marvellous rivals of the cathedrals of Europe. Some, besides the original enclosure with its gate-pyramids, have a second or even third exterior enclosure, with gopura, shrines, porches, cells, etc. The shrine in itself corresponds to the ordinary Hindu village temple, and in some examples has either been such a temple or is little more imposing than one of these. Sometimes two vihāras dedicated to different divinities stand within the central enclosure. In S. India the largest group or congeries of temple buildings is at Srirangam. There are seven enclosures, leading gradually to the central shrine, and the three surrounding the central enclosure are crowded with temples, porches, halls, etc., while in each wall there are two or three gopura of great height. ‘The idea is that each investing square of walls shall contain the worship of one god, by regular gradations to a central holy of holies.’

While the temples of this kind are of comparatively late date, others of earlier date, but presenting the same general features, have been carved out of the solid rock and excavated internally, so that they are monolithic temples. The chief examples are the rathas (ratha=vihāra) at Mamallapuram and the beautiful kāḷīṇu at Ellora.

The Northern temples (Ferguson's 'Indo-Aryan style')—e.g., in Orissa—are characterized by a pyramidal curvilinear tower on a polygonal base in which the central shrine, often quite small. The interior plan is square, and in the Orissan examples there are no pillars, or these are found only in modern additions. In front is a square porch with pyramidal roof, and sometimes in front of this again additional porches. The enclosing wall is always insignificant, if it is present at all, and has no gopura. Other shrines are always subordinate to the towering temple proper with its porch. Even the most elaborate temples preserve these essential features—e.g., the Konārundu Mahāvīra devala, or temple of Siva, at Khajurāho.

In all Hindu temples the inner cell or shrine with its image is the central feature round which all the other external features, like doors, windows, etc., are elaborated, they are all subordinate. The cell is cubical, of small dimensions, unornamented,
and unlike save by the doorway, and is too sacred to be entered by any but the priests. The exterior building surrounding the cell is of the most elaborately
workmanship, often of a kind of brick, and often little too explain by the method of producing it. In some districts enormous numbers of temples exist, ancient and modern, and at Benares, the sacred city, there are 1500, though none are older than the
first century of the Christian era. Shinto temples are not large and conform in structure to the architecture of an age when tools were few and primitive. The quality of the wood used in the structure is more important, for the ornamentation
and carving, whereas the carvings on Buddhist

list temples are highly elaborate, and have much gilding, lacquer-work, and painting. The oldest Shinto temples and many of the smaller ones are thatched with the thatch of China, showing that Chinese influences prevailed.

The temple area, at least in the case of the greater temples, has several enclosures, with flowerbeds and gates, and then the shrine. The main construction of the various structures differs according to the nature of the ground, usually on a slope, giving the chief entrance into the shrine. Shinto shrines, built by the early Buddhist, are preceded by the characteristic torii-set of two wooden uprights on the four corners, the upper one projecting and curving upwards at the ends; they correspond to the gateways of stupas and temples in India, like that of the tope at Sanchi, and in similar structures in religious architecture elsewhere. The temple consists of two or three halls, one an oratory or prayer-hall for worshipers, an intercolumnial hall, and the sanctuary open only to the priests. Shinto temples have no mirrors, a mirror usually constituting the symbol of deity. Some temples are dedicated to more than one divinity. An altar stands in the shrine. The lay-worshipper, entering the prayer-hall, pulls a rope attached to a gong and so announces his presence to the deity before beginning his devotions. Within the temple enclosure, as in China, the grounds often being laid out artifically, stand a pagoda, di, or two, and a temple, for sacred dances, library, votive-offering hall, store-houses, kitchen, priests' rooms, etc. This general description applies to both Shinto and Buddhist temples, though the latter are generally more gorgeous and imposing, and contain images, lights, votive offerings, lotus-flowers of silver, and the like. These shrines are usually built of wood, with gilding and porcelain casing, and metal work for roofs and pillars.

(f) In Tibet the Buddhist monasteries are the chief architectural structures, occupying large areas and containing a square for assemblies, in which stands the temple.

This is a straight rectangular building, on the top of which is a pavilion with a roof of Chinese type. The interior is divided into a nave and side aisles by pillars, which are painted in yellow and red. The interior of the Shinto images within the shrines is at one end. Other images stand along the side walls. There are no windows, and the interior is like a temple. They are often decorated with frescoes and hang with banners, lit by lamps. Seats for the various officials and Lay visitors are arranged according to their position in the order. The two small temples of the Shinto are by a flight of steps and a gateway guarded by demoniac figures. In the vestibules are images of the kings of the four quarters, and also prayer-wheels. These, in larger temples, are placed in detached chapels, in which are images of lower divinities. Occasionally, a small temple, a smaller temple is built in stepped terraces, like a vinman, crowned by a drum-like structure, on which are a square and an oblong mosque. Shrines to the different Buddha occupy the various stories. The great 'cathedral' at Lhasa faces eastward, and is three-storied, the roof being of timber. The approach is through a hall, adorned with pictures. Beyond this is an antechamber, leading to a pillared hall, in which statues of Buddha and bodhisattva are set by a series of colonnades. It is lit from above, as there are no side windows. On the side walls are chapels. Lattice-work separates the cross, and the longer side of the temple. The sacred place is approached by a staircase. This is in form of a square, with three other similar temples, three on the side. Another altar stands in the centre, and on the west is a recess with an image of Buddha. Here too are the seats of the Dalai and Tashi Lamas, and of the other officials. Many others, in the

(g) The Hebrews had different kinds of sanctuaries before the Temple was built at Jerusalem. The ‘tent of meeting’ referred to in Ex was pitched outside the camp in the wilderness. There Moses communed with God, who appeared in a pillar of cloud (Ex 33, Nu 11:9, 12:14). It is not described, a simple tent of a simple character. Its one guardian was Joshua, who ‘departed not out of the tent’ (Ex 33:11). The tent may have contained the sacred Ark, a kind of abode of deity, as Nu 7:8 says (cf. S 13), though tent and Ark are never mentioned together. Such portable sanctuaries were used by the Semites, either in nomadic or in more settled times, in the latter case certainly in the towns, and they were carried with the army. The Hebrew ‘tent’ was used for sacred divination like the Semitic portable sanctuary, and it may be compared with the sacred tents of the Omans. The Tabernacle, elaborately

2 Le Foucar, Le Sina anciem, archéologie, épigraphie, géographie (AMG xvii., xxxi.), Paris, 1890-1908; Spheres, in Ferguson, ii. 404 ff.
5 See § 4 (f) above.
described by P., and containing the Ark, was probably never more than an ideal priestly construction put together in the past. The sanctuary was originally kept in a 'house' or temple at Shiloh (1 S. 1:3), which may have been destroyed by the Philistines, who carried off the Ark. On its recovery, it was kept from then on in private houses, and possibly in a tent (2 S. 7:2), as it was protected by David at Jerusalem (2 S. 6:1; cf. 11:1). Tevets were also used after the settlement in Canaan on the 'high places' (2 K. 23, Ezk 16, 'seven high places').

The Temple was an house of stone, faced by a porch, in front of which stood two bronze pillars called Jachin and Boaz, like those in front of other Semitic temples. The structure consisted of an oblong temple, 90 cubits long, 40 broad, and 30 high. It was roofed with cedar, and had doors into a Holy Place (kubil), and an Oracle, or Most Holy Place (dibor)—a square dark chamber with cubits in each direction, leaving a space of 10 cubits above it. The interior walls were lined with cedar, carved, and ornamented with gold, and the floor was of Cypress. Between the walls of the structure and an outer wall, running round the sides and back to the height of 20 cubits, were three storied rooms for treasures and Temple ornaments. In the Temple wall, above these, there were latticed windows. The oracle, or Most Holy Place, the adytum, was the dwelling of Jehovah, and contained the ark. In the chamber which stood the altar of shewbread, the altar of incense, and ten candlesticks, five on each side. Outside the porch, which faced east, was the altar of burnt-offering, and near it a brazen sea supported by metal oxen, as well as ten smaller lavers on wheels. The people gathered for worship in the court, though it is called 'the priests' court'. The Holy Place was for the priests alone—a suggestive difference, appearing now for the first time. Thus the main features of the Temple were common with those of Syrian and Phoenician temples of the period—porch, outer chamber, and adytum—though some have suggested Egyptian influences in its construction. Ezekiel's ideal Temple has the same division of inner and outer sanctuaries and porch, but there are two courts, an inner one for the priests, an outer for the laity; and the sacred building was to be entirely surrounded by all these buildings, and was also to be shut out from Jerusalem by the lands of the Zadokites.

Zerubbabel's Temple of the restoration period had an outer court with walls and gates, and an inner court in which stood the altar of unhewn stones, and perhaps a laver. Into the inner court the laity appear to have had access for a time at least. The Temple itself had a Holy of Holies, but was unique among temples in possessing no representation or symbol of deity, the Ark having been lost. The presence of deity, however, was marked by the ritual of the Day of Atonement. The Holy Place was separated from the Holy Place by a curtain, and this chamber contained the table of shewbread, altar of incense, and the seven-branched candlestick. The Holy Place was entered by the high-priest alone.

Herod's Temple, built about 20 B.C., was on a larger scale than any of its predecessors, but the general plan was the same.

A large outer court—'the court of the Gentiles'—was surrounded by porches or chambers with marble pillars, built against the enclosing wall. In front of this was a raised platform, a second court surrounded by a terrace and an enclosing wall, with gates, and with balconies and porticoes on its inner side. Within this none but Jews might enter. A wall across the breadth of this inner court divided it into two parts, the smaller of which was occupied by the women. The other part was open to male worshippers, and within its area was the temple building, with its sumptuous brokework of stone enclosing the court of the priests. Within this court priests could only enter, except when the High Priest offered a sacrifice which required his presence. The Temple within this inner area was preceded by a lofty porch and gateway. This gave access to the Holy of Holies, or Holy of Holies, 'the great door of which hung a curtain, and this again to the dibor, the Holy of Holies, across the entrance to which hung two curtains. Above these was an upper storey, and a side building of three storeys surrounded the Temple on three sides. In the kubil, which was open only to the priests, stood the table of shewbread, altar of incense, and seven-branched candelabrum. The dibor was empty and quite dark, and was entered by the high-priest alone on the Day of Atonement. In front of the porch outside stood the altar of burnt-offering and the laver. The building was of white marble, and the eastern front and part of the walls were covered with gold. The dibor was 20 cubicls square; the kubil 40 cubits long, 20 broad, and 40 high. The porch was 100 cubits high, 100 broad, and 20 in depth, and extended on both sides beyond the Temple, with its side buildings, by some 15 cubits. Every part of the Temple was richly hewn, gave place throughout, its dominions, and he erected this for the Jews in his capital part of the land of policy.

5. Conclusion.—A general survey of temples shows that the essential part is the cela, or chamber, for the image of the god, and that, whatever additions are made are by way of increasing the splendour of the temple or as adjuncts to it, this remains constant, and is indeed its most important feature. It is the holy place, and is seldom if ever entered save by the priests. The temple at Eleusis forms an exception, for apparently there all was open to the worshippers. But generally worship takes place in the temple area or within the hall preceding the cela, which is very often dark and unlike the windows, the great synagogue of the bộl in the future and the modern mosque, and the Christian church are not strictly temples, for they are not houses enclosing a divine image, but places of public prayer. Yet even in the mosque the process, or mihrab, indicating the direction of the kahit, towards which the worshipper prays, has a certain parallel to the cela with its image which the worshipper also faces. The great mosque at Mecca also contains the kahit with the sacred black stone, and the kahit in its old but reconstructed sanctuary within the mosque. In the Christian church the chancel and the sanctuary with the altar are not ordinarily open to the laity as a whole in the same way that they approach the altar at the Holy Communion. Certain temples are national holy places, like the Pantheon at Rome, the kahit at Mecca, and similar great temples in important centres. Pilgrimages are often made to temples, and temples form asylum whither criminals flee for safety. Frequently there is much symbolism connected with the temple, and attention is paid to the direction in which it faces, most temples facing the east or the place of the rising sun. Very often in connexion with one great temple there will be a series of lesser shrines for other deities, all forming a group of sacred buildings within an area. The area is usually enclosed by a wall with gates, which are often most elaborate, and avenues, while pillars and pales stand about it, and it is often decorated with flags and streamers. It is interesting also to notice how frequently there is attached to the temple of a religion the old sacred places are retained, and successive buildings occupy the old site, or the same temple serves for new deities.

1 Jos. B. v., Ant. xv. 11.; Mishnkh, tr. Middoth.
settled on the coasts of the Scottish islands, of Ireland, of the Netherlands, and of N. France. The last named, occupied by the Vikings under the leadership of Hrolfr, son of Rognvald, officer of Harold the Fair-haired, king of Norway, became after 911 the earldom of Normandy. From 866 onwards a large part of England too came under Scandinavian rule, though this domination was only temporary. In 870, however, those Norwegian chieftains who had become unwilling to accept the sovereignty of Harold the Fair-haired began permanently to settle in Iceland, and more than 100 years later, in 985, Greenland was colonized from Iceland. Contemporaneous with these events were similar movements across the Baltic, which probably emanated mainly from Sweden. The establishment of the Russian kingdom (traditional date 863) was due to such bands of adventurers. In the East we hear of raids by parties of Scandinavians as far as the Caspian.

2. The conversion of the Teutonic peoples.—As conversion was in general due to direct contact with the Romans, we find that the Teutonic peoples first converted who were settled within the territories of the empire. Before the middle of the 4th cent. the conversion of the Goths by Wulfila to the Arian form of the Christian religion had begun and was practiced for about a century. From then this religion must have spread very rapidly to the Gepidae in E. Hungary and to other neighbouring peoples, since the Vandals appear to have been converted before the great movement to the West began. The Rugii in the province of Austria, the Langobardi, and some of the Burgundians also adopted the Arian form of Christianity, while the Franks before the middle of the 5th cent. and the English in the 7th were converted to Catholicism. It was due largely to the efforts of Irish and English missionaries that between the 6th and 8th centuries the remaining peoples on the Continent (except the Danes), viz. Alamanni, Bavarians, Old Saxons, and Frisians, were converted. In the 8th cent. after great difficulty Charlemagne enforced the adoption of Christianity throughout the territory of the Old Saxons who had been conquered by him. Among the Danes and the Swedes missionary enterprises met with some temporary success, especially in the 9th cent. during the time of the missionary Bishop Ansgar (868 to his death in 905). But Christianity was not permanently established in Denmark till after the defeat of Harold Gormsson by Otto II. in 973. In Norway Hakon I. (934–980) and his successors Harold II. and his brothers (986–975) were Christians, but the country was very little affected till the time of Olaf Tryggvason (995–1000), to whom conversion was really due. Many of the Scandinavians settled in the British Isles were converted before the close of the 9th cent., and these countries had become entirely Christian in the course of the 10th century. Some of the early settlers of Iceland had been converted to Christianity in the British Isles, but it was abandoned by their descendants and not established in the island till 1000. The traditional date of the establishment of Christianity in Sweden was 1008, but it was only towards the close of the 11th cent. that the heathen religion was entirely abolished. The adoption of Christianity by the Russians dates from 988.

3. Authorities.—(1) The little information which we possess relating to the religion of the Teutonic peoples during the period before their invasion of Roman territories in the 6th cent. is derived from the writings of Caesar, Strabo, and Tacitus—especially from the former two—authentic, written in the 1st cent. Some little evidence is also furnished by Roman inscriptions. Still less information is to be obtained from the period during which the Teutonic peoples lived on the Continent when they were converted, though a few scattered notices are preserved in the writings of such contemporaries as Marcellinus, bishop of Poitiers (c. 550), and especially ofProcopius (about the same
data). In the 8th and 9th centuries a similar evidence is to be derived from laws and capitulations in which heathen practices are prohibited, and survivals of heathen practices are occasionally acknowledged. The authority of the 9th century, however, is almost entirely Greek and Latin, in the 7th and 8th century, and, with the exception of Jordanes, a monk of Gothic family, we have no records of Teutonic antiquity.

As to actual beliefs we learn very little. The only myth which has come down to us from the pagan period and connected obviously with an attempt to explain the name of that people is given by Thirion in his "History of the West Langar barbarians," an anonymous work dating probably from the 7th century. There are also two German metrical charms from Mecklenburg (9th and 10th centuries). Beyond this we have scarcely more than a few names, particularly those of the days of the week, which are translations from Latin and date probably from the 4th century.

(4) English.—In England most of the evidence available, which is by far the most important, is contained in the writings of Bede (c. 672—735), who, who in the Chronicule attached to the de Rationale Temporum has left an account of the English in heathen times. A few references to their religion before conversion are preserved also in the Ecclesiastical History. No Anglo-Saxon poem is known which contains evidence of heathen practices, though some certain amount of information relating to heathen practices and stones survives in Latin documents, which are an account, of the calendar used by the English in heathen times. A few references to their religion before conversion are preserved also in the Ecclesiastical History. No Anglo-Saxon poem is known which contains evidence of heathen practices, though some certain amount of information relating to heathen practices and stones survives in Latin documents, which are an account, of the calendar used by the English in heathen times.

The their sources, which are stored with attestations of historical events, I have examined somewhat closely, and have woven together stories and legends in a manner resembling a medieval epopee. Their importance evidence from earlier times is also to be obtained from inscriptions and sculptured monuments of the heathen

(4) Norway and Iceland.—(a) For the religion of Norway and Iceland far more abundant information is available from the sources, which is given in general is a more detailed account of the evidence of heathen ceremonies. The first important are the Islendinga Saga ("Stories of the Icelanders"). Anonymous works written chiefly in the 10th century, though a few may be slightly older. They are based on oral sagas-stories preserved by oral tradition in a more or less fixed form of words—found in the later part of the 10th and early 11th centuries. Among these special mention may be made of the Edda of Snorre Sturlason, which is the earliest extant book of poetry, which contains the religious practices of a certain Thorolf of Møre, who emigrated to Iceland c. 824 to escape from Harold the Fair-haired. The Edda contains many of the characteristics which are also given in Egils Saga, Njöls Saga, Völg-Vigna Saga. These sagas tell us much about the rites and beliefs of the heathen Icelanders both before and after the settlement. For throughout the period covered by the Islendinga Saga (c. 920-1000) it was the custom of the Icelanders to visit their country, and consequently the scene of the sagas is often laid in Norway.

Norwe. A 11th-century inscription from the island of Yggdras, contained in the same account, which is the earliest extant book of poetry, which contains the religious practices of a certain Thorolf of Møre, who emigrated to Iceland c. 824 to escape from Harold the Fair-haired. The Edda contains many of the characteristics which are also given in Egils Saga, Njöls Saga, Völg-Vigna Saga. These sagas tell us much about the rites and beliefs of the heathen Icelanders both before and after the settlement. For throughout the period covered by the Islendinga Saga (c. 920-1000) it was the custom of the Icelanders to visit their country, and consequently the scene of the sagas is often laid in Norway.

(c) The chief authority for the ethics of heathen times is the Edda poems called the Poetic Edda, which is preserved as a composite work, made up of five different poems. In substance it may be compared with Hesiod's Works and Days and Theogony, but with the one exception of Theogony, the heathen maxims occur in several other Edda poems, particularly in the Fornaldar Saga and the early works of Snorre Sturlason. The earliest Anglo-Saxon poems, though these do not often contain distinctively heathen precepts. The ethical standards of heathen times are no doubt faithfully portrayed in early Norse poetry and in saga relating to the same period. With certain reservations the same may be said of Beowulf and other Anglo-Saxon poems.

4. Difficulties.—One of the greatest difficulties which the student of Teutonic mythology has to face is the question of how far the mythological and religious practices found in Iceland alone or in Norway, or elsewhere, are derived from the older Teutonic religions and practices found in Iceland and Norway, that positive nor negative conclusions can be drawn with any confidence. Thus we have no information except from Norwegian and Icelandic sources of some of the more important early Teutonic resurrection myths, such as Frigg's thornchapel or Odin's scandin; yet are we justified in assuming that these deities were unknown except in Norway and Iceland? One is forced to hesitate; for occasionally evidence of their existence is found in the monuments and concepts in which one might justifiably have assumed to be the creation of Norse literature. Othnir's horse, Sleipnir—to quote one instance—is
TEUTONIC RELIGION

represented as having eight legs in Norse mythology, and we find a clear representation of such a hero worshipped as Odin, the god of Iduna, of Gotland.1 The riding valkyryr too (one of the most picturesque conceptions of Norse mythology) might well have been regarded as the creation of Norwegian poetry, had we not met with the same conception on a Swedish inscription at Rök; indeed with great probability it may be traced also in an Anglo-Saxon charm.

The difficulty which confronts the student is that at first sight there appears to be an irreconcilable discrepancy between the account of Norse mythology given by Snorri and the references to religious beliefs and observances recorded in the Íslendinga Saga. The former represents Odin as the chief and most important god of the Norse pantheon; and the early poems of the Edda and of the skalds agree with this representation. The Íslendinga Saga, on the other hand, scarcely records a single instance of worship of Odin. In them Thor is by far the most prominent deity, and after him Frey. It is only in the Formular Sagor, with the emphasis on valhalla, corresponding to the legendary period 2 that we find Odin prominent. The explanation of this fact is probably that the worship of Odin and that of Thor belong to different classes of the population; the former was the god of the royal families and of their retinue of followers, while the latter was the god of the free population in general. Kingship never existed in Iceland, and very few settlers appear to have been of royal blood, and consequently the god of this class of society, though still celebrated in poetry, does not seem to have received any actual worship.

Lastly, one characteristic of Norse mythology may doubtless be accounted for by the fact that so much of our information is drawn from Iceland. In peculiar contrast to the mythology of other peoples, the Norse deities are not associated with particular localities, and herein no student can fail to contrast Norse and Greek mythologies. Frey indeed is traditionally associated with Upsala, and there are indications which connect Gifjon with Sjælland; but these instances are rare. The homes of the gods mentioned in the Edda poems—Breithablik, the house of Balder, Himinbjorg, the home of Heimdall, etc.—seem to be purely mythical. Some evidence is to be found in the Roman-Saxon period, that various deities were connected with localities; Oneglia, Riga, Stockholm, and Iceland as well as with districts in other Teutonic lands. The reason for this comparative absence of local association is obviously to be found in the fact that by their emigration the colonists were cut off from the ancient sanctuaries of their race.

II. GODS, SPIRITS, AND MYTHICAL BEINGS.

Since Norse literature offers an abundance of material for the study of its mythology and religion, it seems almost necessary to make it the basis of any description of Teutonic mythology and religion. In the following account under each heading an attempt will be made to show also how far the testimony available for the mythology of the other Teutonic peoples is corroborative or discordant. In the first place, it is convenient to distinguish between (1) beings essentially mythical and (2) beings or phenomena in themselves natural but treated mythologically.

I. BEINGS ESSENTIALLY MYTHICAL.

- This class consists of the following: (1) aesar (sing. daz) and aesi (sing. dgsi); (2) yndi, yndi (sing. dgsi); (3) dvergir (sing. dvergr); (4) alfir (sing. alfr); (5) heimskir, noer; (6) valkyryr (sing. valkyrja), (7) fyjgar (sing. fylgja), (8) landeterir, (9) such impersonal conceptions as Yggdrasil's ash.

1 Cf. De Chastis, The Viking Age, I, 53.
2 Cf. Íslendinga Saga.
The association of Freyr with Upsala does not belong to this category. Besides their individual homes, the gods collectively are said to inhabit Asgard. Their meeting-place is called Ytha-völfr. In Gæstræks Saga, 7, the hero Starkathing is represented as attending a conference of the gods. The significance of this (together with Yggdrasíl's asb and the fact that völfr originally meant 'wood') is seen below, IV. 4.

A totally different account of the gods is given by Snorri, curiously enough, in the early chapters of Ynglings Saga. Here they are represented as men who had once lived on the earth and come to Sweden from S.E. Europe. Odin is represented as dying and being succeeded in the leadership of the gods by Njóðr, whose reign was marked by prosperity and peace. The latter on his death was succeeded by his son Frey, whose reign was of the same character. Frey was succeeded by his sister Freyja, and she in turn by Frey's sons, grandsons, etc., who are no longer represented as gods. 2 This story is no doubt of numismatic origin, but the association of Freyr with Upsala is ancient and traditional. In Saxo he is represented as instituting the Upsala sacrifices and is said to be the ancestor of certain Swedish warriors. Ynglings Saga itself is largely based on an early poem Ynglingatal, which traces the ancestry of the Scandinavian royal family through the god Freyr to Frey, who is probably to be identified with Frico of Adam of Bremen's account. 3

There are many stories relating the appearances of the gods to men. These occur most frequently in the Foraldrar Sögur, and the deity most mentioned in Odin. 4

(b) Danish and Swedish. On examining non-Norse sources, we find a number of the Norse gods mentioned by Saxo, including Woden (Othin), Thor, Freyr, Frigg, and Oller (Ullr), as well as Balder and Hoder (Höðr), who, however, are by him represented as demi-god and human being respectively. It is not always clear how far Saxo draws from jezehane sources, but there can be little doubt that the majority of these names can be traced back to Frey, who is certainly associated with Upsala and Sweden, and Saxo is also the only authority who gives the story of the Oller (Ullr). 5 With Saxo the home of the gods is sometimes called Byzantium, which apparently is used to translate Asgard. With regard to Swedish beliefs, we have important earlier evidence in Adam of Bremen's description of the sanctuary at Upsala. This contained the images of three gods, Thor, Woden (i.e., Odin), and a deity Frico, who is in all probability to be identified with Freyr. No stories of the gods are, however, recorded from Sweden. It was not until much later that we have a short account of the stories of the people of Thule (i.e. Scandinavia) written by Procopius. 6 The only deity specially mentioned by him is Ares, and it is not clear whether by this name we are to understand Odin or Tyr. An early trace of worship of Freyr may be preserved in the name Fröve(n)—the god among the Wagri of N.E. Holstein.

(c) English. For the mythology of the heathen English we have little or no information except that to be obtained from names. The A.S. word osa, corresponding to the O.N. ass, occurs as the name of one of the letters of the English alphabet (though here apparently its meaning is forgotten). 7 It also is to be found very frequently in personal names, as in Oswald, and the plural form occurs only in the genitive case in an A.S. charm. 8 The form Uth or assa does not occur, except in a few personal names—e.g., Wanaeara—unless this is possibly the origin of the preix winter in wintacne ('epileptic'), in which case we might compare elf-adu in Saxon Lœcchdun, 9 ii. 344. 50.

Othin's name is also preserved—A. S. Woden—as the ancestor of all the royal families except that of Essex, which traced its genealogy to a certain Saxenmeat. His name is also preserved in 'Wednesday,' (as a translation of Wodan's name). (O.N. Thor) is known only from 'Thursday' (where his name is used to translate 'Jupiter') and from certain place-names, e.g., Thunresleah and Thunresford.

The name of Fri (i.e. Frigg) is preserved only in 'Friday' (as translation of 'Venus'), and Ti (Tig) (O.N. Tyr) occurs in glossaries as translation of 'Mars,' and, like osa, is the name of one of the letters of the Runic alphabet. His name is preserved also in 'Tuesday.' In Bede's account of the heathen English calendar two months (corresponding to March and April) are said to derive their names from goddesses called Hrafn (Hraста) and Eastre (Easter). The existence of these deities has been doubted by some modern writers. We also find a reference, in a charm which appears to be a mixture of Christian and heathen beliefs, to Erce ('Mother of Earth'), with which we may compare Semmes Mate (Leitth). Lastly, mention may be made of Ing, the name of one of the letters in the Runic alphabet. In the verses dealing with Ing we are told that when Ing appeared first among the East Danes, but afterwards he went east over the sea, his car speeding after him.

(d) German. With regard to German mythology, a fragment relating to gods is preserved in one of the Merseburg charms, in which we are told that Wodan and 'Phol' were riding to the forest when the pastorn joint of the latter's horse was dislocated. Various deities tried by their incantations to put it right. The names mentioned are Friga and her sister Volva, 9 and Smithgund and her sister Sunna. The only other myth recorded occurs in certain Langobardic writings and is rather striking. 'The two tribes of Vandals and Langobardi (then called Wimines) appealed to the gods for victory in their war with each other. The Vandals approached Woden, who replied: 'Whatsoever I shall first look upon when the sun rises, to him will I give victory.' Woden appeared to Frigg, wife of Wodan, who gave counsel that at sunrise the women of the Wimines should come with their husbands and let down their hair about their faces, like beards. And when Woden saw the Wimines women, he said: 'Who are these Langobardi?' And Friga replied: 'As a token of the name give them also victory.' And he gave them victory.' 4

Apart from these references, the gods are known from the name of the week: Donar (O.N. Thor; A.S. Thanur) throughout the German area; Fria (Frigg, Fri) at least in the greater part of German area; Wodan (Othin, Woden) only in the north-west and in Holland; Ti (Tig) only in the south-west. Occasional references to the gods are also found in lives of missionary saints. Thus the worship of Wodan among the Alamanni is mentioned in Jona's Life of Columbanus, while in other cases German deities are no doubt intended by old names such as Jupiter. In a formula used after baptism and commonly supposed to have come from the region of the Old Saxons (though the language is rather peculiar) the convert is required to adjure Wodan and Thunor and Saxnot together with other monsters (Unholden) associated with them. This Saxnot is doubtless to be identified with the name that stands at the head of the genealogy of the Saxnot. Lastly, in Aelred's Life of St. Cuthbert we hear of a god called Fosite. He was worshipped on a certain island, called after him and identified

3 Cf. Pelling's Old Norse mythology.
3 Gringo langobardiarm. 
by Adam of Bremen with Halogaland. 1 Grimm and others have identified this deity with Forsete, the son of Baldur, 2 but discrepancies in the spelling of his name have hindered this theory.

In Gothic no names of deities have been preserved, unless we place in this category the name of the Runic letter Enguz (A. S. Inguz). The word ananis, however (O. N. Annis), is of Teutonic origin. Hence it is generally accepted that Norse Thor is a name frequently used. The Teutonic Thor has a particularly interesting connexion. He states that the Gods called their chief to whose good fortune they thought they owed their victory, 'non parus homines sed seminodes id casae.' In early Norse times Thor, 3 though unfortunately he seldom mentions Teutonic deities by their native names, twice mentions Mars and Mercurius among the deities of the Germans, and in the Germania specially mentions Mercurius as the deity most worshipped by them. There can be no doubt that the deities meant are the later Zin and Wotan (N. Tirand Othin). In ch. 9 too he mentions Hercules and in Annals, ii. 12, a grove sacred to him. It is not easy to ascertain the identity of their deities. Some modern writers believe Donar (O. N. Thor); A. S. Thunor) to be intended; others think the reference is to a tribal deity. 4 In the same chapter Tacitus calls Thor the best shipman with the symbol of a ship. Here again we are left in doubt as to the identity of the deity. Perhaps we may include the 'templeum Tanfanne' mentioned in Annals, i. 21, and 'Iacum quem Badahemna vocabat' among their deities.

In Germ. 43 he speaks of a grove in which Castor and Pollux are worshipped under the name of deities. The fullest account, however, of a Teutonic deity which may be Thors is in the accenting with the inscription from the world. It is to be observed that the name Nertas is identical with the O. N. Jöthor, and, in spite of the difference in sex, we need scarcely doubt their original identity. Rites similar to those which Tacitus describes in connexion with Nertas are associated with Freyr, son of Jöthor.

Apart from Tacitus, practically the only reference to Teutonic deities occur in inscriptions upon altars raised by soldiers in the Rhenish forests. Besides Mars, these altars sometimes record a deity Nebalennia with the prow of a ship, and this may possibly be a reference to his connexion with the sea. In the introduction to Germ. 2 Tacitus states that in their ancient poems the Germans trace the origin of their race to a god called Tanito. When the race became settled he was the son of Jomunga ('Jomunga') (and he again had three sons from whom three groups of peoples were named and descendent. The former Ingaves (or Ingase), Pieaves, and Etaeaves. These groups-name are mentioned also by Filleni the Elder, and a genealogy of the kind classifying Teutonic and other peoples is found in Merovingian times. We have no trace elsewhere of any god or hero called Isis, but there is some slight evidence for an Irish. The name Ingaves (or Ingase) is undoubtedly to be connected with A. S. Ing, who is associated in tradition with the Danes and with the titles Ingulsa Eoder and Frea Ingulsa, used in Beowulf of the King of the Danes. It is further to be noticed that in Norse the god Frey and his descendants sometimes bear the title Yngvi, the full title of the god being Yngvi-Freyr or Ingim-Freyr. His descendants—the ancient kings of Sweden—are known collectively as Ynglings. It will be seen that there is some discrepancy between Norse and English tradition, the former connecting the name with Sweden, the latter with Denmark; whatever may be the explanation of this, the association of the word with Frey, the son of Jöthor, seems to point to some connexion with the worship of Nertas—a conclusion which is confirmed by the fact that Tacitus, with whom Filleni is substantially in agreement, refers to his deities as 'frost-giants.' 5

2. Jötnar.—(a) Norse.—Giants or monsters play an important part in the stories of Norse mythology. When viewed collectively, they are called jötnar or thursar. Sometimes also we hear of the jotnar, the 'frost-giants' and jotnar ('cliff-giants'). Most often, however, they appear singly, and the corresponding feminine form of the word jötunn is ygrir. Unlike the aseir, they do not appear to form an organized community as a whole, though sometimes individual jötunar (like Thrym, 'Lord of the Thursar') seem to have communities under their dominion. The home of the giant is known as Jötunhelmin, by some called by the name of the giant. The story, far to the north-east, remote from Asgard, the home of the aseir. The general characteristics of the giants were huge form and superhuman strength.

The story of Skrymnir 1 tells dramatically how huge and strong a giant was conceived to be in Norse literature. For the god Thor to take refuge one night in the thunor of one of his gloves, and, having placed it on his hammer, Skrymnir only asked whether a leaf had fluttered down into his face.

Although the giants may have had monster shapes, it seems clear that sometimes the giantesses were deemed very beautiful, as in the case of Gerthor, to whose radiant beauty Freyr lost his heart.

It is necessary to distinguish between anthropo-

and thoromorphous, though it is difficult to draw a definite line between them; e.g., Loki has thoromorphous children. Many of the former dwarf in runic inscriptions,捷 figures. Such giants, as they have been described as the sons of Frey, Thrymr, Hymir, Lungnir, Geirröthr, and Thjazi, all of whom fight with Thor, and are slain by him.

Sometimes the jötunar are on friendly terms with the aseir: cf. 2 Homer, if a thyrsus of Thor. Our picture of the goddesses is established through an appeal to her strength that the funeral ship was able to be launched. Further, we find a number of marriages between gods and giants; Njörð married Skath, the daughter of Thjalfa, 3 Freyr married Gerthor, daughter of Gyanir; and even Odin, father of the gods, had a son and Magri by a giantess Jarna-Saxa. This giantess, with others, the daughter of Geirröthr, appears as the mother of Heimdelin in Hymiltilfú, but this part of the poem (the short Vöðupsa) is commonly believed to be a late composition. The giants too are often represented as waiting to marry ygrir: Thjazi carries off Thun, and Freyja was sued for by Thrymr. It may here be mentioned that anthropomorphous giants often had the power to assume the form of animals. In the incident referred to above, Thjazi assumes the form of an eagle, and in Vatthváthmairi, 4 the wind-demon Hraenavarg is described as a jötn in the shape of an eagle.

Although the giants are presumably gifted with tremendous physical strength, they are not always lacking in intelligence. For we have an incident of Othin's visit to the giant Vatrathrúnin in order to learn of his store of wisdom.

The chief thoromorphous jötunar are the Mithgarthornar, or mountain-giants, and the Fenrisulf, both of whom together with Hiel are said to be the offspring of Lod and the giantess Angroth (she who bodes distress). Mithgarthornar is represented in Gylfasingin, 34, as a kind of vast serpent stretching round the earth. In Hymiskvitha, 23, Thor goes fishing and catches it on his hook. Fenrisulf is a wolf which the gods succeed after great difficulty in lettering, though not until he has bitten off Tyr's hand, which has been placed in his mouth as a pledge of the good faith of the gods. 2 At the end of the world he will burst his bonds and attack the gods in conjunction with Mithgarthornar, Loki, Surrr (a fire-demon), and other monsters. Although usually found in the company of the aseir, it would seem that Lod belonged to the jotunar. Here also we should perhaps mention Egir; the name of the being, who is on friendly terms with the gods and visits them. 4 From Formaldr Sigr, ii. 17, it seems clear that he was the son of Forncjotr, and in Hymiskvitha, 1, 2, he is described as a berys ("cliff-dweller") or a "frost-dweller"—both words are synonymous with jötunn. His wife is called Iara,
and is said to have a net in which she catches all who perish in the sea. There is a suggestion too from the story in Pétur Smári Sogu that a man drowning bath by drowning would do well to carry gold on his person in order to be received well in the halls of Ran. 1

Apart from mythological works monsters are not infrequently mentioned both in the Islandinga Söguðr and in sagas of the kings, as well as in the Formaldar Söguðr, though they are more usually called frökk than jötnar.

A Norse creature consists of two demons (male and female) at Sand Hagsa in the north of Iceland encountered by Greitr; 2 the female demon who ate eleven merchants in a frost house in the Norwegian mountains; 3 and the monster Brêt and his mother in the form of a black cat encountered by Ónar Stórólfsson in the Saga of Old Tryggvason. 4

In those Formaldar Söguðr which deal with the north of Norway, viz. Ketilt Saga Haengo and Grims Saga Lothinskamma, monsters are frequently mentioned. It may be noticed that Thorgestur Helgabréthr once appears among them, 4 and Saxo's Danish History abounds with such stories. Tales like these recall Procopius's remark: 'The rest of the inhabitants of Thule ... worship gods and demons in heaven and in air and in sea and certain other daemons which are said to be in the waters of springs and rivers.' 5

A spring was the home of Mimir. His story is given in Frey's Saga, 6 where the asir named Himör sends a pledge to the men, who cut off his head and return it to the asir. Óthin then smears the head with words to preserve it and keeps it for divining purposes. In Völuspá, 45, Óthin is said to converse with Mimir's head. We are told further 7 that under one of the roots of Yggdrasíi's ash is Aluminæwar ('Mimir's spring'), in which are hidden cunning and wisdom. Óthin is told later that the asir was drinking a drink and was refused until he left his eye as a pledge. This he granted, and in Völuspá, 98, the stëiþ says: 'Mimir drinks mead every morning from the root of the asir.'

A reference to a Miming is made by Saxo 8 in his story of Balder and Höðr. Here Miming is called the 'silvarum satyrus,' and is said to have in his possession 'a golden and magic bracelet, the former of which alone of all weapons will prevail against the charmed life of Balder.' At the beginning of Thithrekra Saga too Mimir is the name of the teacher, both of Sigfrid and Velint. It is to be noticed also that Miming was the name of Weland's famous sword in the poem of Waldhere.

Perhaps originally Mimir was famed for his wisdom, but later tradition laid stress on his skill in ✔

(c) German.—There is no doubt that these monsters were known also in Germany, where we 1 fon for them the words duris (i.e. thurses). No stories of them, however, from very early times have come to have been preserved, but mediaval German poetry and legend abound with references to such beings.

3. Dvergar.—(a) Norse.—Dvergar is the name given collectively to the dwarfs in Old Norse literature, and to many of them are assigned individual names in Völuspá, 15 ff., where also their connexion is said. In Gigfjörgfégningi, 14, Snorri tells us that they first received life as maggots in the flesh of Ymir, but were endowed with intelligence by the gods, and given human shape. The dvergar were said to live either down in the earth or more frequently in stones (rocks), in front of which they were sometimes seen in the evening.

Svegdr one evening at sunset saw a dwarf sitting under a stone, and, when the dwarf refused him gold, he tortured him and put an end to him.

It is perhaps to their connexion with rocks that the word for echo—dvergrmal ('dwarf-speech')—owes its origin. In Norse literature they were renowned particularly for their skill in metal-work, and those where the work was fashioned by their hands —so much so that a compound word has been formed to denote great skill, viz. dverg-heyr. 9

On most occasions the dwarfs appear in human form, though small, but in Reginndad Atlavari lives in a water-fall in the shape of a pike and is caught in that form by Loki, who borrows Baldr's net for the purpose. It is from him that Loki gets the gold required to ransom himself and his companions, Óthin and Höðr, from Hreimothri, and that Jókr after he plays an important part in the Völuspá says: 'The dvergar sages, after this; Andvari withdraws into the stone and curses all who shall possess the gold. 10

Possibly, too, 'Mingius, sylvanar satyrus' mentioned by Saxo is associated with dwarfs, and possibly this Mingius is identical with Völundr or Weland, the most famous of all such beings.

(b) The word corresponding to O.N. dowari is to be found in all languages of the Teutonic peoples extant—O.H.G. tveor, A.S. dowor. In A.S. literature we find a charm against a dwarf. Dwarfs are also figured in German folklore. Thus in the Seyfriedthiad the treasure which the hero won after killing the dragon belonged in reality to some dwarfs, sons of Nybing. 11

4. Aftár—see these see art. DEMONS AND SPIRITS (Teutonic), vol. iv. p. 635.

5. Norrn.—For these see art. DOOM, DOOM MYTHS (Teutonic).

6. Valkyriy.—(a) Norse.—Valkyries, or 'choosers of the slain,' were supernatural maidens sent by Óthin to determine the course of battles and to choose warriors for Valhall. They are also known as valkyriy, bålóyn, valkyriy, and okseyngar, and in Völuspá, 31— if the phrase is not an interpolation—they are called monnur herjas. By the Edda poems, Grimmismad, 36, and Völuspá, 31, we are given certain information about them, and of the former poem Snorri has made use in Gigf. 36. In Grimmismad our attention is drawn mainly to one aspect of the valkyries—their duties in Valhall; for Óthin is represented in the poem as crying to his maidens to bear him the ale as they do the einherjar, which are feasting in the evening in the hall. Here we have the names of thirteen valkyries given.

Snorri inserts this stanza from Grimmismad in his early account of Valhall in Gigf. 38, expanding it in prose and adding that Óthin sends these maidens to battle. He specially mentions—

2 Gigf. 155, 15; also Hóerrar Saga, 6.
3 See art. DEMONS AND SPIRITS (Teutonic), vol. iv. p. 633.
Guthr, Rosta, and Skuld, the youngest norm, as undertaking this work. It is this function of the Valkyries that the poet of Völuspá deals with in his poem. He gives a picture of a band of Valkyries, six in number and named, equipped and ready to ride into battle. From other references in Norse literature we learn that the four were riding in the air and over the sea ('lopt ok lög'), white and shining with their helmets, shields, and spears—a splendid company of maiden warriors.1

With the Valkyries may perhaps be compared the Slavic conception of the elka, who was thought to ride a seven-year-old stag and bridge him with snakes. The characteristic, attributed to her by the Slavs, of discharging fatal darts at men while in the air is especially interesting when compared with a similar reference in an A.S. charm.2

Other Valkyries, who became the wives and lovers of heroes, and are represented as human in origin, although included by Othin among his battle-maidens, are mentioned below.3 From a story in Saxo4 we hear of maidens called 'sympieic sylvester, who seem to be Valkyries.

Hotherus (O.N. Höðr), the enemy of Balder, was hunting in a wood when he came to a lodge where he was greeted by several Valkyries. Just as they were going to leave him, they told him that they had married him in that lodge to determine the fortunes of war and that often they secretly assisted their friends in battle, and gained thereby the victory.

Saemund and the Valkyries were so closely bound up with the fate of warriors and the issue of battles, it is clear that they cannot be entirely dissociated from the norms. The close relationship between the two conceptions is clearly seen in the poem given in Njáls Saga, 156.

There in the accompanying prose account a certain Darruth saw women riding twelve together to a bower and, looking within, he saw that they had set up a large 'nótt'—men's heads served for weights, men's entrails for the weft and warp, a sward for the cloth, and an arrow for the shaft. They sang at their work and in their song seemed to describe themselves as Valkyries, and finally they rode away, six to the south and six to the north.

Moreover, in Gylf. 36 Skuld, the 'youngest norm,' is included among the Valkyries. In contrast with the norms, however, the Valkyries are in Norse mythology associated chiefly with Othin, whose messengers they are, though in one passage quoted from Saxo they seem to assist Hother, who is an enemy of the gods.

(b) Anglo-Saxon.—In A.S. literature we find on several occasions the word wælcyrge (O.N. waelcyrge). In glossaries5 it is glossed 'Eriyris,' 'Belona,' 'Tisiphone.' In Wolstan's Sermon on Anglos the wælcyrge are clasped together with other words and in a clause mention is made of certain women who ride over the land and array their forces. They hurl darts at human beings, who are thereafter seized with sudden pain. The word wælcyrge is not mentioned in the latter example, but there can be little doubt that the lines refer to them.

(c) German.—In German the word does not occur, though the idea does in the Merseburg charm, where they are called idar. They are represented as fastening bonds, holding back the host, and tagging at the fetter.

7. Fyglir.—For these see art. SOUL (Teutonic).

Landvaettr.—Just as the fylgiu presided over the individual, so the landvaettr presided over the country as its tutelary spirits. A certain number of references are to be found in Norse literature, not the least interesting being the historical law mentioned in the Landnámabók, iv. 7, which ordered that figure-heads of ships were to be removed on approaching the island, lest they should frighten the landvaettr with their 'yawn-
ing heads and gaping snouts.' In Egin Saga, 57, Egil turns a curse against the landvaettr of Norway in order to free one Einar, King Eric and Gunn unhild, from whom he was fleeing. Sometimes landvaettr seemed to favour certain individuals, as was the case with Bjorn, the he-goat whom the Fyglir accompanied to the battle, and his brothers were accompanied by them when hunting and fishing.1

The landvaettr seem not always to be very clearly distinguished from the fylgiu of individuals; e.g. in the Saga of Olaf Tryggvasson (Heimskringla), 36, it seems to be suggested that the landvaettr of Iceland seen by the wizard are connected in some way with the great chiefs of the land. The word vaettr (pl. vaettir) is identical with A.S. wæht, 'creature,' etc., although the latter has not the specialized meaning of Old Norse. For the idea itself we may refer to the genius loci of the Romans.

9. Yggdrasil's ash.—Our information for Yggdrasil's ash is mainly derived from Völuspá, 19, 20, 27, and Grímnismál, 29–35. References also appear in Eyrkynnsáld, 15–18. From Völuspá we learn that the ash Yggdrasil, from whose lot falls over the well of Úrðr ('Fate'), and from it falls dew into the vales beneath. Under this tree dwell the three norms. In Grímnismál not only do we learn that 'trexgoe' goes daily to the judgment-seat under the ash, but we are given many details about its appearance.

It has three roots stretching in three directions. Hel dwells under one, the forefathers under another, and under the third of the children of men. Its branches are the home of an eagle, a hawk, and a squired Bataatik, who bears messages to Nithög dwelling below. Four harts gnaw the ash, their branches, and many are the serpents which lie under its boughs.

In Gylf. 15f. Snorri adds that in the spring of Fatre dwell two swans, from whom are sprung all birds of that race, and also from the branches of the ash drops dwell called 'honey-dew,' on which bees feed. The ash is sometimes called Yggdorasl, Askr Yggdrasill, Lóðrithr, Mjötvítir, and Mima-neithr seem to be names for the same tree. In both Grímnismál and Eyrkynnsáld we have indications that the ash is being gradually destroyed; a hart bites it from above, it rots in its side, and Nithög gnaws it from beneath. And, according to Völuspá, 47, the last years come, it will shiver and groan. The golden foliaged Glásir which stands by 'Sigtuns' halls' is perhaps to be identified with it. One other striking passage should be mentioned—Yggdrasil is described as hanging on that tree of which no one knows from whose roots it proceeds.

A similar conception to that of a world-tree is certainly to be found among other Teutonic peoples—e.g., among the Old Saxons, who worshipped the Irmenusl. Several features in Adam of Bremen's description of the tree beside the temple of Upsala also recall Yggdrasil's ash.2

ii. NATURAL THINGS VIEWED MYTHOLOGI-
CALLY.—1. Day and night.—From references in Vafthrásinnatal, 13, 25, Night, the daughter of Nórr, is depicted as driving across the sky her chariot and as a reinman, from whom falls the spume which makes the dew in the valleys. Of Day we are only told that he is born of Dellingr. In Gylf. 10 Snorri gives further genealogical details. In Aslenssáld, 30, is given a list of names by which Night is known among the jötnar, elves, and gods. In the document Haukr Noregr Bygthi we find a genealogy traced back to Swan the Red, son of Dag, his son of Deilár, and the lady of Sol, daughter of Dulitt. For the personifi-

TEUTONIC RELIGION

Greek mythology, especially the allusions to the chariots of the Sun and the Moon. 1

2. Sun: For this see art. SUN, MOON, AND STARS (Teutonic and Balto-Slavic).

3. Rainbow.—To the old Norse people the rainbow was the bridge built by the gods to span the space between earth and heaven. Birnæs or Birna was also the name, and it was triple-hued. Though it is made with cunning and of great strength, Snorri tells 2 that the day will come when it shall be broken. This bridge is referred to as Birnæs in the Older Edda, though it is not explicitly identified with the rainbow. In Gylf. 27 Heindallr is named as guarding it against the frost and cliff giants.

4. Winds and seasons.—In Vafthrúðnismál, 27, 37, references are made to the winds and seasons. The winds, according to the poet, arise from beneath the wings of the giant Hraesvelgr, who sits at the end of heaven in the form of an eagle. In Vafth. 27 Vindőr is said to be the father of Winter and Svasudr of Summer. In Gylf. 18 Snorri gives further details, explaining that the difference between Summer and Winter is to be accounted for by the difference of parentage, for each has inherited the disposition of his father.

5. Thor.—In the preceding paragraphs we have been considering those natural phenomena which are scarcely distinguished from the natural bodies or phenomena which have given rise to them. There can be no doubt, however, that other mythological conceptions originated from similar phenomena in early times, though their identity with these was subsequently forgotten. Thus the name of the god Thor is identical with the word for "thunder" preserved in English and German. The identity was practically forgotten in Norse owing largely to the fact that the word had gone out of use, but it is clearly preserved in Adam of Bremen's account of the Upsala sanctuary, where he speaks of Thor, "qui tonat et fulmina...gubernat." 3 We may refer also to the "malos jovinles" which were carried off by the Danish prince Magnus on one of his raids among the Swedish islands, and which, according to Saxo, 4 had been venerated as symbols of thunder.

In English and German the name of the god is not distinguished, and consequently with the small evidence at our disposal it is not always clear which of the two was meant. The thunder-god (especially personifications of thunder) is of course wide-spread among the people of Europe. It is sufficient here to refer to the Tanais of the Celts (whom name appears to be identical with that of the Scandinavian Thor), Jupiter Tonans of the Romans, Zeus Keraunios of the Greeks.

6. Odin.—Many writers hold that Odin originated in a personification of the wind. This view is largely based upon the association of the god with the raving host, the antiquity of which is not very clear. The name Woden itself, which seems originally to have meant "inspired or frenzied," hardly furnishes a parallel to the case of Thor.

7. Jötnar.—It has been supposed that writers who not only gods but also jötnar largely owe their origin to personification of natural phenomena. The krímikursarr ("frost-giants") indeed, of whom we often hear collectively, can hardly be of other origin. The friendly jötnar Aegir is very closely associated with the sea, for which his name is often used in poetry. There is some reason also for suspecting that Thrymr, the jötnar who takes Thor's hammer, was a counterpart of Thor, a rival thunder-god. It has been proposed by some that the eaten Grendel in Beowulf arose from a personification of storm-dooms, but this explanation is open to the objection that the story is clearly based on an early folk-tale, the original locality of which has not yet been determined. If the jötnar in general had been derived from the personification of natural phenomena, we might expect them to have an obvious meaning for their names, as in the case of Thor and perhaps of Thrymr, but as a matter of fact the etymology of the majority of their names is quite obscure.

According to another view, which has obtained more currency in recent times, the jötnar largely represent the communities of a more primitive race or civilization. This view also can be justified in some cases by the records. The giant Hrungr fights against Thor with a horn, which may perhaps represent a stone hammer, and the word berg-búti ("mountain-hut") points in the same direction. In some stories, as in the case of Grendel, the jötnar have cannibal propensities, and for this practice there is thought to be evidence in the way human bones are found mixed with those of animals in the Norwegian countries. It is based occasionally also on the word jötna in applied to witches of "Finnish" (Lappish) origin, while in Hyndluljóth Heithr is said to be the daughter of the jötnar Hrungr.

Occasionally also the word jötna is applied in some MSS to persons also described as Finnr, as in the case of Swasi, father-in-law of Harold the Fair-hand. In the genealogy of the gods given in the document Íversu Norrøn Bryggjó's some connexion is hinted at between Finn and Jötna. With the evidence at our disposal we are not yet in a position to determine their origin. It has been suggested also that the dwarfar may be derived from communities of more primitive inhabitants.

8. Nornir.—The nornir bear so close a resemblance to the volva ("wise women"), not infrequently mentioned in the sagas, that there can be little doubt that they are at least partly derived from them. Sometimes indeed the words norn and volva are used interchangeably.

9. Valkyria. It is not unlikely that the valkyrja is a word of Germanic origin. Sometimes the name is applied to human beings endowed with supernatural powers, as, e.g., to Svava, the heroine of Helgakviða Hryrvarðsoðar, and to Sigrun in Helgakviða Hunding-bana II., and to Sigrdrifa, a valkyrie who was punished by Olthor for not carrying out his commands. And, as most authorities identify her with Brynhild, the term is applied to the latter also. This conception of human valkyries is not confined to the North. For, in Wulstan's Scrvn ad Anglos, wodegar are mentioned besides wiccean, among a list of bad characters, from which the country is said to be suffering. 7 It is more difficult, however, to explain how the conception arose. We hear of fighting women more than once in Saxo, and the human skyldamenn in the Atlakviða point perhaps in the same direction.

10. Kings.—Among other human beings we may notice especially kings who were credited with supernatural powers both during their lives and after their death. Two of the legendary kings of Sweden, Dönlaid and Olaf Trétegja, are said to have been put to death to order bad harvests for which they were held responsible. 8 This belief lasted down to late times, since Gustav Vasa is

1 See art. DEMONS AND SPIRITS (Teutonic), vol. iv. p. 620.
2 Cf. H. I. 6 (P).
3 Fælingsk Saga, 18.
said to have complained that the Swedes blamed him for bad weather. Nor was it peculiar to the North. According to Ammianus Marcellinus, xx. 42. 4, *History* among the Burgundians to depose their kings in time of famine as well as after military disaster.

11. The dead.—Norse literature shows by constant reference both to the temple-toll and to the dead a belief in supernatural powers. Among those most commonly referred to is that of bringing prosperity and abundant harvest.

In *Fingolfs Saga*, xii, the god Freyr is said to die, but his dead body was never seen by the subjects of the Swedes. His dead body was preserved that prosperity might abound in the land. A similar story is told about Haldan the Black, for his body after death was cut in four pieces, which were buried in different parts of the kingdom, so that all sections of the land might have plentiful years. A similar belief underlies the story of Olaf Grímnalds-son, and that of Guthmundr, who after death was thought by his people to be a god, and was therefore worshipped. Yet another example is to be found in *Lundamæl*, 1. 14, where Þórrór Sjúfarr is mentioned as being worshipped after death. A curious instance of worship of the dead occurs in *Kristni Saga*, 2, where the missionary Thórunn takes by a necromancer from the Church in which the ancestor (ár-mæður or spá-mæður) of the latter is said to have dwelt for a long time. Kodran averred that, when the missionary had sprinkled the stone with holy water, his ancestor had come out and complained that the water had scalded his little finger.

12. Yggdrasil’s ash.—This is a very complex conception, as it may be seen from the variety of phenomena attatched to it.4 The descriptions indeed are hard to visualize and are apparently inconsistent. Sometimes the ash seems to spread out over the whole world; sometimes again it is represented as a definite locality to which the gods ride or walk to hold their court. If the tree called Lóður is a ninth wonder, it is to be identified with the ash, as seems probable, it must be regarded as standing very near to Othin’s hall. Now it was, and indeed still is, the custom for country houses in the North, especially in Sweden, to have standing by them a tree known as várdræði (‘protecting tree’), on which the worship of the house is supposed to depend. Such trees were doubtless regarded as especially sacred in heathen times, and it is not unreasonable to suppose that the original conception of Yggdrasil’s ash may have been that of a várdræði of the divine community. In *Voluspa* the reference to the ash seems to point to a tree on which the destiny of the country is laid rather than to any comprehending world-tree. That its origin is to be found in actual trees is rendered probable by the Irmanen, which likewise was all-comprehending (‘universal column’),7 and there is no reason to think that for this was a real tree, or rather a tree-trunk, in spite of the property assigned to it. Further, the adjutants mentioned in *Grímnismál* and *Gylfaginning*,7 the harte, snakes, etc.—all of which are connected with grove sanctuaries. We may refer particularly to those of the Lithuanians and Prussians, especially to the sacred one at Romove. It was forbidden to injure any birds or animals in such groves. The description indicates that the sacred oak as such was a good omen and furnished an interesting parallel to Yggdrasil’s ash from real life. In the North itself we can find parallels for all the features involved; e.g., snakes seem to have dwelt in the sacred oak described from the North sanctuaries before the date of our records, yet a very interesting analogy in some respects is furnished by the description of the sacred tree at Upsala in scholion 134 to Adam of Bremen’s *History*.

iii. Cosmology.—See *art. Cosmogony and Cosmology* (Teutonic).

III. WORSHIP.—The Teutonic festivals are treated separately under the heading FESTIVALS AND FASTS (Teutonic). There are also separate sections on SACRIFICE (Teutonic). The various superstitions are covered under the headings DIVINATION (Teutonic), MAGIC (Teutonic), and ORDEAL (Teutonic), and under the later section to speak of prophecy and the priesthood.

1. Prophecy.—According to Tacitus, *Hist.* iv. 61, numbers of women among the Germans were considered to possess the gift of prophecy in consequence of which many were revered as goddesses, though he denies elsewhere that the veneration paid to them was so great as this. One of the chief of these prophetic women was known as Veleda, a prophetess of the Bructeri, who ruled over considerable territory. To increase the honour in which she was held, she lived at the top of a high tower, and questions and oracular responses were conveyed to her and the public by a near relative ‘like a messenger who had converse with the gods.’12 The name Veleda, strictly speaking, does not appear to be a proper name but a Gaulish word for ‘prophetess.’ We may here mention the story of the Goth Orm, who in his last campaign was met on the banks of the Elbe by a woman taller than human who prophesied to him the manner of his death even as it afterwards came about.4 According to Strabo, the Cymbri had prophetesses who practised divination with slaughtered prisoners.6

2. Priesthood.—(a) Priest.—(i. In Norway, and especially in Iceland, the duties of the priest were performed by the leading magistrates. Sometimes, however, it was the chief who undertook the office.4 During the colonization of Iceland the more important of the chiefs who went out from Norway built their own temples, not infrequently of the wood of which their temples had been made in Norway. Thus we read in *Eyrbyggja Saga*, 4, that Þórtórr of Móstr built a temple to Thor of such wood. To this temple all the men in his own district had to pay a tax called ‘temple-toll,’ but the chief himself paid for the upkeep of the building and performed all the necessary duties in connection with the temple and the temple services, while at the same time exercising judicial authority over the people of the neighbourhood. Again in *Hrafnkjóla’s Saga* *Freyr* and *Gímróth*, 2, we are told that there existed at that time a temple of Freyr in Atthóló, where he ‘made offerings to Freyr of the half of all the best things that he had.’ Hrundkósi settled the whole of the valley and gave land to people on condition that he should be regarded as their chief and exercise the authority of his office over them.7

The priest was called *golithi*, and his office *golithr*. In each *golithr* was a consecrated place set apart for the thing (gathering of the people). Small settlers who were not of sufficient substance and authority to build temples of their own joined one or other of the *golithr* so as to have the benefit of the temple services and the temporal protection of the *golithi*. So inseparable was the political function from that of the priest in Iceland that the *golithr* formed the starting-point for the foundation of the constitution of Iceland. The title of *golithi* continued in existence after the adoption of Christianity, although now it had lost all religious significance and was no more than magistrate (*lögumkvæði*). It is interesting to observe that the *golithr* was a hereditary office and could even be bought and sold like any other property.8 This combination of priesthood with secular authority existed also no doubt in Norway, whence the original priests of Iceland came, though—and here is a difference from Iceland—the power of the
local chiefs in Norway was subordinate to that of kings. The word *gothi* is occasionally applied to local chiefs—e.g., to Thorhárd the Old, who was *høf-gothi* at Maerum in Trondhjem 1—and on several occasions we hear of priests in Iceland who had formed the *høft*. On such occasions, the *høft* is stated to have acted through the chief's **sáni**. The *sáni* of Håkon the Good (Heimskringla), 16, gives an account of a great sacrificial feast at Hlíðar of which Earl Sigurðr sustained the whole cost himself, and of a sacrifice to Tyr in Snæfellsnes (Heimskringla, 76), we learn that it had been the custom of Olaf's predecessors to offer sacrifices in Trondhjem. In poetry we sometimes meet with such expressions as *virðr rístalla* ('guardian of the altar') applied to kings of the past. In cases where this is as in Iceland, it is clear that no exclusively priestly class existed, and that priestly duties were in all cases combined with temporal power.

For Denmark very little evidence is available. On three Runic inscriptions found in Fyn, and dating approximately from the 9th cent., the word *kultti* (i.e. *gothi*) is found in combination with the word *manni* for a common word, Hróulf and Ali are said to have been *rukar* (Nora-gothi) and *nuuluubaut* (Sölr-gothi) respectively. It has been suggested that Nørri and Söleri are the names of men; but it seems at least equally possible that these words imply that if a deity of this kind is as, Hróulf and Ali may have been local chieftains, like those on the west coast of Norway. It is significant that Saxo, who frequently refers to the laws and customs of heathen times, makes no references to a priestly class in Denmark.

For Sweden the evidence is more abundant. Adam of Bremen states in connexion with the great temple of Ypsala

> "Assigns to all the gods that they have priest to present the sacrifices of the people."

It does not necessarily follow perhaps from this statement that the duties referred to these persons were of an exclusively priestly nature. Elsewhere the evidence seems rather to point to a union in Sweden, like that in Norway and Iceland, of priestly duties with secular authority.

Thus we read in *Younga Saga*, 47, that a famine which arose in the days of the legendary king Olaf *Trjóltakýr* was attributed by the people to the king's remissness in offering sacrifices; and even through the cenotaphs of the kings, as in Herastick Saga, ad fin., of one ÞóUGHTS in *sacrificing-Svein*), obtaining its name through his use of his promise to officiate on behalf of the people, which he actually carried out. Rimhótt describes the formal definition of the Swedish king *Eric*; and it will be remembered that the national Synod, the *Ynglinga*, traced their descent from the god Frey.

Thus, while the evidence is perhaps less direct and convincing for Sweden than for Norway, it seems on the whole to indicate a close union from the earliest times between secular and religious power.

(ii.) Except in Tacitus references to priests among the Teutonic peoples are of rare occurrence. In later times we read in the *History of Ammianus Marcellinus* that the priests of the Burgundians were presided over by a chief priest who held his office for life. *Jordanes* states that the priests of the Goths were of secular extraction.

(iii.) We learn from *Beowulf* that the priests of the ancient English were forbidden to bear arms and to ride except on mares. Heathen priests are also referred to, perhaps the most interesting instance being that of Coili.

*Edda*, in his description of the shipwreck of *Wulfstan* off the Sussex coast, refers to the *prince *sacerdotum nobilissimorum* standing both on country land and on the sea, and by his magic arts seeming to cast fetters on the hands of the people of God.

(iv.) Among the Teutonic peoples of the Continent in ancient times the priestesses have to have combined to a great extent spiritual with temporal powers. According to *Tacitus*, his duties were threefold: (1) the consultation of omens on public occasions, (2) the performance of sacrifices, and (3) the guardianship of the sacred groves and symbols, and other holy objects, which they also carried with the host to battle. They no doubt had duties also in connexion with the sacred public rites. Indeed it may be said that their functions as a whole were essentially of a public character. There is little or no trace of any mystical relationship between the priest and the god, or of any peculiarly spiritual qualification in the priest such as we find noted, e.g., in the case of prophetesses like Veleda, or in the account of the Druids given by *Diodorus*.

(b) Priestesses.—(i.) In Iceland the word *gýfylk* (‘priestess’) occasionally occurs, and seems to be applied to women belonging to the ruling families of Iceland (i.e. those who held *g dyst yr*).

In *Kristin* we are told that the woman who was ‘in the temple offering sacrifices’ while Thorvald was preaching the Christian faith hard by. The *g yfylk*, however, is said to be merely a ‘sacred priest’, and it is possible that she was only acting as deputy for her husband, who was absent at that time (‘general assembly’). Mention is made in *Viga-gils* Saga, 10, of a woman called *Steinhv*, who is described as *høf-gýfylk* (‘high priestess’) and who occupied the highest station among the clergy (‘public temple’) and claimed temple-toll. When she wished to enforce the civil authority of the *g dyst yr*, she was obliged to apply to her kinsman *Iðr* for help. But that she was conscious of her full religious responsibilities seems to be borne out by an amusing anecdote given in *Kristin Saga*, 5, of a ‘flying’ between *Thangbrandr* the priest and one *Steinhv*, the mother of the poet *Reid*, who is without doubt to be identified with the *Steinhv* mentioned in *Viga-gils* Saga. *Thangbrandr* is told that, after she had preached heathenism to *Thangbrandr* at some length, she made the startling announcement that ‘Thor challenged Christ to fight in single combat; but he dared not fight against Thor!’

Beyond this, however, there is no evidence of priestesses in the old Scandinavian countries, except indeed to persons of a different character, these references are no more than suggestive.

In *Stavanger Saga*, 12, 13, we are told of *høf-gýfylk* in a temple, which, however, was *Finnish*. Again in *Younga Saga*, 4, we are told that the goddess Freyja was a *bild-gýfylk* (‘sacred priestess’), and that after *Freyr* had been kept up the temple and sacrifices at Upnax. Here also we are told from the story of Gunnarr Helming, who is related in ch. 278 of the *Saga of Olaf Tryggvesson* (*Platesjuridik*) to have personated the god *Freyr* after destroying his idol. *Freyr's* fires was kept in a temple in Sweden, and his shrine is said to have been attended by a young and beautiful woman who was known as his wife, and with whom he used to make an annual progress through the land, driven in a chariot. This person is not actually called a priestess (*gýfylk*), but at all events she apparently had charge of the sanctuary and interpreted the answers of the god. We may here compare the account of Freyja, who in *Younga Saga*, 4, is said to have upheld the sacrifices at *Upnax* after the death of *Freyr*.

(ii.) We have no definite evidence for the existence of priestesses in the strict sense of the term among the Teutonic peoples. Tacitus speaks of ‘numbers of women of prophetic power,’ but these recall the *wäldr* rather than the priestesses of the North. The former existence of a priestess may, however, perhaps be inferred from the account of the sacred grove of the Nahanarvall, which is said to have been under the charge of a priestess *

IV. Temples and Sanctuaries.—(a) Iceland.—(i) In the last temples the temple was the centre of jurisdiction, one belonging to each of the 39

1 In the last duty he was accompanied by the king; cf. *Germ. 10*, 11.

gathorh. One of the fullest descriptions of such temples which we possess occurs in Eyrbyggja Saga, 4.

Here we are told that Thórríðr of Mosefjord set up a great temple to Thor by river's. There was a door in the wall near one end of the temple with a great cross-bar of silver, which were called roynslagur ("holy pogs"). On these pillars the image of Thor was carved. The temple was of a very holy place. At the end of the temple furthest from the door there was an annexe like a large paling round the place, and in the midst of the floor stood a stalti which served as an altar, and thereon lay a jointless ring weighing twenty ounces on which all who served the temple had been sworn. It was a cross-bar upon his arm at all assemblies. On the stalti stood also the sacred drinking-cup wherein was sacred wine, which served as a sprinkler, wherewith was sprinkled the blood from the bowl which was called hlaut-bolli. That was the blood that was shed by such creatures as were sacrificed to the gods. In the annexe round about the stalti were the gods ranged. To that temple all men had to pay tribute, and they were under obligation to accompany the temple priests on all such journeys as thingmen now take with their chiefs, and the godhi kept up the temple at his own cost so that it should not fall out of repair, and in it he upheld the sacrificial feasts.

Some additional details are furnished by the descriptions of the temple at Kjalarnes in Ærlings Saga, 2, 4.

This temple was 60 ft. in breadth, and, like the one built by Ingimundr in Vatsafjord, 100 ft. in length. Thor was the god most honoured in that temple. The interior of the temple was circular, like a hull of a ship. Thor stood in the midst of it, and other gods were ranged around him. He was made with great skill and covered with iron. On it there was a fire which was never allowed to die down. They called it the "consecrated fire." On that stalti there lay also a great "ring" of silver. The temple priest wore it on his arm at all assemblies. Men took the godhi's word on it. On that altar there lay also a great bowl of copper into which was poured the blood which came from the cattle which were sacrificed to Thor or from men. This blood they called hlaut, and (the bowl they called) hlaut-bolli. Men and cattle were sprinkled with the hlaut, but the temple priest threw them for entertaining the company when sacrificial feasts were held. And the men who were sacrificed were sunk in the pool which was outside by the door, and which was called hlotbelda ("sacred spring"). The temple was surrounded by a wooden fence too high to climb, and both the temple and the fence contained doors that locked. Finally we are told that the beams of the temple were very excellent.

Thorhœdr the Old, like many another, took the temple-mould and the high-seat pillars from his Norwegian temple and used them for his temple in Iceland. We are also told that Jónurðr godhi raised a temple in Svertingestathir. Numerous of their instances might be cited.

In Kristni Saga, 3, heathen sacrifices are mentioned as being offered in a temple at Hvamm. In Hrafnkels Saga Freyrgitha, 3, we are told that Hrafnkels raised a great temple to Frey in Athabal. This temple stood on a rock above the sea; on its side was a pool in the river and contained images of the gods which had some kind of rock over it. Some of the rocks upon them. A sacrifice offered to Frey is also mentioned in Ægle Glæs Saga, 5, as being "on the sacred place called Hrafnkelsstathir." From the same saga we read that there were three temples on Eyjafjörðr. In ch. 55 we have an interesting confirmation of the accounts of the cathedral mentioned above. In the temple in Dýjafjörd on Eyjafjörðr "whoever took the temple-oath took in his hand the silver ring which was reddened in the blood of the cattle sacrificed and which weighed fully three ounces." Possibly the ring of Tomar (Thmorn) which was carried off from Dublin by King Charles Malachi in 994 was one of the sacred rings upon which oaths were sworn. Here we may compare the Anglo-Saxon Chronicle, where the oath-ring is represented as the most binding form of engagement known to the Danes.

(ii.) Not only the temple itself, but also the land round about, was regarded as sanctuary.

Thus in Eyrbyggja Saga, 4, we are told that Thórríðr of Mosefjord held and kept a hill in the precincts of his temple on Thornsæ. Here the thing of the men of the Western Firths was held, and Atli Ósvingr was allowed turn his ring and was never vexed, and no blood was to be shed there. Thórríðr's sons preserved the sanctuary inviolate as long as they could; and, when it had been violated a blood feud was kindled by the Norsemen, and the place was declared unhallowed and the thing removed to another part of the promontory, where the dómbrungur is still pointed out to travellers—"the one of the holiest places.

A curious tradition of sanctity is found in Landnámabók, ii. 16. Author the Deep-Minded was a Christian. She was accou-\ndeemed to say that God's note was raised for the promotion of the place. No sooner was the temple raised there, for she was baptized and a good Christian. Members of her family afterwards showed great reverence for that hill. A great many offerings were made there when they began sacrifices. They believed that they would pass into the hill when they died.

(b) Norway.—(i.) From Eyrbyggja Saga, 3, we learn that, before Thórríðr of Mosefjord left Norway for Iceland, he had charge of Thor's temple on the island of Mosefell. He was a great friend of Thor. The framework of this temple was transferred bodily to Iceland. Another island is mentioned in the Saga of Olaf Tryggvason 4 as containing a large temple dedicated to Thor. Guthbrandr of the Dales also possessed a temple dedicated to Thor. 5 His predecessor was a great friend of Earl Hákon of Hlíðir. They had a temple in common in Guthbrandstala, which contained figures of Thor and of Hód's patron goddesses, Thorgerðr and Írpa. Thorgerðr is described as being as tall as a full-grown man and having a hood on her head. Thor was seated in his car, and all were adorned with clothes or ornaments and had gold rings on their fingers. The temple of his at Hlíðir is said to have been the two chief temples in Norway. 6 When Earl Hákon first took possession of Norway, 7 he commanded throughout his whole kingdom that the temples should be maintained, 8 and later, when the emis-\nsaries of the emperor Otto had overthrown the temples of S. Norway, Earl Hákon caused them to be restored and the heathen sacrifices to be re-\n\n\n
1 Cf. Vatnsaele Saga, 15.
2 Here we may compare the story given in Landn. v. 12 of Kongsset. The vikings were so rich that the order was given to make a cross-beam of silver in the temple which they were building on Mounteb. His son, however, did not carry out his orders.

13 Ct. e., e.g., Holmsvölska Hýrvarðskmam, 4.
The phrase 'höhr' and 'hof' high-timbered' occurs also in 
Vulpe, 7. It has been suggested that the word 'high-timbered' is merely conventional and that the höhr was a stone structure as opposed to the wooden temples so common in Norway and Iceland. In Órvar Odda Saga, 29, we are told that Oddr 'burnt a hof and broke a höhr'; but in the pagan days both hof and hörr were spoken of as 'being burnt.' Hof and hörr are spoken of as burnt in ch. 165 of the Saga of Olaf Tryg- 
gvason (Fornmanna Sagar). But in ch. 141 of the same saga we are told that the king commanded 'a hörr and hof to be burned.' The hörr is frequently mentioned in connexion with women.

Thus in Gýf, 14 the goddesses are said to inhabit 'a hörr which was a very fair house.' It was called Vingdæt.' In Hér- 
ræra Saga, 1, Starthath is said to have carried off Alfhildr as she was 'walking beside a high-timbered' night after 
the great disband. After the death of Ænir the Christian, her relatives made a hörr on the hill where she had set up her 
crosses.

The word is still traditionally connected with high places in popular speech. Thus, when the 
land lies deep in snow, the Icelanders say that 'only the highest högr or jut out.' And in the Norwegian 
periods the hov or hörr was a resting place of a hörr. Perhaps the word is a survival of an older form of 
religion when places of worship were more primitive than the carefully constructed hof. It is obviously 
connected ultimately with the O.H.G. harne.

(iii.) It will be seen that there are certain obvious 
discrepancies in regard to the use of the term hörr.
It appears in some cases to have been a cairn, but in 
other cases it is a high and noble place. Sometimes it is made of stone, in other cases perhaps 
of wood. The difficulty is increased by the fact that the 
word is obviously identical with the early Ger-
man word hurn, which is used to gloss the words 
scumae, lucus, while the corresponding A.S. húr is 
also perhaps used for 'grove.' Such woods or groves were probably common in early 
times, since many place-names are composed 
with the word hurn (sacred grove). Moreover, 
the usual name for the place of assembly in the 
North is thingsgöl, which must originally have 
meant 'wood of the assembly,' söl being cognate 
with the German hurn (forest).

The legendary sanctuary at Glasirvellir 1 previously 
was probably connected with a holy grove, and is 
no doubt identical with Gliasir, the name of one 
of the ash trees by Vallotin, Ötinh, a heathen 
place, mentioned in Skjaldskaparmál, 31. It is a forest 
clearing that the gods meet to decide the fate of Starthath. 2 According to a 
myth, the name of the goddess 
'goddess of the green justica) 
under Æggras.ash. Perhaps we may also instance Tomar's 
wood, which was situated near Dublin. It has been 
suggested that this means 'grove of Thor.'

It is noteworthy that the two great assembly 
places, Frosta and Gaula, are both on peninsulas. 
Sacred islands may also have been known, as can 
perhaps be inferred from the occurrence of such 
names as Njardrey, Vé-ey, Thorsey, and possibly 
Halogaland.

(d) Sweden. — (i.) The great temple of the Swedes 
was at Upsala.

The Swedes have a most magnificent temple which is called 
Upsala (Upsala) not far distant from the city of Sigtuna (Sigturna). 
In this temple, which is fitted (f) entirely with gold, they 
worship the statues of three gods. Thor, the most powerful of them, 
has his seat in the midst of the couch (f), while Woden and 
Frige occupy niches on either side of it. Woden the 
represent as armed, just as our people represent Mars, while 
Thor with his spear seems to copy Jupiter.

'That temple is surrounded by a golden chain which hangs 
over the roof (f) of the building, and the gleam of which is 
visible to visitors as they ascend to the temple. For the sky is 
level ground with hills round it like a theatre.'

(ii.) In the (contemporary) scholium 134 we have 
an expression of a holy grove which stood beside the 
temple, and which contained an ever- 
green tree of great sanctity. 

'Near that temple there is a very large tree stretching out its 
branches afar, and it is always covered with a roof. 
No one knows what kind of tree it is. There also is a spring 
in which it is the custom of the heathen to do sacrifice by 
sacrificing a living man in it. If he does not reappear, the prayers of 
the people will be fulfilled.'

The description of Æggras.ash, which is said 
to overshadow Angel, 1 is no doubt derived 
from the Upsala evergreen, as the description of 
the home of the gods is surely derived from some 
Northern sanctuary, in all probability the identic 
holighthouse at Upsala.

There are many other references to this sanctuary 
in both Norse and Danish authorities, and it was in 
fact the most famous one in the North. In 
Ynglinga Saga, 12, and in Saxo, iii. 90, its establish- 
ment is attributed to the god Freyr, who in the 
former is represented as having lived and died at 
Upsala. This is no doubt also the scene of the 
story of Gunnar Helmingr, although in this story 
the place is not actually mentioned.

In Jonsvikingsa Saga, 12, we are told of a temple 
in Gotland which contained 100 gods and also 
temple treasure and temple servants to offer the 
sacrifices, but apart from the great temple at 
Upsala, we know little of the heathen temples of 
Sweden.

(d) Denmark. — No records of Danish temples 
appear to have been preserved. The chief sancta- 

tuary of the Danes was at Leire. This was no 
doubt a sanctuary of great antiquity. It is the 
home of the famous kings of the 6th cent., Hróarr 
and Hróðfr Kraki (the Hrothgar and Hrothulf of 
Beowulf). In Ynglinga Saga, 5, it is said to 
have been the home of the goddess Gyfjö and her 
husband Skjoldr, the eponymous ancestor of the 
Skjoldungar (A.S. Skyldings), the Danish royal 
family. Like Upsala, the locality is remarkable 
for its barrows, some of which date from the earliest 
times.

The existence of ancient sanctuaries in the old 
Danish kingdom is also implied by some of the place-names; e.g., 
Lund, the name of the old ecclesiastical capital in Skaney, 
meant originally a 'sacred grove.' Cf. also Velborg (mod. Viborg; 
'sanctuary of the name of the holy grove') in Jutland; Ótinh or 
'Óthein's (Óthin's) Sanctuary') on the island of Fyen, and Hlésy, 
besides many other Danish (Norwegian and 
Swedish) place-names.

(e) England. — In England the worship of idols 
and the existence of heathen temples were well 
known to Bede. In A.D. 601 Pope Gregory sent a 
letter to the abbot Mellitus urging that, while he 
is to destroy the idols in England, he is to leave 
the heathen temples standing that they may 
be consecrated for purposes of Christian worship. 
He says expressly, 'It is their custom to slay many 
oxen in sacrifice to devils.' 2 The East Anglian 
king Redwald, who had been converted to Christi-

1 Cf. also Skjaldskaparmál, 31.
2 Gýf. 15.
3 H. H. i. 30.
4 Jb. ii. 16.
5 Jb. iii. 8.
meaning 'grove of thunder,' perhaps indicate the existence of groves sacred to the thunder-god among the ancient English, and there are other reminiscences of heathen worship no doubt preserved in such place-names as Thundersley and Wensley.

In Beowulf, 175, we hear of offerings made set heaerstafan, which perhaps means 'shrine' covered with canopies. The word heaer, identical with Norse hørgi, is of frequent occurrence standing alone, and is used to translate various Latin terms such as fanum and idolium. There are other passages in which the word seems to mean a 'grove,' as in German, and it is not uncommon in place-names—e.g., Harrow. A number of other words which appear in Christian usage were presumably applied at first to heathen sanctuaries—e.g., scoedof ('altar').

(f) The Continent.—(i.) References to temples on the Continent are rare. In the 6th cent. a Frankish temple was destroyed by Rudegund, wife of Chlotar. Gregory of Tours describes a temple at Cologne which contained figures of the gods and in which sacrificial feasts were held. The Frisians seem to have had temples, but the notices are not always clear.

(ii.) The word fanum, by which these sanctuaries are usually denoted, is also used of the Irmen, which, according to Thietmar of Merseburg, was an immense wooden shaft or pillar worshipped by the Old Saxons in a place called Erasburg. According to the Vita S. Alex. 3, this pillar was 'set up aloft in the open.' In their own language they called it 'Irmenal, quod latine dietur universalis col- umnæ, quae aeterna est.' In the year 772 by Charlemagne, who spent three days destroying the sanctuary and carried off much gold and silver.

Among the Teutonic practices of the Old Saxons condemned in the Indenula Superstitionum and elsewhere we hear of sanctuaries connected with woods, of springs connected with sacrifices, and of various places which are venerated as holy.

The chief sanctuary of the Frisians was that of Fosite's Land.' According to Aeluin's Vita S. Willibrordi, 10, it took its name from the god Fosite.

The fans of this god were 'constructed' (constructa) on it. This place was held so sacred by the country folk that no one dared to touch the cattle or anything else that fed there. He also mentions that no spring on the island, Adam of Bremen identifies this land with the island of Heligoland (Halogaland). In the Vita S. Bonifatii, 23, we read of a sacred oak of gigantic size, the robor Jovis, which was cut down by the saint amid the clamorous protests of the heathen.

There is no doubt that sacred trees and groves were of frequent occurrence among all the Teutonic peoples of the Continent. In the Translatio S. Alexandrini, 3, we are told that the Saxons worshipped trees and streams. Claudian speaks of 'groves grim with ancient religious rites and oaks resembling barbaric divinity.'

The O.H.G. word haru, like the O.N. hørgi and A.S. heaer, presents some difficulty, being used sometimes to gloss neman, hrods, sometimes fanum, dalbrum. It has been suggested by Mogk that it may not be clear distinction between the terms for the natural and the artificially constructed sanctuary is due to the utilization of old sanctuaries as sites for later temples.

(iii.) References to Teutonic temples in earlier times in the Edda, both sacred and doubtful.

In Ann. i. 51 it is stated that Germanicra razed to the ground the temple which they called the temple of Tamsfana and which was most frequented by those tribes. Again, in Germ. 40 mention is made of the templum of Nœthris, but it is not unlikely that the word is used loosely for sanctuary. 'The holy grove on the island in the ocean,' the home of the goddess Nœthris, who visits the nations in a consecrated car covered with a garment.

One priest alone is permitted to touch it. He is able to perceive when the goddess is present in her sanctuary and accompanies her with the utmost reverence as she is drawn along by covered seats, a season of rejoicing, and a period of festivity reigns wherever she deigns to go and be received. They do not undertake bodily, 'the holy grove on the island,' every weapon is put away; peace and quiet are then only known and welcomed, until the goddess, weary of human intercourse, is at length restored by the same priest to her temple. Afterwards the car, the garments, and, if you are willing to believe it, the divin herself, are cleansed in a secret lake.' This rite is performed by slaves who are instantaneously swallowed up by its waters.'

The indications given by Tacitus are too vague to enable the site of this sanctuary to be fixed with any certainty. It is said that the Nœthris of the Danes was the Danish sanctuary of Leire. In that case Nœthris may have lived on as Gifjönn. Her name, however, is identical with that of the Norse god Njöðr.

According to Germ. 9, 'the Germani deem it to be inconsistent with the majesty of the gods to confine them within walls or to reserve to them after any similar fashion, to them they dedicate groves and woods and call by the names of gods that invisible thing which they see only with the eye of faith.' Sacred groves are mentioned by Tacitus in several other places, but their life is not distinct. Here was a sacred grove sacred to Hercules. Civilis brings his army together in a sacred wood. According to Germ. 48, the Naharnavall had a grove of ancient sanctity. It was in this sacred grove that they kept the sacred symbols. Here also were reared the sacred white horses which were never allowed to do work for mankind, but were employed to draw the sacred cars, when their steering was carefully observed by the priest and king of the state.

According to ib. 39, the Semnones had a wood of immemorial antiquity and holiness. Here on certain occasions there met embassies from all the kindred peoples (the various branches of the Suevi) to celebrate their barbaric rites by the slaying of a man. The grove was held in reverence, and no one was allowed to enter unless he was bound with chains to weigh his own humility and the power of the grove.

THAGS

259

or companies carried valuable goods or large amounts of gold and silver, and then with much skill and cunning contrived to win their confidence. They would talk of trading for days or even weeks, until time, place, and all else were favorable to their purpose, when, at a signal, they suddenly set upon the unsuspecting party, strangled them all in a few minutes, buried their bodies, distributed the booty, and decapitated. They used a cloth in strangling their victims. Similar methods were practised on the rivers.

One of the most extraordinary of their history is the almost unbroken immunity which they enjoyed: it was only very rarely that a Thag was caught and punished for his crimes. Thags bore their profession to be a religious duty, and all that they did was done under the sanction of religion. They were fully convinced that the goddess Káli, the wife of Siva, called also Durga and Bhawani, had commanded them to strangle and rob, and had laid down all the rules which they followed in the course of their operations. Many Bráhmans were Thags; and, when there was a Bráhman member in a gang, he conducted their particular party under the son of a Thag or a new accession, was initiated in an impressive religious ceremony, and took a dread oath of absolute fidelity to the brotherhood. Before starting on the next operation, the gang met in a suitable place, and took part in a solemn act of worship. As soon as possible after every successful operation another religious ceremony was carried out. Once in seven days at least the goddess was worshipped, and on the greater occasions animals were sacrificed in her honour. They would not start on a journey, admit a new member, or decide upon an act of murder, unless the goddess granted them favourable omens. In every ceremony she was worshipped, and to her their prayers were offered. No image was used; but the pickaxe for digging the graves of their victims, solemnly consecrated, stood for the goddess, and was believed to be filled with her power and inspired by her to guide them. In every ceremony the offerings of gur (i.e. coarse sugar) and water were made to the pickaxe; over it every oath was taken; and at all times it was regarded with extreme reverence, confidence, and fear. On every occasion when gur and water were offered to the pickaxe, every fully qualified Thag also offered the pickaxe his own personal prostration. At the close of each period of operations a percentage of the gains was solemnly presented to the goddess in one of her temples.

Among the rules which guided the Thags perhaps the most noticeable was the law that they must never strangle a woman.

3. Sources of the system.—The religious and political conditions of medieval India provided the soil and the seed from which this extraordinary organization grew. The following facts require to be realized.

(3) In all parts of India today exist criminal tribes, i.e. tribes whose regular caste-occupation is some form of crime. In each case there is a belief that some divinity has imposed on the tribe the particular type of crime which it practices and has also laid down the rules under which it is to be carried out. It is the duty of every member of the tribe to make the practice of the crime his regular occupation, and to obey all the religious rules which are laid down for his guidance in it. So long as he does so, he regards himself as a religious man. A percentage of the gains is regularly dedicated to the goddess and gives the tribe its criminal profession. A few of these tribes profess Muhammadanism, and dedicate their gains to some sūr (Muhammadan saint); but they are probably the remnant of the great grass-gang and money-lender, discovered which individuals

N. KERSHAW.
monarchy. The idea is to make him truly absolute, to sever Hindus from the most decisive way, not only from the earthly and sensual, but from all human conditions as well. This, therefore, makes very clear that in Himself and in all being separated from both good and evil, it becomes possible to acknowledge that He is indifferent to the world, and is equally the cause of both. Hence it is that God should be all-powerful. Those who are wrong to the Hindu to be not only quite natural but also inevitable.

(c) The Śākta sect of Hinduism, which worships the wife of Śiva (Kali), has been a centre of several extraordinary features. Only one need be mentioned here, viz., that for many centuries now the Chandi also human sacrifice was permitted. In 1535 the British Government prohibited human sacrifice, but until then it was common in the chief shrines of the goddesses in North and Central India. According to the ritual law, only males can be sacrificed to her.

(d) In the worship of the goddess in the homes of the people, pots, pieces of metal, and diagrams are more often used than images; and both images and symbols, when duly consecrated, are believed to be filled with the presence and power of the goddess.

(e) In modern India there are many groups of ignorant Muhammadans who take part in Hindu worship. They not only join in the great festivals, but also visit Hindu temples and make offerings at gods, in order to acquire immunity from disease and to obtain other boons. Muhammadans of a lower creed generally regard it as an insult.

These facts enable one to realize that, in medivial India, there might readily appear a community organized on the basis of the worship of the goddess and the practice of murder and robbery. At first, it was little more than an ordinary criminal tribe; and the first Thags would be ignorant Hindus who had been worshippers of the goddess before they formed the society to struggle and rob unwary travellers. To pass from participation in human sacrifice before the altar of the goddess to the search for victims for her on the high roads would be no violent change. Nor would even the thoughtful Hindu be shocked by the doctrine that the goddess had ordered the programme of murder. Hindu theology provides a substantial basis for the idea. Further, the fundamental document on which the worship of the Devi rests is full of blood and horror. The story in that document of her struggle with a demon named Raktabija and her final triumph over him was made by Thags the starting-point of the tale in which history unfolds the original Thags to strangulate men. 2 The ritual law that only males should be sacrificed to her is clearly the source of the rule that Thags must not kill women. It would also seem quite natural to devotees of the goddess to use the symbol of a powder mixed into an image and they would instinctively believe that the power and the will of the goddess were present in it.

Nor need we wonder that Muhammadans, in order to become Thags, were willing to participate in Hindu worship, since so many are to-day accustomed to supplement Muslim rites with the cult of Hindu divinities.

(f) India has usually been ruled, not by one Imperial Government, but by a multitude of petty states, each of which sought only to secure peace and order within its own narrow territory, and cared little for gods, or in order to acquire immunity from disease and to obtain other boons. Muhammadans of a lower creed generally regard it as an insult.

These and similar facts account for the almost universal immunity which the Thags enjoyed. Thugs were extremely numerous over all India, and were closely bound to one another by oath and interest, and were usually only too well able to take prompt vengeance on any who molested the brotherhood.

Thus only an Imperial Government using wider powers could successfully grapple with them.

4. The rise and fall of the Thags.

It is clear that the Thag conspiracy was originally a Hindu organization, as we have already suggested, and that it came into being before the Muhammadan conquest of North India (1190–1200). It was called the Thak-charita the Hindu poet Manka or Manka (f. c. A.D. 1150) compares the thievish spring to a Thag. 1 Clearly by his time the community was already well known.

If the community was very successful, it would soon attract indigent Hindus of high caste, and there would be plenty of poor Brahmans who would be eager to enter. It seems probable that, after the Muhammadan conquest, during one of the many periods when anarchy was wide-spread, the strangers found unusual opportunities for their depredations, and waxed so rapidly rich that many Muhammadans became Thags and readily acquiesced in the established cult of the goddess. The great success and the wonderful immunity from punishment which the movement enjoyed would be to the credit of the system.

There is conclusive evidence that Muhammadan Thags looked back with great veneration to Nizám al-Din Awliyá, a famous Muslim saint, who lived at Delhi in the first quarter of the 14th cent., and that they regarded him as one of the founders of the system. 2 This fits in perfectly with our theory that, at some time after the conquest, numerous Muslims joined the community. It is probable that the event occurred about A.D. 1300. The story that Muhammadan Thags were all descended from seven famous tribes 3 may also have a historical root.

The community spread and flourished for many centuries, and was still extremely prosperous at the moment when it had the ill fortune to attract the attention of the British Government in India. In 1829 special officers were appointed to investigate the system, and a serious campaign was started for the destruction of the whole organization. Within seven years the work was done. The success of this great effort is mainly due to the devotion and genius of Captain, later Major-General, Sir W. H. Sleeman.

5. Religious and ethical character of the Thags.

—Those Europeans who had extended intercourse with Thags, during the period when the British Government was endeavouring to eradicate the system, gave very vivid descriptions of the kind of men they were.

(a) Every Thag was fully convinced that the goddess had created the system, and that she invariably saved Thags from punishment or disaster, so long as they obeyed the rules she had laid down for their operations. They were also innately convinced that the consecrated pickaxe was so filled with the presence of the goddess as to be able to guide the Thags in their wanderings and to bring dire disaster on every one who disobeyed. 4

(b) No Thag ever showed the slightest compunctions of conscience for his crimes. Sleeman writes:

Thag considers the persons murdered precisely in the light of victims offered up to the Goddess; and he remembers them, as a Priest of Jupiter remembered the oxen, and a Priest of Saturn the she-goats and sheep, and he gratifies his goddess without any misgivings, he perpetuates them without any emotions of pity, and he remembers them without any feelings of regret. They gratify her, and she does their retribution ever cause him iniquity in darkness, in solitude, or in the hour of death. 5

Never did the strength of religious faith or the extraordinary domination which religion exercises over man's moral nature find clearer illustration.

THEISM.—1. Definition.—The word 'theism' (Fr. théisme, Germ. Theismus) is a purely modern
word, implying a non-existent, Greek Ἱστισμός and an equally non-existent verb ἱστιεῖν (on the anal-
ogy of the verb ἱππεῖν, 'to ride,' and the English 'to ride,' and there is a certain vagueness about the meaning of the word in current English, it is necessary to begin this article with a convention as to the sense in which 'theism' will be employed in what follows. The
word will be used throughout as a name for a
philosophical theory as distinct from a practical
religion. Perhaps the faith and the theory are not
absolutely disjointed, but they are at
least logically distinguishable. It may be doubted
whether any man wholly untouched by the spirit of adoration and wholly devoid of love to God has
ever been a genuine theist in philosophy, and
again, many who are regarding a God in accordance with a philo-
sophical belief in God without being led on to
regulate his life by that belief. But it is at least
possible to practise love of God and trust in God
without making any conscious attempt to find a
speculative explanation of the world. There are
many who, in George Tyrrell's phrase, share the
faith of Simon Peter without concerning them-
selves about his theology. The present article will
be exclusively concerned with the philosophical
conception of God as the ultimate ground of things.
Current usage seems to require a further distinc-
tion. It seems necessary to make determinateatheism (q.v.), the denial that God exists, and scepticism or agnosticism (q.v.), the refusal to answer any question about the ultimate ground of things, but also from deism (q.v.), which, in its way, also treats God as an
ultimate ground. We shall probably not depart
far from the implications of current language if we
agree to define theism as the doctrine that the ultimate ground of things is a single supreme

reality which is the source of everything other than itself and has the characters of being (a) in-
trinsically complete and perfect and (b) as a com-
plete, unqualified object of unqualified adoration or worship. Belief in a ground of things which is not intrinsically complete and perfect, and consequently no adequate object of adoration, but at best of respect and admiration, would at the present day probably be described by
every one as deism rather than as theism. Thus
the suggested definition in fact coincides with the
famous formula of St. Anselmus, The God is "cogitari
nou potest, 'the being than which none greater can be thought.'

It is evident that theism, thus understood, is
incompatible with polytheism (q.v.) and also with
any doctrine, theological or metaphysical, which
asserts a plurality of independent and equally
ultimate 'realms,' whether in the form of a duality
between God and the good principle, and an im-
material evil principle (Zoroastrianism, Manichae-
ism (q.v.)), or between God and matter, or in that
of an ultimate plurality of unoriginated 'souls'
or 'persons,' or in any other shape. All such
doctrines involve the denial that there is any object which answers to the definition id quo
cogitari non potest. For this reason the various modern
theories of a finite or limited deity are incommensurable with strict theism. All theories of a
limited by restrictions arising outside his own
nature is manifestly not the source of all reality
other than himself, and not God in the sense in
which was earlier that word. As all the 'limitations'
are asserted to be self-limitations, due to the
nature of God Himself (as in the philosophy of Hastings Rashdall), we have to face a
dilemma. Either the presence of these limita-
tions in the deity is a defect, and the deity is
therefore not God in our sense at all, or their
presence is not a defect, and there is then no sense
in calling them restrictions or limitations, as it is
their absence which would, in this case, be the
defect.

It is mainly on the ground of alleged difficulties in the notion of the divine Omniscience that these theories are recom-
mented. But the difficulties seem due to misunderstanding. Omniscience means only power to do whatever is consistent with God's own nature. It is not a real limitation of God, but a power to hold, as most theologians and philosophers have
done, that God cannot do something otherwise. It is false to say that God cannot do something otherwise, but God can, in such a way, do something other than he did before; his existence if he grows tired of it, is a mere false paradox.

It is, perhaps, more important to be clear on the
point that theism, as defined, is equally incon-
sistent with the type of philosophic monism called
by James Ward 'singularism'—the theory that there is only one existent, the Absolute, and that
this single existent is the true subject of all
'significant propositions. If we mean by God a
being from whom all else that exists derives its
being and who can be worshipped, then the belief
in God necessarily implies belief in the real
existence of beings who can worship God. To say
that God is the source of existence implies that
God is not all that exists. From a theistic point of
view it is, no doubt, proper to call God, the
being from whom all others are derived, the
Absolute or unconditioned being, but only on the
condition that the Absolute is not equated with all
that really exists. The undeterred source of ex-
istence may, in virtue of its unique intrinsinc
completeness or perfection, be called the ens realis-
simus, but the name of such a phrase implies that there are other entia realia.

It will probably be readily admitted that the i'sum as doctrine of singularism is in no sense
anomalous or abnormal, and none, the
have the most distinguished representatives of singularism in

1 Prolegomen, ch. 2.

3 W. McCrindle, Ancient India as described by Ptolemy, Calcutta, 1886, p. 128.
our own times shown any desire to claim the name of theist. It should be recognized that the popular language about a purely ‘immanent God’, as opposed to the ‘transcendent God’, is equivalent to the distinction between theology, is incompatible with genuine atheism, inasmuch as it conflicts with the recognition of a God above the superstructure of existence and the dependent existents. It is just this distinction which is vital in a theistic philosophy, and, for this reason, it may be taken for granted that all that would seem to be the way of conceiving the relation of its God to the world is consistent with the critical recognition of the dependence of existence.

2. Philosophy and theism.—If we look at the history of European philosophy, it may be said that in the main the general trend of philosophic thought, even independently of the influence of positive religions, has been theistic, at least from the time of Plato to our own day. Even the agnosticism of Herbert Spencer, when all the qualifications with which it is enunciated by its author and taken fully into account, has a recognizable theistic tendency and might be said, apart from its blunders about dynamics, to be little more than a very crude reproduction of the ‘negative theology’ which is really one-half of the orthotheism (q.v.), would seem to have been shown directly, this tendency to theism is a direct consequence of the permanent influence of Plato on all subsequent developments in philosophy. Apart from materialism (q.v.), which has never produced a philosopher of the first rank, the main anti-theistic influence in modern European philosophy has been that of Spinoza’s (q.v.), which has steadily affected metaphysical thought, perhaps even more outside than within the professionally philosophic schools, from the time of Jacobi and Lessing down to the end of the 19th century. This is partly accounted for by the powerful attraction exercised by the naturalistic strain in Spinoza’s doctrine on the devotees of physical science, partly by the tendency of many of the most prominent 19th cent. representatives of the Hegelian line of thought to interpret Hegel (q.v.) in Spinozistic sense.

Whether the Spinozistic interpretation of Hegel is the true one might admit of question, and it has been rejected by some such eminent Hegeliasts as Hesse and Hegelians as Heinrich Scholz and J. M. E. McTaggart, in the case for a definitely theistic interpretation, in the other for a version which has more affinity with the monism of Leibniz (q.v.) than with Spinoza’s singularities. But in the main Hegel has become known, at least in the English-speaking world, through the work of such philosophers with strong Spinozistic propensities, with the consequence that the influence of these has ways of theism been definitely hostile to theism. Even among professedly Christian theologians allegiance to Hegel in philosophy has usually led to an anti-theistic doctrine of God which at least compromised the theistic position.

More ephemeral has been the influence excited in the last half of the 19th cent. by the pessimistic atheism of Schopenhauer (q.v.), and in the last twenty or twenty-five years by the brilliant, if incoherent, anti-Christian polemics of Nietzsche (q.v.). Both the pessimism of Schopenhauer and the anti-theism of Nietzsche are, however, too little reasoned and too obviously matters of personal temperament to be regarded as of permanent philosophical importance. The influence of Hegel, also, and still more the doctrine of God, would seem to be for the present a spent force. In the present state of philosophy the most formidable rival to theism as an explanation of the world appears to be the ‘horrifying negations’ of those who claim the ‘new realism’, represented at its best by the writings of Bertrand Russell and G. E. Moore. Of this doctrine, as well as of the supposed objection to them arising from the evolutionists’ alleged ‘redistributed of matter as red-in-tooth-and-claw’, something is said below (§ 17).

3. Plato.—The importance of Plato as the creator of philosophical theology makes it necessary to review, very roughly, as a philosophical theory with a clear statement of the Platonic position, so far as that position was expressed by Plato in his writings. To call Plato the creator of philosophic theology does not, of course, mean that the belief in God is an invention of Plato. As has been often remarked, the general trend of the best Greek thought on the problems of human conduct and destiny—e.g., by such poets as Aeschylus and Euripides—is in the direction of a vague monism. And it cannot be seriously doubted that an earnest of that faith in God, as theistic, of Pythagoras and of Socrates. Even the most unreasonable scepticism about the historical good faith of Plato’s accounts of his master cannot obscure the fact that Socrates gave up the whole of his mature life to the execution of a mission to which he believed himself to have been called by God and died as a martyr to his calling. But this, so far as we know, was a matter of personal religious conviction rather than of speculative theory. Even Plato himself does not attempt a formal philosophical statement and justification of the belief in God until we come to the megrum opus of his old age, Proclus. It is best known of his earlier writings—e.g., the Republic—great stress is laid upon the importance for the formation of moral character of an ethically adequate conception of the divine nature. God must be thought of as perfect, and current actions must be purified of everything which suggests that there is anything unethical in His character or that His dealings with men have any other purpose than their true good. It is just because God is perfectly good that (Republic, Theaetetus) the end of life may be said to be to ‘become like God.’ God fashioned the world and made it the best possible world because it would be unworthy of His goodness to make it otherwise (Timaeus). True piety is to be a ‘fellow-worker’ with God (Euthyphro). We are God’s sheep and He is our shepherd (Politicus). The souls of the righteous are in the hand of God, and when they depart from us it is to be with Him (Phaedo).

But this, of course, the language of religion, not of science, and we are made to understand the difference by the simple fact that nearly all that is said of God, outside the Laws, beyond the one emphatic statement about His perfect goodness, is conveyed in ‘myths,’ i.e., in imaginary stories, as to which we are cautioned that we cannot undertake to pronounce the truth. Not any attempt made to prove either the existence or the perfect goodness of God. In particular the story of creation in the Timaeus is, as we are explicitly warned, not to be taken as scientific truth, but as a tale which is the most probable that can be told about matters which lie outside the region within which scientific knowledge is possible. If we did not possess the Laws, it would be legitimate, as in fact it is not, to doubt whether Plato did not agree with Kant that reasoned scientific knowledge of God is impossible, though on grounds which are not identical with Kant’s. In the tenth book of the Laws, however, 1 we have a very definite doctrine of God which at least attempted to avoid of any features of mythical colouring, which is expressly declared to be conclusive. The argument, the main principle of which had been already anticipated in the Phaedrus, 2 is as follows. The most universal characteristic of things is motion and change. Now, motions are of two kinds, (a) impressed, and (b) original or spontaneous. Or, to use Plato’s phrase, there are motions which are able only to move something else (impressed or communicated movements), and there are motions which move themselves as well as other things. And motion or spontaneous movement is essentially an impressed or communicated movement. We cannot

1 S.v. A-899 E.
2 Phaedrus, 245 C-E.
regard all movements as impressed or communicated without falling into an impossible logical regression. Furthermore, in each instance which moves itself is precisely what we mean when we talk of ψυχή, 'soul.' 'Soul' is simply a shorter name for the κόσμος ενώπιον καθένας ἑαυτοῦ. In Plato, the only thing that is capable of internally initiated movement or change that we feel bound to say that the thing in question is 'animated' or has a 'soul.' It follows, then, that souls and their various 'motions' (judgments, volitions, hopes, desires, and the like) are prior to bodies and their motions or changes. All bodily processes are derivative from and dependent on 'motions' of the soul, and it is just for this reason that Plato explicitly denies the doctrine, often implied to him by the sceptics, that 'matter' can be the principle of evil. Further, good souls, in the degree of their goodness, are sources of orderly and beneficial motions; evil souls, of disorderly and evil motions. Now, the great recurrent motions which science discovers in the universe (the periodic motions of the heavenly bodies) are all regular and orderly and belong to the class of 'good' souls; they must be due to good souls. (It had been carefully laid down in an earlier passage that all apparent irregularities and anomalies in these motions are only apparent; the more accurate activity of our world-soul becomes more evident.) If, then, we define God as a perfectly good soul, we may say that, since the great motions of the universe are all perfectly orderly, they must be caused by God. God, however, cannot be the only soul, or 'movement that moves itself.' For, though the magnalia naturae exhibit perfect regularity, there are also irregular and destructive motions, such as those, e.g., of diseases or those due to a wicked will; and these are just as actual as facts anywhere. Thus the facts of the universe bear witness to the existence of souls which are not wholly good. There must be at least one 'bad' soul, which is not God, and there may, of course, be many more as are required to account for the observed facts. The transcendance of God is thus safeguarded.

Plato's language about the 'bad' souls has been misunderstood both in ancient and in modern times. Plato thought that the single soul postulated in Plato's doctrine of an ultimate dualism between a good and an evil world-soul. This view did not find favour with the Platonists of antiquity, but has found a new lease of life in modern times by the weight of whose name it has obtained a wholly undeserved consideration. Few today have any idea of what activity of the Good or anywhere else. What he does say 2 is merely that all motions cannot be due to a single soul; there must be at least two, the 'beneficent' and that which has power to effect the contrary results.' The whole context suggests that the bad souls of which he is thinking are chiefly those of passionate and ignorant men, which, of course, are numerous. It should further be noted that, in the passage of the Laws containing the theistic argument, Plato speaks throughout in the plural of 'souls,' giving the soul which moves the sun as an example of his meaning. This is, however, a mere consequence of the fact that the legislation of the Laws is designed for an ordinary Greek community. It is assumed that the State religion of the colony will recognize 'souls many,' and Plato's object is to substitute the heavenly bodies, or rather the souls which move them, as types of regularity and beneficence, for the merely frail and passionate anthropomorphic deities of actual Greek religion. Further, the personal conviction of all God tions are not of concern to us. The unity of God, 'the best soul,' follows, in fact, as we may see from the Timaeus, from the unity of the universe. The universe is one and is a rational system; therefore it is the product of one intelligence. 2 That a Greek writing for the profane world should allow himself to speculate on such mysteries as what is really significant is that Plato speaks so frequently, and just when he wishes to be most impressive, of this. 3

From the goodness of God, since God is a soul (δύναμις) which moves all the other parts of the world in the way that it does, it follows that: 1. De animae procreat. in Timaeo, 1014 E. 2 Laws, 870 B. 3 Timaeus, 30 D-31 B.

1 From the goodness of God, since God is a soul (δύναμις) which moves all the other parts of the world in the way that it does, it follows that: 1. De animae procreat. in Timaeo, 1014 E. 2 Laws, 870 B. 3 Timaeus, 30 D-31 B.

1 From the goodness of God, since God is a soul (δύναμις) which moves all the other parts of the world in the way that it does, it follows that: 1. De animae procreat. in Timaeo, 1014 E. 2 Laws, 870 B. 3 Timaeus, 30 D-31 B.

The one fundamental principle of the cosmological argument from the contingency of the world 1 to the existence of a First Cause and that of the argument from design, which is not degraded by Plato, as it has often been by modern apologists, into an argument from the alleged adaptation of the world to our individual convenience. As understood by Plato, the

1. The distinction in this form became fixed in consequence of the fact that it was adopted by the Roman encyclopaedist M. Tertullian (b. 155) and taken over from him by St. Augustine in the de Civitate Dei. The theology of the philosophers was called 'natural' either in contrast with the 'supernatural' of the Church or with 'revealed' truth, but because it was held to be scientific and true, unlike mythology, which the poets were believed to have invented. If, in a tenth book of the Theology puts it, 'is not philosophy but law.'

THEISM

argument from design is simply the argument from the intelligibleness of the world of actual facts and events to intelligence in the cause which produced them. Plato and Aristotle both gave a variety of arguments, but the most famous is the argumentum a posteriori, in the correct scholastic, not in the inaccurate Kantian, sense of the phrase a posteriori; i.e., it is an argument from the character of a known truth, or the very fact of its being, to the character of the first cause. That there is a world of mutable things, and that, as scientific insight advances, the processes in this world of mutability are more and more found to exhibit conformity to intelligible laws, are assumed as empirical, rather than known truths, and without these empirical premises the demonstration would not work. There is no hint in Plato of the line of thought which at a later date crystallized into the one genuinely a priori argument for the existence of God, the ontological proof, which, if valid, establishes its conclusion without any empirical premises whatsoever.

4. Aristotle.—Aristotle's doctrine of God, though better known to the modern world than Plato's, is simply the Platonic doctrine rather more precisely expressed and shorn of its ethical and practical applications. With Aristotle, as with Plato, the central argument is moved, and the argument is once more based upon the assumption of the causal principle. Like Plato, Aristotle contends that communicated or impressed motions are the presence of the universe. Aristotle says of motion and change that he regards ψυχή as the one source of spontaneous movement. But here he is led to make a further refinement. The 'motions of the soul', not ψυχή, 'appetition', and appetite is always apposition of something apprehended as good (ἀγαθόν ἐπὶ διά ἴδει). This apprehension of an object as good is an exercise of ψυχή, an act of immediate intelligent apprehension. The apprehension is not itself a movement, though it gives rise to motions both of the soul and of the body. We must not then be content to trace back all motions to the motions of the soul. This point is Aristotle's starting point in the 'movement which can move itself'; but behind even this we must look for a 'unmoved mover', an unchanging initiator of all change. Otherwise we shall simply fall into an indefinite regress, and an indefinite regress in the order of efficient causes is unhackable (the principle of the argument from the 'contingency of the world'). The unity of the supreme First Mover once more follows from the unity of the physical world. The whole physical world is a 'design' in which latent things are developed into actuality by the agency of efficient causes which are already themselves developed actualities. Behind every process of development lies the agency of such already developed actualities, and thus, just because there really is something and not nothing, there must be some actual agents which have never developed at all, but have been eternally and immutable active. From Aristotle's point of view, all processes of development depend upon the eternally regular and uninterrupted movements of the heavenly bodies. Hence there must be as many 'unmoved movers', in Aristotle's phrase (ἀγαθόν ψυχή), as there are independent astronomical movements. Further, astronomical movements form a hierarchy. Each of the 50 odd concentric spheres which Aristotle postulates to account for the apparent movements of the heavenly bodies has its own proper revolution and its own 'unmoved mover'. But there is one sphere which, without being enclosed by any other, encluses all the rest, and, according to the Aristotelian cosmology (which disagrees with Plato's point of view), the heaven, which is the only existing heaven (Sophistes, 249 A, Philebus, 30 D, Timaeus, 30 B).

The notion of an unconscious intelligence or reason as the ground of things is Aristotelian. Aristotle's planet is thus a matter of argumentum a posteriori, in the correct scholastic, not in the inaccurate Kantian, sense of the phrase a posteriori; i.e., it is an argument from the character of a known truth, or the very fact of its being, to the character of the first cause. That there is a world of mutable things, and that, as scientific insight advances, the processes in this world of mutability are more and more found to exhibit conformity to intelligible laws, are assumed as empirical, rather than known truths, and without these empirical premises the demonstration would not work. There is no hint in Plato of the line of thought which at a later date crystallized into the one genuinely a priori argument for the existence of God, the ontological proof, which, if valid, establishes its conclusion without any empirical premises whatsoever.

Further, this object must be adequate to occupy the divine mind through eternity. It follows that the object of God's unbroken Sabbath of contemplation is God Himself. He thinks Himself and He is thinking God. In a phrase, He is thinking God. 12 In fact, though without the presence of God there could be no motion in the universe, God is supposed to be wholly unaware of the existence of the universe unless He is present in it by being an object of apperciption to it, and thus it is aware of Him, but He is no more aware of it than the various objects of our human apprehensions need be aware of us and our desire for them. The world's desire after God is precisely and exactly the desire of the IIth for the star. This conception, due apparently to Aristotle's own temperamentally inclined to the practical life, of course strikes out of philosophical theology the doctrine of Providence and of the rightness of God's dealings with man. In fact, since Aristotle held that 'goodness of character' is a different thing from 'goodness of intellect', he is quite consistent when at the end of his Ethics he expressly denies that goodness of character or moral goodness is predicable of God. 3 God, in fact, becomes in Aristotle what Aristotle himself would have liked to be, if the conditions of human life were any. A mere 'magnified and non-natural' scientific thinker. In respect of this evacuation of all ethical content from the idea of God, Aristotle may fairly be accused of having been more of a Platonist than a naturalist, even as Plato was the founder of philosophical theism. It is clear that to Aristotle and his disciple Eudoxus, who identifies the speculative life with the contemplation and worship of God, 4 the First Mover was an object of genuine worship and reverence, therefore the worship of such a being could have no real connexion with active good works; but a non-ethical deity, who knows nothing of humanity's needs and aspirations, can never become the centre of an enduring religion. Hence it is not surprising that, while Platonism continued throughout later antiquity to be the creed of educated religious men, Aristotelianism was reduced to simple naturalism within half a century of Aristotle's death by the third head of the school, Strato of Lamprocemenes. 5

5. Epicureans.—The deism of the Epicureans is 6 of no significance in natural theology. For all practical purposes the school were, what their opponents called them, pure atheists, since it was

one of their principal tenets that the gods not merely take no interest in the doings of men but play no part in cosmology; the world has been formed by the pre-Roman gods and demi-gods. The only use made by Epicurus of gods is a trivial one; their existence accounts for the phantasms of superhuman beings which are seen in dreams.

On the other hand, natural theology of a kind plays a prominent part, though the original Stoic doctrine can hardly be called theistic. The theology of Zeno, Clearchus, and Chrysippus was a materialistic theology of immanence. The substance of all that exists is a single body; in fact, the universe is a 'fire.' The cosmic fire is intelligent, and this is fire that is God. This doctrine, borrowed by the founders of Stoicism from Heraclitus, but put forward with a conscious opposition, which Heraclitus would not have understood, to the immaterialism of Plato and Aristotle, is the nearest counterpart that ancient thought has to show the Stoic conception of the original substance with its plurality of disparate but 'parallel' attributes. But with the Stoics it is not, as with Spinoza, thought, but extension, that is the 'Aaron's rod that swallows all the rest' of the attributes.

As to the details of the doctrine, God and the world, though really one, are logically distinguished. At one time in the literature of the Stoics the phrase the 'fire,' which alone in its singularity and purity contains within itself all the substantiality of the half-world of gods, or according to the Stoic way of thinking, a process of progressive evolution, identified by the Stoics with the 'downward path,' of ῥεῖσιν, of Heraclitus, in which the στοιχεῖα λόγοι of all the inhabited world and the world of divine and human beings partook. There is a second and antithetical process, regarded as identical with the 'upward path,' and ending in an ο̣ν, general configuration; the plurality of divine existents of Providence and the divine original fire, and God is left once more as the only existent. The whole double process of evolution followed by involution constitutes a 'great cosmos' in which the universe is made up of an endless succession of such 'great years,' each repeating the events of the preceding without variation (a fancy which we know from a fragment of Eudemos preserved by Simplicius in his commentary on the Physics of Aristotle 1) to go back to the early Pythagoreans, and which has been revived in our own time by Nietzsche as the doctrine of 'eternal recurrence.' The details of the process of evolution belong to the Stoic physics and do not concern us here. In accord with this doctrine, God is sometimes declared to be the same as the στοιχεῖα, or universe, somehow disconnected from it. Thus the word στοιχεῖα in three senses, to mean (1) God Himself . . . who is, of course, impervious to the world-order; (2) the world-order itself; (3) the world-order, which resums into Himself and again begets out of Himself the whole of being in accord with certain cycles of time; (4) the world-order as the heavenly body or the heavenly composition of these two. Hence the full definition of God was that God is στοιχεῖα τῶν στοιχείων, 'the first principle of things,' καθ' ὅσα ἐπιστήμη καὶ ἐπικόνωσις γενέται, 'a fire of craft [or 'art'] proceeding in order to the general regulation of the world, containing in its constitution ratios in accord with all things to come to be in order of destiny.' But this being so, the doctrine that God is equal to God with the στοιχεῖα is not in itself, at all, since it denies that there are any real existents other than God. But religiously the founders of Stoicism, as we see from the well-known Ἰδιομετρία of Cleanthes, were fervent worshippers of God. It was characteristic of the school from the first that they insisted strongly on the moral side of things. Like the Platonists, they were vigorous exponents of Providence and used the doctrine to justify evil by arguing such things as astrology, prophetic dreams, oracles, and divination. Providence was, however, regarded as identical with absolute predestination, and scientifically explained by the rigid mechanical concatenation of all events in a single causal system. Hence, as may be seen from the controversial essay on theContributionsto Stoiicism (vgl. στοιχεῖα, στοιχεῖα, στοιχεῖα), the devices by which the Stoic philosophers tried to contradict the popular religious belief in a providential order with their materialistic monism were often really fatal to the Stoic moral ideal. But this is a digression.

In the writings of the Stoics of the Roman period, from whom the ideas of the school have become familiar to the modern world, the ethical and fatalistic elements of the doctrine are less prominent. They often seem to be teaching a simple spiritual theism. It must be remembered that all these writers were later than Zeno and were greatly influenced by the philosophy of Apelles (first half of 1st cent. B.C.), who gravely modified the original doctrine of Zeno and Chrysippus by contaminating it with Platonic elements, and who is usually known as long after he tried unsuccessfully to introduce Stoicism into the Academy. It is precisely because the Stoics of the latter period are not natural philosophers that we can be shown to depend most completely on Posteriorius in whom the monoism and materialism of Stoicism is least apparent. To understand the later Stoics is to understand the system. Consequently we shall have to study it as it was before Posteriorius had Platonicized it. For this purpose the pre-Stoic essays of Zeno and Chrysippus, and the account of Stoic doctrine given in the life of Zeno by Diogenes Laertius are particularly valuable. Indispensable for special students is Isocrates, the history of the Stoics of the pre-Roman period, Stoicorum Venerum Fragmenta, 3 vols., Leipzig, 1901–9.

The one really original contribution made by Stoicism to natural theology is the appeal to 'innate ideas,' and the consensus gentium as an argument for the existence of God. 'The doctrine of innate ideas' (consensus, nativitas communis) is a consequence of the Aristotelian criticism of Plato. According to the theory of method expounded more specially in the Phaedo and the central books of the Republic, the work of science begins with the provisional assumption of a theory (ordo) to account for a group of observed facts. If the observed facts (ά φασιν) agree with the results of 'Arts' (πρᾶξις, from the ἀρχηγοί) these 'agreements' are said to be 'saved' by the theory, and it is so far vindicated. It may still, however, be called in question, and in that case will have to be defended by arguments derived from some more certain premises which the impugner himself admits. It thus becomes a task for dialectic (or, as we should say, metaphysics), the highest science of all, to make a critical examination of the provisional assumptions (the unproved postulates) of all the other sciences and to discover the real unquestionable presuppositions of all knowledge. Aristotle endeavored, against this view, that the special postulates of each science must be self-evident when once they have been formulated. For the Stoics this doctrine, that every science depends upon self-evident universal premises, created a difficulty, as in their theory of knowledge they were, unlike Aristotle, extreme sensationalists, regarding particular sense-perceptions as the foundation of all knowledge. They were accordingly obliged to provide some criticism or test by which they could distinguish universal propositions which are valid generalizations from sensation may be discriminated from those which are not. An obvious test suggested itself. God, as the only real existent, and certain special groups of men or by particular individuals may fairly be supposed to be due to temperamental, educational, national, or racial bias; those which appear to be made without exception by all men, no matter how widely they differ in temperament, education, national traditions, social institutions, may be presumed to be formed spontaneously, and therefore naturally, i.e. as a consequence of the intrinsic character of mind. It is thus reasonable to regard these generalizations as true and thus to take the consensus gentium as the best guarantee for the truth of a belief. The Stoic concept, 'common notions,' are thus innate in the very sense in which Descartes afterwards used the word. It is not meant that we come into the world with them already in our possession, but that we have the power of realizing them by the normal development of intelligence independently of any kind of bias.

As the most obvious examples of such common notions the Stoics instance the beliefs, which they held to be common to all mankind, that there is a God and the gods and the universe 11.

of the belief in God and why their critics have often laid great stress on travellers’ reports which have been supposed to indicate the existence of ‘atheistic’ savages. The Stoics themselves, in appealing to this evidence, have not, of course, meant to deny the sporadic appearance of individual atheists. This could be accounted for as the consequence of individual prejudices due to improper education and ‘unnatural’ institutions. We should not, therefore, press this evidence too seriously, merely because that belief in God and Providence is too wildly diffused to be regarded as anything but a spontaneous and ‘natural’ conviction. The position taken up by some modern agnostics who deny that there has ever been a single convinced and sincere atheist is an exaggeration of the Stoic doctrine.¹ It may be added that the degradation of the argument from design or ‘intentional causality’ into the crude form which it assumes in so much of our popular apologetics is mainly due to the extravagant exaltation of man by the Stoic philosophy. With Plato and Aristotle teleology means a complex type of general causality and processes is so ordered that it realizes an end which has absolute intrinsic worth.² It is to the Stoics that we owe the consoining of the thought in which they have been deprecated. The words comfort and content, as well as the intrinsic and absolute good which is the end realized by the cosmic processes, thus they maintained that plants and animals exist only to furnish man with food and rainment convenient for him, or even with agreeable luxuries.

Porphyry’s ³ quotes from Chrysippus the statement that ‘the gods made us for ourselves and one another, but animals for us, the horse to help us in war and the dog in hunting, kelpies bears, and lions, to practise ourselves in valour upon. The pig was made for nothing but to be sacrificed, and God who made man clothed his flesh like a reasoning to make it readily digestible for us. Shell fish of all kinds and birds he contrived that we might have them for food or sport’ and enterat.⁴ Against Plutarch, Porphyry carried things so far that he asserted in his work ἐστὶν θεοῦ that God made hares to prevent us from sleeping too long and mice to teach us to take proper care of our cupboards.

7. Neo-Platonism.—In any account of the popular theism of antiquity prominence would have to be given to the utterances of the later Platonizing Roman Stoics, such as Seneca, and to the earnest defence of the ethical side of the theism by writers like Plutarch and his contemporary Maximus of Tyre. Plutarch’s philosophical essays which deal with the supreme benefactor of Pythagoras regarded as the soul of the Epicurean but also of the Stoic pantheistic necessitarianism (especially in the essay τέλος ἀντικειμένων, which aims at showing that the materialism, pantheism, and determinism of Zeno and Chrysippus are inconsistent with their moral optimism and professed belief in an ethical Providence). Interesting, however, as this theological literature is to the historian of Platonism, it cannot be said to add anything of value to philosophical theism. The Neo-Platonic school, founded in Rome by Plotinus (c. A.D. 205–270), worked out for the first time the combination of mystical and metaphysical theism which provided the philosophical basis for the Christian theism of the whole Middle Ages. For purposes of the present article it will be most convenient to reproduce the main features of this doctrine as it is presented by the great systematizer of the school, Proclus (A.D. 410–455), in his στοιχεῖα τεολογίας, Rudiiments of Platonic Theology.¹ In what follows nothing will be quoted from Porphyrius which does not form part of the teaching of the whole Neo-Platonic school from Plotinus onwards.

In Plato’s own theology, or at least in the state- ment of it which he gives in his writings, as we have seen, God is not quite all that the Christian theist has usually meant by God. God is the supremely good ‘soul’ and the source, it appears, of all existents other than Himself. But we are not positively told what is the relation of God to the supreme principles of the Platonic system, the forms (ἐδῶς, θέου) or numbers, and in the mythical picture-language of the Timaeus these forms (or numbers) are identified respectively with the divine and with God; they are the pre-existing model or pattern which God contemplates in fashioning the world of finite existents, or, as Plato calls it, the world of ‘being’ or ‘beings.’ There is no warrant anywhere in Plato for the psychologizing interpretation, often put on his language since the time of Philo of Alexandria, which makes the forms into thoughts of the divine mind. This means in modern language that, though God is regarded as the source of actuality, He is not unambiguously held to be also the source of all real possibility. In Neo-Platonism the further step is taken. God is thought of as the absolute prior of everything, and the world of existents as dependent on Him not only for its actuality but also for all its possibilities. God is no longer regarded as a soul or even as a mind, but is simply identified at once with the Good which is described in Republic, book vi., as the source of ‘being and knowledge,’ though itself ‘on the other side of’ both being and knowledge, and with the One which, according to Aristotle, is the origin of the absolute actual or self-sufficient, in the forms themselves and as the same thing as the Good.² The One thus becomes in Neo-Platonism a transcendent God of whom nothing can in strictness be said to be ‘soul’ or ‘being’.³ It is not a being, since it is identical with goodness, not a subject to which goodness can be ascribed as an attribute. Nor must it be said to exist; it is not a being or existent, but the transcendent source of all being, and is therefore regularly said to be ἄπώτερον, ‘super-essential’, or ‘super-substantial.’² God, thus conceived as the transcendent and ineffable source both of actuality and of real possibility (of existences and of ‘essences’), is connected with the actual world by the Neo-Platonic theory of causality. The theory is commonly known as that of ‘emanation,’ but the metaphor of emanation is with Plotinus and Proclus only a metaphor, and the

¹ There is no good critical edition of this important work. The least defective is in F. Cremona’s In vitia philosophica ac theologica, 3 vols, Leipsic, 1839–42, and in the Greek text of Knobloch, 1869–73.

² Metaphys., Α. 1 20.: ἦμεν ἄναρχοι τοῦ κόσμου καὶ τοῦ μεγαλοῦ ἐκείνου, ἦμεν καὶ αὑτοῖς ἀρχομεν· καὶ τούτῳ διὰ τοῦ καλοῦ πάντως, τοῖς στιχοῖς ἐπικεφαλέως εἰκοσιedia τεκμηρίων·

³ If we have omitted the word τοῦ μεγαλοῦ we have followed the reading of the majority of manuscripts and of F. Cremona. In τοῦ μεγαλοῦ is the reading of E. Schone, which is to be preferred to the reading του μεγαλου of C. W. L. Beuron. ἦμεν ἄναρχοι τοῦ κόσμου καὶ τοῦ μεγαλοῦ ἐκείνου, ἦμεν καὶ αὑτοῖς ἀρχομεν· καὶ τούτῳ διὰ τοῦ καλοῦ πάντως, τοῖς στιχοῖς ἐπικεφαλέως εἰκοσιedia τεκμηρίων., is in the distinction between existence and essence, valid for every other existing case, cases to have any meaning. It is from this last thought that the famous ontological argument for the being of God was destined to take its origin.
theory requires to be explained a little more fully, as it was not only influential throughout the Middle Ages but is tacitly presupposed in the famous attacks on it by the Neo-Platonists to establish the existence of God in the Third Meditation. Causality, as understood by the Neo-Platonists, does not necessarily imply contemporaneity in time and is always a relation between a producer and a producer of events. The relation is dyadic and unites between a producer (τὸ παραγόν) and something which the activity of the producer calls into being (τὸ παραγόνω). It is therefore derived on the ground not merely of the existence of that thing but of its being what it is and having the character which it has (the cause of its essentia as well as of its actuality). Causality is a relation of 'participation' (περιεχόμενα) or 'likeness'; i.e., the effect (τὸ παραγόνωμεν), since it derives the fact that it is and its whole quality from its cause (τὸ παραγόν), is like its cause, exhibits the same character but in a less perfect form.

The Neo-Platonic theology is strictly creaturely, not in the popular sense of regarding the world as having been made at a definite date in the past (all the Neo-Platonists held strongly that Plato, like Aristotle, meant to teach the eternity of the world), but in the philosophical sense of maintaining the causality of all that exists in relation to a supreme upon God and upon God alone. What 'really is' and what 'becomes' form a hierarchy of manifestations of the excellence contained 'emmanually' in each number of the hierarchy, according as it is at a farther remove from God, exhibiting these excellences in a less perfect way. On the other hand, the further point that the causal activity of the higher principles extends farther down in the scale of being than that of those below them, that interior or God, as we have seen, is 'above being' and is absolutely simple, not because it is void of character, but just because all relations are completed and perfectly unified and interpenetrant in it. The reason why the One creates at all is that the One itself, goodness, is of its very nature, absolute and simple, or 'divine.' Thus the One, already produced by the 'over-lying' is 'wise, intelligence' or 'understanding'; or, since the fundamental inferiority of produced to producer shows itself at this stage in the form of a distance, it is not together with the objects it contemplates, τὸ παράγων, the connected system of scientific concepts. The two are inseparable, for the παραγόν have no substance outside the understanding; they are not a realm of 'themselves,' for which Neo-Platonism has no room. As mind or understanding is an imperfect image or mirroring of the divine One, so soul is a further image or mirroring of mind. And mind and soul together make up for the Neo-Platonist the whole system of υφαίνω, real things. Bodies, the natural world as disclosed through the senses, are images of soul and are properly not υφάσμα but υφαίνοντα; they are not, 'they become,' 'are made,' υφαίνοντα, though we must remember that the really do appear and are the appearances or shows of souls, though consciousness is of the essence of real things, just as God was placed above the real things themselves, stands that 'shadow of a shade,' υφαίσθησις, bare stuff, 'which neither is nor is not,' but as a mere potential nature of something better than itself, may properly be called µέρος.

Bodies are not absolutely dependent on God, the series of υφαίνοντα and υφάσμα is further connected with the One by τοῦτον τὸ παραγόν, 'the One itself.' It does not necessarily proceed from its cause, but is inverted or reflected back into its cause. This, in fact, a consequence of the Identificatio of the First Cause with the universal Good. For the good of anything is that to union with which the thing in question aspire, and the universal Good is therefore, according to the old definition of Plato, that which all things desire to become, that which all things desire to attain. As all things have their source in God, so all things find their end or completion in God as well, and when all things have taken place, as Proclus puts it, ψυχήν τε καί ψυχῆς, as a source, or knowing. It is in turning back on their sources in contemplation that they come to know-knowledge, and are thus inverted as well as into it. The soul gets to know itself by learning to contemplate the One, the principle of the contemplation of the One; in both cases self-knowledge is got by reaching out of one's self towards the higher. Thus the transcendence of God, though it is so complete that we may not even predicate 'being' of Him, in no way interferes with the truth that the self-knowledge of the soul and the self-knowledge of the soul has no origin but support God. The monotheism of this philosophy of religion is, of course, no more affected by the belief of the Neo-Platonists in an elaborate hierarchy of superhuman beings whom they call gods than the monotheism of Christian theology, the belief in the one God, on the other hand, is the same that of Milton by his application of the appellation 'gods' to the fallen angels in Paradise Lost.

It should be particularly observed that the Neo-
Platonic school, by definitely making the One its God and teaching that the One is 'beyond being,' is committed to theism as against pantheism. The world is to One, but precisely because the effect is only an imperfect mirroring of its cause, it would not be true to say in the same sense that the One is in the world. The relation between God and the world is that of one-sidedness, of God over the world, υφαίνοντα and υφάσμα, ψυχή, and bodies; they do not produce the One. In fact, in the mythology elaborated by Proclus the ἐν οὐσίᾳ θεός occupy the lowest rank among the gods, the one-sidedness of the 'world' by which the name 'god,' thus corresponding to some of the middle ranks of the mediaeval hierarchy of angels.}

Anselm.—As is well known, when the Christian Church began to feel the need of a philosophical foundation for its theology, it sought that foundation primarily in Neo-Platonism. The Neo-Platonic influence was exerted in three main ways—through the Court of Paris, through the influence of the theological and angelological speculations of Proclus. The Neo-Platonic conception of God thus became part and parcel of orthodox Christian thought. It is this conception that St. Anselm assumes in the arguments attempted to show the existence of God by an argument which, in one form or another, has been a centre of philosophical controversy from the date of its first becoming generally known to our own day—the so-called "ontological proof" of the existence of God. St. Anselm's own formulation of his argument will be found in chs. 2-3 of the little tract, written before he had been called from his monastery at Bec, to which he gave originally the name Fides quaevis intellectus and afterwards that of Pros-
logion seu Allegoriam de Dei existentia. The object of the reasoning is to show that the existence of God is in fact an immediately evident truth. Uncertainty about God's existence is possible only so long as we are unaware of the true meaning of the word Deus. The argument, as given by Anselm, runs thus: By 'God,' we

1. Bodies are incapable of 'inversion into self,' and they are not inverted into their immediate cause, soul, ψυχή.
2. When Kingsley in Hypatia makes his Neo-Platonic phi-

3. For the sources of the preceding paragraphs see Proclus, Ἰντελεχος, τοιοῦτον τοῦ παραγόν, 1-4 (unlike and plurality), 7-11 (causation, the good), 13-21 (inversion), 21, 23, 34, 38.
mean 'that than which nothing greater can be conceived.' It seems that a doubt may be felt about the existence of anything answering to this definition, since Scripture tells us that the fool has said in his heart (i.e. has thought) that there is no God. But Anselm, in reply to this 'fool,' argues as follows. Even the fool who doubts or denies the existence of 'that than which nothing greater can be thought' must understand what this phrase means, because he knows for certain that there is such a thing.1 Thus it is certain that God, as defined, is in intellectu—a phrase which means simply that the words 'that than which nothing greater can be thought' have a definite meaning. But, if God were only in intellectu (i.e., if there we no object answering to the definition), we could think of something greater than God, for we could at least conceive that such a being was not merely thinkable but real.2 Thus the argument is that, if 'that than which nothing greater can be conceived' exists only in intellectu, 'that than which nothing greater can be conceived' is not 'something than which nothing greater can be conceived,' and this is a formal contradiction in terminis. It follows therefore that God cannot be conceived as existing without substance, but his substance cannot be conceived not to exist. How can it be true that the fool 'has said in his heart' that God does not exist? Only in the sense that the fool attaches no sense or a mistaken sense to the word 'God.' 3 These few lines contain the whole of the Anselmian argument that id quod nihil minus cogitari potest exists at least in the intellectus even of the atheistic fool. It is assumed that God exists in intellectu, and the only point discussed is whether He can be conceived not to exist. Hence the existence of God is proved by simply urging that we know what the atheist means when he says that God exists. To make the fool invalid, it ought to be shown that the fool cannot understand what the theist means without also seeing that his assertion is true, and Gaunilo denies that Anselm has established this point. Arguing, not as an empiricist, but from Neo-Platonic premises common to himself with Anselm, he urges that in point of fact we have no positive adequate concept of God; and it adds nothing to our information to be told that God is greater than all the things of which we have positive concepts.4

So far Gaunilo (who has been oddly mistaken by some modern critics for an empiricist) is simply playing off the negative or agnostic side of the theology committed by his master to something greater than the positive, and it is significant of his real purpose, which is that of a mystic rather than of an empiricist, that he quietly replaces Anselm's definition of God ad tunc that which nothing greater can be conceived 'that which is greater than all which can be conceived.' He then continues as follows. Even if I admit, what is itself questionable, that I understand the meaning of the phrase 'something which is greater than all which can be conceived,' Anselm's argument cannot force me to admit that there really is such a thing. All that the argument proves is that it would be inconsistent to admit that there is such a thing and at the same time to deny its reality, since, if it is not real, it is not greater than things which are conceived and are real. But the 'fool' is not really convicted of this. The Christian is being led to believe that he admits is, at the outside, that he understands the sense of the words 'something greater than all that can be conceived.' To make Anselm's argument cogent, one ought to be taught that God is something actually exists. If this proof is once forthcoming, Anselm's further demonstration that the something in question is all that God is

1 Certe ilium ipsum insipientium, cum audit hoc ipsius quod dico, id est intelligat et quod intellectus ejus est, estiam non intelligi illius esse (Prologion, ch. 2).
2 Et quod intellectus ejus est, estiam non intelligi illius esse (Prologion, ch. 2).
3 Sic ergo vere est aliquid quod cognoscit potest ut nec cognosci possit non esse: et hoc esse tu, Domine Deus nostri (ch. 3).
4 Nemo intelligens id quod Deus est, potest cognosci quia Deus non est in consensu, nec in intentione, neque in intellectu solo. Si enim vel in solo intellectu est, potest cognisci et in sensu diuinorum, non in sensu sensibilium (ch. 4).
5 Hoc enim est olim quod ille susurrat et PhI. divinit. quae in intellectu neque constat illud habere, cum audiat intell. intelligitur discernere esse aliquid multis omnibus quae valeant cogitari (ch. 4, § 4).

268 THEISM
held to be well valid. It is to illustrate this second point that Gaunilo introduces the reference to the famous lost island by which he is principally remembered. The island, as described to us, was as wealthy and better than any inhabited land, I should readily understand the meaning of the words, and the lost island would be 'in my understanding' in the same sense in which God may be unconsciously identical with the whole of the face of the earth. But it would be idle to say that the island must also really exist somewhere in the ocean because it would otherwise not be, as by definition it is, richer than all the lands. Finally he believes that it is not, as Anselm had assumed, a *proprum* of God that He can only be thought of as existing; it is true, no doubt, that we know that God exists cannot think the proposition

'There is no God' true, but neither can we think any other proposition to be false which we know to be true; e.g., I cannot think it true that I do not exist at this moment, because I know it to be true. The phrase 'in my own existence,' and, if there is, it is equally possible, in the same sense, to think of the non-existence of Gaunilo's island. This last point, of course, anticipates Hume's criticism that whatever we can think of as existing we can equally think of as not existing, and if this is admitted fatal to every argument of the ontological type.

Anselm's reply to his critic is contained in the short Liber Apologeticus contra Gaunilone re- spondentem pro Insigniis. He points out, naturally enough, that Gaunilo's substitution of the phrase 'that which is greater than everything which can be conceived' for 'that than which nothing greater can be conceived' alters the character of the argument, and that Gaunilo's reasoning about the lost island is not a real parallel to his own proof, which, as he insists, is applicable only in the case of the concept 'that than which nothing greater can be conceived.' What he does not prove, but merely asserts, is that this phrase really has a definite meaning and is not a non-
sensical or insignificant sound. On this point he is content to say that even the 'fool' must concede the meaning of the words before he can deny that they stand for a reality.

It is very difficult to follow Anselm here. If his reasoning is sound, it is not only the real existence of God but all the existence (in the logician's sense of nothing, round squares, equilateral right-angled triangles, fabulous monsters, the greatest number of all integers, etc., would be; that the three propositions 'There is no such thing as a round square,' 'There are no fabulous monsters,' 'There is no integer which is the greatest of all integers,' etc., are true; and it may then be argued that, since they are true, round squares, etc., must exist in the *intellectus* of the person who asserts the propositions. What Anselm is assuming is, as he himself says, that a proposition cannot be understood unless its 'parts' are sever-

ally understood. From this he infers that, if there is no such thing as *x* is a significant proposition, *x* must be a significant term. The assumption is plainly not justified, since my ground for asserting the proposition may be precisely that *x* has no intelligible meaning. The state of the case, then, seems to be that Anselm's argument certainly proves that, if 'that than which nothing greater can be conceived' (or 'that which cannot be conceived as not existing') exists in *intellectus*, it also exists in *re*. But the question whether it exists in *re* is certainly not settled by this argument.

9. Thomas Aquinas.—The history of the sub-
sequent fortunes of Anselm's theistic argument is a highly interesting one. In the 13th cent., the golden age of scholastic philosophy, it was widely known and disputed by all the leading thinkers. In the main the mediaval philosophers seem to have been disposed to accept it until it was rejected as a sophism by St. Thomas, whose great authority has ever since discredited it. The principal 13th cent. texts relative to the subject have been edited with an acute commentary by the Benedictine Augustin of Cassel. It is true that, although all the teachers of the second half of the 13th cent. seem to have felt themselves obliged to make their attitude to Anselm's argument clear, no theologian of the 12th cent. appears to have taken any part in the controversy. The explanation of this silence seems to be that of Daniels, that the circulation of the *Proslogion* was slow and the work unknown to theologians in general until well above the 13th century. It is certainly not true, as is sometimes said, that acceptance of the argument was confined to the Oxford Franciscans. Of the fifteen scholastics whose writings are examined by Daniels, three (one of whom is Albert the Great) express no opinion on the validity of the proof, ten (including Alexander of Hales, Bonaventura, and Scotus) accept it, only two (Richard of Middleton and St. Thomas) reject it. These facts seem of some importance. It now seems that the discrediting of which the ontological argument fell —it will be remembered that, when Descartes revived it in the 17th cent., critics were quick to remind him that the very virtues of the argument, such as the least suspicion of heterodoxy—was due almost entirely to the general recognition of the weight of St. Thomas's criticisms. They are, in fact, so formidable that we still repay the trouble of reading them, and are, in the present writer's opinion, altogether on a much higher philosophical level than the better-known polemics of the *Critique of Pure Reason*. The general position of Thomas is precisely what we should expect from a philosopher whose thought has been moulded partly by Neo-
Platonism and partly by Aristotelianism. He holds that the existence of God can be, and has been, sufficiently proved a posteriori, by reasoning from the works of God to their Author, and consequently he accepts as valid both the argument from the necessity of an unmoved First Mover (the Aristotelian argument) and the argument from design, in the wide sense of an argument from final or intentional causality (the Platonic argument from order and intelligibility in the world to an intelligent Creator). But on principle he rejects the attempt to demonstrate the existence of God *a priori* (from a mere consideration of the content of the concept of God).

The most important of the relevant passages in the works of Thomas are to be found in *Summa Theologiae*, t. qu. ii. art. 1, both dealing formally with the question whether God exists; and *Summa Contra Gentiles*, l. iv. 11, and *Summa Theologiae*, t. qu. ii. art. 1, both dealing formally with the question whether God exists. His own view on this question is that the proposition is self-evident if the *essentia* of God is once adequately known, but, since we in this life do not behold the *essentia* of God, His existence is not self-evident to our understanding. It is not immediately evident to us that there is anything 'than which a greater cannot be conceived,' or 'Than God cannot be thought not to exist'; on this point St. Thomas is in complete agreement with Gaunilo. Anselm's argument, in fact, is a sophism arising from failure to distinguish between that which is *nomen per se simpliciter* and that which is *nomen per se notum*, and evidence to this.

Theism in its broadest sense is the belief in a supreme being who is active in the world, either directly or through agents. This concept is often associated with monotheistic religions such as Judaism, Christianity, and Islam. The term is derived from the Greek theos, meaning "god." The concept of theism includes the belief in the existence of a single, personal, and transcendent God who is the creator and ruler of the universe, who is the source of moral law, and who judges the actions of humankind. Theism holds that the laws of the universe are not merely natural laws, but are the direct expression of God's will and nature. Theism is a fundamental tenet of many monotheistic religions and is often contrasted with atheism and pantheism.
Theism

271

The process of 'passing to the limits,' of which mathematical reasoning furnishes so many examples. But we are not really assured of our authority to consider the limit of a series or of a sum of terms that a given series has a limit or a given sum has a limit, if the limit of a sum has a limiting value or not to be discovered by examination in each special case; it is notorious that mathematicians down to a very recent time have failed so to do. It is an essential assumption that there exists, in point of fact, do they do so fail, as far as it is necessary to assume existence without more ado. It is hard to believe, as Descartes does, that St. Thomas is really right in confining the concept of God to that which he has made to resemble God. He has, for instance, to take an answer of the proof as anything more than a glaring petitio principii.

II. Spinoza.—With Spinoza's attempt to give a pantleistic turn to the Neo-Platonic and Cartesian lines of thought, there is a further and more important discovery to bear upon himself further than to remark that the whole of the First Part of the Ethics is logically no better than one long petitio. The first, third, and sixth of the definitions already contain the two assumptions, that God is substantia unica (one and not two), and that causae sui (which is defined as 'that whereof the nature cannot be conceived but as existing'), and two assumptions entirely independent of one another, that God is in reality, and that the definition of causae sui is more than a meaningless noise.

One particularly glaring example of Spinoza's singular carelessness about logical necessity is in his argument in the first of his main highest, that all that exists is God. It has been taken from Neo-Platonism the first and most fundamental notion of his system, that of causae sui (n — adaequatio Proclus). No one can fairly reproach a Neo-Platonist with taking the name adaequatio to minds and souls and expressly maintained that the One God of the Greeks having no cause, being unproduced, is adaequatio in the most complete sense. Theologians had done the same thing; as Arnoldi said in his commentary on the 'Spinoza's' his God, that is, the most perfect thing, that is, the Name adaequatio, and that is, the notion that God's existence (nisi Deus, and so on), the most perfect thing, that is, the Name adaequatio, and that is, the notion that God's existence is necessarily independent of one another, that God is in reality, and that the definition of causae sui is more than a meaningless noise.

12. Locke.—Locke's proof of theism, which he regards as another name for the Metaphysical certainty, though in some ways perfunctory, is in its general character of the Neo-Platonic type. He does not refer to the a priori or ontological argument, and refuses to pronounce any opinion on Descartes' own special argument from our possession of an idea of God except to remark that 'it is an ill way of establishing this truth and silencing atheists to lay the whole stress of so important a point as this upon that sole foundation.' (As the context shows, Locke thinks that it would be a true and relevant criticism of Descartes to say that some men have no idea, and others false ideas, of God.) It is not quite clear whether Locke regards the certainty of theism as equal to the certainty with which we know actually perceived facts or the fact of our own existence. He says that we have more certainty of it than of anything our senses have not immediately discovered to us,' and again that we 'more certainly know that there is a God, than that there is anything else.' This certainty looks as if Locke held (as Descartes did not) that the distance of God is less certain than our own, and
THEISM

possibly less certain than that of the objects of actual and mental perception. But it is also possible that he only means that our certainty in the last two cases is immediate, but in the first depends on an ability, not found in all men, to follow the steps of a deduction. He may not intend to suggest that, to the man who can perform the deduction, its conclusion is inferior in certainty to any immediate cognition, 'intuitive' or 'sensitive'.

Locke's own proof is the usual a posteriori one based on the principle of causality and the empirical proposition (guaranteed by the ego) that something (viz. myself) exists. It is also assumed, as usual, that a cause must contain more reality or perfection than any of its effects, as the Neo-Platonists had taught. The argument then becomes this: I exist; therefore I must have a cause; this cause cannot be 'bare nothing'; therefore it is a positive something. Since 'bare nothing' cannot be the cause of anything, therefore the cause of my own existence and that of all other existents must be eternal. (The impossibility of the endless regress and the 'contingency of the world' are not mentioned, but are of course tacitly presupposed.) An effect must derive all its properties from its cause. Therefore 'eternal cause' must be the most powerful of things. (It is assumed that the cause has not only as much reality as 'the effects, but more, and further that there can only be one 'eternal cause' — a point which Locke is hardly entitled by his own metaphysics to assume.) There is intelligibility in this principle of the existence of a higher intelligence (of a higher degree) in the cause. 'The eternal cause' is thus not only the most powerful, but also 'the most perfect', and this Locke thinks it follows that this cause is what we mean by God; whether we use the name or not is a mere matter of vocabulary. The same argument can be repeated again and again, and therefore Leibniz, which either any one will please to call God, it matters not. The argument, therefore, assumes that we can derive by inspection the materiality of the eternal cause. The goodness of this cause Locke presumably held, as any Platonist might, to be inseparable from its perfection. It consists, therefore, in reasoning back to find a cause of the present universe, of which any one will please to call God, it matters not. The essential characteristic of the subject is that it is thus only the familiar one from causality badly stated and with most of its real premises left unexpressed.

3. LEIBNIZ.

Leibniz's treatment of the subject is far more adequate. In his system, at least as represented in his best known works, the proposition 'God exists' holds a unique position. It is a truth of fact, and therefore, like all 'truths of fact', synthetic. But it is the only truth of fact which is capable of demonstration. In general, only 'truths of reason,' analytic propositions, admit of formal demonstration, because the demonstration of a proposition is nothing but its analysis into simpler propositions which are seen on inspection to be identities. This is why the 'principle of contradiction' (A is not non-A) is regarded by Leibniz as the supreme principle of all analytic propositions. (Truths which assert actual existence) do not fall under the principle of contradiction, but under that of sufficient reason, and thus, with the only exception of the proposition that God exists, they are not analysable into identities and cannot be formally demonstrated. The anomalous character of the proposition 'God exists' vanishes, however, when we discover from the papers published by Couturat 1 that Leibniz's real view was that all truths are analytic, the only difference between 'truths of reason' and 'truths of fact' being that the former can be resolved into identities by a finite number of steps of analysis, the latter require (like the extraction of the square root of an integer which is not a perfect square) an infinite number of intermediate steps. 2 It follows that God, being omnipresent, his existence must be part of his Being (that is, it can be included in them to be identities), just as Leibniz says more

1 Opuscules et fragments inédits de Leibniz, Paris, 1908, p. 515 ff.
2 ibid., p. 518: 'Semper ignotum praedictum sequens non subiecto seu antecedenti se incompositum, nisi in ipso consistat natural veritas in universum'; p. 519: 'the law of sufficient reason itself is a consequence of this, for all logic veritas, directum, quia non posset probari a priori, seu quia non resolveretur in infinitas series, non est verum, nisi tale, quod expositum, sine dubio, naturales, necessares, non possum demonstrari nisi infinita scholia.'

than once that God sees 'from eternity' in the sense of knowing of that Peter will repent of his denial, and in the notion of fatalism this will die immanent, and that the distinction between the necessary truths of reason and the contingent truths of fact means nothing to him. Quod nos a priori, God exists, is merely the proposition demanded for its proof a priori an infinite series of resolutions. In being capable of resolution into identities by a finite number of steps it resembles the truths of reason.

Consequently Leibniz is bound to hold that the Anselmian argument a priori from the meaning of the concept of God to the real existence of God is in principle valid. Since he held that all propositions with which he was dealing were naturally accepted the form of the argument used by Descartes, viz. that the proposition demand its proof a priori, he has also maintained an infinite analysis. The peculiarity of the one truth of fact which is necessary quod nos, 'God exists,' is merely the proposition demanded for its proof a priori an infinite series of resolutions. In being capable of resolution into identities by a finite number of steps it resembles the truths of reason. 3

3 Cf. what has been said above about the attitude of Socrates, by whom Leibniz may very possibly have been influenced.

1 Nouveaux Essais, op. cit. 
2 La Cognitione, ser. ii, vol. i, part i. 
3 See the discussion of them in B. Russell, A Critical exposition of the Philosophy of Leibniz, ch. ix.
Leibniz himself at times explaining why the actual world, rather than any other equally possible world, exists, by ascribing the existence of the actual world (existence, the actual existence (existence actualis)) to its degree of internal harmony, and saying that the most orderly of them is actual just because its external harmony is of a higher grade. This is what happens in more popular writings, treating existence as something which is conducive to the highest degree of possible worlds by God in virtue of His 'choice of the best.' Unless one is prepared, as the present writer after long study is not, to accuse Leibniz of insincerity, it seems impossible not to recognize here a fundamental inconsistency between his personal religious belief and his metaphysics, his natural physical system. If all true propositions are identities, philosophy cannot beistic.  

14. Hume.—The most important philosophical treatment of the theistic problem between Leibniz and Kant is unmistakably that of Hume in his Dialogues concerning Natural Religion (written apparently before 1751, though not published until 1777, three years after the author's death). In judging this work it must be borne in mind that it makes no pretence to expound the theology of the author. It is strictly what it purports to be, a conversation between a supporter of philosophical naturalism, 'natural theology,' Cleanthes, a violent atheist, Demes, intended as a representative of orthodoxy, and a sceptic, Philo. The responsibility for the positions taken by the three parties is entirely with themselves. Hume abstains from indicating his own sympathies except in the final sentence, where he suggests that the 'opinions' he has given are to be regarded as arguments for the 'natural theologian.' Cleanthes probably comes nearer to the truth than those of Philo, and those of Philo than those of Demes. Hume's real position in natural theology, as in philosophy in general, seems to have been that of a consistent Academic. Genuine scepticism is a rare thing and liable to be misunderstood. So Hume's general philosophy has commonly been mistaken, as by T. H. Green, Huxley, and others, for a shallow sensationalistic phenomenism. In reality he is neither a sensationalist nor a phenomenalist. He holds that there are insuperable difficulties in the Cartesian rationalism, and that, on the other hand, sensationalism leads to the conclusion that science is an impossibility. Being unable to accept either Cartesianism or sensationalism, and knowing of no third choice in philosophy, he adopts the sceptical attitude of 

quote

"The universe is a thing whose nature we cannot know, let us therefore be content to ascribe nothing to it and to live in the midst of this uncertainty.

"We do not, as it is we wished to be convinced, vindicating our faith, though Hume lets us see that personally he inclines to accept it. His attitude is neither that of a zealous 'indef' nor that of a philosophical and anathema. Neither

1 Cf. Couturat, La Logique de Leibniz, Paris, 1901, pp. 234-254, with the passages cited there.

2 For a useful concordance of all the more important utterances of Leibniz on the existence of God known before the publication of Couturat's volume of Oeuvres see Russell, Crit. Essays, of the Philosophy of Leibniz, pp. 234-251, and, for a 'summary,' but by no means final, attack on all the four arguments, ch. ix. of the same work.

3 Ie, natural theology., a mode in good faith seems clear from Hume's letter to Gilbert Elliot of March 10th, 1751, where he speaks of Cleanthes as the 'hero' of the dialogue and asks his friend for any suggestions which will 'strengthen that side of the dialogue,' protesting against the ascription to himself of 'any thing or the like,' by which he plainly means the side of Philo. No one could suspect him of 'propensity' to the side of the 'anti-theist.'

Vol. XII.—18

THEISM 273

There is no sign of irony in this utterance, and its seriousness is all the more probable. So Hume proceeds to express the intellectual difference between the characters of the dialogue, assigning an 'accurate philosophical turn' to Cleanthes the theist, 'carefully to Philo the atheist.'

2 The truth so obvious, so certain, as the being of a god 

want truth so important as this which is the ground of all our hopes, the basis of our confidence in the existence of the support of society, and the only principle which ought never to be a moment abased from consideration. We cannot but be moved in treating of this obvious and important truth; what obscure questions occur, concerning the nature of that divine being: his attributes, his abode, his plan of provision.

There is no sign of irony in this utterance, and its seriousness is all the more probable. So Hume proceeds to express the intellectual difference between the characters of the dialogue, assigning an 'accurate philosophical turn' to Cleanthes the theist, 'carefully to Philo the atheist.'

Hume's view of the problem. No one could suspect him of 'propensity' to the side of the 'anti-theist.'

1 That Hume was personally an orthodox Christian is, I believe, unlikely, but there is no reason to suppose that he was much further removed from orthodoxy than more of the prominent 18th. cent. latitudinarian bishops or Scottish 'moderates,' and in his philosophy he never commits himself to any view not compatible with the complete orthodoxy, as orthodoxy was understood in his day. Huxley's anti-clericalism is quite incompatible with Hume.

2 There is a certain want of definiteness about the position ascribed to Demes. He is spoken of as a philosophical sceptic, and a depreciator of the powers of reason; on the other hand, he is the champion of the 'simple and sublime argument a priori'—an odd attitude for a 'sceptic.' Hume does not seem to have distinguished between negative theology, the creation of philosophical rationalism to explain the scepticism, and the scepticism which arises from sheer distrust of reason. Philo's 'scepticism' is quite another thing, a mere declaration that, 'as at present advised, he has no sufficient motive for a positive conclusion.'

3 Demes, in fact, so little of a real theologian that he is unaware that it is impossible to prove the existence of God known only by revelation. Perhaps, like Hume himself, according to Johnson, 'he had never read the New Testament with any great deal of attention' and he almost says, not knowing that his position had been formerly condemned by the Fifth Lateran Council.

4 Huxley's exploitation of Philo for an antitheistic purpose rests on the false assumption that it is who is the real 'hero' of the dialogue.'
THEISM

effect to cause, the known effect is not perfect and we are not
entitled to infer that it is free from errors or from defects which
or from moral deficiencies, or even that 'several defects' may
not; our knowledge is defective, and we have nothing to operate
to build a house or ship. 'A man, who follows your hypothesis,
is able, perhaps, to assert, or conjecture, that the universe, somethings, and that which we call divine, beyond the
position he cannot ascertain one single circumstance, and is left
in the dark, and therefore, to suppose the ultimate
licence of fancy and hypothesis.' 1

The God of Cleanthes, in
fact, a 'finite deity,' and a finite deity is as bad as none at all.
And, if we cannot place any object of any reality there
should we look on the material world as an animal of God
and not even a spirit? We have to seek to astound the
affirmation of the eternity of the world contrary to the position of
Cleanthes, who assumed that we could have no
account for its origin. Or, again, if the world is more like
an animal or vegetable than a watch or loom, why should we
not infer that words are pronounced, everlastingly good
ought may be the 'egg' of a solar system. Demons, of course,
comments on the absence of any data for such 'wild' theories.
But this is exactly the point on which Philo wishes to insist:
we have no data to establish any system of cosmogony.
He establishes the existence of the 'all-purposes' or 'me
ding that intelligence itself is caused by physical generation.
Generation, itself an unintelligent process, is explained as
a 'principle of order in nature,' and we 'see every day the
latter [Intelligence] arise from the former [generation], never
the reverse.' 2

It is clear that there is nothing obvious that
Cleanthes is here making two very questionable assumptions—
that 'the material causes' consists in the 'body, universe,' and that
because an oak or a spider is not rational, the growth of the
and the instinctive behaviour of the other are not guided by
'simplicity' does not of itself ensure us of those
.' Philo finally reaches the climax of his position,
argues that the 'unguided' notions of material particles may give rise to
'an uniformity of appearance,' and thus 'account for all the
appearance of order in the universe.' We may hope
for such a position, or rather be assured of it, from the eternal
revelation of some God. The condition of cosmogony does not
warrant the statement that there is ever has been
'the whole of this system.' He makes the notion that
we know from existence to an halt. This implies
that we have to
the case with the universe at present. . .
May we not hope

at hand. For he
by suggesting that the only reason why there is order in the
world is that it works itself. 3
Cleanthes reasonably resorts to the
degree of harmonious adaptation in the known part of the
universe as evidence that he,
the world.

by the argument by which the existence of the
selfrealism is to be established from an analysis of its own nature. The
exposition of this argument is given to Demea, the spokesman of
the materialists. Philo puts the argument into the
fact of motion to a First Mover and the argument from
the possible to the necessary. Since the infidel regresses to illegitimate
in arguing from effects to causes, we must come to
a First Cause, and when we ask why the 'succession of causes'
ought to be what it is and not a different series, we are forced to
answer that the First Cause is a 'necessarily-existent Being,
who is not and is not.' This last sentence gets in the
mind of the ontological proof under cover of the argument from causality:

possibility of demonstrating theism. In his thesis for his degree,1 which aims at showing the irreducibility of the principle of sufficient reason to the absence of contradiction (or the impossibility) of the constituents of a 'complex notion.' The 'constituents' are thus presupposed as the 'matter' of the 'complex notion.' Thus a 'possibility' without any presuppositions, a 'possibility' when nothing whatever has been given as actual, is meaningless. It follows that 'nothing can be conceived as possible unless that which is real in every possible notion exists, and, indeed, exists with absolute necessity (since, if you leave this (reality) out of account, nothing whatever would be possible, i.e., everything would be impossible). Further, he urges, this 'necessary reality' must be a single being. The argument for this is that, if we suppose 'the real,' which are, so to say, the matter of all possible concepts, to be found distributed among many existents (i.e., if we suppose a plurality of ultimate 'reals'), each 'real' will have limitations, i.e., 'privations,' contrary to a single being as absolutely necessary. The supposed 'reals' will therefore all contain an element of contradiction, and the whole of the possible concepts will therefore be without any limitations and therefore infinite. (But God, who is the infinitely perfect being, cannot have a plurality of absolutely necessary predicates.) Kant thus, by deducing the existence of God from the principle itself, is fully self-consistent. He says, it is already anticipating the doctrine of the Critique that all existential solutions are synthetic without exception. Descartes' ontological argument is premises essentially invalid, precisely because it attempts to deduce the 'existence' of God from the principle of contradiction ('possibility' is an absolute necessary predicate), whereas, if we demonstrate that 'reality' is itself made to depend on 'existence,' it is nothing more than a syllogism. Kant's subject is the short essay, *On the Only Possible Proof of the Being of God.2* The proof offered is substantially that of his thesis of 1755, devestated of scholastic terminology. Existence is not a predicate or determination of a subject, but the absolute positive of the subject itself; e.g., when I am fully acquainted with the whole story of Julius Caesar and know every predicate of the hero of the story, it is still an intelligible question whether Julius Caesar is a 'real' man or only the hero of a fiction, and by calling him a 'real' man I do not add an (n + 1)th predicate to the n predicates which I have already ascribed to him (while a hypothetical proposition like: there is a difference between a 'real' and a merely possible thing lies not in what is posited in each case, but in the way in which it is posited. If I think of a triangle as a possible thing, then the Law of the Implication of the universe as a complex of simple substances or monads. His object is to show that such a complex must depend for its existence and character upon a supreme and necessary 'extra-mundane substance,' which is God. The theistic argument is more specially contained in §§ 17-22, and runs as follows. The principles of interrelation between a plurality of substances cannot have their complete ground in the existence of these substances. Each substance is indebted for its mere subsistence only to its cause (if it has a cause). But the relation of effect to cause is not, commercium reciprocum, not commercium dependens (one-sided dependence), and what we have to account for is the commercium of the substances which make up the universe. Not all these substances could be 'self-existing' because, if they were, they would be absolutely without dependence on each other; there would be no commercium between them, and they would not form a world at all. The world, or 'totality

3 Der einzig mögliche Beweisgrund zu einer Demonstration des Daemot en Gottes, Königsberg, 1798 (Werke, ii. 100-200).

nothing should exist.' (In more modern language this means that the difference between the logically possible and impossible depends on the composibility of some predicate and the irreducibility of the possibility of others; thus, that there may be so much as the difference between what is logically impossible and what is possible, there must be predicates, and predicates are predicated of something. Hence there must be something, to the predicate if the very word 'possible' is to have a meaning.) Thus we get back to the starting-point of the proof of 1755. Possibility logically presupposes an actual existence as its foundation. Therefore there is something actual, the elimination of which would destroy all 'internal possibility'; i.e., there is 'an unconditionally necessary being.' Kant then proceeds, as in 1755, to prove that the necessary being is one, simple, immutable, and eternal, and, as that, which contains the data of all possibilities, is, in fact, the ens realessimum. From these attributes it is inferred that 'the necessary being is a spirit (Geist), and this completes the proof that God exists. It still remains for Kant to show that his form of the argument—from the possible to the necessary—is the only valid logical and theological proof. This requires the definition of God and His attributes. Kant first introduces the definition of God, putting aside on the ground that it treats existence as a predicate. The familiar argument of the throne of God and the supposition that the world is an effect, therefore it has a cause which is itself uncaused and therefore unique, is as follows. Kant then allows in this essay, as he does not in the Critique, that the difference to an uncaused First Cause may be valid. It is not so clear that 'this independent thing is unconditionally necessary,' i.e., it cannot even be thought not to exist, since the demonstration of this turns on the principle of contradiction, reason, which is not admitted by all philosophers. But, even if the point be conceded for the sake of argument, it is not proved that the absolutely necessary being is what we mean by God, i.e., is utterly perfect and utterly One. To establish this point (that 'the absolutely being = the perfect being') we require to prove that, 'if A is perfect, A necessarily exists,' and this is just the ontological argument, with its treatment of existence as one predicate among others, over and over again (a point on which Kant expatiates more fully in the *Critique*). The teleological or, as Kant calls it, the physico-theological proof here, as in the *Critique*, comes off better. Like Hume's Philo (in one of his moods), Kant is convinced that there is such evident system, adaptation, and benevolence in nature that its author must be thought of as One, wise, and good. But, though the argument deserves to be enforced in the interests of practical piety, it is not enough to prove perfect wisdom or benevolence in the Creator, and thus not enough to prove that He is all we mean by God. The same criticism will meet us again in the *Critique*.

The argument for the dependence of the world on a 'necessarily existing being' recurs again, in a slightly different form and thought, in a parallel work—Kant's inaugural lecture as professor on 'The Form and Principles of the Sensible and Intelligible World.' As in the two works already considered, Kant's assumption is that there is a complete constitution of the universe as a complex of simple substances or monads. His object is to show that such a complex must depend for its existence and character upon a supreme and necessary 'extra-mundane substance,' which is God. The theistic argument is more specially contained in §§ 17-22, and runs as follows. The principles of interrelation between a plurality of substances cannot have their complete ground in the existence of these substances. Each substance is indebted for its mere subsistence only to its cause (if it has a cause). But the relation of effect to cause is not, commercium reciprocum, not commercium dependens (one-sided dependence), and what we have to account for is the commercium of the substances which make up the universe. Not all these substances could be 'self-existing' because, if they were, they would be absolutely without dependence on each other; there would be no commercium between them, and they would not form a world at all. The world, or 'totality
of substances,' is, therefore, a 'totality of genius' in the world in virtue of its essence, consists of mere contingents. Moreover, no necessary substance is connected with the world (mundus) at all, unless as cause with effect, and therefore the cause is intelligible, a prerequisite to the existence of the parts of one and the same whole are connected by reciprocal dependence, a relation which does not affect a necessary being. The cause of the world, then, is an intelligible thing being seen as a 'sound of being required.' And the necessary being which is the extra-mundane cause of the world is one and not many. For the effects of different necessary beings would stand in no relations of reciprocal dependence, since their assumed causes are not reciprocally inter-related. Hence the unity of the substances composing the world in a single system is a consequence of the dependence of them all on one being, and it follows that this one being is not a mere 'architect of the universe' (i.e. delmorphos), but its Creator. Incidentally also the argument removes the ambiguity which had haunted Leibniz's account of the 'pre-established harmony' to God, thereby makes the harmony itself dependent on God.1

Thus down to 1770 Kant shows no doubt of the possibility of demonstrating theology. The arguments of religion remain the same—the Neo-Platonic argument a posteriori—and rest on the assumption that the world is a contingent object for which the principle of causality is required to seek an explanation.2 The proof, as with every other metaphysical argument, aims at establishing the existence of the One—the single, internally simple and perfect, extra-mundane source of all the existents which together make up the cosmos. The peculiarity of Kant's special version of it is that, to escape the criticisms which had been directed against Descartes, he draws himself to deduce to the existence of a 'being which cannot be thought not to exist,' not from the logical concept of ens realissimum, but from the consideration that, in the proof of existence of the one, being which exists of the same thing and some combinations of relations between the same things are possible, and others not. The existence of an actual extra-mundane being once established as a pre-condition of the difference in intra-mundane things between what is possible and what is impossible, the internal unity, simplicity, and perfection of the necessary being are then deduced as consequences of its necessary existence. If this line of argument is not fallacious—i.e. if it really proves that something exists—necessary—'it clearly has the double merit of being free from the objection to the ontological proof, and of being equally untouched by the criticisms urged by Philo and Democritus in heaven against the a posteriori proof. If the principle on which Kant relies—that the possible presupposes the actual—is sound, his argument seems to be a complete scepticism in respect of the being capable of being deduced to its most succinct expression. Why, then, did Kant, in his later 'critique of pure reason' demand the question of the a posteriori proof to be transcendental—i.e. outside the legitimate limits of speculative investigation—and all 'proofs of the existence of God,' including that of the existence of a world itself formerly claimed 'geometrical certainty, mere fallacies'?2

In dealing with Kant's drastic assault on speculative natural theology in the Critique of Pure Reason, we may perhaps distinguish two questions which Kant himself naturally treated as one. It is one question whether Kant has proved that the demonstration of theology is impossible on the assumption that the special doctrine of his Critique as to the limits of human knowledge is true, but quite another question whether that doctrine is true, and consequently whether Kant has proved the falsity of natural theology unconditionally. The first of these two questions no doubt permits of only one answer. Kant is clearly right when he asserts that all existent propositions are hypothetical at best (to repeat the distinction of St. Thomas to which Kant pays no regard) quod nos. And it follows at once from this single consideration that, if, as the Critique maintains, the synthesis in a synthetic proposition depends on the total knowledge of the world, which is itself the result of an application of formal 'categories of the understanding' to a material supplied in sensation or sensuous imagination, no synthetic proposition (and, by consequence, no existential proposition) can be affirmed of a subject which is purely empirical. And it seems to many to be this main a point in his criticism of the ontological proof. Unfortunately, however, this doctrine, if carried out to its full logical consequences, would lead to a result which Kant has been the first to reject. For it follows that the world must be conceived to consist of an infinity of pure arithmetic and pure geometry. The subjects about which synthetic propositions are asserted in these sciences are one and all Objekte des reinen Denkens no less than the ens necessarium or the ens realissimum of speculative theology. No element whatever supplied by sense enters into the mathematician's concept of a circle, a parallelogram, or an integer, or a real number. Kant overlooks this all-important point because he assumes throughout his whole reasoning that, before I can demonstrate a proposition in geometry, I must draw the figures of which the propositions are to be deduced to the existence of numbers. If, on the contrary, he sets about it in a manner he would certainly think more logical, before I can say what the sum of two integers is, I must count the units of which he supposes the integers to consist. The erroneous character of this view has been sufficiently demonstrated by the subsequent history of mathematics, which has been shown to have been clear to Kant himself. Even if all geometry, as he tacitly assumes, were metrical geometry, he ought to have seen that Descartes' invention of the geometrical method, which had already long been in use, and which essentially consists in the drawing of figures in principle superfluous in geometrical science. His conception of arithmetic is even more superfluous—in fact, on a level with Aristotle's.2 Kant has correctly observed that Kant's examples are all drawn from the demonstration of singular propositions (such as 7+5=12). If he had asked himself how any general truth in the theory of numbers is proved (how, e.g., we prove Fermat's theorem) he would have seen at once the inadequacy of his own theories. Indeed, mere consideration of a singular proposition which does not relate to integers (e.g., the proposition 2.3+4.3=6.16) might have taught him that arithmetic is not the same thing as counting, and even suggested to him that an integer is not a 'collection of units.'3

With the discussion of Kant's 'Transcendental Aesthetic' and the section of the 'Transcendental Dialectic' containing the famous antinomies, which may now be fairly regarded as a 'fait accompli,' one becomes conscious of the impossibility of considering whether natural theology does or does not involve a priori rational knowledge. Kant has declared an illegitimacy of all metaphysical demonstration of pure logic. From Kant's point of view, to be sure, it does. But this is just because Kant assumes that the only legitimate use of logical principles is their employment to order a material given by sense. If the doctrine of his 'Aesthetic' is rejected, and with it that of the 'Dialectic' in which he absurdly tries to show that the mathematical doctrine of infinite series leads to antinomies, it is no longer obvious that what Kant calls a transcendental employment of the principles of logic—i.e. their employment independently of application to 'the manifold' of sense—need be illegitimate. In fact, it is not clear that the whole of the general theory of arithmetic is not just such an employment of logical principles as 'constitutive de la Denkobjekte.' It is certainly so if it is as probable the case, the series of natural integers can be defined wholly in terms of the primitive inductive principles of the mind. Kant in particular, may be noticed here, as it plays a prominent part in the assault on the theistic arguments. Kant claims that all the arguments for the 'necessary being' based on the causal principle depend on employing this principle, which is a mere rule for ordening the appearances of the mathematical, and has no meaning apart from these appearances, as a means of transcending the world of sense.3 It is the same to remark that one form of cartesianism which we are intimately acquainted with and to our own volitional activity. In this activity, which is both self-sufficient and independent of any external cause, what are connected as cause and effect are not an earlier and simply consequent effect. The activity of creation, by an

THEISM

which does belong to it. Kant could not deny the causal relation between the rational self and events in the Simplicius without ruining the foundations of his体系, but the admission of such causality ought to debar him from attacking natural theology on the ground that it 'uses the principle of connection of cause and effect to nonsense.' He only escapes open self-contradiction by his monstrous theory, which makes us suppose that at the present day, that self with which we are acquainted is not the real self at all, but a phenomenal self apprehended by an inner sense. From the world of logic, the criticism is content to a refusul to admit the validity of any logical inference from the terms of the problem to the conclusion of the series. It is not in itself any more absurd to hold that examination of the things and events of the Simplicius in the light of the causal principle reveals their true nature when something which does not belong to that world than it is to hold that a series of which every term is a rational fact can be shown to have a limit which is not a rational fraction. (This is, e.g., the case when we represent a surd 'square root' as a recurrent continued fraction. Each of the 'convergents' is a rational fraction, but the limit of the series is not.) The general argument is thus invalid. No a priori reason can be given why the causal principle should not enable us to transcend the world of sense, and the only real question which remains is whether the particular arguments of the critics will stand scrutiny on their merits. There is no general logical presumption against them of this kind, however.

We are thus brought to the consideration of the force of Kant's attack on natural theology taken by itself and apart from its connexion with a general theory of the nature of scientific knowledge. We may therefore confine ourselves to the sections of the Critique of Pure Reason which profess to make a complete enumeration of the possible proofs of the existence of God and to convict each of the 'proofs' of fallacy, together with the 'Critique of All Speculative Theology,' in which Kant sums up his results. The general line of argument is as follows: The scientist's interpretation of facts consists in regarding any given actual condition of things as conditioned and asking for the antecedent facts which condition it. When they have been found, science once more requires an interpretation of them on the same lines, and so on in definitum. Every set of facts has thus to be regarded by the scientific intellect as conditioned by an antecedent state of things which has, in its turn, to be discovered. The scientific 'explanation' of the world is thus a task which, from its nature, can never be completed. Behind every set of conditions, however remote, at which we may arrive there is always a body of still more remote conditions to be discovered. (The conditions, in every case, like the facts they condition, are facts and processes of the Simplicius.) The unending regress from conditioned to conditions, however remote, is supposed to prove that the whole process of explanation would be completed if we could find something ultimate, itself unconditional but the condition of everything else. Thus we arrive at the notion of a being which 'exists necessarily' and contains in itself the explanation of everything else, the one and only being which is not contingent (i.e. a consequence of something other than itself).

Next, it occurs to us that, if there is a 'necessarily existing' being, it must, as the condition of everything else, contain in itself that which is truly real or positive; what is real in all limited and finite things must come to them from the one. This was the en necessarium with the ens realessimum ('dos nesje nie was alle Realiteit enthalt'). Finally, since we ourselves, who are among the things dependent on this being, are intelligent beings, we can 'personify' this being, and thus we arrive at the conception of God as the Supreme Being and source of the world. But the whole process has no scientific foundation or intelligibility in it. The inference then of the existence of a 'necessary being' is invalid because it employs the causal principle, which is really only a rule for the interconnexion of sensible events, as a means of connecting the sensible with the intelligible (a general criticism which has already been considered in the last paragraph); we have no positive conception whatever of the character of this necessary being, and have no right to seek and the attempt to find one by identifying it with the 'most real being' will not stand examination, since it is logically possible that there might be a plurality of 'necessary' beings, each imperfect and finite (the same idea of the 'indefinite series'). The ultimate 'reality' is a 'society' of unoriginate 'persons' without any Creator); and the attempt to prove the existence of a single 'most real being' directly is a pure sophism. The conclusion then is that, though speculation may suggest to us the possibility that God (conceived after the fashion of the Neo-Platonic 'One') is the source of the world, it can do no more. It cannot even prove that the possibility is more than 'logical'; i.e., speculation may convince us that there is no internal contradiction in the notion of such a being; it cannot show that God is a 'real possibility'—i.e., that there is no incompatibility between the existence of God and the actual facts of the world of experience, if we knew them all instead of being aware of a mere fragment of them. The whole line of argument is thus to suggest this mere possibility, to warn us that we are not speculatively justified in regarding the sensible world as ureal, but must keep an open mind. If, however, apart from all speculative philosophy, there are practical grounds for believing in God—i.e., if the reality of absolute moral obligation can only be made intelligible to our reason by a dependence on God—then for practical purposes, the open possibility is converted into a moral certainty. Kant means, as he explains, that, in shaping the conduct of our lives, it 'suffit pour.' We must act either on the assumption that moral obligation is absolute or on the assumption that it is not; there is no third course. But all moral obligation, as is shown at length in the Grundbegriffe der Metaphysik der Sitten, is absolute, and there is no fact more certain than this. Without God as ruler of the world, however, the system of absolute obligations would be a logically flawless construction ('in der Idee der Verummt ganz reich'), but would have no 'reality of application to ourselves, i.e. would be without motives.' A virtuous man is thus necessitated to a firm rational belief in them, but that which makes the necessity is not the purely demonstrative force of the theistic arguments (which in fact is zero), but the virtuous man's immediate conviction of the absoluteness of moral obligations. This is what Kant meant when he described himself as abolishing knowledge to make room for faith. If our unfavourable judgment on the 'Transcendental Aesthetic' is justified, we plainly cannot concede to Kant that all speculative theism must be baseless. The theistic arguments must be scrutinized on their merits, not condemned en bloc like the generals at Argusana. With his usual love for formal schematism Kant urges that this be done and only three ways of trying to prove the existence of the Supreme. We may attempt to...

1 Kritik der reien Vernunft, pp. 611-670.
prove the existence of the 'most real being' entirely a priori (i.e. without the use of any
'truth'][argument or premises] by arguing that existence is included in its very nature—the ontological proof; we may, departing from the strictly a priori method, employ the single truth of the God hypothesis and the empirical postulates, and then argue to the conclusion that a 'necessary being' exists—the cosmological proof; we may include among our premises specific assertions about the nature of the universe, or the like, i.e., we may argue from the marks of intelligent and benevolent design in the actual world to intelligeice and benevolence in its source—the physico-theological proof. All of these proofs is now to be shown unsatisfactory.

The refutation of the 'ontological proof' is one of the best-known passages of the Critique of Pure Reason. Kant speaks of the proof as the 'first of the three', and his review of its outcomes.

He examines it only in the form in which it has been revived by Descartes, and particularly by the Scholastic writers. The critics, of course, make the point that Kant's definitions of the 'God' concept are dependent on the 'ontological proposition' ('God exists') categorically. In fact, existence is not the predicate of any 'real' 'dollars' in a precise sense. Thus, Kant's view that the existence of a Supreme Being is in many respects a most useful idea, but just because it is merely an idea it is wholly inexplicable of extending our knowledge of what exists by means of itself alone. Since Hegel undertook to rehabilitate the argument, it has been fashionable to retort on Kant that, though it may be true that the real existence of a sum of a hundred dollars cannot be inferred from analysis of the corresponding concept, the case is wholly altered when we come to deal with the unique and exalted concept of the Supreme Being. The present writer does not feel that Hegel's criticisms on this point are any answer to Kant's criticism. Kant is certainly right in saying that mere success in defining a concept without contradiction does not in general warrant our asserting that the concept has an 'extension'. The logical investigations which have been brought forward have been very valuable in this respect, but it must be remembered that when we reason from a concept to an ontological proposition ('God exists') categorically. In fact, existence is not the predicate of any 'real' 'dollars' in a precise sense. Thus, Kant's view that the existence of a Supreme Being is in many respects a most useful idea, but just because it is merely an idea it is wholly inexplicable of extending our knowledge of what exists by means of itself alone. Since Hegel undertook to rehabilitate the argument, it has been fashionable to retort on Kant that, though it may be true that the real existence of a sum of a hundred dollars cannot be inferred from analysis of the corresponding concept, the case is wholly altered when we come to deal with the unique and exalted concept of the Supreme Being. An example of the phenomenon is that the series of events has a first term, or, like St. Thomas, hold that it can only be known by revelation whether the series has a first term or not. The cosmological argument is not a First Cause argument (or ‘movers’ or ‘agents’ in the plural), as the case may be, the world has been demonstrated to have two independent causes, cosas are what they are because there happen to be such and such agents, and the reason why there is no need to be determined and no others is that there happen to be (or ‘to have been’) certain others by which the set first mentioned have been produced, and so on in this fashion. This means that there have been no world at all, or one quite different from that which we see. As a result, it may be possible to maintain this thesis, and we shall have to face it in the sequel. But it is an injustoio elenchoi to defend it by assuming physical evolution. On the other hand, prove that the cosmological argument is valid, for which it is indispensable that every human self shall be a ‘first cause’ of its own morally and legally impeccable acts. If ‘first cause’ really means nothing indestructible, Kant’s practical philosophy is no better than an idle sporting with ingenuous words. One must hold that the full force of the cosmological argument is only seen when it is combined with the argument from intentional causality. If the historical world is the result of the will of any kind of being, the suppositions must be made in connection with the being or the object of the implication of the sort of all the natural constitute universe happen to be what are. An ultimate pluralism, to prove that there is no meaning in all the world-process. But, again, the Kantian phenomenology is a question of the logical constitution, this view. As to the last point, it does depend on the special principles of the critical philosophy, and, in particular, on the theory that there is a self at the root of the valid synthetic propositions. As has already been remarked, this theory is supported by the simple consideration that every proposition in the theory of numbers is synthetic in Kant’s self, thus, on the one hand, the argument is unfounded. Even the complaint that we have no positive conception of either ‘necessary’ or ‘real’ being only amounts to a demand that we know what it would be to be God—a proposition which no reasonable theist, least of all Kant, would be inclined to concede to the argument. For the matter of that, I do not know what it would be like to be my cat, but that is merely an insufficient reason for denying my account. Kant’s treatment of the argument from intentional causality is much more lucid, and may be summarized more briefly. This argument, which he reduces to the argument from design, he regards with great respect as the most important one. His argument seems to assume the negative that it is not a truth of the design. This is because it is not a self-evident fact that it is impossible to be designed in this way, and a priori there is no ground for objection to speculative theological consideration similar to the Kant’s, and the fact that it is true is self-evident—an impossible idea is impossible in this sense: still less it would be possible to maintain that, when one utters the well-known proposition, every integer can be represented as the sum of two prime numbers, in the case of the integer—i.e., at least is not true, one is not transcribing anything that is impossible to be true. In any case, to verify the proposition by examining its validity for each successive integer is an impossible idea. But, though I could, e.g., prove the proposition quoted to hold good for a few cases by actual counting, I manifestly cannot carry out this process of verification by the method of the problem to intuition. Again, we know the test is a logical argument by which a logically true proposition can be demonstrated. We may be concerned only with objects that fall under the forms of intuition. Kant’s treatment of the argument from design is much more lucid, and may be summarized more briefly. Kant’s argument is that the existence of the universe is an ‘a priori’ and not an empirical fact. He assumes the existence of the universe as a self-evident fact, and he assumes the fact to exist. But the fact is not self-evident, and it is not possible to prove it. Kant’s treatment of the argument from design is much more lucid, and may be summarized more briefly. Kant’s argument is that the existence of the universe is an ‘a priori’ and not an empirical fact. He assumes the existence of the universe as a self-evident fact, and he assumes the fact to exist. But the fact is not self-evident, and it is not possible to prove it.
THEISM

old speculative natural theology, it is even more his purpose to replace it by a positive moral theology, and it is probably true to say that it is primarily intended to this end. At the same time, it is mainly upon the moral argument that popular theistic philosophy continues to base itself. As the Kantian moral theology has often been very inadequately understood, whether its right application to state Kant's real position rather carefully, in order to put in the clearest light the differences between Kant and those who hold that the existence of God remains a sufficient moral problem, though not established by the facts of the moral life, or those who hold that it is a doctrine recommended mainly by its comforting character. To appreciate the strength of Kant's position, it is necessary to understand that theism is not in any sense an arbitrary hypothesis tacked on to a system of ethics, or, as Bosanquet calls it, a ‘survival’ of belated superstition, but a logically necessary part of ‘practical’ philosophy. The argument starts from premises which are taken as once for all established in the Grundlegung zur Metaphysik der Sitten and the Analytic of Practical Reason. These premises are the following:--

1. That the Critique of Practical Reason should be divided, like the Critique of Pure Reason, into an 'Analytic' and a 'Dialectic'—of course there can be no 'Aesthetic' in this case—and that the 'Dialectic' must have its antithesis a pure piece of pedantic formalism which Kant would have done well to do without.

2. The words of this statement are not precisely those of Kant, but have been chosen to express as briefly and untechnically as possible the main substance of his thought. Kant's own expression is carefully observed that the central thought is not egotistic. Kant's point is that the 'ideal spectator,' apart from any consideration of his own happiness, would judge unfavourably of a world in which the will of the good will be virtuous (a). The highest good—object of the moral will—is thus a union of virtue with happiness, but a union in which the inner virtue of the agent is the condition and cause of his happiness. Since the highest good, in which a rational being is (a) deserving of happiness, deserving that his will be done, as in heaven so in earth, and (b) has the happiness which he deserves as a consequence of his deserving it.

(More briefly, the highest good is that the actual order of things should be a moral order.) But—and here comes in the antinomy which Kant thinks indispensable in a Critique—the principle, as distinct from the object, of the virtuous will is always to act from reverence for the unconditional moral law, without any consideration of the result of our actions. We must, as moral beings, will the highest good, yet we must also, as moral beings, will to do right for its own sake, without even asking the question whether our right actions will lead to the fruition of this good or not. We cannot escape from this antinomy, as Kant holds we can from those of speculative reason, by dismissing it as illusory. For we are not absolute obligations, and we cannot be really virtuous without desiring the highest good, nor yet can we be really virtuous if we allow this desire to affect our will to do right because it is right, regardless of consequences. Thus, if morality is to be more than an empty dream, the union of virtue and happiness must be realized, though we must not set ourselves to realize it by treating virtuous actions as a means to it. The realization of the union must be brought about for us, not by us. Now, experience shows abundantly that in the empirically known system of nature there is no dependence of happiness on virtue. The virtuous man is not a force, whose will is actually done 'in earth,' nor the man whose will is done the man whose volitions are morally purest. The union must therefore be effected for us by a supreme power, not our own, to which the 'intuitive world' which discloses the course of events so that, if we could see the whole infinite series at once, we should see that every man is happy in proportion to the degree in which he deserves to be happy. Further, since morality demands not merely that the virtuous shall be happy but that the happiness shall be a consequence of their virtue, we could not regard the union of virtue and happiness as effected by a mere blind 'natural tendency' in things. The virtuous man's virtue must be the motive of the disposing power to make him happy—i.e., this disposing power must be thought of as an intelligent and absolutely holy will. Thus it becomes a postulate of morality that there is an absolutely wise and holy Supreme Being. We have already seen that the speculative use of reason in finding an explanation for natural events themselves suggested the hypothesis that there is a Supreme Being, though all our attempts to demonstrate the truth of this hypothesis proved to rest on fallacy. The conception of the presuppositions of morality now show that, unless there is to be a contradiction between our conception of the highest good and the first principle of duty, such a Supreme Being must really exist and, what is more, must be spiritual. Practical reason then does not introduce us to any new idea; it did, there might be an insoluble conflict between its suggestions and the results of speculative criticism. It only gives us the right to affirm as a reality what speculative reason itself unavoidably suggests as a possibility, the complete dependence of the world on a Supreme Being, and enables us to determine the character of that Being so far as to say that it combines perfect wisdom, holiness, and power. Beyond this moral absolutely cannot go. It tells us what God must be if the world is to have moral order, and it tells us nothing more. Kant pushes this consideration so far that he is not content to say with the Neo-Platonists and scholastics that we do not know God secundum essentiam suam. Recurring to his view that an object of possible experience must have sensuous forms, he suggests (in the language of intuition), he in effect denies that we have any experience of God at all. 'Mystics' profess to experience the divine, but for that very reason Kant sets them down summarily as 'fanatics' who must not be allowed a hearing.
THEISM

281

The value of Kant's moral argument for theism seems to rest on the independence of our concept of the critical philosophy as a whole. The phenomenalism which is the weakest point of the system only affects Kant's unvalueable estimate of specific religious evidence. If anything, he might be said with an appearance of plausibility that God as the source of the subordination of nature to the moral order is only brought in to solve a difficulty which Kant has created for himself by the abstract formalism of his ethical system. If we come in for more unsparing reprobation than the famous theory that the moral worth of an act depends upon its being done from reverence for universal law as such, and is destroyed if any desire for a specific result influences the agent's motives. But, apart from this untenable theory, it may be said, there is really no antithesis between the supreme object of virtuous willing and its true principle: the realization of the good is at once object and principle. And thus the problem which, according to Kant, is solved for us by the existence of God is not a real problem at all. Yet such criticism surely misses the mark. The problem Kant has in mind still remains when the pure formalism of his own conception of the good will has been dismissed. One and the same concept of the maxims and end values, the right of decisions to control the world, compels us to pronounce the world evil and our own moral striving a vain show if the highest good is not realized or realizable, and also forbids us to aim directly at the realization of this highest good by doing moral evil that good may come out of it or leaving the undone undone because the consequences of our actions are not limited by any limits in a certain case, bad. It is certain that good often comes out of moral evil, and that moral integrity itself often demands action which leads to bad results which would not have followed if the agent had been less virtuous. Thus, quite independently of any special Kantian theses in ethics, we are confronted by the dilemma: either the order of things, rightly understood (the intelligible world), is a moral order and realizes the highest good or the highest good is not realized and all moral effort is senseless and foredoomed to failure, in which case the conviction of the absolute value of the good, on which morality is based, is a mere illusion. If this be so, the argument from the reality of the absolute values to the all-wise, all-holy, and all-powerful Supreme Being, in the present writer's judgment, holds, exactly on the lines on which Kant has conducted it. It is precisely the same argument, divested of its incidental trappings of Kantian 'critical' phraseology, which Solovyov compresses into a sentence when he writes:

'The unconditional principle of morality, logically involved in religious experience, contains the complete good (or the right relation of all to everything) not merely as a demand or an idea, but as an actual power that can fulfil this demand and create the perfect moral order or Kingdom of God in which the absolute significance of every being is realized.'

16. Lotze.—This article cannot undertake to follow the history of the treatment of theism in philosophy beyond Kant with any detail. To do so would require a substantial volume, and it does not seem to the present writer that anything which is new in principle has been added to the arguments for or against theism since Kant's development of the moral proof in the Critique of Practical Reason. An exception, however, may be made for Lotze, more particularly on the ground that he has done so much, in the face of Kant's critical repudiation of his own earlier position, to vindicate the Kantian problem that philosophical theology is exhausted by the one proposition that God exists.

1 See the entertaining illustrations of this point in V. Solovyov, The Futilization of the Good, Eng. tr., London, 1918, pi. iii. ch. 5. p. 193. The whole of Solovyov's book is worth reading as a starting point for Kant's philosophy of religion which he himself relied upon for advanced middle age.

2 It may seem strange to describe Lotze as reasserting the particular version of the cosmological argument which finds in God the reductio ad absurdum of a point of view. But it is clear from the fact that Lotze himself, in the chapter on 'Proofs of the Existence of God, in the Grundzüge der Religionsphilosophie, professes to have disposed of the cosmological proof in one or two paragraphs of not very profound criticism. Yet an analysis of his own method will show that Lotze does not rest on Kant's doctrine or argument for the being which exists with an absolute necessity. The starting-point of Lotze's train of thought was historically determined for him by the necessity of taking up a definite attitude towards the philosophy of Herbart, and to a lesser degree of Hegel; this special concern with the problems raised in the metaphysics of Herbart further accounts for the very marked influence of Leibnitz.

3 We can neither dismiss change or becoming as a mere illusion, even if Kant's doctrine of the subordination of natural processes to any infinite being for the world is, as Kant said, 'irregularly, though not absolutely, necessary,' we must suppose that there is a reason in the state of things in which A was present, which can be replaced by B rather than by C or Q, and that on special occasions A (we say 'coincidentally') followed by B (dictated by B). If B, on the other hand, we require B to exist, then again we must require necessarily that the changes of state of the various things are intericoned by laws according to which a definite change of state in one of the existents is conditional by changes of state in the rest. The very fact that, e.g., A only exhibits the change from state to state (on the condition that certain account of the pre-conditions of this universal fact of change, 3

The universe were really a collection of independent existents, or 'things,' how could the occurrence of a change of state be the corresponding change in another (the occurrence of a state a on b)? This is the fundamental fact which the universe is and cannot be not be find.

1 Lotze's treatment of the subject is to be found partly in his Metaphysics, Introd. ed., Leipzig, 1912, Eng. tr., 2 vols., Oxford, 1938, see particularly bh. i. chs. 6-7, with which may be compared the treatment of the subject in the second critical edition of the Grundzüge der Religionsphilosophie, Leipzig, 1882, Eng. tr., Outlines of Metaphysics, Boston, U.S.A., 1886, particularly the chapter 'Of Causes and Effects' (Eng. tr., pp. 57-73), partly in the Grundzüge der Religionsphilosophie, Leipzig, 1894, A longer and more popularly written exposition is given in his later work, The Unity of Things, Eng. tr., 2 vols., Edinburgh, 1894, bk. ix., 'The Unity of Things.' Only the general outline of Lotze's doctrine can be dealt with here.

2 It must be understood that Lotze is here thoroughly unacquainted with Leibnitz's most important papers, which were mostly unpublished until after he had been dead for several decades. It was his only fundamental doctrines; hence his version of the earlier philosopher's thought is not to be implicitly trusted.

This view of Kant's religious problems which had specially occupied Herbert and the Herbartians.
THEISM

is not fully known to us. But it is important to be quite clear on one point of the first importance. This is the so-called 'M' problem. This is a problem described as 'subject to meaningful definitions'. If the world of the 'M' problem is composed of things subject to meaningful definitions, then this secures an intelligible account of the relation between the things and the laws. The laws of the 'M' problem are not a concrete "M" and its individual acts of self-expression and self-maintenance. Since we are part of the contents of M, we cannot possibly, according to Lotze, assign any meaning and so come to formulate general propositions. We can even consider the matter so far as we have the notions of "class" and 'member of a class," to think of M, the real world itself, as one member of a class of worlds, and to speculate on the possibility that thought might be other—"poetical" say Leibniz said. Then we may be led, as Leibniz was, into the insoluble problem of why just which things are 'real', not distinguished from the non-real, is real. But this whole way of thinking of possibilities as metaphysically anterior to reality, or of the hypothetical propositions we call laws as anterior to temporal relations are, and as what we have, these laws, rests on illusion. Metaphysically speaking, it is the actual nature of M that accounts for our existence and our possession of the mental capacities which we exercise in framing laws and hypotheses. If M were other than it is, its elements, it seems, would cease to exist and serve as our views as to what alternatives would be possible would be different also. This is the philosophical theory to confound logical with metaphysical priority.1

How M can be the in & well required by the theory we are accounting for in detail, but broadly speaking, at any rate, that M cannot be material. The only thing with which we are acquainted which is not directly or indirectly discharged for materiality is the functions which M must discharge for the totality is the soul which at once has or owns a multiplicity of states or activities and also a personal identity of itself and not dependent on its own unity and its distinction from each and all of these states and activities. M is thus said to be an unity of forms, and these form, is real. And though this whole way of thinking of possibilities as metaphysically anterior to reality, or of the hypothetical propositions we call laws as anterior to temporal relations are, and as what we have, these laws, rests on illusion. Metaphysically speaking, it is the actual nature of M that accounts for our existence and our possession of the mental capacities which we exercise in framing laws and hypotheses. If M were other than it is, its elements, it seems, would cease to exist and serve as our views as to what alternatives would be possible would be different also. This is the philosophical theory to confound logical with metaphysical priority.1

We have said that M, the real world itself, is a class of worlds, and that thought might be other—"poetical" say Leibniz said. Then we may be led, as Leibniz was, into the insoluble problem of why just which things are 'real', not distinguished from the non-real, is real. But this whole way of thinking of possibilities as metaphysically anterior to reality, or of the hypothetical propositions we call laws as anterior to temporal relations are, and as what we have, these laws, rests on illusion. Metaphysically speaking, it is the actual nature of M that accounts for our existence and our possession of the mental capacities which we exercise in framing laws and hypotheses. If M were other than it is, its elements, it seems, would cease to exist and serve as our views as to what alternatives would be possible would be different also. This is the philosophical theory to confound logical with metaphysical priority.1

The construction of a metaphysical system, we must be content to indicate the general view to which their studies in logic, ethics, and the philosophy of the mind have led them to the conclusion, which is that of pluralism of the type in question would take issue with Lotze over the validity of the ground on which he maintains the existence of such a being as M. It would insist that the concept of "dualism" which Lotze assumes to be unthinkable —the 'dualism' of actual existence and hypothetical universal laws. It would be maintained that what we actually find the 'world' to consist of is a plurality of existing things standing in a complicated network of relations of all kinds with one another. These relations, it would be further said, cannot all be reduced, as Lotze assumes, to reciprocal causal inter-connections. Causal connection is only one of the many types of relation; there are others, such, e.g., as the mere 'togetherness' or 'comprehension' which language represents by the word 'and', the 'disjunction' symbolized by 'or', and 'else', and so forth, in which causality is not a component at all. Relations are all 'universals', and no relation is an 'existent', while 'existents' are all individual. We have to accept it as an ultimate fact with these ways of non-of individuality. And it would therefore be said that specific individual existents stand in certain definite relations to other specific individual existents. To ask why this is so is to ask a question quite as illegitimate as to ask why there exists a thing, or the pure scientific philosophers whom we ridicule for asking 'how being is made'. More particularly, the special problem which leads Lotze to frame the concept of M—the problem of a change of "state" is brought about, say one thing can exhibit a succession of different states or first have a relation to a second thing and then lose it—would be declared illegitimate. According to the view which has been most elaborately developed by Russell,2 the proposition that at a certain moment A changes its state from a1 to a2 or changes its relation to B from R1 to R2, if expressed accurately, only means that the whole duration of A's existence can be resolved into two mutually exclusive classes of moments. In any moment of the one class a has the state a1 or stands in the relation R1 to any moment of the other class a2 has the state a2 or stands in the relation R2. And, further, every moment of the one class a, comes before any moment of the other class a2. There is no moment in the whole conjunction of the class a, at which a1 and a2 overlap, is derived from this character. And mere inanimate things are held to be a support of this view. There are, accurately, only the living body and his acts. Some of these acts are souls with a real spiritual individuality of their own. In this way, while avoiding the customary theistic language about the transcendence of God, Lotze secures the same result by maintaining that God is immanent in the world, but that the world is immanent in God. The limitation of real individuality to souls naturally reminds us of the Neo-Platonic view that souls hold the lowest place in the system of souls bodies not being real but 'wholesome', what becomes,' or eidos eis eidos, 'images of the soul.' The resemblance with Neo-Platonism is even more marked when Lotze uses his view of M as the metaphysical prius of universal laws or eternal truths as a ground for urging the same sort of incompatibility. The monologue phrase has it, 'naturally prior to God; God is Himself the connate ground of which all things are mere conjunction.'

17. Logical pluralism. —The foregoing statement of the theistic argument as presented by Lotze provides an opportunity for considering the type of ultimate pluralism of which we have spoken as the commonest philosophical connotation of theistic. This type of view is best represented in contemporary English philosophy by the writings of G. E. Moore and Bertrand Russell, though, as nearly as can be estimated, the present writer regards Lotze's argument for the unicity-of-M as in principle identical with Kant's pre-critical argument for a 'necessarily existent' at the foundation of real personality.1

1 In The Principles of Mathematics, Cambridge, 1903. The later work of Russell and Whitehead, Principia Mathematica, Cambridge, 1910 and subsequent years, does not assume this metaphysics.

It will be clear from these last statements of Lotze's present writer regards Lotze's argument for the unicity-in-multiplicity of M as in principle identical with Kant's pre-critical argument for a 'necessarily existent' at the foundation of real personality.
THEISM

283

1 It would be a superficial objection to say that 'because it is worst' would be also an answer to our question. Good (no one has doubted) does exist on the point that there is something definite and positive. So 'best' has a meaning, but 'worst' has none, any more than 'so crooked that nothing can be crooked' has.

a 'being which cannot be conceived not to exist.' Causality, as commonly understood by metaphysicians, like it disappears. The causal principle reduces to the modest proposition that an observed frequent sequence of an event of the class $\beta$ on an event of the class $\alpha$ affords ground for the judgment that in cases not previously observed as well as in $\beta$ it is likely to have been followed by an event of class $\alpha$. How likely this conclusion is then a mere problem in the mathematical theory of probability. Whether all events have causes or merely open, we may say, and must always remain so. It is clear that such a theory leaves no room for theism in philosophy. If it is really the last word of metaphysics, belief in God loses all rational foundation, though it is, to be sure, still possible that the belief may 'happen' to be true. It must further be admitted that the theory has its strong points. It is by no means obvious that a philosopher is entitled to assume as axiomatic such a conviction about the thoroughly interconnected interconnexion of all events as Lotze makes the basis of his argument. In what sense or to what degree the 'world' is a unity is a question to which perhaps we may find no answer, but the answer itself may conceivably be very much looser than Lotze is willing to admit. And it seems clear that the mathematical analysis by which the problem of the interconnexion is eliminated, as far as it goes, entirely justifies.\(^1\) Nor yet can it be denied that the very modest statement to which the principle of causality is reduced is all that is required at any rate for the purposes of a system of such sciences.

It still, however, remains a question whether we could possibly be content with a logical pluralism of the kind just described as the final answer to our intellectual demand for a rational explanation of the world. For the purposes of the present article it must be enough to call attention to a few of the considerations which suggest that such a theory can only be provisional. One may fairly doubt whether it can really be called an explanation or interpretation at all. The system of inter-related existents with which it presents us as the solution of a perennally intellectual problem seems to be simply the problem itself stated in an unusually abstract way. And it ought to be clear that, when it has been granted to the full that the special problem about the meaning of change has been solved, there is a more fundamental open problem which the theory has simply left out of account. However true it may be that 'we live in a changeless world'—i.e., that there never is a 'moment' in which anything is 'passing from one state to another'—Lotze's main contention, that the analysis of the universe into relations and existents, which are the terms of the relations, rests on the uncriticial assumption that the successive steps of the logical construction by which we try to make things intelligible correspond exactly to the steps of the real process by which 'being,' so to say, constructs itself, has been left unaniered. Logical pluralism, no less than the 'panologism' of Hegel, simply assumes that the logically prior and the metaphysically prior are identical. The only difference is that the logic of Hegel is so much inferior as logic. To put the point in the simplest possible way, we cannot avoid raising the question why, out of the infinity of relations open to the study of the logician, some are selected, and that it is a 'mathematical' 'limit': The 'Theory of Relativity' becomes important at this point (consult A. N. Whitehead, Principia Mathematica, Principles of Natural Knowledge, Cambridge, 1917.)

Yet it is surely true, as maintained, e.g., by Whitehead, that 'passage' is just the fundamental fact about Nature, however we choose to analyse it. 'Nature' is, as Plato called it, a *ψυχικόν*, and only some are actualized—have existents as their terms. Logical pluralism has no answer to this inevitable question except that 'it happens to be so.' And this is really no answer at all. It amounts to saying not merely that the world might have been wholly different from what it is, but that there might equally well be no actual existents whatever; or that things have been theory or have been and are still, for the same sort of reason as that which prevents the ontological proof from producing conviction. Just as that argument assumes that 'there must be something,' so this argument assumes that 'there might just as well be nothing.' Now, we cannot prove that there must be something, nor can we prove that there might have been nothing; we have to start from the fact that there is something and that this something has a definite character. Hence, to the present writer, Lotze seems right in contending that it is the character of this something that accounts for the range of logical possibilities itself being what it is, and Kant in arguing that there is an actual ground presupposed by the very distinction between the possible and the impossible. In fact the logical pluralism is not so much an interpretation of the structure of the world as explicable only by the metaphysically 'first' character of the 'necessary being'; and, when once we have taken this step, it is not hard to show that the 'necessary being' must necessarily be the character of the end and must itself, if it be its own justification, its own *raison d'etre*. If so much be granted, it follows at once that, though we can form no adequate concept of an 'endless' Being, the least inadequate way in which to think of it is in terms of the highest values known to us—i.e. by analogy with the human spirit at its best. How inadequate such an analogy is has always been patented. Even of the human spirit at its best we can only form very inadequate notions from what we see of its actual achievements, and our notion of the Supreme Reality which is the measure of our estimates of worth, as of all other possibilities, must necessarily be doubly imperfect when it has to be framed in so unsatisfactory a way. But we can at least say that such a being must be all that we mean when we think of it as the end which is the character of the end only. If we are not satisfied with theories which, under a disguise, offer us the unexplained detail of the world as its own explanation, it is only in the thought of the detail as conditioned or conditioned by the living Good that the intellect itself can finally acquiesce. Of course we cannot expect to know in particular how each constituent of this detail is consequent on the character of the Good—why, e.g., it is 'best' for us in particular to be living on the particular planet on which we do live, rather than any other; why there should be just the number of members of our planetary system there are; why the range of colours we can perceive should be neither more nor less extended than it is; and the like. But the conviction that all this detail is as it is 'because it is best' gives an adequate reason why it is what it is, even though we may be quite unable to see why it is best.\(^1\) And it is only the thought of the dependence of the world on the absolute Good which, by removing the problematical and the metaphysical from the realm of fact and the realm of values, can achieve
THEISM

the solution of the supreme intellectual problem, the reconciliation of science with life. These considerations suggest certain further reflections on the limitations of logical pluralism. The theory that the universe is in the exclusive interest of pure mathematics and the application of mathematics in the natural sciences, and for that purpose it works admirably, but there is no reason to suppose that these sciences take into account. Even within their limits it remains to be seen whether the theory as it stands will really do all that a philosophy of the sciences should. The fundamental difficulty is that it is a consequence of the theory that, as has already been said, the establishment of scientific laws by induction comes to be simply a problem in the theory of probabilities. But the theory of probabilities, taken by itself, seems to give no ground whatever for attributing to the conclusion of an inductive generalization any finite probability, however small.1 Science would thus seem to be impossible in principle by the discovery of new requisites for induction, which is not included in the theory of probabilities, can be unearthed; and it remains to be seen whether such a premise, if discovered, is consistent with the rest of the known natural sciences. The individual exists of popular common sense and ordinary science by infinite series of momentary individuals seems an absolutely necessary consequence of the initial assumption of the theory, and, so far as the things of the external world as conceived by common sense, or the constituents of the physical order as conceived by the physicist, are concerned, there might be no difficulty about it.2 But it is quite another question whether the substitution does not destroy the whole significance of the moral realm, the system of intelligent spirits. It is not merely that it creates a difficulty in psychology, though surely it does create such a difficulty. The immediate witness of consciousness to our identity as subjects of experience is a real fact which no logical theory about the constitution of the world has a right to ignore. It may be that the "mind thinks not always," that there are intervals in which each of us is wholly unconscious, though such evidence as we have does not seem favourable to the supposition; but, at least, money is conscious act fills an actual interval and yet has its absolutely unitary character. A "duration," though a brief one, is necessary to think the simplest proposition, and much more, it is one of the fundamental thoughts of the proposition or the making of the inference is a unitary act only intelligible as the act of unitary intelligence. It is nonsensical to say that, when I think "God is," this thought, as a mental event, is really made up of an infinity of momentary "mental states" of similar but numerically different minds, or that the "I" which resolves on a given act and the "I" which carries out the resolve are each an infinity of different "I's" with a further infinity of still different "I's" between them. Only the elementary blunder in analysis of resolving activity into mere succession can account for the prohibition of such a view. It is a still more serious matter that the doctrine is wholly incompatible with the fundamental pre- requisites of ethics. This point is capable of being developed in great detail and from more than one side, but in principle it should be enough to say that the denial of permanent personality is fatal to the conception of personality as having moral worth. If we analyse any act upon which a moral judgment would normally be passed into an infinity of momentary phases, no moral predicate can be ascribed to any one of these stages. The moral judgment for approval or censure is no longer possible; no meaning if it be applied to any such single stage; to be significant, it must be passed on the whole act, considered as one, and as an expression in act as well as the result of the inner will of a subject who is the same from its first inception in thought to its completion. Similarly the notion of duty loses all its meaning with the relegation of permanent selfhood to the realm of illusion. That an act is may be genuine and existing in the present situation means that it is something not yet done, but which ought to be done and to be done by me. But if "I" only exist at a mathematical punctum temporis, the proposition that I ought now to do a certain act has no longer an intelligible significance. A merely momentary "I" can do nothing and can be nothing except just what it is; "ought" is a category which has no application to it. If a mere accident that Russell should have dropped significant hints in his latest writings of conversion to the view that moral judgments are only "subjective," mere expressions of fundamentally irrational mind. The real outcome of a logical pluralism in ethics would not be the ultimate truth about what is, nor even that standing dualism of what is and what ought to be of which Lotze complains; it is rather the pronouncement that categories of value (there can be no reason to confine the conclusion to specifically ethical values) are one and all devoid of any real application. For those who cannot accept this result, Kant's moral argument for theism seems to the present writer unanswerable. For it is only if the Good is also the supreme principle of all existence that it becomes possible to understand how what is and what ought to be can form one "world," and from the recognition of the Good as the Supreme being theism follows directly. This seems to be illustrated by the present state of philosophical opinion in our own country. Throughout the thirty years or so, from the seventies of the last century onward, in which Hegelianism, interpreted with a marked Spinozistic bias, was the dominant philosophy in academic circles, there was a natural tendency to make it almost the test of a man's philosophical capacity that his attitude towards the problems raised by the religious life should be an emotional pantheism; atheism was in discredit as indicative (as indeed it is) of lack of interest in or understanding of the religious values of personal values; theism as a supposed mark of want of logical thoroughness. In the present generation, the issues seem to be clearing. Philosophers are certainly tending, though not without exception, to range themselves into two camps. Those to whom the business of philosophy seems to consist mainly, if not exclusively, in providing a logical basis and a methodology for exact science appear to be identifying themselves with the doctrine of logical pluralism and taking up a distinctly atheistic attitude which involves the denial of the objectivity of judgments of value; to the other hand, who are convinced that the business of philosophy is to make life, as well as science, intelligible, and consequently find themselves obliged to maintain the validity of these categories of worth apart from which life would have no significance, are, in the main, declared theists.

1. Objections to theism.—It may be desirable to add some brief observations on certain types of objections which are often quite well directed against a theistic interpretation of the world. In principle none of these difficulties are novel; most of them find their expression in Hume and may be traced back far behind Hume to the literature of

1 See the acute discussion by C. D. Broad, in Mind, new ser., cviii, 190–404. Broad, in the terms of H. B. Hume's Mind, new ser., cx, 102–190. Jourdain's criticisms do not seem to the present writer to reflect the soundness of Broad's conclusions.

2 But the philosophical interpreters of the "Theory of Relativity" would have something to say on this point.
THEISM 285

the ancient world. Popularity these objections are often called 'scientific,' though their only con-
exclusion with modern natural science is that its
discoveries enable some of them to be stated in a
more impressive way. For the most part they are
in the antithetical assertion of Lucretius that the existing world is too bad to
have been created or to be administered by a divine
intelligence, 'tanta stat praedita culpa. Thus it is
is reasonably said, an inference of the antithetical assertion is too
great, the cost of the 'struggle for existence'
too painful, for us to ascribe a world like that we
know to a benevolent Creator. Or, again, it is
said that an allmighty Creator might have made
the human race, in particular, such that it would
not be exposed as it is to suffering, to constant
struggle with its environment, to the conse-
quences of its own mistakes and wrongdoing. It is
then inferred that, if there is a superhuman intelligence
behind nature, that intelligence is either deficient
in wisdom or wanting in goodness. Now, obviously,
criticisms of this kind rest upon premises which
may be fairly called in question. One might
reasonably doubt whether the pessimistic interpre-
tation of the facts which sees misery predominant
everywhere in animal and human life has any real
weight. An unbiased observer after an animal
does not seem normally to give signs that it finds
its existence miserable, and it is notable that
suicide is not common among men, and, unless
the stories of the scorpions which kill themselves when
surrounded by burning charcoal and the like are true, apparently as good as
non-existent among the lower animals. The mis-
use of the metaphorical phrase which describes the
process by which species are selected for survival
as a 'struggle' is too glaring to need more than a
word of comment. If competition plays a promi-
nent part in the economy of the animal and
vegetable kingdoms, as it does in the economy of
commercial life, it no more follows that the life of every
animal, or most animals (and? vegetables), is one of
wretchedness than it follows that all or most
business men are hopelessly miserable. Still,
of course, it may be said that there is, at any rate,
suffering in the world and that perfect
goodness would have permitted none at all. Such
an argument, however, tacitly assumes that perfect
goodness can have only one end, a hedonistic one, and falls
into the fallacy of supposing that whatever the
end which perfect goodness conjoined with omni-
potence would propose to itself—and we clearly
are not in a position to say what that end would be—
other thing is permissible to suppose that it
can be the mere promotion of agreeable feeling, an
end which even we ourselves regard as a low one.
If we could know the purpose of creation, it might
well be that we should see that it is entirely good
and at the same time could not be attained without
the presence of an element of hedonic evil in things.
Similarly, with respect to the objection based on
the view that it would be 'better' that human
beings should have been placed in a world where
there were no unfriendly or intractable envi-
ronment to master, and should have been ab initio
infallible and impeccable, it is obvious that it loses
its force if we decline to assume (1) the hedonistic
identification of good with pleasure, and (2) the
proposition that the good of the human race must be the sole or at least the principal design of God. If God
aim in dealing with us is to educate us into
a noble character—so much worthier aim than
that of making us comfortable—it may well be
that such an end could not be obtained except by
the discipline of struggle with our surroundings,
with our own mistakes and our own misdeeds.

1 And is it possibly, in the present state of knowledge, to
regard 'competition' as playing anything like the part Darwin
assigned to it in determining the fate of 'varieties'? Nor have we the right to assume that the human
race must necessarily be the 'sole or even the chief
object of the divine care; we do know, unless
ethics is a delusion, that a human soul is a thing
of absolute worth; that it is of higher worth than
everything else which God has created is more
than we can know. Indeed there is a rival objec-
tion which proceeds on the opposite assumption.
We are asked to think of the enormous spaces
of the universe, the innumerable planets, the
bulky of the heavenly bodies, and then to reflect on
the absurdity of supposing that the fate of the
inhabitants of one petty planet can count for any-
thing in the scheme of the universe. Yet it is
clear that here, too, the antitheist is reasoning (if
it can be called reasoning) upon a false assumption.
He is assuming that we know that the absolute
worth of a member of the universe is estimated by
its bulk and duration. Man must be of little value
in the scheme of things because his body is tiny
and its lifetime short. Plainly we have no right
to make serious objections to the theist's belief in
God's care for man on such flimsy grounds. We do
not know that man is the thing of highest worth
in the creation, neither do we know that he is not.
The one thing which a theist can affirm is that the
absolute worth of a member of the universe is as
pected in a system which is the work of God,
'Justorum animae in manu Dei sunt'; that is all
we can say, but surely it suffices. If the Good is
the principle of actuality, that means only we may
say that whatever comes to be because it was
better that it should be than that it should not;
it is where and when it is because this is better
than that it should be otherwhere and otherwhen;
that befalls it which is ultimately the best.
Thus, best that it should befall—is, i.e., God is alike Creator,
Providence, and Judge of His creatures. Of course,
if we had no grounds at all for our theistic con-
viction, difficulties like those mentioned might
forbid us to entertain it as a mere 'extra' belief.
But, if it is true, as has been urged in this article,
that speculation and practice alike point to the
eternal nature of God. As the object in which both
find their completion, we have a double exigence
of the practical and the speculative reason on the
side of theism, and in the presence of such an
exigence we are justified in applying Newman's
remark: 'Since the world is one, and if we are to
be led to one doubt.' One might add that there is a third
exigence—the specifically religious. It would be
perhaps a more serious objection to theism than
any we could bring to bear that it was not
usual procedure in looking for a First Cause is
vitated by one obvious fallacy. The world, it might be
said, even if it has attained its present structure
as the result of processes which are in the last
resort reducible to mere redistributions of un-
intelligent primary constituents, directed by
mind and having no end, still must, of course, have
a perfectly determinate structure, and, as we our-

selves happen to be included in that structure, of
course we inevitably discover adaptations in our
environment to our special needs, and are led to
fancy that such adaptations are evidence of the
direction of the world by an intelligent power
which aims at supplying our needs. But the real fact
is simply that it is not the world that has been
adapted to us, but we who have learned and are
learning to adapt ourselves to the world. If we
did not so adapt ourselves, we should not be here,
and, if a time ever comes when our capacity for
such 'adjustment' of our 'inner relations' to the
outer world has been exhausted, we shall be
here. If the actual course of events had been
different, all the reactions which we now call
good, because they further adaptation, might have
hindered it, and those which now hinder it might

have fared better. If in such a state of things there had been reflecting beings at all, they, judging from their environment, would in all probability have thought evil, and evil all that we think evil, and evil all that we think good. They would have inferred benevolent divine activity from the existence of conditions which we should regard as indicating the control of nature by a beneficent and benevolent intelligence, and their inferences would have just as much foundation as ours. These considerations, it might be said, are a *reductio ad absurdum* not merely of all attempts to escape from the difficulties through the only effect of peripheral aid, but also of the moral argument itself, since they show after all that standards of valuation are and must be in the end purely subjective. Since the human race existence, and so long as it continues to maintain itself, there must, of course, be no irresolvable discord between human estimates of value and the actual conditions of existence. But, as the illustration shows, we have no right whatever to argue from this simple and obvious fact to the dependence of existence on an absolute ‘Good.’ In fact, any of the races which have ‘gone under’ in the struggle for existence would be equally justified in asserting that the Good leads the good fight with the best of the evil. Here, as it seems to the present writer, we are confronted by the real ultimate difficulty for theism. If there is, after all, no realm of absolute values, a belief in heroism is a product of the imagination, determined by the conviction that the realm of facts and the realm of values cannot be separated must manifestly be futile. It is just the recurrent fear that the ‘realm of values’ may turn out to be a fiction of our imagination that is, in speculation, the last enemy to be overcome. How is it to be met? The answer, it may be suggested, is the old one, given in the memorable utterance of Pascal: ‘Tu ne me chercheras pas si tu ne m’essais. Ne t’inquiète donc pas.’\(^1\) The sentences may be applied to ultimate doubt about the reality of every kind of human value. Is a man tempted to doubt whether there really is any absolute and certain truth, whether all our ‘truths’ may not be mere ‘human’ or even ‘personal’ points of view, *βρότον δὲθητι αὐτοὶ οὐκέν πάντας ἀληθεῖς;* Let him be think himself that it is only because he is not acquainted with truths that he can frame the notion of the absolutely true, and only because he has framed the notion that he can raise his doubt. So it is only because we are all along secretly aware that all our notions of what is good is something of a fiction, and that we are really able to do the question whether any given accepted obligation is really unconditional can so much as be put. If we knew no beauty, we could not even ask ourselves whether our judgments about beauty rest on illusion. In like manner it is only because the absolutely Good and utterly Adorable has not left Himself without a witness in our hearts that we feel the need of an object to worship and are driven on from the worship of trees, or streams, or animals, or mighty men, or anthropomorphic deities, towards an object in which our adoration can at last find rest because that on which it is directed is adequate to sustain it. Prayer and adoration need no more justification than the questioning attitude towards things which leads to science, or the impulse to make things of beauty which leads to art, the desire to do right which leads to morality. It is not for nothing that man, as the Greeks said, is the only animal who has a god. If we look at the matter from this point of view, we may fairly say that the God of the theists is a projection of their love and not the attainment of a normal demonstration, still contains a thought which goes to the very root of things. There are, of course, individual men who do not feel the impulse to seek for something that they may worship with a *rationabile obseverium*, as there are men with no sense of humour, or men to whom music means nothing, or men who cannot believe that the difference between right and wrong is anything more than the difference between what society will allow them to do and what it will not let them do without making them uncomfortable. The existence of such individuals is about as important in any one of these cases as in any other. Nor does the number of such men without a religion seem to be on the increase. In our own day the leading reason for atheism is not that there is a dream appears to be that they transfer their worship to the demonstrably not most high; we get such quaint aberrations as the Comité worship of ‘humanity,’ or the elevation of Marxist Socialism into a faith. The one real question is not what certain individuals are unable to feel the necessity of searching for, but what those who do seek find, *sed quid inventissent?* The lives of the ‘saints’ are the real answer of theism to the last insistent perplexities of the doubter who lurks in each of us. Others, without the theist’s faith, have often led noble lives; they have fought a good fight with the utmost sincerity, they have believed in their hearts to be stupid or malignant; yet the most clear-minded among them, like Huxley, have confessed that mortal gauntlets of the struggle against evil forces. Such heroes, after all, do but apply to the universe the saying of the Emperor Marcus about base men: ‘The finest revenge is not to become like them’; they have revenged themselves on the world. What they lack—and one does not see how the lack is to be made good—is the secret of spiritual joy which belongs to those who are assured that it is the Good which is supreme in heaven and in earth. It would be tempting to develop this argument farther, from a slightly different point of view—that of love. To love, no less than to worship, it may be said, is an ultimate human need. At least, if a man does not feel the imperativeness of the need, we should probably say there was something ‘inhuman’ about him. And love too, like worship, seeks its adequate object—that which, without any yielding to illusion, a man can love with all his heart and mind and strength. Love, with no limitations, if it is clear-sighted, for us at least must be an *amor ascendentem*, and, as it has its source in good (for real love is only for what is good), it is the realization that is evil, in its object), so, unless it can at last rest in the supreme Good, which is good altogether, it must remain unsatisfied. But we cannot here pursue the point farther. Only one thing more will be said in conclusion, and that for the believer in ‘science’ who scruples at admitting the reality of the Good. Why do we believe in science at all? Why do we, as we must if we have this belief, refuse to entertain the possibility that the ‘progress of science’ is only bringing us nearer to a point at which the whole construction would be found to culminate in manifest and hopeless contradictions? As a mere logical possibility there seems to be nothing absurd about the suggestion. If we dismiss it, as we do, it is because we believe that knowledge is good, and because in our hearts, whatever we may say with our lips, we believe that the Good is real. Therefore, little as we know of the facts of the world, we work on in confidence that, however drastically the discovery of new facts may compel us to modify our statements of truth and good order and as provisional results we once thought established for ever, no new fact of the infinity which might be discovered in an endless ‘progress’ will ever show that ‘science’ has been a secular nightmare of the race.

THEOCRACY

Literature—Besides works mentioned in the text, the following, recommended or cited, are among the most important:

Moab, Milcom ruled Ammon, Jahweh ruled Israel, and so on. Sooner or later, however, this kind of theocracy was to lead to a breakdown in every settled of the state. The gods of such tribes as Edom and Moab passed away, with the tribal independence, before the attack of Assyria, or Babylon, or Persia. In other lands polytheism survived on hethistoty. There the idea of the theocracy was more or less a different idea, the state. The Hebrews, however, thought that Jahweh's rule evolved to meet the varying challenge of national need. To set this out fully would be to write the whole story of Israel. Here a narrow question is in place: the idea of government by Jahweh being constant in Israel, how did the idea of its method evolve?

The study of the method of any kind of polity turns largely on the nature of its organs, for almost all civilized governments rule through organs. This is peculiarly so with theocracies, since it is only in legend that gods speak directly to their peoples. Josephus is perhaps the one passage where we get the idea of theocracy, as when he coins the term 'theocracy,' speaks, not of Jahweh, but of Moses, as 'our law-giver.' In Israel, as elsewhere, the organs of theocratic government are the lines of the sacred shrines and their priests. Shiloh, Shiloh, and Bethel are instances. The shrine, so to speak, gave the organ authenticity. When doubt or dispute arose about Jahweh's Law, appeal would be made to the guardians of some great shrine. These came to form a priestly class. At the great shrines, too, there soon began to be books of Jahweh's torah, here as well as elsewhere, the few men who could read could be considered priestly. At least, the original Law had been given, and its first edicts written, at the shrine of Horeb or Sinai. In later times, no doubt, when a Hebrew visited a shrine to learn Jahweh's will, its authorized exponents, the priest, would not only read the appropriate law, but explain it. Sometimes, again, he would need to extend an old principle to meet a new case. So, little by little, the 'Law of Jahweh' would insensibly grow. For early Israel three things were indissoluble—Jahweh's shrine, Jahweh's book, Jahweh's priest. The three together formed the normal organ of theocracy.

The history of pre-monarchic Israel, however, has traced the development of other theocratic organs—the so-called 'judge' and the 'prophet.' Of these a distinctive phrase is used: 'the spirit of the Lord came upon' so-and-so. The phrase has variants, but this is its usual form. It is the earliest explanation of the method of theocracy. There are some hints that the 'judge' was usually connected with a sacred spot. If so, this theocratic organ also cohered with the shrine. It is perhaps a similar connection at first between the shrine and 'prophesying.' Before the days of Samuel the

1 The 'Ark of God' was originally a kind of movable shrine.
2 Cf. Ex. 25:10 and parallel; 1 S 25:7f
3 Cf. Josh. 5:14, Jg 3:13—17, 1:9, 100,
4 Ex. 25:13.
5 E.g., Jg 11:9; Nu 24:2. 1 S 19:9
6 Cf. e.g., Jg 6:24.
7 It is possible that historical study may weaken some of those organs of the 'spirit of Jahweh' (cf. Nu 11:17); one who had saved Israel (cf. Jg 5:1—31) etc. was also such an organ. Not introduced at all 'judge', because a 'prophet' and later Hebrew writers, not the constant union of the captain and the judge, which seems to have been treated as it was in later times too (e.g., Jg 5:9, 9:14). Yet there seems to have been judges who were neither priests nor 'saviors' (Jg 10:26—31; 1 S 11:18). It is clear, however, that there were distinct theocratic functions, though two of them might unite in the same person.
THEOCRACY

Hebrew 'prophet' was probably hardly more than the wandering saint of other Eastern faiths—"a man who lived a separate and so a 'holy' life. In all lands these have frequented shrines, for, even when not connected with a particular ritual, temples offer the best opportunities for the alms by which they live. The first band of 'prophets' named in the Hebrew records appears as 'heroes' of impending disaster to destroy, nations and their gods together. Even in exile, however, Israel believed in the rule of its God. Of this creed the unknown prophet now called 'Deuteronomy' was the great exponent. The thought does not readily isolate the different organs of a god's activity.

Scholars differ about the degree in which the re-invention of pre-monarchic Israelism identified other tribal faiths, but all allow that within the period of the monarchy Hebraism became unique. In that period all the theocratic organs named above persisted, but in persisting changed. Every other Hebrew shrine was eclipsed by the Temple in Jerusalem, and at length disappeared. So, too, the Temple became at last the depository of the one recognized book of Jahweh's Law. In Judaism, again, the priesthood of Israel underwent a monumental concentration. At crises in the history of the Southern Kingdom the high-priest sometimes played a decisive part, and there is evidence that the Temple was the shrine of the teachers, who surpassed all contemporary priesthoods in the loftiness of their teaching and the purity of their lives. Their permanent memorial is the book of Deuteronomy. It was only at the close of the monarchy that they became utterly corrupt—a fate that also beffiled the 'sons of the prophets'—and even then Jahweh's great witness, Jeremiah, was born a priest. Of the three other theocratic functions found in the times before the kings, two—leadership in war and judgment in peace—which had previously often united in a single person now permanently blent in the king. While, of course, there were inferior captains and subordinate judges, he was both supreme captain and supreme judge. He was effectually both. A king, unlike the earlier 'savior,' held permanent office, and, unlike the earlier judge, had power to enforce his decisions. And he was king by the will of God. He was Jahweh's 'son,' as having His mind and acting under His guidance. He was 'the Lord's anointed.' At times even a wretched king fell back upon Jahweh's blessing at the pinch of his people's need. It is true that one king after another did that which was evil in the sight of the Lord, and so repulsed the righteous God. At times one of the leaders—so, for instance, as a king who, like David, did the will of Jahweh remained a part of the hope of Israel. Ideally the Hebrew monarchy was theocratic.

The chief glory of monarchical Israel, however, was its prophets. They were different indeed from all other 'prophets'! With them the connexion of theocracy with shrines, maintained by the kings, began to loosen. At times, again, the prophet must perform denounce the priest. Yet the prophets, more than any else, were the true organs of theocracy. 'Thus saith the Lord' was their watchword. They spoke under the impulse of the Spirit. In a sense they knew it. Indeed, it is true that, from the time of Elijah, Israel began to refuse their guidance, that at last the Northern Kingdom rejected it altogether, and that even in Judah they became the leaders only of a 'remnant.' But it was just this 'remnant' that meant so much for the future of the world.

is unique among theocracies because of its prophets.

The Exile was a signal proof of their greatness, for no other ancient people survived exile. To be carried captive for ever to a distant and new land was to destroy, nations and their gods together. Even in exile, however, Israel believed in the rule of its God. Of this creed the unknown prophet now called 'Deuteronomy' was the great exponent. The thought does not readily isolate the different organs of a god's activity.

Scholars differ about the degree in which the re-invention of pre-monarchic Israelism identified other tribal faiths, but all allow that within the period of the monarchy Hebraism became unique. In that period all the theocratic organs named above persisted, but in persisting changed. Every other Hebrew shrine was eclipsed by the Temple in Jerusalem, and at length disappeared. Jahweh was thought of as 'filled with' His Spirit. This was why and how he knew God's will. Men thought their own wishes had been divinely willed by OT thinkers, that a perfect theocracy, therefore, could come only if all its citizens, and not a few only, had the Spirit of Jahweh. This idea is rooted deep in the evolution of the Christian doctrine of the personality of the Holy Ghost. There can be a perfect theocracy only when every man acts always under the guidance of the Spirit of God. Here is the culmination of Biblical theocratic doctrine. Yet here also is its euthanasm.

For this kind of 'theocracy' does not satisfy the definition given above. It is not a 'theory of national polity.' The Christian doctrine of the Holy Spirit is naturally individual, and as naturally universal, but it is not naturally national. Again, the term 'polity' implies government and its coercions, and one of the marks of the Spirit's sway is that it is inexorable. Yet the husk of Israel's theocratic idea held a kernel of 'eternal' value. The last human society will be a Kingdom of God.

LITERATURE.—For Josephus's use of the term 'theocracy' see H.C. Leibniz, op. cit., p. 337 (V. H. Stanton); for the facts about the general Semitic notion of theocracy see W. Robertson Smith, The Religion of the Semites, London, 1901, lect. ii, and 'The Prophets of Jerusalem,' 1907, lect. ii.; for the development of the idea in Israel and in the apocalyptic literature see the standard authorities on the religion of Israel, the theology of the OT, and the extra-canonical Jewish books; the corresponding authorities on the NT discuss the relation of the idea of the kingdom of God to the theocratic doctrine. Separate treatment of the subject is unusual.

C. RYDER SMITH.

THEODICY.—I. The term.—Theodicy (Germ. Theodizee, adapted from Fr. théodicée, which is compounded of G. théos, 'God' + diex, 'justice') means literally the (or a) justification or vindication of God. Leibniz appears to have been the first to use the word in its distinctive sense. In a letter written in 1697 he spoke of employing it as the title of an intended work, and in 1710 the work duly appeared. The complete title was, 'Essais de Théodicée sur la bonté de Dieu, la liberté de l'homme, et l'origine du mal.' Since Leibniz's time the word 'theodicy' has been in common use.

2. The concept.—In modern usage the scope of the term is vague and ill-defined. Sometimes it is employed, as by P. Janet and G. Séeséilles, as equivalent to natural theology or philosophy of religion. For those writers theodicy comprises the general problem of religion, though it is also understood by them in a more particular sense, as comprising only the central problems of the nature of God and the relation of God to the world. In either of these senses it may escape the charge of being a theory put forward 'to save the situation.' But in the usual sense it does not so readily escape such a charge. For as a rule the use of the term is more in keeping with its literal meaning, and theodicy is understood as the (or a) vindication of the divine providence or government in view of the existence of evil. The 'theodicæan' assumes the validity of the theist's conception of God as powerful, wise, and good, and on this basis seeks to defend the divine administration: he would

assent eternal Providence, and justify the ways of God.

3. Origin of the concept.—The need of such a defence and vindication is not felt in primitive religion under polytheism, with its animistic or spiritistic view of nature, because under polytheism the evil is subject to a multitude of spirits both good and evil, who live and act on the throne or grounds; and are themselves limited by the natural order. Nor is the need felt even at the polytheistic stage of religious belief, with its multitude or hierarchy of gods and goddesses,那种indulged from science or gorillas because at this stage thought, if no longer naive and instinctive, is still uncritical, and the gods are conceived as being subject to fate or necessity or as governing a world already given and never properly under their control. At the monothestic stage of religion, however, where thought is become critical and reflective, the problem of theodicy arises and calls for a solution. Sometimes, as in Persian religion, a dualism in the divine nature is postulated, and the world represented as the scene of a grand conflict between the principles of good and evil, in which good is destined to final triumph; and obviously a dualistic philosophy of religion, if it could be otherwise satisfying, would ease the problem. Under a monistic philosophy of religion, again, the tendency is actually to get rid of the problem by distinguishing evil from evil, or reducing evil to illusion. This tendency is observable in the cosmic and acosmic pantheisms of Stoicism and Brahmansim respectively. Only in a philosophy of religion in which God is recognized as wholly good, and evil as truly evil, is the problem of theodicy felt in all its insistence. Si deus bonus, unde malum? Christianity, theistically interpreted, supplies such a philosophy, and in the course of Christian history the problem of theodicy received distinctive treatment in the ecclesiastical doctrine of the Fall. Whatever may be said as to the form of that doctrine, it stands for a principle which should be acknowledged in theistic interpretations of the world, namely the principle of human freedom and responsibility. It is not without significance that the classical theodicy or theistic apologia of Leibniz bears its title not only 'the goodness of God' and 'the origin of evil,' but also 'the freedom of man.'

4. Leibniz's Théodicée.—(a) In the problems of theodicy Leibniz had been interested since his boyhood, and he claims to have given more attention to them than most. There are many references to them, certainly, in his correspondence during the last decades of the 17th century, with Poinssot, Bossuet, and others; and the Essais itself also bears ample witness to his long-continued interest in them. It should be remarked, however, that the Essais is not, properly speaking, a systematic presentation of the questions involved in theodicy. It is, in Leibnitz's own word, a 'tissu' of what he had said and written in the course of the theological and philosophical discussions, centred in Piet Bayle's works and especially his Dictionnaire historique et critique, which he carried on with Sophia Charlotte, queen of Prussia. From a letter of Leibniz's written to Sir Thomas Burnett in 1717 it appears that the Essais was compiled at the request of his friends and as a memorial to the deceased queen. The book was extraordinarily popular, and apparently the author finds satisfaction in recording that it was welcomed
THEODICY

by Catholics as well as Lutherans and Evangelicals. 1 No doubt the Eunomus served its purpose well in an age of theological rationalism, and helped to predicate an apologetic which was now beginning to threaten the foundations of religion itself. 2 But Leibniz's theistic apologia does not commend itself so readily in our time.

(b) It will be sufficient for the purposes of this article to indicate a few salient points in Leibniz's theodicy, for the sake of illustrating the difference between the older and the newer theism in apologetic method and outlook.

On Leibniz's own recent exponents of a theistic philosophy of religion, Leibniz was of the belief that the being or existence of God could be demonstrated by purely logical or rational proof. Theodicy is neglected, he says, for the existence of the whole collection of contingent things which constitutes all of creation and it is to the Substance which carries with it the reason or cause of its own existence, and which is consequently necessary and eternal; and that Substance which is necessary and eternal is God. Leibniz is moved to this argument that it is logically fallacious, as containing more in truth than can be, the actual, indeed, is contained in the possible, and the possible is contingent, so must also be the conclusion. 3 As for the proof from the eternal truths—i.e. truths which involve no reference to contingent facts of existence—it is largely dependent upon Leibniz's notion of possibility. For Leibniz, everything in Spinoza, the possible is greater than the actual, existence than existence; and he argues that, if the eternal or metaphysical necessary truths are real, and founded on these, that existing necessarily means be the metaphysically necessary Being of God, in whom essence involves existence, and to be and to be possible is to be.

God not only would there be nothing existent, but there would be nothing possible. 4 Against this proof, as handled by Leibniz, it may be urged that it is inconsistent in one who regards the possible as wider than the actual, the essential than the existent, to regard a truth as existent upon existence; and that in any case we cannot on the premises reach a necessary being separate from the existent and actual world. In all such arguments indeed, as B. Russell points out, there is difficulty in avoiding Spinoism. 5

(2) The world—In presenting what may be named his telescological optimism Leibniz still moves on the high plane of metaphysical notions and a priori logical proof, nor condescends to the lower empirical world, to which Bayle would bring him down. Founding upon the principle of sufficient reason and the idea of the preestablished harmony, he holds that there is not a single one of these worlds possible; or, were a better world than this world possible, God is deceived in choosing it. 6 God is the best of all possible worlds and good; and His goodness moved Him to create and produce all possible good, His wisdom led Him by a moral necessity to choose in his choice of the best, His power enabled Him to execute His great design. 7 It is curious to reflect that the Leibnizian deism is supplanted with the most diverse ethical valuations of life, optimistic, pessimistic, millerotic; which gives point to Schopenhauer's objection that, even if this is the best possible world, it does not prove that it is a world good enough to have been actualized. 8 An objection, this, on philosophical grounds, thus meeting Leibniz on his own plane, but it is on empirical grounds that the Leibnizian optimism has been most frequently challenged, from Voltaire's Candide down to the present. Nor could Leibniz himself ignore the empirical aspect of the problem of theodicy.

(c) Evil. —Accordingly, apart from this metaphysical theory of evil as necessary limitation appertaining to finite existence and the source of both moral and physical evil—our idea that evil exists in the very nature of things, some evil, especially physical evil, is to be interpreted as an instrument or means of good. In advocating this theory he sought to counter Bayle's contention that the strength of Manichaeism was due to its conformity with an empirical rather than a priori concept of the world. Even from the exegesis of the prior notion, Leibniz would reply, physical evil may be reasonably accounted for by the theodicy that, just as the will of the natural evil, it could not be prevented by God without the subversion of the freedom of self-determination which belongs to spiritual beings and makes them free and responsible. 9 But in the later arguments also Leibniz supports his doctrine of optimism, and enough has been shown to show that, if this world is forced to recognize the standpoint of experience, it rests primarily—like his theistic proofs—on metaphysical considerations.

(d) The difference between Leibniz's theodicy and the modern attitude in theodicy may now be briefly stated. Leibniz approached the problem of evil with a God whose existence had already been proved, as also His character of absolute perfection in power, wisdom, and goodness; and it was therefore an altogether reasonable presupposition on Leibniz's part that this world as being the creation of such a God was the best possible. No matter what exception might be taken to the case as presented, the case itself was excellent. But nowadays, with the spirit of pessimism abroad in society, and the spirit too—not unakin—of anti-religious agnosticism, the problem of evil has become more acute, and one has learned to sympathize with W. James and others in the modern rationalism and the complacency of his attitude, e.g., a dogma like eternal punishment. The 'charmingly written Theodicee' is even described by W. James as a piece of 'superficiality incarnate'; as a 'cold literary exercise, whose cheerful substance even hell-fire does not warm.' 10 Such strictures are too severe, but let them be a reminder of the shift in attitude in such matters between the old and the new approach to the problem of evil. It would be quite untrue to say of modern exponents of theism that they compose theodicy 'with their heads buried in monstrous wigs.' 11 The modern theist is conscious of the failure of rationalistic or purely speculative theology to establish its claims, and of the necessity of fundamentally empirical methods in theology if scientific results are to be gained, and he therefore examines the world of experience in face of evil as an empirical problem, with the view of testing the reasonable-ness of the theistic faith in God as just, holy, and loving. He is led to recognize that the observed facts of nature and history do not afford an unexceptionable argument for the goodness of God, and that after all the most solid ground of belief in the divine goodness lies in the needs and claims of the theistic faith itself. If there would be a circulus in arguendo involved here if such considerations were put forward as a solution of the problem of evil. On the one hand, it is the faith of religion that God is affirmed to be perfectly good, despite the evil to be found in the world of His creation and governance. On the other hand, religious faith is based on the power of religion as a solvent, or at least a partial solvent of the problem of evil in religion men seek refuge from the various evils that assail, from without and from within—which shows that a non-rationalist theism could not offer a real solution of the problem of evil. Nor does it profess to do so.

5. Theodicy and philosophical reflexion.—It is not necessary that this article should enter into a comprehensive discussion of the problem of theodicy from the side of philosophical explanation. This will be found in the art. GOOD AND EVII, where it is affirmed with most students of the subject that 'every proposed solution either

leaves the old question—"si Deus bonus, unde malum?"—unanswered or raises new ones. None of the less we should like to express our sympathy with a type of solution—partial as it must be—which is on the lines of Leibniz in its recognition of human freedom as real, in the sense of implying self-limitation on God's part. Self-limitation does not necessitate, nor imply, any loss of qualified indeterminism. Such a solution is not only consistent with the moral and religious consciousness, but alleviates also the burden of the mystery of evil; and it lends itself to expositions in the speculative sphere, as in the humanistic or personalistic idealisms which arouse so much interest at present. Yet it still leaves God, as indeed must every theodicy, ultimately responsible for both physical and moral evil. At the same time the recognition of the instrumental worth of evil somewhat relieves the weight of the divine responsibility. Take it first in connexion with the problem of physical evil. Pain and suffering are no doubt largely retributive and to be accounted for as the wages of individual and racial sin. But retribution is not an end in itself, and the positive rather than the negative character of physical suffering is more and more emphasized. Through pain, hardship, and loss moral energy may be stimulated and character moulded and shaped to finer issues. In this sense the suffering of the blessed, blessing those who suffer and those brought into contact with them. Take it also in connexion with the problem of moral evil. Here again the instrumental theory applies, and evil may be regarded as for education and discipline. In fact many theists regard moral evil or sin as having been always under the divine control, and interpret it as necessary for physical evil to human development. It is the discord without which there could be no harmony, the shade without which there could be no light. Through sin man learns his weakness, and his need of strength from on high. Through sin, and its direful effects in society, he learns the meaning of brotherly service and the measure of the sacrificial love of God.8 Christianity looks for the time when man's moral education shall be brought to completion, and his suffering and sin have served their purpose.9 Yet, when all is said, the problem of evil remains.

6. Theodicy and the religious consciousness.—Theodicy, the solution of the problem of evil, employs empirical grounds, and in particular of the instrumental theory of value, leads us to a consideration of the religious solution. There is a philosophical theodicy, and there is a religious theodicy. In the first, evil is explained—or an attempt is made to explain it—in the light of the divine goodness; in the second, evil is not explained, nor is there any attempt to explain it—it is simply to be overcome. As Eucken has remarked, 'religion does not so much explain as presuppose evil';10 and, as F. T. Forsyth so well insists, a religious theodicy is not an answer to a riddle but a victory in a battle. As a religious theodicy it is not man who justifies God's ways, but God who justifies His own ways, and that not by accounting for the world's evil, but by saving men from it. While this is said, religion can have no more philosophy escape the problem of evil. For the individual believer in God and His goodness the problem receives a practical solution through the working of faith; he finds in it no more nor less by hedonistic standards, but discovers the Supran.

2 The Truth of Religion, p. 500.

Good in moral and spiritual union with God. From the universal point of view the religious solution of the problem may be stated broadly in terms of the teleological idea. The end or purpose reached by the universe is the creation of free ethical personalities capable of personal intercourse with God and of reflecting as in a flawless mirror the divine image and likeness.11 To that purpose the pain of suffering and personal discord, and there are traces of it even in animate nature, which we have too often regarded as merely a field of struggle and carnage.

'There is no ultimate scientific sense,' says J. Arthur Thomson, 'in which it may be said that Man is part of the system of Nature and the crown of its evolution; and it is assuredly of some significance that he can find in Animal Nature far-reaching correspondences to his ideals of the True, the Beautiful, and the Good.' We might therefore be content to state our theodicy in the following terms, which give due regard to the fact—made clear in modern science—that our world is still in the making, and which also illustrate the newer empirical as distinguished from the older rationalistic way of approaching the problem of evil, as well as the pragmatic tendency in modern theology and religious philosophy:

'We hold that this world is a finite and imperfect creation and that the final and ultimate solution of the problem of evil will be the perfecting and completion of the world's development with a new universe in which the original imperfections shall be removed and the new world shall be free from suffering and personal discord. In the meantime we hold that the universe is by no means complete, but is in a state of development and that the divine purpose is being realized in a measure.

This is not to say that the problem of evil is not real, for it is real today as in the past. We hold that it will be solved in the future, in the same way as it was solved on earth by the complete victory of Christianity over its adversaries, by the overcoming of all evil by the victorious doctrine of the Incarnation. For the time being, however, we do not, as some have done, regard the problem of evil as a mere figment of imagination, but as a reality which must be faced and dealt with, and which will be solved in the same way as it has been solved in the past.

1 It is here that, in a more extended treatment, the 'theodism' aspect of the problem of immortality might be considered.

friends, including a Simides who may be the poet. After the first 100 lines there is little sequence or coherence of ideas. There are many repetitions, and some of the verses occur in the fragments of Solon, Phocylides, Tyrtaeus, and Meleager. These considerations, and the fact that quotations in Plato6 in a passage attributed by Stobaeus to Xenophon are susceptible of various interpretations, raise many problems about the composition of the poem, if it is in any sense a whole, and have given rise to an almost entire German literature of hypothesis most conveniently surveyed in E. Harrison's Studies in Theognis.7 Harrison argues plausibly, if not always quite convincingly, that the poems do stand as a connected sequence. His book concludes with an excellent chapter on the life and times of Theognis. He was a noble of Nissaean Megara, who apparently at one time was also a citizen of Hyblean Megara in Sicily. He spoke of the terror of the Medes,8 and is therefore conjectured to have lived to see the invasion of Xerxes. He lived in a time of social and political revolution at Megara, vaguely known to us from three references in Aristophanes' Politics9 and from one passage in Plutarch.10 His temper was embittered by the temporary triumph of the popular party,11 the loss of his property,12 and the impossibility of securing redress for the crimes of the travels in Eubea, Sparta, and Sicily to which he refers.13 To these experiences we may trace his pessimism,12 his cynicism,12 his harping on the hardships of poverty that constrains a man to deeds to which his will does not consent,14 his complaint that money makes the man and that mercenary marriages corrupt the breed of men,15 his emphasis on the virtue of faith5 or loyalty to caste, club, and matter,5 his utilization of 'good' and other ethical terms in the political or social sense.16

Too much has been made of this last idea by Theognis' translator J. H. Frere,10 by Nietzsche, whose own philosophy is largely based upon it, and by Grote, who, however, admits that the ethical meanings are not absolutely unknown.19 Theognis is merely the chief example, the conveniently quoted 'classic instance', so to speak, for general human tendency. We still speak of the better classes as they did in Aristotle's time,21 and Homer characterizes menial tasks as the services that the worse sort perform for the good.22 We cannot infer that the ethical idea was lacking.23 We can only say that before Plato it was easier to confound pure or absolute ethics with prudential, conventional, tribal, caste, or political morality than it has been since. Much the same may be said of the naive inconstancy between Theognis' general commendations of truth, justice, good faith, and kindness, and his passionate praises for vengeance,24 his (per-
